The Japan Gazette

MAIL SUMMARY, SHIPPING AND MARKET REPORT.

PUBLISHED TWICE A MONTH.

Per O. & O. Str. "Belgie."

YOKOHAMA, THURSDAY, JANUARY 11TH, 1877.

Single Copy. 25 cents.

THE "Japan Gazette" MAIL SUMMARY.

FROM 24TH DEC., 1876, TO JAN. 10TH, 1877.

DEATH.

In Ts'kidji, Tokio, January 9th, 1877,
ARTHUR K. EBY, aged 3 years and 3 days.

OUR last mail Summary was despatched
per P. M. S. S. *Alaska*, which left this
port at daylight on the 27th ult. Since the
former date we are in receipt of the follow-
ing mails:—

	DUE.	ARRIVED.
American Mail	Dec. 26.	Dec. 26.
English "	Dec. 30.	Dec. 28.
French "	Jan. 7.	Jan. 6.
American "		Jan. 8.

Latest dates are :

London..... Letters	Nov. 18.
" ... Telegrams	Jan. 8.
New York ... Letters	Dec. 8.
" ... Telegrams	Jan. 1.
San Francisco Letters	Dec. 16.

Summary.

CHRISTMAS and New Year's holidays having
intervened between the dates of the compila-
tion of our last and present Summaries,
business has been very slack, and the com-
munity, foreign and native, have given them-
selves up to amusement. The usual annual
Christmas Tree was set up in the Gaiety
Theatre, and a very excellent impersonation
of Santa Claus distributed the gifts it bore
to the little ones. Special services were held
in the Churches. Christ Church was magni-
ficently decorated under the supervision of
the Chaplain, and one of the largest congre-
gations ever assembled in Yokohama was
present there at the morning Christmas
service. In spite of the dullness of the
times and the hardness of money, the festive
season has been observed with quite the
usual zest and interest. Christmas vacation
in H.B.M.'s Court commenced on 20th ult.,
and expires on the 16th inst.

THE agrarian disturbances, of which we
had to report the rise and progress in our
two last Summaries, have been all but put
down; and the land-tax has been diminished
for the current year.

GENERAL SAIGO, Mr. Shioda Masashu, *Daijo*
of the Foreign Office, and Dr. David Murray,
of the Educational Department, returned to
Japan in the *City of Tokio* from San Francisco.

THE Postmaster-General has published his
report for the fiscal year ending 30th June,
1876, showing a progressive increase in all
the branches of the department.

PAPER-HUNTS were held on Christmas and
New Year's days. Some scratch races, which
were fairly well attended and afforded excel-
lent sport, were held on the Race Course on
the 6th instant. On the afternoon of the
9th an open foot paper-chase over the hills at
the back of the Rifle Range was well con-
tested. Prizes were given to three of the
sailors and marines of H. M. S. *Modeste* com-
peting.

THE war between "E.P.S." and the Editor
of the *Mail* has ceased, like Rodrigo's combat
with the Moors, *faute de combattants*.

H. E. the Japanese Minister in the United
States and his Secretary of Legation are ex-
pected to return to Japan about the middle
of the current month, and to remain for a
short time before returning to America to
resume their duties.

THE departure of H. M. the Mikado for
Kioto has been postponed till the 22nd inst.
His Majesty will take passage in the *Takao-
maru*, of the Mitsu Bishi Company, which
has been specially fitted up for his accommo-
dation, as far as Kobe, whither he will be
escorted by a squadron consisting of three
men-of-war.

MR. D. W. AP JONES of the Agricultural
Department, accompanied by two Japanese
officials of the same department, left for San
Francisco in the *Alaska*, en route to Phila-
delphia, where they are to make purchases,
on the part of the Japanese Government, of
articles to be used in proposed extension of
the pastoral industry.

THE M. B. M. S. Co.'s vessels *Takasago-
maru* and *Niigata-maru*, are expected to
leave under sail in February, for England,
there to be refitted with engines and boilers.
Several cadets of the company will make the
round voyage in these boats for the purpose
of being instructed in practical seamanship.

H. :  *Vineta* took away twelve
young gentlemen as cadets.

FIRES are still reported from the provinces;
and another very disastrous one, which
destroyed a number of houses, estimated
variously at from three to eight hundred, has
occurred in Tokio.

A STORE and dwelling-house on Lot No. 45
in the settlement, in the occupation of Mr.
Anthony, a Frenchman, was burned down on
the night of the 30th ult. Early on the
following morning what might have been a
serious fire in the Grand Hotel was arrested
in its inception.

ON the 30th ult. the foundation stones of
a German Hospital, now in course of con-
struction on the Bluff, were laid.

H. E. MR. DE STRUYE, Russian Minister,
has received at the hands of the Mikado the
decoration of the first class of the new
Japanese order of merit.

MR. BRENNWALD, Consul for the Swiss Con-
federation, and Doyen of the Consular
Board at Yokohama, has received the deco-
ration of an Italian order, for the services
rendered by him while Acting Consul for
Italy.

THE first snow storm of the season fell on
the 2nd inst. There was a slight earthquake
in the evening of Friday, the 29th ult.

MR. THOMAS BAKER, recently Chief Officer of
the *Taihei-maru*, shot himself on the evening of
the 30th ult. The inquest held on the body
resulted in a verdict of "suicide while of
unsound mind" being returned against the
deceased.

THE Schooner *Rupak* has been sold, having
been attached in Admiralty for wages due to
the crew. She fetched \$3,800.

THE shooting question is at length settled.
The amount of the license fee for a season's
shooting is fixed at \$10, under certain regu-
lations which came into force on the 6th
instant.

A new weekly journal "The Tokio Times"
has made its appearance. This paper is the
property of and conducted by Mr. E. H. House.
The first number contains much matter of
interest well put together. The journal,
which is to be devoted to subjects directly or
indirectly having a Japanese bearing, will
apparently advocate protection and the aboli-
tion of the extra-territorial jurisdiction
clause in the treaties.

1876.

WHILE wishing our readers prosperity, health, and happiness for the new year, we will take our farewell of that now old year, which has already begun to fade into the dim past, giving place to the more stirring influences of the ever present moment, with a brief review of the more noteworthy events which occurred during the twelve months of 1876.

Last year opened with prospects of a Japanese war with Corea. The insult offered by the garrison of some forts on the Corean coast to the Japanese flag by firing upon the *Unyokuwan*, a Japanese gunboat, had not been atoned for or avenged. The warlike spirit of the samurai was much excited, and that class was greatly in favor of war. But Mr. Kuroda's diplomacy, and, perhaps more still, the determined attitude assumed by the Japanese Government, and the extensive preparations made by it for a Corean expedition in case war should unfortunately turn out to be inevitable, averted the storm, and Corea consented to open sundry of her ports to Japanese trade, and to send an Embassy to the court of the Mikado.

With the 1st of January, 1876, the Gas Company shut off its supply of gas to the street lamps of the foreign settlement, which has since been nightly dependent for illumination upon the moon and stars, and such stray rays of lamp or gas-light as might wander into the night through key-holes and chinks of shutters. The Company refused to reduce its rate of charges, and the settlers refused to pay as much as they had paid theretofore: so for twelve months now after sundown the night has had its reign undisputed; and wayfarers have had to put up with chances of collisions, and other dangers of travelling in the dark. The measure recently set on foot to collect enough subscriptions to defray the expense of lighting the streets during the now current year has only been partially successful.

In January the Finance Minister published his budget for the then current financial year: the Postmaster General issued his report for the half year ending 30th June 1875; and an exhibition of the articles intended for show at the Centennial Exposition in Philadelphia was held in Tokio: after ten months' delay the soldiers and police implicated in an assault upon U. S. Deputy Marshal Elmer, on the occasion of the passage of the Mikado through the settlement of Yokohama in the preceding March, were judged and sentenced to merely nominal punishments, quite out of proportion to the gravity of their offence. In the budget the estimated revenue showed an excess of nearly ninety thousand dollars over the estimated expenditure; and the Postmaster's report demonstrated a cheering increase in the business of his department. A collision between the M. B. M. S. S. *Nagoya-maru*, late *Oregonian*, and the Japanese troop ship *Osaka-kuwan* in the Inland Sea, resulted in the sinking of the latter vessel and the loss of twenty-nine lives, including that of the Captain. Judgment was given in the U. S. Consular General Court in the important case of Ito Hachibei vs. Walsh, Hall & Co., in which the plaintiff claimed more than \$108,000, totally against the plaintiff. The *Bankoku Shinbun*, a Japanese newspaper, edited by Mr. J. R. Black, was compelled to cease publication after the issue of a few numbers, its continuance under the peculiar circumstances of its ownership and publica-

tion being held to be at variance with the Japanese law on press matters. In consequence of the difficulties arising out of the brief career of the *Bankoku Shinbun*, Sir Harry S. Parkes issued a notification prohibiting the undertaking by British subjects of similar enterprises in the future.

The Hon. F. R. Plunkett, attaché to H. B. M.'s Legation here, was removed to Washington. Before leaving Japan he prepared a report of considerable interest on the mines of the country.

The American ship *Surprise*, Captain Johnson, which left New York in May, 1875, with a cargo of kerosine oil and sundries, was wrecked off the Plymouth Rock, a short distance from Yokohama, early in February, through the incompetence of one Shields, a man who called himself a pilot. The wreck and cargo was bought by Captain C. A. Fletcher, who disposed of the cargo, and made several unsuccessful attempts to raise the vessel which now lies under water in Yokoska Bay. This lamentable loss, and other accidents which have occurred through the carelessness and ignorance of *soi-disant* pilots, joined to the fact that no regulations for the licensing of pilots existed in Yokohama, have all tended towards the final but very slow evolution of a better state of things. A licensing board has been established and pilotage regulations published by the Government. Examinations will have to be passed by persons wishing to obtain pilotage licenses; and after the middle of this month it will be the fault of Captains of vessels coming to or leaving the Gulf of Yedo if damage accrues to the property and loss to the lives under their care, through the employment by them of men who have no better claim to be called pilots, than the temporary possession of a boat, and the fee-simple of a vast combination of ignorance and assurance.

General Saigo, Commissioner from this country to the Centennial Exhibition at Philadelphia, left on the 24th February in the *City of Peking* with his suite for America. He returned in the *City of Tokio*, arriving here on the 26th December, 1876. Mr. Mori's mission to the Court of China on the subject of the Corean imbroglio was satisfactory; the Minister receiving the assurance of the Tsung-li-yamen that China had no intention of interfering in the matter, and that the Court of Peking thought the Japanese Government perfectly justified in the steps it had taken to secure reparation for the insult offered to its flag.

On the evening of Sunday, the 12th March, a thief entered the house of Mr. C. D. Moss, one of the proprietors of this journal, and stole therefrom the sum of \$600, and the office books, which had been taken to Mr. Moss' house to be made up. The money and books were recovered, the latter however having been much torn. In the early part of the year burglaries were very frequent. On the 14th of March a severe gale blew in the harbor, and the brigantine *Mary Jane* was capsized. Being empty, however, she sustained but little damage.

In March a seission occurred in the Yokohama Race Club Committee. Mr. John Robertson proposed a candidate for admission to the Club, and his proposition was seconded by one of the oldest supporters of the Race Club and of racing in Japan. In spite of the guarantee thus furnished as to the eligibility of the candidate he was blackballed. Mr. John Robertson at once withdrew from the Committee, and later from the Club; and an association for racing open

to all members of the community was formed. The new association, known as the Yokohama Racing Association, held its first meeting on the three days on and following the 16th November.

The P. & O. Company having detailed some of its vessels to run to and from Shanghai via the Inland Sea of Japan, considerable reduction was made in the fares charged by the M. B. M. S. S. Co., which since the sale to it of the vessels of the P. M. S. S. Co. plying on the same route, had enjoyed a monopoly of the trade. The P. & O. Co. charged fares at a corresponding low rate, and for a few months passengers and freight were conveyed from Yokohama to Shanghai and the intermediate ports at prices virtually nominal. The competition did not last long, however; for the P. & O. Co., finding that the trade did not pay, wisely withdrew their vessels in June. Meanwhile the M. B. M. S. S. had the best of the native trade through an unfair advantage bestowed upon them by the Government, which compelled native passengers in foreign vessels to take out passports, the issue of which was invariably only granted after great delay and much annoyance to the applicants.

The text of the treaty between Japan and Corea was published in the native journals on the 25th March. It comprised twelve articles: two ports in Corea were to be opened to Japanese trade: Japan was to send a Consul to Corea; and the principle of extraterritoriality, the clause providing for which in her treaties with western nations causes so much umbrage to Japan, was insisted upon as far as Japanese settling in Corea were concerned. Mr. Kuroda, the envoy, and the officers of his suite, were fêted on their return from Corea.

In April Mr. Nomura was appointed Governor of Kanagawa. The Mikado bestowed the decoration of the second class of the newly instituted order of merit upon General Legendre and Monsieur Boissonade de Fontarabie. The Government prohibited the wearing of swords; and, with very few and trifling exceptions, this *coup-de-grace* to feudalism was accepted without a murmur by the samurai. Eight hundred and forty Japanese residents in the island of Sakhalin emigrated to Yezo, in consequence of the cession of the Japanese portion of the island to Russia. Sunday, the 2nd April was first observed as the national weekly holiday, the *ichi-roku* having been abolished. In consequence of the fall in the exchange value of the dollar to a price below four shillings, Mr. A. Major published a supplement to "Rutter's Exchange Tables," containing calculations of dollars into sterling, and *vice versa*, at rates between 3s. 6d. and 4s. inclusive. On the return of Mr. Russell Robertson, H. B. M. Consul at this port, from the Bonin Islands, he read a very interesting paper upon those islands before the Asiatic Society. Mr. Goto having resigned the office of speaker of the Gen-ro-in, Prince Arisugawa-no-miya was appointed. Mr. Kido resigned his office as *Sangi*, and was appointed *Naikaku kamon*, or Councillor. Alterations in the boundaries of certain *ken*, and amalgamations were notified. A Japanese Post Office was established at Shanghai on the 15th April. Representatives from the Yokohama Athletic and Rowing Clubs took part in the interport sports at Kobe, and carried off several of the best prizes in the land contests.

Early in May, H. E. Mr. Arinori Mori, Minister from Japan to the Court of Peking,

returned on leave of absence. At about this period of the year several shocks of earthquake were felt. An agrarian riot, caused by disaffection with the alteration in the land-tax, was suppressed. Mr. H. de Siebold, Secretary to the Austro-Hungarian Legation, opened a private exhibition of curios in his house in Tokio. (We regret to learn that the destructive fire of the 29th and 30th November, caused him to lose a great part of his valuable collection.) Mr. Carst, a contractor, and his partners, succeeded in raising the wreck of the *America*, partly burnt in harbour in 1873. The wreck has since been broken up. The old *Saco*, which started the previous month, and had to return through stress of weather, having been docked at Yokoska and repaired, resumed her interrupted voyage towards San Francisco. The opening of the tea season relieved a little the depression in business which was noticed since the commencement of the year. On the 10th of the month the public gardens at Uyeno, Tokio, were opened. The Yokohama and Tokio Amateur Athletic Associations held their spring meetings in May. On the last day of that month an ambassador from Corea to the Mikado's Court arrived in Yokohama, in a vessel which had been placed at his disposal by the Japanese Government. Within a few hours of his arrival he proceeded, with his large suite, by rail to Tokio. The embassy remained in Japan for about four weeks, the greater portion of which time was devoted to sight-seeing. During his stay both the ambassador and his following expressed the greatest disinclination to have any dealings with foreigners, other than Japanese. To such absurd lengths was this dislike carried that the presence of an English engineer in the employ of the Mitsu Bishi Company becoming known to the ambassador on board the steamer which was to convey him home, after she had put to sea, he expressed such displeasure that, for the engineer's own safety, he had to be put ashore in Kobe.

H. M. the Mikado left his capital in great state on the 2nd June, for a tour through the northern provinces. Passing through Utsunomiya, Yonedzuwa, and Sendai he arrived at Awamori, whence he crossed the Strait of Tsugaru in a steamer to Hakodate. At the latter place he remained for a few days, and returned in the *Meiji-maru* to Yokohama, where he arrived on the evening of the 21st July, after an absence of seven weeks. Throughout his progress he was received with marks of loyalty and devotion; and evinced a lively personal interest in the material well-being and mental improvement of all classes of his subjects. In the progress of the pupils in the various schools of the towns and villages through which he passed he especially interested himself; and throughout the journey made it a practice to admit to his presence and often to his table the officials of the Ken. By allowing himself to be approached also by private individuals, and travelling in the gaze of the multitude as it were, he displayed a desire to break down the barrier which for so many ages has divided the throne from the people in this country.

Mr. Nomura, the newly appointed governor of Kanagawa, soon after his accession to office, published a notification cautioning natives against accepting the notes of the foreign banks. Immediately on the appearance of this extraordinary manifesto three of the four foreign banks advertised that they would not accept the notes of the

native banks; and this refusal is virtually in force to this day.

Prince Kuwa-cho-sanhin-no-miya, a cousin of the Mikado, and an Admiral in the Imperial Japanese Navy, died in his twenty-seventh year. Consular trade reports for Kanagawa, Nagasaki, and Hakodate were published, each showing a serious falling off in the native trade. A fire in Benteu, Yokohama, destroyed one hundred and eight houses. The *Audacious*, H. B. M. flag-ship on this station, and her tender the *Vigilant* arrived in Yokohama. The infant daughter of the Mikado died, shortly after His Majesty's departure from Tokio for the north. Captain C. P. Jones, the master of the *Oxfordshire*, having transferred his agency from Messrs. Jardine, Matheson & Co. to Messrs. Smith, Baker & Co., was sued by the former firm, and, although he got his tea-cargo hence to New York from the latter, was ordered in H. B. M.'s Consular Court to pay commission at the rate of five per cent on £9,000, the estimated value of the freight, to Messrs. Jardine Matheson & Co.

The annual general communication of the Grand Lodge of Freemasons was held on the 24th June. The Silk season opened with very high prices, a state of things caused by the receipt of news of the partial failure of the crop in Europe. The Centennial Fourth of July was a very dull anniversary in Yokohama.

A government notification vested in the Naimusho the arbitrary power of suppressing newspapers and periodicals apparently prejudicial to the public welfare; and the Naimusho within six days of the promulgation of the notification, probably with a view to testing its power, suppressed three papers and magazines, the iniquitous regulation having been given a retrospective action.

The Japanese workmen employed in the construction of the buildings for their country's section at the Philadelphia Exhibition, returned to Japan this month. Another of those interesting and valuable documents, which reflect so much credit upon the British Consular Body, trade reports, that for Hiogo and Osaka, 1875, was compiled by Mr. A. A. Annesley and published.

The year under review saw the inception and failure of two journalistic ventures. The *Japan Fortnightly Review*, intended to be devoted to religious, scientific, temperance, and literary subjects, after one issue, was gracefully allowed to glide from its cradle to its grave; and the *Ostasiatische Zeitung*, a German sheet, made two spasmodic efforts to live and failed in each. After the final collapse the Editor, Mr. Egmont Sutor, left precipitately for San Francisco.

In August their Excellencies Sanjo, Prime Minister, Ito, Terajima, Okuma, and other officials of high rank, paid a visit to the Island of Yezo. The Summary of the foreign trade of Japan for 1875 was issued by H. B. M. Legation. Some narrow escapes of explosion through carelessness in the stowage of kerosine in Tokio and Yokohama were reported. A Japanese coolie, carelessly handling a shell fuze, caused it to explode and was blinded. Dr. Burdon, Bishop of Victoria, Hongkong, paid a visit to Japan, and held confirmation services here and in other ports. There was great excitement in the Silk and Exchange markets. Inferior silks were taken up at about any price holders liked to ask; and exchange went up to the rates quoted twelve months previously. The British steamer *Quangse* collided with the M. B. M. S. S. *Kanagawa-maru*, the latter vessel sustaining considerable injury. An

engineer, named Kelly, died from having eaten fish which had been chemically poisoned for the purpose of killing cats; and a young man named Wych shot himself on vacant ground on the Bluff, and died from his wounds a few days afterwards. The aquatic sports of the Yokohama Rowing Club were held.

The Spanish Minister had a private interview with the Mikado, when he presented a letter from King Alphonso to His Majesty, acknowledging a visit paid him by Mr. Uyeno. Salvage operations on the wreck of the French Mail steamer *Nil* were resumed. The Japanese envoys to Corea, intrusted with the duty of seeing the Treaty ports opened, arrived in Fusan and were well received. A severe drought having been experienced, disputes, and fights even, about water-right occurred in the agricultural districts. John Coleman, a Russian, Saloon Proprietor, fell from a verandah in his house, and died from injuries sustained in the fall.

On the 5th August the measure for capitalizing the state incomes of the nobles and gentry was promulgated by the government. This measure, which had for object to relieve the resources of the country by liquidating within thirty years from its date all claims of the hereditary pensioned classes, was received with general acquiescence by the persons most interested. Although it is virtually one of domestic repudiation, yet it would be hardly just—in fact there is no actual analogy between Japan and Western nations in the matter—to judge it by the standard which would have to be applied to such action, were it possible, on the part of a European country. Indeed, if the nobles and gentry themselves accept it quietly or cheerfully as one of necessity, outside people have little right to condemn it.

In September the M. B. M. S. S. Co., finding the trade between this port and Kobe had largely increased, put an additional large steamer on that line. A Chinese Company commenced to run steamers between Shanghai and Kobe. A notification emanated from the Ministry of Justice ordering the Courts to decide upon the evidence produced before them. This was held to be a virtual abolition of the use of "the question" in Japanese Courts. The dispute between the Yokohama Race Club and the community, as to the proprietary right in the Race Course, was decided by the Foreign Ministers, who, with one exception, pronounced emphatically that the right was vested in the community. H. E. Mr. de Struve, Russian Minister, received the decoration of the first class of the new Japanese Order of Merit, at the hands of the Mikado. The captain of the British barque *Gaucha* was fined \$60 and costs in H. B. M.'s Court at the suit of the Customs for neglecting to enter his vessel in this port on his return, en route for Europe, from Shinagawa with a cargo of rice. A depositor in the Comptoir d'Escompte de Paris, wishing to withdraw a fixed deposit before its expiry, was denied by the Bank. He brought the case into the French Consular Court, where it was decided against him. The *Jinkai-maru*, a Government vessel built at Yokoska, was launched in the presence of two princes of the Imperial family and a large crowd of spectators native, and foreign. A large financial operation, conducted by the Shosha when dollars were very scarce, turned out through a fall in exchange most favorably for the native bank. Telegrams were received from China announcing that Sir T. F. Wade and Li Hung Chang had arrived at a settlement of the difficulty arising out of the mur-

der of Mr. Margary in Yunan. On the 17th of the month a heavy gale swept over the coast of Japan doing, however, but trifling damage to property. Codification of Japanese criminal law was and has been steadily proceeded with. The Japanese law of surety was translated at H.B.M. Legation and published in this journal. The U. S. S. *Alert*, replacing the *Saco* on this station, arrived in Hongkong via the Suez Canal. Press prosecutions were continued with unabated severity.

In October Mr. Sanjo and his colleagues returned from their tour in Yezo. It was expected at the time, and is still far from improbable, that one important result of the Prime Minister's visit to the island would be the withdrawal therefrom of the Colonization Department. Intelligence was received of the loss, off Kokaishima, of the British barque *Theseus* bound from Manila to San Francisco. The captain, mate, and eight men were drowned: thirteen of the crew were saved. Messrs. John Robertson, E. de Bavier, R. de Monbel, Henry Allen, Jr., and E. Fischer were appointed, by a general meeting of the Y. R. Association, a Committee to draw up regulations, &c. Trustees of the Race Course were appointed by the Consular Body. A meeting of the Bluff land-renters was held, at which a committee of seven gentlemen of different nationalities was nominated and requested to enquire into the grievances of the renters and to report progress. Gindle, a seaman of the American ship *Imperial*, received a sentence of six months imprisonment for stabbing the chief mate in the arm on board the vessel. The mate, in the struggle, drew his revolver and shot his assailant in the arm.

The British Colony of Hongkong joined the Postal Union, thereby assuring a considerable reduction in the postage rates to Europe from Hongkong and hence, which is expected to come into operation shortly. About this time warlike telegrams continued to be received from Europe, and grievously affected the silk market. An address from, Shimadzu Saburo to the Mikado, written two years ago, was translated in the *Japan Gazette*. The M.B.M.S.S. Co., in the absence of any opposition to their trade in the Inland Sea, raised their rates for freight and passage to a tariff much higher than had been enforced before, but still fairly reasonable. The "Chefoo Convention" was published here from the China papers. Slight shocks of earthquake were felt. The American schooner *Olsego* was lost when returning from a successful otter-hunting cruise. Mr. Carst and one of his partners, salvors of the wreck of the *America*, commenced salvage operations on the wreck of the *Nil*, which had been abandoned by the Japanese. The *Kearsarge* left for Hongkong on receipt of a telegram thence on the subject of the *C. O. Whitmore* outrages. Translations of the Supplement to the Japanese-Corean treaty, and the trading regulations, were published.

In November the Kuma-moto insurrection of samurai, which broke out at the end of the previous month, and the other risings connected with it, were entirely suppressed within three weeks of their commencement. At Kuma-moto the trouble assumed a serious complexion. The General in command of the troops, the Governor of the Ken, and thirty-six officers of various ranks, were killed, the barracks were set on fire; and the soldiers were taken by surprise and driven from their quarters. But this was the only serious success obtained by the rebel arms. The Government was strong enough to quell

the disturbances without difficulty. Mayebara, the ringleader, a very influential shizoku and ex-retainer of Choshu, with his brother and others of his subordinates, was arrested. He, his brother, and eleven of the more responsible of their associates were beheaded. Some pity and respect must be accorded to Mayebara, who contributed largely to the restoration, and appears to have been sincere and conscientious in his motives, however mistaken these may have been.

The *Onyokuwan*, the gun-boat which was fired upon by the Koreans in the previous year, was wrecked in a gale of wind in the Ki-channel. Race-meetings of the Yokohama Race Club, and Racing Association, were held, the former on the 2nd, 3rd, and 4th, and the latter on the 16th, 17th, and 18th November. The Young Men's Christian Association was abolished; and in its stead the Christian Association, with a wider scope than its predecessor, was established. In H. B. M.'s Provincial Court, Mr. H. S. Wilkinson, Acting Law Secretary, characterised the conduct of Mr. F. V. Dickins, a barrister practising in his Court, as unprofessional. Mr. Dickins, who was not allowed to explain in Court the action on his part which was so condemned, did so in the *Gazette*.

H. M. the Empress left Tokio for the old capital Kioto on the 20th November. On the night of the 29th-30th a great fire burst out and raged in Tokio, destroying nearly ten thousand houses. Subscriptions were made by foreigners in aid of the sufferers.

On the 2nd December there was another fire in Tokio, which, but for coming so soon after the great conflagration, would have been considered serious, as 226 houses were burned by it to the ground. General Van Buren in the U. S. Consular General Court, aided by two assessors, gave judgment on the case of the *Tokio-fu vs. Batchelder*. He found that the defendant was not liable for the ground-rent claimed by the Government, the latter having failed, by allowing foreigners to reside in Tokio outside the Ts'kidji. concession, in its part of the conventions. He certified further to the loss sustained by the defendant through the depreciation in his property consequent in such failure.

After a sojourn of five years on this station, the U. S. S. *Yantic* left for Norfolk, Va. The *Oceanic* made her December trip to San Francisco hence in 14 days 15 hours, the quickest time on record. The British ship *Mary Fraser* which went aground on the 20th November, in a gale, in Akashi straits, was got off with the assistance of H. M. S. *Sylvia* and towed into Kobe.

Scarcely were the Kuma-moto troubles suppressed, than agrarian riots were reported from the provinces. Farmers, discontented with the working of the new land-tax, and unable to find the wherewithal to satisfy the tax-gatherer, rose, armed themselves, and banded together in some instances in large numbers. These riots have been put down, however, with little trouble and but slight bloodshed.

A famine was reported to be prevailing in Corea. Press prosecutions have continued to the end of the year. Thirty-one journalists were confined in one gaol, at the time of the recent release, on the expiration of his term of imprisonment, of one of the offending editors. A serious fracas between some thirty sailors from the German man-of-war *Vineta* and a Japanese mob occurred in Takashimacho. One of the sailors was killed; and several more were very badly beaten. Some Japanese police and coolies were also injured in

the broil. Large fires occurred in the provinces. Mr. H. B. Joyner, Director of the Meteorological Department, published an interesting pamphlet upon Meteorology in Japan. The Japanese having decided upon fresh colonisation experiments in the Bonin Islands, Mr. Obana, the newly appointed Governor of the Islands, left for his post. The Yokohama Race and Athletic Clubs held their annual meetings, reports of which have been published. A new light-ship was launched at the yard of the Light-house Department, Benten. On the 30th December the foundation-stones of a German Hospital were laid with ceremony on the Bluff; and with our notice of this event, which was also the last important event of the old year, we will close our brief review of 1876.

THE SHOOTING REGULATIONS.

THE *Japan Daily Herald* in its issues of the 4th and 5th instant gives the following translations of the form of license to be issued to foreigners wishing to shoot, and of the covenant to be subscribed by them.

"FORM OF LICENSE."

"Nationality
"Name.....
"Age.....
"Resident"

"This license is only for the present shooting season, viz.: from the day, on which it is issued, until the 15th day of the 4th month of the 10th year Meiji (April 15th 1877). The sum of ten gold yen has been paid for this license, and conditions upon which it is issued are as follows.

"I.—That the above named..... shall not shoot or pursue game between sunset and sunrise, nor wantonly shoot and kill, merely for amusement, birds not used for food.

"II.—That he shall not at any time shoot in any of the following places, viz.—

"In any city or town, or in any place where there is a collection of people.

"In any place where there is fear that the projectile may reach any dwelling house.

"In any place outside of the Treaty limits.

"In any place where a notice prohibiting shooting is posted up, such notice showing two fowling pieces crossing each other, and over them four Japanese characters signifying "shooting prohibited here."

"In any place covered with standing crops.

"In any enclosure around any temple, or in any other place surrounded by a cord or temporary fence."

"FORM OF COVENANT."

"E. B., citizen or subject of....., hereby covenants and agrees to, and with the Kenrei of..... (in Tokio, with the Chief of Keisicho), in consideration of a license to shoot, granted this day to him, the said E. B., by the said authority of....., that he, the said E. B., will strictly observe the following conditions, to wit:—

"I.—That he shall not shoot or pursue game between sunset and sunrise, nor wantonly shoot and kill, merely for amusement, birds not used for food.

"II.—That he shall not at any time shoot in any of the following places, viz.:—

"In any city or town, or in any place where there is a collection of people.

"In any place where there is fear that the projectile may reach any dwelling house.

"In any place outside of the treaty limits.

"In any place where a notice prohibiting shooting is posted up, such notice showing two fowling pieces crossing each other, and over them four Japanese characters signifying 'shooting prohibited here.'

"In any place covered with standing crops.

"In any enclosure around any temple, or in any other place surrounded by a cord or temporary fence.

"III.—That on the demand of any Japanese officer, he will exhibit the said license for inspection, and will not allow the use of the said license to any other person, and will not use the said license himself after the 15th day of the 4th month of the 10th year Meiji (April 15th, 1877), but will,

within 20 days after that date, surrender the said license to the authority from whom the same has been obtained; and he, the said E. B., further covenants with the said authority of..... that for the violation by him, the said E. B., of any of the aforesaid conditions, he shall pay to the said authority of..... the sum of ten dollars, and thereupon the license shall become null and void.

".....day ofmonth
"ofyear Meiji."

We have always held and still hold that it is only right and proper that some license-fee should be paid by foreign sportsmen for the privilege of shooting; and the sum of ten dollars for the season is not excessive and will not be objected to by true sportsmen, while at the same time the fee, and the clause of the regulations which prohibits shooting in the neighborhood of houses, will happily put a stop to the antics of those who make it an amusement to beat the by-ways in the immediate vicinity of the towns, and "pot" sparrows and other small birds perched in trees and on bamboo fences. Still, as this season is already half over, it would have been well had only half the amount of the license-fee been exacted for the unexpired period; but, we repeat, the true sportsman will hail with joy the promulgation of regulations, which are no more restrictive than those in force in Europe, and by conforming with which he will be able to pursue his favorite sport without let or hindrance. As he will not probably do more than grumble a little at having to pay the full fee for only half a season's sport, and as it is for him that the regulations have been passed, we can well let the matter stand as it is.

Sir Harry Parkes' draconian notification is a little amusing, and there is rather more in it than meets the eye. He appears to have been the only one of the Ministers who objected to the fines, to be paid by British subjects for violating the regulations, going into Japanese coffers, and to his insistence is probably due the delay in the promulgation of the regulations. He ceded at last; but, determined not to be altogether beaten, he has provided punishments, specially for offences committed by those under his protection. It is to be hoped that no British subject will render himself liable, by defying Sir Harry, to enrich the funds of the Consulate by one hundred dollars, or to serve, with or without hard labor, for thirty days in the Consular Gaol. Meanwhile, there can be no disputing that Sir Harry has despotic proclivities. Fortunately, even his power is limited, and there is little chance of his being able to emulate in fact, however much he may do so in fancy, the acts of Dionysius of Syracuse, or his own more modern namesake, the eighth English monarch of the name. The other Ministers take a milder view of the heinousness of non-compliance with Japanese edicts, and a less comprehensive one of their own powers.

JAPANESE EDUCATION. *

"IT is hoped that the account here given in regard to the progress and prevalence of education in Japan may not be without interest, even to those favored Western nations whose science and culture have given them their preëminence." Such is the hope expressed in the preface to the work now before us, a wish which a perusal

of the little book itself convinces us will be amply gratified. Certainly the "Outline history of Japanese Education" was not the least interesting of the exhibits at the Philadelphia International Exhibition; for "the early introduction of letters into a country, the foundation of schools, the encouragement of education by the Government, the growth of literature and a literary class, and, above all, the diffusion of learning among the people, are, to those who desire to understand the history of that country's civilization, important subjects of enquiry." To any person of education the rise and progress of education in Japan must be matter of enduring interest.

The thanks of the compilers are given specially to Dr. Verbeck, who revised the translation of nearly all the chapters. The introductory chapter was written by Dr. David Murray, who also exercised editorial supervision over the publication. Chapters I to IV, comprising an account of the introduction and progress of education, were compiled by Otsuki Sinji, with the aid of Naka Mitchitaka, and translated by Okkotsu Tarotsu. Chapters V and VI were compiled by Sakakibara Yosino, and translated by Suzuki Tada-ichi, and Okkotsu Tarotsu; and the Chronicle of events composing Appendix II was prepared by Tsumagi Yorinori, secretary to the Minister of Education. With such writers and annalists employed upon the preparation and revision of the work, failure of success in adducing and laying before the reader in a readable shape much matter of great interest, would have been subject of surprise.

As for the modern introduction of western learning into Japan, so for the earliest impulse towards the cultivation of letters, Japan has been indebted to foreign sources. It is somewhat strange as proving how history, which is said to repeat, often reverses itself, that the first lettered efforts of Japan should have been prompted from a country, which it will in the early future probably be Japan's mission to civilize and instruct. Corea was the country whence were derived the first seeds of learning. The real history of Corea has much analogy with the fabulous history of Ireland, which country is fondly credited with having, before it relapsed (?) into the more than semi-barbarism of the middle ages, given learning, letters, priests, and teachers to the Courts of Europe. While all probabilities and the results of induction tend to deprive Ireland of this position assigned her by poets and enthusiasts, there can be no question that Japan, which has subsequently invaded on several occasions the territory of Corea, and now bids fair to be the means of that country's accepting the arts and civilization which she herself has borrowed from the West, was principally beholden for the possession of that advanced state of civilization, and profound culture of esoteric art and literature, observed in the higher classes of her people since ever the traders and proselytisers of Europe visited her shores, to the early lessons of Corean teachers.

The introductory chapter contains brief sketches of the great schools, and school life of old Japan, showing the intense application formerly required from the lettered, which was also the military, class to attain even an average amount of accomplishment in a branch of learning which, after all, was almost profitless, its highest scholars being profoundly ignorant of useful sciences, and excelling only in the arts, for such they

really became, of official letter-writing and versification. These sketches are followed by others of "Modern Education," the "Origin of the Department of Education," the "System of Administration," and the construction and working of the "Department of Education." The remainder of the chapter is devoted to the consideration of the elementary, normal, and foreign language schools, the University of Tokio, and the professional and technical institutions of the Empire, with *résumés* of the courses followed in each.

The following paragraph on the condition of the Press in Japan was evidently written before the rigid enforcement of the Press Laws which date from August 1875; and the last part of the last sentence is now unfortunately the direct contrary of what is now and has been for many months the case. We must take exception also to the comparison which would place the writings in the native press upon a par with the "best journalism of modern times."

"The newspaper, in the present sense, is a new institution in Japan, dating back only about nine years. The design in its first establishment was to provide a means of explaining and defending the progressive measures which the Government had adopted. Since that time newspapers have multiplied rapidly, so that now there are more than one hundred in different parts of the country. In the capital alone there are at least a dozen, many of which have a large circulation, two at least reaching ten thousand daily. The best literary talent of the day is employed upon these newspapers, and subjects of public and international interest are discussed with a force and intelligence which will bear comparison with the best journalism of modern times. There is a bureau for the regulation of the press, and occasionally unpleasant collisions have occurred, but in the main a large degree of liberty is allowed by the Government, and a hearty support is tendered by the press."

Compiled and translated as the next four chapters are by highly educated Japanese, they contain much that will be found new to the foreign student, however well versed in the history of Japan, and much more, which, if not actually new, is yet presented under a guise which gives it all the charm of novelty. In connection with Japanese relations with Corea, and the report circulated some time since that the Corean Government had applied to that of Japan for a Japanese medical practitioner, well versed in European medical science and practice, to be sent to Corea, it is interesting to remark that the compliance with the request will only be a return for past favors of the same kind conferred by Corea upon this country. Now-a-days, in literature and in science, the relations of teacher and taught as between the two countries are reversed. "In 412 A.D. the Emperor Jukio sent for physicians to Shirako, one of the states of Corea." Just below this we read of a student and a priest returning to Japan after having been educated in China. Probably it would save China much trouble in the future, if in this generation she would allow her students of the better class to learn something from Japan. For other and more valuable information of the history of education, which is also the history of the empire, presented in a concise and readable form, the portion of the work comprised in these four chapters deserves special recommendation to the students of Japanese history.

Equally interesting are the two remaining chapters, the second of which, devoted to the Japanese arts and sciences, gives, among other useful information, descriptions of the manufacture of paper, pencils, and ink.

* An Outline History of Japanese Education; prepared for the Philadelphia International Exhibition, 1876, by the Japanese Department of Education. New York: D. Appleton & Co. 1876.

The appendices are five in number, and consist of:—I. Constitution of the Japanese Department of Education: II. Chronicle of Events in the Recent History of the Department of Education: III. List of Emperors: IV. List of Year-Periods: V. Catalogue of the articles exhibited by the Japanese Department of Education.

Among these articles the exhibition of instruments, ancient and modern, must have been particularly attractive, and a practical evidence and illustration of what the little work we now close so well describes in an outline sketch, namely, the "History of Education in Japan."*

* In August 1875, on the anniversary of the day on which the Department of Education was organised, Tanaka Fujimaro, Vice-Minister, presented the following address to the Mikado. It is well worth reproducing here, as showing the appreciation by the officials of the Department of the difficulties before them in their work of reorganising the entire educational system of the Empire, and the hope nevertheless entertained by them of arriving at good results:—

"Your humble servant has had the good fortune to hold his office at a favorable time when civilization is beginning to be diffused, and the people are gradually becoming cultivated. Although it is my earnest desire to advance the affairs of this department, still it is not long since it was organized, and its operations are comparatively recent. In regard to sanitary matters which are at present under its direction its imperfection is apparent. But, in regard to its educational duties, it is the humble opinion of your servant that it has in some degree established order and system. I am, therefore, happy respectfully to present to your majesty the first annual report of this department. In this report for the sixth year of Meiji (A. D. 1874) are shown the internal arrangements of the department, together with the work it has accomplished, and the condition of the schools and school-districts regularly classified under appropriate heads. For the purpose of easy reference, an abridgment is attached. Owing to the necessity of respecting local customs, and to the incompleteness of the reports received from the cities and provinces, some discrepancies will be discovered. It is the opinion of your humble servant that the time when complete and correct reports may be obtained, and when such reports shall show that every family is educated and every individual is in good health, only be reached by gradual and slow approximations. Your humble servant, therefore, respectfully presents this report, such as it is, and begs your majesty's gracious acceptance and examination of the same."

THE POSTMASTER GENERAL'S REPORT.*

THE comparisons in the last report published by the Postmaster General, in consequence of the change from the calendar to the fiscal year, were made by doubling the actual accounts for the half year ended 30th June, 1875, the period then considered. This system, however, having been found to lead to some inaccuracies, has been abandoned, and the accounts for the whole years ending 30th June, 1875 and 1874, respectively, have been compiled, and the results compared with those of the fiscal year treated of in this report.

The ordinary revenues of this Department for the year under review and including postages,—and the fines paid to the Judicial Department on account of infringement of the Postal Laws and Regulations, the funds received for the sale of mail steamers, and other revenues which, though properly be-

longing to this Department, being excepted, —were Yen 595,201.83.

The expenditures (exclusive of the subsidy paid to the Mitsu Bishi Mail Steamship Company, and the money given to the same Company for the establishment and maintenance of the Marine School) were Yen 709,321.92, and the disbursements of the Bureau, Dzusho Kioku, for printing and the purchase of books, were Yen 3,922.27, making the total expenditures Yen 713,244.19.

An excess of expenditures over revenues amounting to Yen 118,042.36, or a little more than 19.8 per cent, is shown. This excess does not wholly arise from the expense of maintaining the Postal Service, but a portion of it is due to the fact that the salaries of officers, and other expenses of the Marine Board, and of other sections whose duties are not connected with the Post Office proper, are included in the expenditures, in order to avoid the necessity of a separate account.

The estimated revenues were Yen 570,000, while the actual revenues were Yen 595,201.83, or Yen 25,201.83 more than the estimate. This increase is attributed to the greater facilities and conveniences afforded to the public by the establishment of new mail routes, the increase of service on routes already established, and to the greater number of collections and deliveries of mail, which now take place ten times per day in Tokio, and have been increased in the same proportion in places of less importance.

The estimated expenditures were Yen 714,244.00, but the actual disbursements were Yen 713,244.19, or about Yen 1,000 less than the estimates.

The difference between the estimates of expenditures, as above given, and as published in the last report, arises from the fact that, since that report was issued, all merchant ships were placed wholly under the control of this Department, and the remittance of all monies from the different Departments to the local Governments, was given into its charge, and therefore Yen 17,244.00 were added to the estimates, to meet the necessary expenses connected therewith.

A comparison of the revenues of the fiscal year ended 30th June, 1876, with those of the year ended 30th of June, 1875, shows a gain of Yen 146,674.41, or 32.7 per cent; and a comparison with those of the year 30th of June, 1874, shows a gain of Yen 302,875.54, or 103.6 per cent, a very considerable gain, and one which bids fair to be progressive. The expenditures it is true increase though not in quite an equal ratio; but the indirect gain to the state by increased facilities for postal communication more than compensates for any burden that communication may impose upon the resources of the Government.

The increase in the expenditures of this year was Yen 118,655.36, or 20 per cent, over the expenditures of the year ended the 30th of June, 1875, and Yen 359,368.20, or 101.6 per cent, over those of the year ending 30th of June, 1874.

The estimated revenues for the next fiscal year, are Yen 654,517.00, or Yen 59,315.17, being 10 per cent, more than the actual revenues of the past year; and the estimated expenditures for the next year are Yen 786,096.00, or Yen 72,851.81, being 10.2 per cent more than the actual expenditures of the past year.

A comparison of the estimated revenues and expenditures of the fiscal year ending June 30th, 1877, shows a deficiency of Yen

131,579.00, or 20.1 per cent. This deficiency, compared with that of the past fiscal year, shows a relative increase of three-tenths of one per cent; and the deficiency of the past year, compared with those of the years ended June 30th, 1875, and June 30th, 1874, respectively, shows a decrease of 12.7 and 1.3 per cent.

This continued fluctuation in the deficiencies is accounted for by the increase in the amount of business transacted, the Department being yearly enlarged, and its work increased by the addition of new duties, causes which are quite sufficient to explain the apparent irregularity. It is worthy of notice that the subsidy paid to the Mitsu Bishi Mail Steamship Company is not included in the ordinary expenditures, inasmuch as it was granted for the purpose of affording the convenience and advantage of regular steamship communication between the different ports of Japan, and between China and Japan, and so can hardly be considered a purely departmental expenditure, although the direct expenditures have been greatly reduced in consequence of the free transportation of the mails, in return for the said subsidy, which amounted to Yen 187,500.00; and the amount paid to the same Company for the establishment and maintenance of the Marine School was Yen 8,750.00.

We subjoin a table of comparative revenues and expenditures for 4 years, from the 1873, 1st of July, to the 30th of June, 1877.

YEAR.	EXPENDITURES.	REVENUES.	DEFICIENCY.	PER CENT.
Fiscal year ending June 30th, 1877, Estimate....	Yen 786,096.00	Yen 654,517.00	Yen 131,579.00	20.1
Fiscal year ended June 30th, 1876....	713,244.19	595,201.83	118,042.36	19.8
Year ended June 30th, 1875.....	594,588.83	448,527.42	146,061.41	32.6
Year ended June 30th, 1874.....	353,875.99	292,326.29	61,549.70	21.1

The aggregate number of letters, newspapers, books, patterns, &c., transmitted in the mails during the fiscal year ended June 30th, 1876, was 30,162,614. During this year there has been an increase of 6,856,755, or 29.4 per cent., over the number transmitted during the year ended June 30th, 1875, and of 14,910,631, or 97.8 per cent., over that of the year ended June 30th, 1874.

The number of domestic newspapers transmitted in the mails during the past year, was 5,049,415, which is an increase of 1,631,780, or 47.7 per cent over the number transmitted during the year ended June 30th, 1875, and of 3,663,059, or 264.2 per cent over that of the year ended June 30th, 1874. The Postmaster General comments upon this part of his subject thus:—"Although the number of letters, newspapers, &c., transmitted in the mails is still very small, when the population of the Empire is taken into consideration, yet, if we compare it with the number transmitted in the preceding years, we see that great progress has been made in the short time which has elapsed since the establishment of our postal system, a system which may still be regarded as in its infancy, but which, if conducted with proper care and effort, affords us a very reasonable hope, that it will finally attain a high degree of efficiency in all its branches, and will, while it serves the public as a useful agent, at the same time become a source of high honor to the general Government."

* Fifth report of the Postmaster-General of Japan, for the fiscal year ended June 30th, Ninth Year of Meiji, (1876). Printed at the Japan Gazette Office.

The mail routes in operation at the close of the year, aggregated 32,902.5 English miles in length. The increase over those in operation at the close of the year ended June 30th, 1875, was 6,277.5 English miles, or 23.6 per cent, and 7,685 English miles, or 30.5 per cent, over those in operation at the close of the year ended June 30th, 1874.

The total annual transportation, exclusive of that performed by steamers, was 13,406,115 English miles, which is an increase of 1,626,255 miles over that of the preceding year, and of 1,965,080 miles over that of the year ended June 30th, 1874.

During the year there have been established 242 post-offices, 41 receiving agencies, 132 stamp agencies; and 190 street letter boxes have been erected. There are now in operation 3,691 post-offices, 124 receiving agencies, 835 stamp agencies, and 703 street letter boxes.

The number of articles dispatched to, or received from, foreign countries during the past year cannot be compared with the actual number dispatched or received during the year preceding, as the foreign mail service was not in operation until the 1st of January, 1875. However, if an estimate for the whole year ended June 30th, 1875 is made by doubling the actual number dispatched, or received, from the 1st of January to the 30th of June, which gives 157,648, for the number of mails dispatched, and 143,894 for the number of mails received, a comparison made with that estimate, shows an increase of 25,226 in the number of mails dispatched during this year, over the estimate for the preceding year, and an increase of 18,757 in the number of mails received.

The cause of this increase is thus pertinently explained:—"It was not from any increase of the foreign population in Japan, nor of the number of Japanese abroad; nor were the business interests in this country more prosperous than last year; but, when the foreign service was first placed in operation, there was considerable prejudice against it in the minds of Foreigners, and some fear that it would not be properly conducted, or that our mails would only be received in the United States. However groundless these fears and prejudices were, they undoubtedly affected the mails for some time. To a greater extent the increase is due to the reduction in postage, and to the better facilities for communication afforded by the establishment of a Japanese Postal Agency at Shanghai, which has led to the transmission, by way of Japan, of a fair proportion of the correspondence from China, addressed to America and Europe. There has also been a very considerable increase in the number of communications between Japanese residing abroad and their friends and relatives at home."

The establishment and working of the Japanese Postal Agency at Shanghai are thus alluded to:—"The Japanese Postal Agency at Shanghai, China, was established in April of this year, and communication opened between it and the ports of Japan. Stamp and receiving agencies will also be established within a short time at the other open ports of Northern China, and when that is accomplished, there will be regular mails to, and from, all of these ports *via* Shanghai. At all these agencies, mails may also be posted for America, and countries beyond *via* America, at the same rates as those originating in Japan. Our present postal relations with other countries, though still restricted, present an agreeable contrast to the entire absence of such relations a few years since.

Until very recently all correspondence dispatched from, or received in Japan, was entirely under the control of Foreign Governments. Now, however, besides our regular exchange of mails with the United States and other countries *via* the United States, a line of steamers has been established between Japan and China, which conveys the mails in either direction under the Japanese flag, and an agency has been established in a foreign country. So that, in addition to the management of our own mails, we are assisting in furnishing a postal service for our neighboring Empire, China."

The rate of postage between Japan and the United States which in January, 1876, was reduced to 12 sen, in accordance with the 3rd article of the postal convention signed at Washington on the 6th of August, 1873, was again reduced to 5 sen from the 1st April, 1876.

It appears that difficulties are still experienced in treating the domestic correspondence of foreigners directed to the Japanese, or to Japanese towns wrongly spelled in their own language, or with Japanese characters added improperly written, or written in the wrong place, but by experience in handling mails so addressed, and the greatest care on the part of the clerks in charge, miscarriage and delay arising therefrom, have been to a great extent avoided.

The information given as to dead, lost, and stolen letters is interesting. The comparatively small number of one hundred and fourteen letters were actually lost, one of which contained Yen 3.76. The number of persons charged with stealing letters and other articles transmitted in the mails, or with otherwise violating the postal laws and regulations, was 82, and 16 cases were waiting decision at the close of the last year, making a total of 98. Of these 74 have received sentence and 24 were held over. The amount of fines imposed by the Judicial Department, for violation of the postal laws and regulations, was Yen 95.90.

The number of postal money orders issued during the fiscal year ended June 30th, 1876, was 191,191, of the aggregate value of Yen 3,714,420.80, which is a gain over the estimate for the preceding year, of 112,395, or 142.6 per cent in the number of orders, and of Yen 2,333,185.84, or 168.9 per cent in the amount of money represented. The number of orders paid was 185,115, amounting to Yen 3,707,833.94 which is an increase, over the estimate for the preceding year, of 109,579, or 145.1 per cent., in the number of orders, and of Yen 2,364,583.98, or 176 per cent., in the amount of money disbursed. The excess of orders issued was 6,076, amounting to Yen 6,586.86.

The money order fees collected amounted to Yen 21,137.59, showing an increase of Yen 13,692.60, or 183.9 per cent., over the amount estimated. The money order funds, including private funds advanced by postmasters by special arrangements, were Yen 345,000, of which Yen 60 were destroyed by fire at the burning of the office at Takata, Yechigo, leaving the actual amount now employed Yen 344,940. The whole number of money order offices, including the General Post Office, in operation at the close of the year was 310, of which 196 were established during the year. Notwithstanding this increase, according to the report, the number of offices in operation is quite insufficient to meet the wants of the public. "The accumulation of funds, and the training of the officers to properly transact the business, must, how-

ever, keep pace with the extension of this service, and it must also be kept in view that it has only been in operation one year and a half, too short a time to attain to anything like the perfection and usefulness that it is confidently hoped it will attain after a reasonable period.

The working of the Post Office Savings Bank system, established in January 1875, is next considered, and the report on this subject is of sufficient interest to be quoted at some length:—"The amount deposited during the past year was Yen 33,825.73, and the certificates issued were 17,794. The increase in the deposits over double the actual deposits for the half-year ended June 30th, 1875, was Yen 21,608.10, or 176.9 per cent; and the increase in the number of certificates issued, was 8,838 or 98.7 per cent.

"The amount deposited, together with the amount on deposit at the close of the preceding half fiscal year, makes a total of Yen 38,712.97, in 21,502 certificates. The amount withdrawn was Yen 9,530.32; the interest paid to depositors was Yen 718.05, and the number of certificates returned was 2,128. The amount on deposit at the close of the year was, therefore, Yen 29,182.65; and the number of certificates was 19,374.

"The number of new depositors was 3,887, which, added to the 782, who continued their deposits from the preceding half year, makes a total of 4,669. The number of persons who withdrew their deposits was 367, leaving the whole number of depositors, at the close of the year, 4,302. The amount remaining on deposit averaged Yen 6.78 for each depositor and Yen 1.51 for each certificate.

"The number of offices established during the year was 70, making the total number of offices in operation 89. It is useless to hope that any high degree of prosperity can be attained with so small a number of offices, and in fact, for the present, it is only expected to gradually educate the people to appreciate the benefits sought to be conferred by the system, while at the same time the officers are gaining the experience necessary to the proper management of its affairs. Moreover, should it be extended too hastily, and without the greatest care, it would be a source of great expense, without a corresponding benefit.

"Nevertheless the Department is not satisfied with its present condition, but is making every effort to advance its interests, and to secure its final success, and to that end will, as often as possible, establish new offices, and thus gradually increase the facilities for depositing small savings."

To encourage habits of prudence and the accumulation of small savings in a people naturally so improvident as the Japanese is a worthy work; and the government in prosecuting it through the agency of the post office department is doing much towards the encouragement of a spirit of forethought and wish for independence among the poorer classes of its people.

In consequence of the increased business of the post office there has been a corresponding but not excessive increase in the official staff. Indeed the whole working of the department appears to be conducted on a praiseworthy system of economy, far removed from niggardliness, from which more favored (to use once more that hackneyed term) nations might learn a useful lesson. Only four foreigners are employed in the post office. The total number of officers and employes now in the postal service, is 5,270, and their salaries are Yen 204,142.18, which

is an increase of Yen 82,433.50, or 67.7 per cent over the salaries paid during the year ended June 30th, 1875.

Table of comparative salaries of officers and employés for 2 years, from the 1st of July 1874, to the 30th of June 1876.

DESIGNATION.	For the year ended June 30th, 1876	For the year ended June 30th, 1875	INCREASE.	PER CENT.
Salaries of Officers	Yen 60,482.26	Yen 47,387.77	Yen 13,094.49	27.6
Native employés.....	43,508.87	27,508.80	16,000.07	58.2
Foreign „.....	27,742.64	18,386.29	9,356.35	50.9
Postmasters.....	72,408.41	28,425.82	43,982.59	154.7
Total.....	204,142.18	121,708.68	82,433.50	67.7

In August, 1875, eighteen steamers purchased from the National Mail Steamship Company, at the request of that Company, and thirteen steamships already in the possession of the Department, were freely made over to the Mitsu Bishi Mail Steamship Company, to which Company a subsidy of Yen 250,000 per annum was also granted by the General Government, and a loan of Yen 810,000, in order to enable it to purchase the Pacific Mail Steamship Company's branch line of steamships, thus increasing and facilitating communication between the different ports of Japan, and between China and Japan, and securing it almost entirely to the Japanese flag.

In order to train and educate officers in the mercantile marine service, Yen 15,000 per annum were granted to the Mitsu Bishi Mail Steamship Company for the establishment and maintenance of the marine school, which is also under the superintendence of this Department.

The general rules and regulations for the examination and engagement of masters, mates, and engineers, of vessels of foreign form of construction, and other regulations, for the management of shipping, were drawn up and submitted to the General Government.

The number of ships wrecked and missing, during the calendar year ending 31st of December 1875, was 457, including ships both of foreign and native form of construction; and the number of persons wounded, drowned, and missing, was 188.

The remittance of monies from the different Departments to the local Governments, was placed under the charge of this Department in May, 1876.

The amounts for transmission, and transmitted, since then and the balance remaining on hand at the close of the fiscal year, are shown by the following table.

Designation.	Amt. Recd.	Amt. Paid.	Amt. awaiting transmission.
	Yen	Yen	Yen
Japanese Currency.....	8,462,854.17	8,321,872.05	137,982.12
Govt. Securities	77,675.00	77,675.00
Dollars.....	229.03	229.03
Total.....	Yen 8,540,758.20	8,402,776.08	137,982.12

“One, two, four, and five sen and five rin postage stamps, of new design, have been issued, and new designs are also being prepared for other stamps and the postal cards.”

“Post offices have been erected at Niigata, Nagoya, Kanazawa, Kagoshima, and Otsu; and the General Post Office buildings at Tokio, and the post offices at Kobe, Hakodate, and Shimonosaki, have been enlarged. Grounds and materials have also been purchased for the erection of post offices at Kyoto and Osaka.”

“A line of carriages has been established for the conveyance of mails between Tokio,

and Atsuta Owari, and a steam launch has been constructed, and is now ready for use, for the transportation of mails across the Inland Sea of Imagiri.”

“The number of official communications transmitted to, or received from, other departments and post offices, was 545,208, which is an increase of 292,590 over those of the preceding year.”

“Maps, showing the mail routes in operation throughout the country, have been published; and books entitled ‘Collected Information on Postal Affairs,’ Postal Guides showing all the details of the business transacted by this Department, have been compiled; and the Postal history of Japan, and the Directory giving the names of streets, villages, and other localities, are now about half completed.”

“For the purpose of improving our Postal Laws and Regulations, a careful selection has been made from those of Western nations and from our own, and a draft of the same is now nearly completed, and will soon be submitted to the general Government for its sanction.”

Once again we are glad to have the opportunity of congratulating Mr. Mayeshima upon the efficiency of his department, and the rapid progress towards the perfection of its development, in its various branches, made in the past few years of its existence. We have a confident hope that when the last improvement, to which he draws attention as to be soon effected, is brought about, foreign post offices will be abandoned in the Empire of Japan, which will then have the sole control of all postal communications, of whatever kind, coming to and leaving its shores. The competence of the postal department for the work is now abundantly proved; and there is no earthly reason to suppose that the trust once reposed in it by the transfer of the business of the foreign post offices would be abused.

RACES.

An attempt to get off some impromptu sports on New Year's Day on the Race Course resulted in their being postponed until the afternoon of the 6th inst., as it was feared they would interfere with the Paper Hunt which took place on Monday, as well as with other arrangements.

Although the Grand Stand was not so tasteful decorated as it usually is at the Spring and Autumn gatherings, it answered the purpose of affording a good view of the racing as well as ever. No tickets being required for admission to the Stand, it will readily be conceived that there were not many persons lounging around the gateways and fences. The recent heavy fall of snow left its effects upon the course, which was unusually heavy. The following is a report of the different events as they came off.

HURDLE RACE.—For all ponies that have never won a hurdle race. Once round, over six flights of hurdles.

The Baron's Kickapoo.....	10st. 0lbs...	1
Mr. Whitney's Doncaster	10st. 7lbs...	2
Dr. Buckle's General	10st. 7lbs...	3
Mr. Robertson's Oyama.....	10st. 0lbs...	4
Dr. Buckle's Slasher	10st. 0lbs...	0
Mr. Sprightly's Major	10st. 0lbs...	0
Mr. De Monbel's Mohstolz.....	10st. 0lbs...	0

All the horses named above started for this event. The *General* and *Kickapoo* took the first hurdle together, after which the grey went away with the lead. *Mohstolz* and *Major* declined the first jump until their

chance of winning was irretrievably lost. At the second hurdle *General* was still in front with *Doncaster* and *Kickapoo* close up. All the ponies took the leap and raced away for the next hurdle, at which the *General* tripped slightly but soon recovered himself, and went away with increased speed. After passing the trees, however, the pace began to tell, and *Kickapoo* went up with a rush. The two ponies took the hurdle together, but the *General* struck the rail and almost threw his rider. This accident enabled *Kickapoo* to take the lead, and it was thought that the race was his for a certainty. But on coming to the last hurdle he refused the leap. The *General*, who was next, also refused, which gave *Oyama*, who was running gamely, a chance, but he also refused, and *Doncaster* coming up took the leap. By this time *Kickapoo* was faced about and brought to the hurdle again, which he cleared in fine style, and succeeded in overhauling and passing *Doncaster*, thereby winning a very good race. The *General* was third and *Oyama* fourth.

SECOND RACE.—For all China and Japan Ponies. Winners of more than one race excluded. Three quarters of a mile.

The Baron's Nibookin	10st. 0lbs.	1
Mr. De Monbel's Davenport.....	11st. 2lbs.	2
Mr. De Bavier's Trustee	10st. 8lbs.	0
Mr. J. Robertson's The Moor	10st. 2lbs.	0
Dr. Buckle's General.....	10st. 11lbs.	0
Mr. Robertson's Nick	10st. 0lbs.	0

The favourite for this event was *Davenport*, who proved very fractious at the post and got off badly. The *Moor* took the lead until nearing the trees, when the horses went all together and changed places so rapidly that it was impossible to distinguish which was in front. The first to come out from the ruck was the favourite, followed by *General* and *Trustee*. But this state of affairs did not last long as *Nibookin*, who had been lying back, came with a rush through his competitors and challenged the leader, who was unable to put forth an extra effort: so *Nibookin* went to the front and won by several lengths. Time 1.42.

THIRD RACE.—For all Ponies. Half-a-mile.

Mr. Kingdon's Lodi.....	10st. 4lbs...	1
Mr. Robertson's Mandarin.....	10st. 8lbs...	0
Mr. Copeland's Glencoe	10st. 5lbs...	0
Mr. Copp's Grayling	10st. 4lbs...	0
Mr. J. Robertson's Oyama.....	10st. 2lbs...	0
Mr. De Bavier's Title Deed	10st. 5lbs...	0
Dr. Buckle's Sandboy	10st. 4lbs...	0

The start was a bad one. *Lodi* jumping off with a strong lead was never collared; *Mandarin*, who was considered the most probable winner, running second. *Grayling* bolted. No time.

FOURTH RACE.—For all ponies that have never won a race. Five furlongs.

Mr. Jaffray's Satz.....	10st. 5lbs...	1
Mr. J. Robertson's Moor	10st. 5lbs. }	2
Dr. Buckle's General.....	10st. 11lbs. }	
Mr. J. Robertson's Othello.....	10st. 8lbs...	0
Mr. De Monbel's Antidote.....	10st. 8lbs...	0

Antidote made the running at a rattling pace, but on reaching the hill began to lag and at length was passed by all the other horses. *Satz* went to the front and won with ease. A capital race for second place occurred between *Moor* and the *General*, resulting in a dead heat. *Othello* was left at the post. Time, 1.24.

FIFTH RACE.—Match. Half-a-mile.

<i>Lodi</i>	1
<i>Mandarin</i>	2

In consequence of *Lodi* getting a great advantage in the start of the half-mile race,

being as small as it was—not more than fifty persons being present. The performance itself was similar to others which Mr. Vertelli has given in Yokohama and Tokio. The tricks were all well executed without any exception, —the “Dancing Skeleton” being, perhaps, the most amusing; and Mr. Vertelli’s ventriloquism called forth well merited applause. The “Box Trick,” after Dave Carson’s explanation, has lost the mystery attached to it, but it was as cleverly performed on Saturday night as ever it was by Carson; and the addition of a bag in which the secreted person was, apparently, securely placed, with the mouth of the bag tied and sealed before being placed in the box, added somewhat to the interest of the trick.

Hakodate, December 21st, 1876.

During the past week the temperature has ranged from $24\frac{1}{2}^{\circ}$ to 44° F., with changeable weather, and snow on the 15th, 18th, and 21st.

H. I. R. M.’s transports *Gornostai* and *Japanetz* left on the 16th instant under sealed orders.

NEVER, since the visit of the Revd. Sholto Douglas, has Christ Church been so well attended as it was at the morning service on Christmas Day. The body of the Church was tastefully decorated with evergreens. The opening voluntary was the Pastoral Symphony from Handel’s “Messiah,” and the closing voluntary was taken from the same Oratorio. The Revd. W. F. H. Garratt, who was assisted by two other clergymen, preached.

MIDNIGHT mass on Christmas eve at the Roman Catholic Church was as fully attended as on former occasions, a great number of natives being present. The choir was not so complete as it was the previous year, and the musical part of the service suffered in consequence. Abbé Midon preached a sermon in English. The decorations of the Church were superb.

On the 25th ult. Messrs. H. Ahrens & Co. applied to the Judicial Court of Kanagawa for execution of the judgment in the case of Messrs. Ahrens & Co. v. Yagiya Chobei and Yorodzia Sadabei delivered against the defendants in April last, and by virtue of which they were to take delivery of 1,500 pes. prints on or before the 30th of November last, together with interest from April. Since the judgment was given the principal party interested on the defendants’ side died; and his firm has not taken delivery of the goods: hence the present application. It was stated that the plaintiffs have been trying to come to terms with the defendants, who have paid the sum of \$700 bargain money; and it was agreed to suspend the execution of the judgment until the 10th of January.

The Agent of the Occidental and Oriental Steam Ship Company received, on the 28th ult. a telegram announcing the arrival in San Francisco of the *Oceanic*, which left this port at daylight on the 12th ultimo, and made the passage in 14 days 15 hours. This beats the *City of Peking’s* fastest time, which is also heretofore the fastest time on record, by twenty hours, that vessel having made her August passage hence to San Francisco in 15 days 11 hrs. In addition to her latest exploit the *Oceanic*, in May last, made the best passage ever made from San Francisco hither. We subjoin a list of the quickest passages both outwards and homewards on the Trans-Pacific route.

OUTWARDS.

Granada, (P. M.).....Aug. 1874.....17 ds. 13 hrs.

The steamship *Dragon*, on her way from Hakodate to Shanghai, called into Yokohama on the 29th ult., for the purpose of delivering despatches and landing passengers. She left the same evening for Shanghai.

At a little before half past twelve on the morning of the 30th ult., the fire-bell rang out. Flames had been discovered issuing from a store on lot No. 45, in the occupation of a Frenchman. Mr. Anthony, immediately opposite the site of the late Japan Hotel, which was burned down about the middle of last year. A large crowd had collected on the vacant ground opposite the fire within five minutes of the alarm being sounded; and the Relief and Victoria fire-engines were soon on the spot, as was also Mr. Hohnholz’s private fire-engine, the hose from which was led from the well on Mr. H. Moss’ premises on No. 43, and soon directed a jet of water upon the adjoining buildings. Some time necessarily elapsed before steam could be got up and water pumped by the “Relief” from their well on the compound where the alarm bell is hung; and by the time three powerful jets were got to play the house was gutted, and all the volunteers could do was to endeavor to preserve the adjoining and surrounding tenements from being invaded by the flames. In this they were completely successful; though at one time the Chinese Exchange shop which was only separated by a narrow passage from the burning building was in imminent danger. From the combustible nature of the goods in the store the fire consumed them and the house with such rapidity that, within an hour from the time of the first alarm being given, the walls had fallen, all danger of the spread of destruction was past, and the crowd had dispersed. The origin of the fire is, as usual, unknown. The proprietor of the store and his wife and family were absent at Yokoska, the house and contents being left in the charge of native servants. At the request of the Chancellor of the French Consulate a police guard was placed over the ruins to prevent anything which might by chance have been unconsumed from being removed until the arrival of the proprietor, who was telegraphed for early on Sunday morning, and returned to Yokohama at 9 a.m. that day. It is so far fortunate that the walls of the ruined house were of stone, as that fact greatly reduced the chance of the communication of the flames to the houses at the side and rear. The building was a new one, having been erected only about a year ago, on the site of some of the fragile houses which were destroyed on the occasion of the burning of the Japan Hotel above referred to. Mr. Anthony’s property was insured in the Staffordshire Fire Insurance Co. for \$5,000. The safe was disinterred from the ruins under which it was buried. It was opened to-day at the French Consulate, and its contents were found to have been only slightly singed.

ANOTHER FIRE, of less serious dimensions than that on No. 45 it is true, but which would have been much more disastrous had it once got headway, occurred in the Grand Hotel. A strong smell of fire pervaded the whole of the building about five o’clock on Sunday

morning (31st ult.) In fact several visitors remarked something unnatural in the atmosphere before retiring to rest, but as nothing could be seen to denote the existence of anything smouldering, all uneasiness was allayed. But about the time referred to above it no longer became doubtful as to there being a fire somewhere. A search traced it to the room above the bar. The alarm was instantly given and gentlemen were detailed to assist ladies, in case of the flames assuming serious proportions. Several neighbours were roused and notice was sent to the Victoria Fire Brigade. In the meantime the efforts of the majority of the visitors and domestics were concentrated on the burning spot. It was then discovered that one of the beams running parallel with the chimney was burning. When the exact spot was ascertained it did not take the willing hands long to put an end to the threatened catastrophe, all danger being averted before the arrival of the fire engine. The origin of the fire is attributed to the fact that the beam referred to was so close to the chimney that the heat of the fire in the bar-room grate beneath penetrated through the stone-work and caused the wood to ignite; and it is thought that probably it may have been burning slowly for days. The extent of the damage done does not exceed \$100 in value, which others beside the proprietors of the hotel may be thankful for.

AFTER the usual business of the Alpha Lodge, I. O. G. T. No. 1, had been brought to a close on Saturday evening, the 30th ult., the lodge-room was thrown open, and an entertainment given by the members of the lodge to their friends. The number of visitors was considerable, and all expressed great pleasure not unmixed with surprise at the very tasty and handsome decorations of the well furnished lodge-room. On the walls above the seats occupied by the officers when the lodge is in session were wrought in evergreens, sprinkled with red berries, the initial letters of the respective titles. The walls were hung with festoons and wreaths; and the central chandelier was a graceful mass of dark verdure relieved with red, amid which the lamps glowed. A globe, also of green leaves and red berries, hung from the bottom of the chandelier. The entertainment consisted of vocal and instrumental music, readings, addresses and recitations. Tea, coffee, and refreshments were handed round at half-past nine o’clock, and at eleven o’clock the pleasant party had dispersed.

A REPORT of a Committee appointed in Tokio for the relief of some of those rendered destitute by the great fire in that city will be found in another column, under a letter from one of the contributors, with whose expression of satisfaction with the manner in which the work has been done by the Committee we heartily concur.

At 5 o’clock p.m., on the 31st ult., a fire broke out at the large residence of the ex-Daimio Doi at Sugamo, Tokio. A strong north wind was blowing. Fortunately as the palace was situated at a distance of a few *cho* from other houses the flames did not spread; but the entire building was burned to the ground. At about 8.30, another fire broke out at the house of one Hanakawado, Asakasa, Tokio. It spread rapidly on all sides and was not extinguished till about 350 houses, including a large theatre, were destroyed. [This is the fire which was so plainly visible from the

Bund at Yokohama on the evening of the 31st ult. and which was thought to be raging in Kawasaki or Shinagawa.]

AN inquest was held on the 2nd instant on the body of Mr. Thos. Baker who shot himself on the evening of the 30th ult. It appears from the evidence that the deceased had been drinking, and was also depressed in spirits from other causes. On the evening in which he committed the rash act he walked into a Japanese house in Ohoi-cho and demanded permission to sleep there, a request which was not very graciously complied with. Shortly afterwards two shots were heard behind the screen where he was located. An inspection showed that he had shot himself not only through the heart but also in the head. The jury returned a verdict to the effect that the deceased shot himself while of unsound mind.

HAOKODATE, December 28th, 1876.—During the week the temperature has ranged from 22° to 52° F.

The Swedish barque *Hedvig* arrived from Yokohama; and the German schooner *Hongkong* left for Shanghai or Amoy on the 26th ult.

THE festival of the New Year has been gaily kept by the Japanese, who were favored with glorious weather for their rejoicings. Both in Tokio and Yokohama the decorations were exceptionally good. All the public offices and the railway stations were festooned and hung with flags; and the streets were thronged with young and old, joyous and gaily dressed, enjoying the crisp bright air, greeting their acquaintances, and playing the national game of battledore and shuttlecock.

INDICATIONS of an approaching snow-fall were not wanting on the 2nd inst. at dawn; and the promise was soon fulfilled. At ten o'clock flakes began to fall. By noon the streets and house-tops were covered with white, and snow descended thickly for several hours during the day. A sad time for those whom the new year has found homeless from the effects of fire.

At 6.15 p.m. on Friday the 29th ult. there was a slight shock of earthquake, of about twenty seconds' duration.

A mass for the repose of the soul of the late ex-Queen Marie Victoire of Spain, wife of the Duke of Aosta, was held in the chapel of the Italian Legation at Tokio at 11 o'clock a.m. on the 4th inst. The members of the Diplomatic Corps attended by invitation.

INVITATIONS, a copy of which is subjoined, have been sent to the Secretaries of the Kobe, Nagasaki, Shanghai, and Hongkong Athletic Clubs, respectively, by the Secretary of the Amateur Athletic Association of Yokohama, to compete in the spring meeting of the latter Association to be held in April next. Besides the events mentioned in the programme (also subjoined) there will be a Griffins' Race, which will give any new members a good chance of securing a prize.

Amateur Athletic Association of Yokohama 2nd January, 1877.

The Secretary—Club.

DEAR SIR:—In accordance with a resolution passed at the Annual General Meeting of this Association on 21st December last, to the effect, that an invitation to compete at our

Spring Meeting be sent to the Athletic Clubs of Hongkong, Shanghai, Kobe, and Nagasaki. I have much pleasure in inviting the members of your Club to compete in our next athletic sports, which we propose to hold in April next (probably on Thursday and Friday 21st and 22nd) so as to correspond with the proposed Interport Boat Race. I send you, by bookpost, a copy of the rules of this Association, with a programme of a former meeting which also contains the rules under which our meetings are held, and which it is not proposed to alter at the coming meeting.

Enclosed you will find a draft of the proposed programme, which has been drawn up with a view to afford neighbouring ports every opportunity of competing in all the events. You will notice it is proposed to have separate interport races for all distances up to half a mile. For the longer distances the Committee think there will be no danger of the Interport Race interfering with the Club Handicap, and therefore propose to make them Interport and Handicap Races, the former being of course between the scratch men from this and other ports. In jumping, where the handicap allowance is in inches, and in the steeplechase, where the time allowance is adjusted at the end of the race, it will of course be unnecessary to have different competitions, nor will it in the Hurdle Race which is not handicapped.

Hoping that your port may be fully represented, and anticipating the pleasure of your reply,

I remain, Dear Sir,

Yours faithfully,

E. FLINT KILBY.

Hon. Secretary.

Proposed programme for Spring Meeting of the Amateur Athletic Association of Yokohama, to be held on Thursday and Friday, 21st and 22nd of April, 1877.

- 1 100 Yards Flat, Members' Handicap.
- 2 150 " " Interport.
- 3 150 " " Members' Handicap.
- 4 440 " " Interport.
- 5 Race for Boys.
- 6 High Jump, Interport and Members' Handicap.
- 7 880 Yards (or 600 Yards), Members' Handicap (Ladies' Purse.)
- 8 100 Yards Flat (Final Heat, Members.)
- 9 Hurdle Race, 120 Yards, 10 Flights (Open, no Handicap.)
- 10 One Mile Walking, Interport and Handicap.
- 11 100 Yards Flat, Interport
- 12 150 " " (Final Heat, Members)
- 13 Long Jump, Interport and Members' Handicap.
- 14 440 Yards Flat, (Challenge Cup, no Handicap), Members only.
- 15 Throwing Cricket Ball, (Open, no Handicap).
- 16 Half Mile, Interport.
- 17 Pole Jump, Interport and Members' Handicap.
- 18 Honorary Members' Race, 150 Yards, Handicap.
- 19 Consolation, 440 Yards, Members only.
- 20 Steeple Chase, Interport and Members' Handicap.

As the *Genrio-maru* neared Vries Island on the 4th inst. an eruption was visible at a distance of thirty-five miles from the vessel's deck, and presented a truly magnificent spectacle.

We are informed by a native correspondent, that the opening of the ports of Shimonoseki in the inland sea, and Tsuruga on the north east coast, next year to foreign trade and residence, is now under the consideration of the government. It is proposed to have no distinct foreign settlements, though certain localities will be defined for foreign premises, and conventions to contain certain trade observances, hitherto inapplicable as between foreigners and Japanese in Japan, to be stipulated; also specified municipal rules and regulations, to be observed by foreigners resorting to and taking up their quarters in those ports; to be maintained and enforced by the consular and other foreign courts. We think the scheme as propounded by our correspondent somewhat dim and obscure, though of practicable test, if and when properly shipshaped.—*Nippon Standard*.

Correspondence.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

"E. P. S." AND THE MAIL.

To the Editor of the *Japan Gazette*.
No. 3.

SIR:—I extremely regret the necessity I am under of addressing you again upon a question that I was positively assured would be finally set at rest by the publication of my second letter; but I cannot allow the paragraph copied into your Saturday's issue from the *Daily Advertiser*, nor the subsequent article in the *Japan Mail*,—the publication of which was in itself a breach of faith on the part of the Editor of those papers,—to go unanswered; for they convey an entirely erroneous impression of the circumstances they profess to set forth.

The Editor of the *Mail*, soon after the appearance of my first letter, wrote to request me to state my name and address, without loss of time, in order that a further communication might be made to me. Thereupon, the friend whose name I have already furnished you with called upon him, and, though strongly urged, very properly refrained from disclosing my name at that time. When it was subsequently demanded by a gentleman acting on behalf of the Editor of the *Mail*, it was communicated to him. My friend was fully empowered to disclose it at his discretion, but agreed with me that it was desirable to withhold it until it should be demanded by a fourth party. The prudence of that reticence has since been very conspicuously demonstrated.

My second letter to you was worded in exact conformity with the advice that was tendered to me by my friend, and by the gentleman (also a personal friend of mine) who represented the Editor of the *Mail*; and it was approved by them both. The draft of that letter was never "submitted" to the Editor of the *Mail* "for his approval." I knew that he was to see it; but it was taken to him as an ultimatum (for that was the very word used), duly approved by his representative and mine, and was word for word as I wrote it myself. It is true that he made some slight objection to the phrase "in that sense," but he was at once informed that those words could not and would not be struck out. Moreover, it was not until after he had published it in one of his own papers, that he made any strenuous objection to the passage. In corroboration of the truth of this statement, I

a match was got up between him and *Mandarin*. The black again got off best at the post and was never headed, winning by a couple of lengths.—Time, 63 seconds.

This event brought a pleasant afternoon's sport to a close.

A GERMAN HOSPITAL.

On Saturday the 30th ultimo, at 3 p.m., the foundation stones of a German Hospital were laid. The ceremony was as interesting as such ceremonies usually are. The principal officers of the German man-of-war *Vineta*, the band, and about thirty seamen from the same vessel, were present. So was the German Consul and his staff, together with a number of ladies and gentlemen from the settlement, amounting in all to more than one hundred persons.

The stones themselves were nothing remarkable, being about 18 x 24 x 9 in size, and of a kind of grey freestone. In the cavity of each was placed a tin containing several documents and duly soldered.

The first stone was laid by the Captain of the *Vineta* assisted by his officers, and the Consul, who all participated in spreading the mortar, and the latter delivered an address. The stone, which was suspended by a chain from the apex of a triangle decorated with flowers, was then laid in its place. The party afterwards proceeded to the next stone and went through a similar performance, at the close of which the Captain of the *Vineta* called for three cheers from the spectators and met with a hearty response. This stone was laid by H. I. G. M.'s Consul, Mr. Zappe, assisted by Mrs. Evers and the officers of the *Vineta*. During the ceremony the *Vineta's* band played some national airs.

A few words descriptive of the building now in course of construction for the accommodation of the German sick, may not be out of place. The Architect and Contractor, Mr. Lescasse, produced plans and specifications as far back as July 1874; but as these had to be sent to Germany for approval, it was not until the middle of October last that the work was actually commenced. The lots selected as a suitable site for the Hospital are Nos. 40 and 41, situated on an eminence at the rear of the police station on the Bluff. The ground being exceedingly rough it took no inconsiderable amount of labour to reduce the ground to its present condition, as hillocks had to be cut away and cavities of no mean dimensions filled up.

The Hospital is to consist of two main buildings, besides the usual out-houses; and a wooden building at some distance in the rear for the reception of small-pox patients. Each of the main buildings will occupy about 150 *tsuchos* of land. They will be built of stone and brick. The stone is of a greyish blue, of superior quality, procured from the extensive quarries in Idzu, from which, it is said, the best building stone in Japan is exhumed; and the bricks will come from Tokio; it may therefore be characterized as a stone and brick building with three coats of silicate paint, which will not only render the material more capable of standing wear and tear, but will also add to the beauty of the structure. The roof will be of tiles from Mr. Girards works in Homura.

Each of the main buildings will be divided into three divisions. The front part will comprise the kitchen, washhouse, clothes-room, cellars &c. on the lower floor, while the upper story will consist of apartments for the warders and a reading room. The next divi-

sion is a large ward for the sick. It is to be 62 feet in length, 27 feet in breadth, and 20 feet in height, and capable of containing 20 beds. At the extreme end of this apartment, separate rooms will be supplied for sick officers, to each of which will be attached, a small bathroom. The buildings which are to be 40 feet apart will be connected by two passages and a verandah will be built round the two rear divisions.

The system of ventilation is of the most modern invention. Five feet from the ground is the floor of the ward, underneath which is another floor, a vacant space of some inches being between the two, through which a current of air will run when required; and therefore the floor on which the patients rest will be kept as free from damp as possible. The walls, like the floor, are also to be double, only joined together here and there. By this means the rooms will not only be rendered more cool during the hot summer months, but, in the middle of winter, the walls being thus detached will keep all possible dampness from penetrating from the outside. Around the base of each room and in the ceiling, will be sheets of perforated zinc, which of course will be capable of being closed when desired. A current of air may then enter between the two ground floors, pass up the walls, into any of the rooms, thence escape through the perforated zinc in the ceiling and finally find its way out at the roof.

When completed the German Hospital will be a valuable addition to the accommodation for the sick already existing in Yokohama. The architect and contractor, Mr. Lescasse, confidently anticipates that the buildings, if not entirely completed, will at least be fit for occupation by the end of December this year. We had almost forgotten to mention that the whole of the buildings will be surrounded by a substantial fence.

INQUEST.

Before RUSSELL ROBERTSON Esq., H. B. M. Consul, Coroner, and the following Jury.

MESSRS. A. JAFFREY.
Ed. Powys.
THOS. ROSE.

Tuesday, January 2nd, 1877.

This morning, at the residence of Mr. Bohm, an inquest was held on the body of Thomas Baker, late Chief Officer of the *Tai-hei-maru*, who met with his death by the instrumentality of a revolver on Saturday last (30th Dec.) at about 6 p.m.

The body having been examined by the Coroner and Jury, the following evidence was taken.

Tone, a Japanese woman, deposed:—I am a laundress, residing at Ohoi-cho, No. 1 ward. I have been employed at 101 for seven years. I have known the deceased for the last two years. On the 31st I left my house to perform my duties, and at 5 p.m. I went to a photographer's, where I saw a woman who told me to go home at once, which I did. When I arrived home I saw a foreigner apparently dead. I asked where my husband was, and was told that he had gone out a little before 4 o'clock. About 5.20 my husband returned and then went for a policeman. I knew deceased from seeing him pass the house several times and exchanging greetings with him. I did not examine the body closely, but saw some blood flowing from a wound. I have seen the body below and identify it as the body of the man I saw in my house on the 30th.

E. Wheeler, M.D., deposed:—On Saturday afternoon I was called to see a man who had shot himself in a Japanese house near the Public Gardens. I found the body of the man lying on his back with blood on his face. On examination I found a pistol wound about an inch and a half above and 2 inches internal to the left nipple. He also had another wound on the right temple. The body was scarcely cold. On Sunday afternoon I held a post mortem examination: On opening the thorax I found that one ball had entered that cavity through the cartilage of the third rib at its junction with the bone; passing through that portion of the lung the heart at the septum between the right and left ventricle, entering the heart after traversing the left ventricle. I found that the bullet had passed through the third intercostal space behind where I found the bullet lying in the loose cellular tissue below the skin. The other bullet wound was through the right temple. It had entered the cranium about one inch behind the external angle of the frontal bone, piercing the right hand interior lobe of the brain and penetrating the left hand interior lobe. I found the bullet lodged in one of the left anterior lobes. I may mention that the membrane of the brain and the brain itself was slightly congested, but nowhere did I find any adhesion, which would go to show a disease of the brain. The bullets I have in my pocket (bullets produced). I think the shot through the heart was fired first, as, owing to the smallness of the bullet he probably had a minute to effect the other shot. Either shot would have caused death, but had the bullet in the head been fired first, the man would have been stunned and not able to direct the other shot. The people in the house seem to take the affair in much the same way as Japanese usually do. The congestion of the brain might be caused by habitual habits of intemperance. The wounds are such that they might have been inflicted by his own hand. I never saw the man before.

Nobu, a Japanese woman, deposed:—I reside at Ohoi-cho. I was in the house working at 4 p.m. on the 30th, when a foreigner came in drunk, and asked to be allowed to sleep there. I refused to allow him. He insisted, however; came in and asked for a pillow and a covering which I lent him. He then asked me for a screen, which I also gave him. The only other person in the house was a little sister of five years old. I went about my work and suddenly heard a report. I started and looked round, but seeing no cause for alarm proceeded with my work, when suddenly there was another report. I was frightened and ran out of the house to fetch my mother. We returned together but did not venture near the screen. My father then came in, looked at the body, and sent for the police. I knew the man's face from seeing him pass the house often.

Oba Mankichi, deposed:—I am P.C. No. 347. Information was brought me on the 30th a little before six o'clock that a foreigner had shot himself. I then went in company with another constable and sent for a doctor. We felt the man's pulse and found he was dead.

James Donald:—I am a sailmaker. I don't know anything about the deceased. I last saw him on the 25th. He sent me an invitation to meet him at 7.30 p.m. on the iron bridge. I went accordingly; but he was not there, so I went to the Railway House where I found him. I asked him why he

had sent for me. We had high words then. I have not seen him alive since. He had been out of employment from the 22nd of December. I was one whom the deceased brought an action against for assault. He did not appear to be sober on the 25th of December. I don't think he was an habitual drinker. I recognise the pistol. It belonged to Baker, who got it from Mr. Bennett. I never knew him to carry it with him. While he was living with me it always lay in the drawer. When not at sea he lived with me for 17 months. We were friendly enough until lately. The note I received said, "Will you kindly meet me at 7.30 p.m. on the iron bridge." Another note of a similar character was sent to Forsyth, and also one to Bonneau. Forsyth went with me. I had high words with the deceased, and told him I did not want to see him again. He was very strange in his manner. I don't know where he lived after he left the vessel on the 22nd of December.

P. C. W. Hazell deposed:—On Saturday night I was called out by the Japanese police. I went down to No. 1, and on going in saw the Japanese woman, who procured a light and conducted me behind a screen, where I saw a man lying on his right side. I saw some blood on his face. Not knowing the man was dead I caught hold of him by the arm, and then perceived a pool of blood beneath him. A Japanese policeman present picked up the pistol and gave it me. I felt the deceased's pulse and found he was dead. I immediately sent for the doctor and also to the British Consulate. On the 28th the deceased came at one o'clock in the morning to the Station and asked for a bed. I told him we had no beds, but he could lay in the cell and I would give him a couple of blankets. I searched him and found a large knife on him which I took away. He lay down till morning. He had no money on him and no pistol. When he came to the Station I informed the sergeant. He did not seem at all strange, though he had evidently been drinking.

Some certificates and other documents were produced at this stage of the proceedings, which had been found on the deceased, including a telegram informing him of the death of James Donald, and also a bill from Donald for over \$500.

F. E. White deposed:—On the 30th at 6 p.m., acting under instructions from H. B. M. Consul, I proceeded to a Japanese house near the market, where I found the body of a European lying on his left side, with his knees doubled up, and a pool of blood under his head. I turned him on his back and recognised him as Thomas Baker. I found the pistol after turning him over. I then went and called Dr. Wheeler, who returned with me and examined the deceased. I saw him on the evening of the 28th at about 8 o'clock sitting in front of the fire in the Brooklyn Hotel. At that time he was sober, though evidently suffering from the effects of drink, as he was trembling very much. After the doctor's examination I caused the deceased to be removed to 114. Deceased took his things to the Brooklyn on the 23rd and asked if he might stay there. He was told "yes," and he left his things there and went out. He had about \$40 about him. I believe he was in Japanese town nearly all the time. I do not know why he was discharged from the ship, but have heard it was through the row between him and Donald and Forsyth. I do not know how he got the pistol. He might have got it from Hood.

William Hood deposed.—I am coal-keeper for the P. & O. Company. I saw Baker last Thursday night. He asked to see me. He came inside. I asked if he wished anything. He asked me if I could give him any advice about Mr. Donald. I told him "no," as I did not understand the circumstances of the case. He wanted me to go to Donald's house, but I declined. He did not appear to be at all excitable. On the following morning about 9 o'clock I saw him close to the market. He appeared to me to be sober. He was evidently very low-spirited. I don't know whether he saw me or not. I did not see him alive after. I cannot say whether he had a pistol with him or not when he was at my place.

James Donald, recalled:—I recognise the telegram referring to my death. I sent it myself. As I wanted to bring him back, I gave out that I was dead. I wanted him back to get an explanation from him.

The Coroner.—What was this trouble between you and Baker?

Witness:—Am I obliged to answer that question?

Coroner:—Yes.

Witness:—I cannot answer that question.

Coroner:—I shall have to commit you for contempt if you do not. What objection have you to answer?

Witness:—My objection is that I do not want my statement to be published in the papers.

Coroner:—What was the bottom of the trouble between you and Baker? Your feelings are one thing, but cannot be taken into consideration in such a case as the present.

The witness then asked that the reporters might leave the room.

Coroner, to reporters:—Please leave the room.

Mr. Donald's evidence being concluded, the Jury returned.

A verdict to the effect that the deceased being of unsound mind shot himself with a revolver on the evening of the 30th ult.

Miscellaneous.

THE *Tokio Times* made its first appearance on the 6th inst. The new weekly is a paper of great promise, which if fulfilled, as there is every reason to believe it will be, will make it *facile princeps* among the literary journals of the East. One thing at least can be safely vouched for in advance. The new venture will not lay itself open to charges of lamentable inconsistency, nor will its pages be made a vehicle for the expression of purely personal animosities, any more than they will be devoted to direct or inferred laudation of the proprietor, or the propagation of so-called opinions which may bring him a substantial reward. The scope of the *Tokio Times* is a broad one. If it succeeds on the programme laid down for its conduct it will succeed worthily. If it fails it will at least have had an honorable and a morally healthy existence. But why talk of failure? There is ample room in Japan for a well-conducted and liberal weekly paper devoted principally to Japanese subjects or subjects having some relation to Japan. Indeed there is more than room: an absolute need exists for such a journal, working for a reward it is true, but such a reward as can be touched with clean hands—the wages of industry and enterprise, and not a subsidy, which can very rarely be earned at all, and still more rarely honestly earned by any

journal. A subsidy to a newspaper is the very inverse of mercy. "It is twice cursed. It curseth him who gives and him who takes."

The first number of the *Tokio Times* contains a collection of interesting editorial paragraphs, a rather rose-colored article upon the Empire, a good description of the Russian Legation at Tokio, evidently, as it is headed No. 1, the first of a series, and some interesting personal and other intelligence. But the most attractive part of the paper is an article on "Japan and Rome in the seventeenth century," giving a lucid account of the embassy sent by Date Masamune to Rome in the early part of that century. Translations of the credentials given by the Prince of Oshiu to his ambassadors, Fray Luis Sotelo, and Hashikura Rokuyemon, as well as of the certificate of Roman citizenship conferred upon the latter, are given. But, as is indicated by the Editor, "the remarkable feature of this journey is that it should have been made from Japan across the continent of America—a route which we now find to have been opened more than two centuries and a half ago. This circumstance suggests in a new way the familiar enquiry—what might have been the consequences if Japan and Spain had not buried themselves, one in a political, the other in a religious trance for ages?" We have but one wish, and that a comprehensive one, for the new enterprise; and that is that it may go on and prosper.

A NOTIFICATION has been issued by the Prime Minister, in accordance with an imperial command, to the effect that the land tax for and after this year shall be assessed at the rate of $2\frac{1}{2}$ per cent on the value of the land.

ABOUT eleven o'clock p.m. on the 25th ult. an alarm of fire was given in the neighbourhood of Kanagawa. The flames, which burst forth from an outhouse, were extinguished in about ten minutes.

THE little sympathy which the shizoku, whatever may be their own grievances against the Government, have with the rising of the agriculturists may be gathered from the following paragraph which appeared in the *Choya-shinbun*:—"On the 21st ult., when the agrarian rioters of the Mie-ken had threatened the city of Nagoya, the Aichi-kencho issued a proclamation ordering the enrolment of a corps of shizoku to defend the kencho from the mob. In a few hours about two thousand shizoku, each armed with gun, sword or lance, assembled before the kencho, where three hundred were chosen from the number. One hundred were ordered to guard Komaki: Ikuta was confided to the care of another hundred: and Inaba was assigned to the third hundred. The rest were ordered to await at their homes any call to arms from the kencho."

THE following is the *Mai-nichi-shinbun's* peculiar version of the Christmas paper-hunt:—

"At about 3 p.m. on the 25th inst. about thirty foreign residents of Yokohama, each riding on horse-back, laid waste, by trampling over them, those farms which surround the Race Course at Negishi."

ON Saturday night (23rd ultimo) Mr. Vertelli gave one of his legerdemain and magic performances in the Gaiety Theatre. The weather was wet, which probably had something to do with the attendance

H. E. MR. SAMEJIMA, Vice-Minister of the Gaimusho, gave banquets on the 25th and 26th inst. at which all the foreign ministers were present.

On the 28th ult. at about 2 p.m. the Russian Minister attended at the Imperial palace of Akasaka, where he was presented by the Mikado with the decoration of the first class of the new Japanese order of merit. About one hour afterwards the English minister, accompanied by Captain Buller of the *Modeste* and two other officers, was received by His Majesty.

THE *Hochi-shinbun* says that the farmers of the Kochi-ken are much inclined to follow the insurrectionary example set them by the farmers of the Ebaragi-ken.

AGRARIAN riots are likely to break out in the province of Shimosa. On the 15th ult. about six hundred farmers under the command of five men of the county of Nagae assembled at the Buddhist monastery of Honmijoi. The *kucho* and *kocho* of the Shigewara district, at the peril of their lives, instructed them to disperse. Nearly half returned to their homes, whilst the rest held their ground at the monastery, saying that nothing will oblige them to disperse unless their wishes be granted.

FARMERS in the province of Yamato are ready to unite with the rioters of the Mie-ken. On the 21st ult. Mr. Zeisho, governor of the Sakai-ken, became anxious lest they should join the rioters, who are now advancing by the Yamato road, and sent a message to the Osaka barracks, requesting the despatch of troops, in order to prevent their rising. About three hundred soldiers left Osaka at 7 p.m. on the same day.

At dawn on the 21st ult. a large number of the rioters of the Mie-ken made a raid into the Gifu-ken, where they set twenty-four *kucho* houses on fire in the counties of Ishitsu and Nakajima. The fires were visible for a circuit of one and a half *ri* (nearly four miles). Mr. Shiwa, *Sanji*, and his subordinate officials guarded Kasamatsu at the head of a force of policemen. The city of Gifu was thrown into great confusion, and citizens were very busy removing their clothing and furniture. The *kencho* was guarded by officials and two companies of firemen; and all the public documents were collected and placed in godowns at a distance from the *kencho*. About twenty-two police met, at the village of Akitake, a large crowd of farmers. Fortunately for the policemen, who were at once obliged to retreat, half a battalion of infantry from Nagoya came to their aid. At the appearance of the troops the rioters began to disperse, and about forty were arrested. About one hundred farmers were arrested in the Aichi-ken.

THE *Choya-shinbun* says that a disturbance has broken out among the *shizoku* of Kagoshima, and that the elder Saigo and Kirino are about to leave for Tokio on some important business.

MR. OTOWA, Editor of the *Aichi-shinbun*, was condemned to ten days' imprisonment, and a fine of fifteen yen, on the 23rd ult., for having violated the press laws.

(From the *Nichi-nichi-shinbun*.)

Notification No. 22.

It is hereby notified that, as a submarine cable is laid between the village of Shibukawa, Fukuoka-ken, Bizen, and the village of Yayoi, Ehi-me-ken, Samuki, a buoy is moored as represented on the map, denoting the whereabouts of the cable. All persons are strictly prohibited from anchoring vessels or fishing within a distance of 200 *ken* on either side of the cable.

Accompanying this notification is a map showing the position of the buoy.

ITO HIROBUMI.

Koku-kio.

December 28th, 1876.

(From the *Nichi-nichi-shinbun* of the 29th Dec.)

We have been favoured with various letters from the three provinces of Mino, Owari and Ise, where agrarian riots have broken out. A crowd of farmers, which attacked the town of Tsu on the 19th Dec., was dispersed in disorder by a force of the *kencho* officials. The mob became very angry and set the village of Inui on fire. Here they separated into two parties, one advancing towards the town of Sekiyado, which they entered at about 10 o'clock p.m. Each of the rioters carried a burning torch. They set the district office on fire and pulled down three public fire-proof storehouses in which were kept many official documents. At dawn on the 20th, they appeared at the entrance of the town of Kameyama: thence they proceeded to Yokkaichi through Shono and Ishiyakushi, which they found had been already destroyed by the other party on the 19th Dec. When the citizens of Takasagomachi learned that they were intended to be the next victims, they determined to take the part of the police and fought bravely against the rioters, nine of whom were killed. Early on the morning of the 21st two battalions of infantry landed at Yokkaichi. On their arrival the rioters dispersed without a show of resistance, and good order is being restored.

The same paper says:—The agrarian riots, of which we receive daily information, broke out in the three provinces of Tsu, Shima, and Iga and extended over the two adjoining provinces of Mino and Owari. To our great sorrow, we have not yet been informed of the suppression of the riots. Notwithstanding the gracious reign of the present Government, this year agrarian riots have also broken out in the Wakayama and Ebaragi-ken. A few days after their suppression, we were informed of other disturbances. These agrarian rioters are, of course, conscious of their crime. But we must consider the reason which has made peaceable farmers take up arms against the Government, fearless of the punishment due to such a proceeding.

According to the editor of the *Choya-shinbun*, who is our friend, the first provincial disturbance broke out in the Owake-ken, since the three *fu* and seventy *ken* were established. In the 6th year of Meiji (1872) insurgents rose in several counties of Bungo, viz., Owake, Naoiri, Sokumi and many others, wishing to re-establish the Shogun's Government.

On their suppression, two of the ringleaders were condemned to be beheaded, and another one to be strangled; and their men, amounting to about 27,000, were sentenced to hard labour or exile. The suppression of this rebellion was speedily followed by the outbreak of another in the Tsuruga *ken*; five leaders of which were condemned to be beheaded, while the others were sentenced to hard labour; and the insurrection in the Hojo-ken resulted in fifteen chiefs being executed. Besides, disturbances have broken out in other *ken*, viz., Fukuoka, Tottori, Shimane, Mito, Tanba, Bingo, Iki, Amakusa, and many others. Four leaders of the Fukuoka insurgents were beheaded, and 64,000 men were also condemned to terms of imprisonment with hard labour; and seven leaders of the Mito insurgents were

also beheaded and 16,900 men were punished more or less severely.

Thus many and various disturbances broke out during the 6th year of Meiji. Most of them were excited by those persons who desired to subvert the present government. But the three agrarian disturbances in this year originated through the alteration of the land tax.

ACCORDING to information received from Nagasaki, a disturbance has broken out among the *shizoku* of the Kagoshima-ken.

On the 28th ult. a banquet was given at the palace of Akasaka by H. M. the Mikado to the *Daijin* and *Sanji*, and another banquet was given the same day to the foreigners in the employ of the Shihosho, at the Imperial palace of Shiba.

A REPORT of the broil between natives and the sailors of the *Vineta* was sent from the Kanagawa-*kencho* to the Gaimusho on the 28th ultimo.

THE Superintendent of the Shikibu-Rio of the Kumaisho has issued a notice to the effect that at 5.30 a.m., on the 8th inst., Her Majesty the Empress Dowager would leave her palace of Awoyama en route for Kyoto, and that all officials of rank between the first and seventh official class would accompany her to the Shinbashi Railway Station.

H. E. MR. IWAKURA, *Udaijin*, arrived in Yokohama in the *Nagoya-maru* on the 28th ultimo.

SINCE and in spite of the suppression of the Kuma-moto insurrection, discontent prevails in that neighborhood. A few nights ago a policeman was found slain in a street of Kuma-moto. Disaffection also exists in Saga, Hizen.

THE *Choya-shinbun* denies that H. E. Mr. Tanaka, Vice-minister of the Monbusho, has returned from America, and adds that he will return by next mail.

3,433 *SHIZOKU* from the various *ken* appeared at the Kaishicho as candidates for admission to the Police-force in Tokio during last year. 1,988 of them were appointed.

At about 6 p.m. on the 30th ult. a fire broke out at the barracks in Nagoya, Aichi-ken. Two buildings were destroyed.

NOTIFICATION No. 161.

Notice is hereby given that the land tax in the Hokkaido is decided to be one per cent, till further notice.

SANJO-SANEYOSHI,

Daijo Daijin.

28th December, 1876.

H. E. MR. SANJO, *Daijo Daijin*, has issued a notice to the effect that, on the 28th inst., the railway, which connects Kyoto and Hiogo, will be opened. His Majesty, the Mikado, who will leave Tokio for Kyoto on the 14th instant, will be present at the opening ceremony.

THE *Hochi-shinbun* states that H. E. Mr. Hayashi, Vice Minister of the Home Department, arrived in Kagoshima on the 27th ultimo, and that a telegram, despatched by him on the following day, to the Government, announces that all is quiet in the Kagoshima-ken.

HER Majesty the Empress took with her presents of seven hundred yen to each of the late *Daijin*, and Their Excellencies Konoe, Nijo and Takatsukasa.

DISTURBANCES seem likely to break out shortly in the Kochi-ken, as the people are very

excited. It is reported that five shizoku, whose names are not yet known, have gathered a large number of men together. It is further stated that the governor of the ken has left his residence.

At about 2 o'clock a.m. on the 29th ultimo, a fire broke out in a house in Yegawacho, Shidzuoka, on the Tokaido, and was not extinguished till it had burned down about three hundred houses, including the telegraph office. Another fire broke out in the residence of a Mr. Takahashi, No. 55 Nagoricho, Hamamatsu, on the 31st ult., and destroyed about forty-five houses. Another conflagration in Yamagata, Uzen, on the same day, destroyed the temple of Zoiu-in. The *Akebono-shinbun* says that the fire in Asakusa on the 31st ult. destroyed one thousand one hundred and ninety-six houses.

THE *Akebono-shinbun* says that the Chinese Government having entered into negotiations with Mr. Mori, Japanese Minister in Peking, for permission for the steamer *Kai-an* to coast along the shores of Japan and touch at any of the ports, a notice has been issued that the steamer is to receive no molestation during her voyage.

THE *Takao Maru*, which will take His Majesty the Mikado to Kioto, has completed her repairs and preparations for his accommodation. On the 1st inst., she made a trip to the island of Oshima, Idzu, in order to see whether her machinery was in good order.

THE amount of duty paid into the Yokohama Custom House during the 9th year of Meiji, was yen 1,534,200.

DURING his approaching tour His Majesty the Mikado will stay two days at Osaka and ten days at Kioto.

MR. TACHIBANA of the *Tohoku-shinbun*, Sendai, was condemned to be fined twenty yen on the 26th ultimo, for having violated the press regulations in his paper No. 38.

THE 5th instant was observed as a general holiday and no native papers were published.

A BARRACK for the accommodation of a detachment from the Osaka garrison will shortly be built at Awajishima in the Inland Sea.

MR. WATANABE, Sanji of the Miyagi-ken, was a man popular and honest, and discharged his duty well and was especially interested in all that concerned pastoral pursuits. He committed suicide on the 25th ultimo, at the age of forty-three. The cause which induced his self-destruction is not known.

THE *Mainichi-shinbun* says:—On the 2nd inst., the *Vineta*, German corvette, left for Germany. She took away twelve Japanese cadets who will study seamanship on board.

(From the *Nichi-nichi-shinbun* of the 4th Jan.)

Before we make any comments upon the opening of the 10th year of Meiji, we will give our readers a short review of the principal events which have occurred during the past year, as the most important events in the history of Meiji have therein transpired.

At the commencement of last year the subject of a Korean expedition created much excitement; and the most experienced did not know what would be the result. Notwithstanding public opinion, it was decided to request the Korean government to explain the outrages committed on our flag; and the government of Japan appointed Messrs. Kuroda-Kiyotaka and Inouye-Kaworu as Envoys to Korea. They proceeded to Fusan, and thence to Kukuwa, where they persuaded the Korean government to open ports for trade with Japanese, just as Commodore Perry did

with the Japanese Government when he came to Japan about twenty years ago. At last a friendly treaty was signed at Kukuwa on the 27th February. Messrs. Nomura-Yasushi, and Miyamoto-Koichi, who accompanied the Envoys, performed good service. Shortly afterwards the Korean government sent an Embassy to Japan, consisting of about eighty men. Our government received them with due hospitality. Soon after the Envoy returned home Mr. Miyamoto, *Daijo* of the Gaimusho, was sent as Commissioner, to the capital of Korea, where a supplement of the treaty of friendship between Japan and Korea was contracted between him and a Korean official. Thus a peaceful treaty between Japan and Korea, caused the troublesome cloud, which has hovered over the two countries for many years, to clear away.

Friendly relations with Korea were established. But the difficult question concerning Loo Choo has not yet come to an end; and the king of these islands has sent repeatedly a petition to the effect that he may be permitted to pay tribute to both China and Japan. To our great mortification, we have not been able to learn what has been done respecting Loo Choo during the past year.

Great progress has been made in our judicial affairs. The confinement of persons for civil cases was abolished on the ninth of January; and on the 10th of June it was notified that verdicts in criminal cases would be given in accordance with the amount of evidence adduced. But as no regulations have been established regarding the manner of giving evidence it is difficult to pronounce the amount of benefit likely to accrue from verdicts being given according to the evidence. The confinement of persons accused of criminal offences is still adhered to, though there has been some agitation for the admission of accused persons to bail; and the question of the admission of Counsel into the Courts has also been under discussion, but power to practice was not granted during the year. Besides these alterations the establishment of provincial Sائبان and branch Courts has been very beneficial. It has been reported that the Minister of the Judicial Department has submitted to the Government a code of laws based on foreign principles.

Ten ken, namely: Ashigara, Nara, Watani, Iwai, Niigawa, Aigawa, Hojo, Hamada, Kokura, and Saga, were abolished on the 18th April of 1876, and annexed to other ken. Again, on the 23rd August, Chikuma, Hamamatsu, Wakamatsu, Iwamae, Tsuruganaka, Okitama, Tsuruga, Tottori, Kuzuma, Toyooka, Mitsuata, Miyazaki, Kagawa and Mioto-ken were abolished, thereby dividing the whole empire into three hundred and thirty-five ken, viz., Tokio, Kioto, and Osaka, and Kanagawa, Sakitama, Guuma, Chiba, Ebaragi, Tohigi, Sakai, Mie, Aichi, Shidzuoka, Fukushima, Miyagi, Iwate, Aomori, Akita, Yamagata, Ishikawa, Shiga, Nagano, Yamanashi, Gifu, Niigata, Hiogo, Fukuoka, Shimane, Hiroshima, Yamaguchi, Wakayama, Ahime, Koshi, Fukuyama, Owake, Kumamoto, Nagasaki, and Kagoshima. Great alteration has also taken place in the provincial governments. His Majesty's the Mikado's tour to O-u was one of the most noteworthy events which occurred during the year. His Majesty wished to make a tour in 1875 but was prevented. He therefore postponed his departure till the 6th June. He proceeded through the provinces of Musashi, Hitachi, Kozuke, Shimotake, Iwaki, Iwashiro, Rikuzen, Rikuchiu and Rikunoko. He then crossed the strait to Hakodate. After his return to Tokio, the *Daijo-Daijin*, *Sangi*, and other high officials,

travelled through every province of Riku-u Hokkaido, which is also one of the noteworthy events of the year.

(To be Continued.)

On the 4th inst., H. M. the Mikado went to the Sei-in with the *Daijin* and *Sangi*, and re-opened the assembly. At 11 a.m. he returned to the palace of Akasaka.

At about 3.30 a.m. on the 5th inst., a fire broke out at the house of a certain kawai, No. 11, shi-chome, Bakurocho, Tokio, owing to an accident with kerosine oil. The fire was not extinguished till four hundred and seventy-seven houses were burned down. Mr. Hachisuka, ex-Daimio Awa, has distributed five hundred yen among the sufferers by the fire and Mr. Hayashi, late governor of the Hamamatsu-ken, one hundred yen. Many others have contributed more or less.

A NUMBER of Koreans, drifted in their boats on to the coast of Takushima, Kagoshima-ken, during last year, have been sent back to their native country.

HIS MAJESTY the Mikado will shortly visit the new buildings of the Naimusho.

THE Tokio Exhibition, inside the gate of Yamashita, was closed on the 26th ultimo, and re-opened to-day, the 6th instant.

OWING to the alteration in the land-tax, agrarian riots have broken out at Takasaki, where about fifty men have assembled. Disturbances have also occurred in the Nagano-ken.

Law Reports.

In the Judicial Court of Kanagawa.

Before Mr. ASAINA KANSUI, Vice-President.

Thursday, Dec. 28th, 1876.

DAVID WELSH vs. SANRIKU-SHOKO.

Judgment in this case was delivered to-day as follows.

(Official Translation.)

JUDGMENT.

DAVID WELSH, British subject, residing in Yokohama, plaintiff.

MORI MOTOHARU, cohabiting with Sasaki Torakichi at No. 1 Shinyeitaicho 16th Shoku of 1st Daiku Tokio;

and BAN MITCHITIRO, cohabiting with Tanabe Gengoro at No. 110 Motomatchi Ichome 3rd Shoku of 1st Daiku Yokohama, defendants;

and YAKUMAI UMPATCHI, cohabiting with Yamamoto Zengoro at Nogenmatchi Shitchome No. 210 of Yokohama, 2nd Shoku of 1st Daiku.

This is a claim for \$1,020 dollars for breach of contracts and according to the statements of the parties and witness the particulars of the case are as follows:

Plaintiff states that in or about the middle of December 1875, one Yakumai Umpatchi came to plaintiff's place and told him that a company was going to be established in Tokio, and of which a branch was also going to be opened in Yokohama, that he asked plaintiff whether he was desirous to be employed in said company, to which plaintiff answered that he was at their service.—That after several interviews then plaintiff received on the 23rd of December 1875, and in presence of the head of the company Mori Motoharu

appeal to the recollection of two unbiased gentlemen, which is certainly more trustworthy than that of one irate Editor.

No demand for an apology was ever made to me by or on behalf of the Editor of the *Mail*, and no apology was ever offered by me. It was represented to me by his friend and mine that he felt that his private character had been attacked in the epithets made use of in my first letter. I assured those gentlemen that that was not my purpose, my intention having been to challenge his editorial veracity; they then asked me to put that in writing, and I did so. That, shortly, is the whole history of the appearance of my second letter, the meaning of which would in no wise be altered by the omission of the three words now objected to. Those three words were not insidiously introduced, neither do they neutralize the context. I have, from the first, abided by the sense of my first letter; and my only object in troubling you with a second was to satisfy the wishes of two gentlemen who urged upon me the duty of withdrawing words in so far as they admitted of a construction they were not intended to bear.

The Editor of the *Mail* takes some credit to himself for not disclosing my name; but actually procured the presence of a fourth person during one of the interviews between himself and the two gentlemen who acted as intermediaries, and allowed him to remain till the end of that interview, notwithstanding their protest.

He was equally estopped, by solemn promise, from all further allusion of whatsoever kind or nature, at any future time, to the letters of E. P. S. He kept that promise for about twelve hours, or say from seven o'clock on Thursday evening, when my second letter was published in the *Gazette*, until the same hour on Friday morning, when he reproduced it in the *Advertiser*.

As to the anonymity of my letters, the editor of the *Mail* is as well aware as I am, that the name of their author is not unknown in this community. I had my own reasons for wishing to keep it out of public print, and the best way to do that was to stipulate that it should not be made known. That desire must now give way to other considerations. This letter contains statements of certain facts which are known to four people; those statements are more or less in direct contradiction to statements of the same facts as put forward in the *Japan Weekly Mail*. If, now, the Editor of that journal will venture, in either of his papers, in his own name, to question the accuracy of a single material statement so made by me, I promise to refer it to the decision of the two gentlemen who acted as intermediaries between us, and to publish the result of that reference, in my own proper name, in the columns of this paper.

I feel that the mere enumeration of the above facts, in juxtaposition with the assertions of the Editor of the *Japan Mail*, is sufficient to justify me in ignoring the reflections he has chosen to make upon my honor, and upon the rectitude of my purpose.

Before closing this letter I desire to express to the public my very sincere contrition for having allowed myself, in my first communication, to make use of two words, the employment of which constitutes a sin against society; my desire was to convey ideas the reverse of truthful and heroic; my fault lay in the selection of words for that purpose.

Yours faithfully,

E. P. S.

Yokohama, Dec. 26th, 1876.

To the Editor of the *Japan Gazette*.

SIR:—Several palpable errors occur in the translation given by the *Herald* of the Pilotage Regulations. One of them at least will be plainly visible by comparing the *Herald* translation of article 15 of the regulations with the *Gazette* translation of the same article.

Gazette, 22 Dec., 1876.
Characteristics of Pilot Boats.

Section 15.—Every pilot vessel and boat shall be distinguished by the following characteristics, that is to say:—

1st.—She shall be of a black color outside, with the exception of such names and numbers as hereafter mentioned.

2nd.—The words "Licensed Pilot Boat" in Japanese and Roman characters, or in Roman only, shall, with her number, be legibly painted at the stern, or on her quarter, and on the head of the mainsail.

3rd.—When any licensed pilot is on board any licensed pilot boat or vessel, a flag at the masthead, or sprit, or staff or in some other equally conspicuous position, shall from sunrise to sunset be kept flying, and such flag shall be in accordance with the regulations of the Navy Department, and of larger size than usual, compared with the size of the vessel or boat.

4th.—At night, every pilot vessel or boat when under weigh, and on, or proceeding to or from her station, with any duly qualified pilot on board, shall, from sunset to sunrise, exhibit a bright white light at her masthead, visible all round the horizon, and shall in addition burn a flare-up every fifteen minutes; at all other times she shall carry the usual side lights as provided for sailing vessels.

I would remark here, parenthetically and apart from the absurdity which will be evident in the *Heralds'* version to every practical mariner, that, in my opinion, it will be found extremely difficult if not impossible for pilot-boats of the class now employed in the Gulf of Yedo, to comply with the regulation as far as the carrying of a mast head light and side-lights is concerned. This difficulty will be apparent to pilots, without any further explanation from

Yours truly,

MARINER.

Yokohama, December 28th, 1876.

THE GREAT FIRE.

To the Editor of the *Japan Gazette*.

DEAR SIR:—You will confer a favour upon many of your readers by publishing the following report of the manner in which relief has been distributed to many families and individuals plunged into the greatest distress by the late disastrous conflagration in Tokio.

Herald, 21 Dec., 1876.

Art. 15.—Every pilot boat must be distinguished by the following signs:—

1st. The sides of a pilot boat must be painted entirely black.

2nd. The letters "Men-kio M'zusakifune" (licensed pilot-boat) in Japanese and Roman letters, or singly in Roman letters, and number, must be plainly painted on the stern, and on the upper part of the mainsail.

3rd. When a licensed pilot is on board a licensed pilot-boat, a flag must be hoisted from sunrise to sunset on the bow, mast, or other part of the boat easily visible; and the flag, although it must answer to the regulations of the Navy Department, should be wider than that of common vessels.

4th. A pilot-boat having on board a licensed pilot, must light a clear white lamp, and flash it every 15 minutes from sunset to sunrise in the place most easily visible from every part of the horizon; while at anchor or cruising, and at all other times, the ordinary side lights must be lighted the same as in common sailing vessels.

The committee who make this report through their chairman deserve the warmest thanks of the whole community not only for the wisdom and efficiency of the plan which they devised and so successfully carried out in executing the difficult task which they were requested to perform, but also for the personal devotion of many days of their valuable time to this work of charity.

It is proper to add that, from first to last, the mayors of the devastated wards gave the committee every assistance in their power, more especially by giving information of the more needy cases not otherwise provided for, and that many of the donors to this fund were at the same time contributors to the funds distributed through the agency of the Tokio Fu, having been assured that the relief would be conveyed only to the most necessitous.

ONE OF THE CONTRIBUTORS.

Tokio, December 27th, 1876.

REPORT.

The dreadful and devastating fire in this city which broke out on the night of the 29th of last month, has called forth a good deal of practical sympathy and charity from foreigners both in Yokohama and Tokio.

A subscription list was promptly opened in Yokohama at the *Japan Herald* office, and liberal sums were given to the sufferers through that channel. Much good has been done also in a private way. The Right, Rev. Bishop Williams, the Rev. David Thompson, and myself were requested to become a committee for the distribution of various sums sent to us, amounting in all to yen 465 24.

We have disposed of this sum in the following manner. The really needy families were visited and examined, when tickets were given to those who were deemed most deserving of aid. The receivers of these tickets were requested to come into the Tsukiji, where the charity was dispensed.

Altogether 233 families, numbering 870 persons, have been relieved. To 226 families—847 persons—10 days' rice was given. Besides the 10 days' rice, 184 of the 226 families received a futon each. To 7 families was given a futon each and no rice. Only 81 families received money in addition to the rice or a futon; and in these cases we were guided by the presence of old age, sickness, or widows in the families. Thus only one ninth of the sum entrusted to us was given in the shape of money. It will at once be observed that, striking an average of the several gifts, each family has received the value of two yen. We also gave away several articles of clothing sent to us by the Rev. A. C. Shaw. Our thanks are due to three Japanese young men, who rendered us much assistance in the performance of this work. In conclusion we can say it has been a pleasant duty to gladden the hearts of 870 persons with the money forwarded to us, and it will be an additional pleasure if the plan we adopted meets with the approval of the several donors.

On behalf of the Committee.

JOHN PIPER.

December 22nd, 1876.

Nippon Notes.

THE *Hochi-shinbun* publishes the following items concerning the agrarian riots in the Aichi and Mie-ken:—

On the 20th Dec. a number of excited farmers held meetings in the Mie-ken, and their

example was followed by the farmers of the Aichi-ken. Most of them assembled at the town of Yokkaichi. On the following day they threatened to attack the Mitsui Bank in Nagoya, which in consequence had to be guarded by a number of the local officials. In Yokkaichi, an official was killed by the insurgents, who cut all the telegraph wires which connect the eastern and south-western provinces with the town. According to a private telegram received from Nagoya on the 23rd ultimo, the insurgents set Yokkaichi on fire, and an extensive portion of the town was burned down. But the branch offices of the Mitsu Bishi and Kaisokuwaisha Cos. and the telegraph office were fortunately protected from injury. Nearly the whole town of Tsu, Ise, was destroyed, including many public buildings, and a large number of noisy people assembled at Inuyama, Owari, and Imao, Mino. A telegram, which was despatched from the Aichi Kencho at 6.40 p.m. the same day, says: about one hundred farmers of the Mie-ken attacked six district offices in various villages and burned them to the ground. A force of the garrison troops as well as a number of police was sent against them. Four of the principal leaders of the mob were arrested during the night of the 22nd ult., and all the rest repaired towards the Gifu-ken to join their companions. Measures are now about to be taken for the suppression of the disturbances in the Aichi-ken.

All the farmers of the village of Toyohara, Isarago-kori, Mie-ken, held meetings on the night of the 18th ult., beating drums, in order to excite their courage. The farmers in twenty-four other villages followed their example immediately, in spite of prohibitions by the Kencho. Early on the morning of the 20th ult. the insurgents, each of whom were armed with various kinds of weapons, attacked the local offices at Tsu. Half a battalion of infantry was sent against them from Nagoya. A steam ship company's office in Kuwana was destroyed during the night of the 20th. At the request of the governor of the Aichi-ken, the towns of Miya and Suga were strictly guarded, each by half a battalion of troops. Half a battalion was sent to the Gifu-ken on the 21st. On the following day, half a battalion of infantry, stationed at the branch barracks in Otsu, was ordered to start for the Mie-ken.

Owing to the alteration of the land tax, the Nagano-ken (Shinshu) is much disturbed, and farmers are holding meetings here and there.

A passenger by the *Shinagawa-maru* of the M. B. M. S. S. Co. from Yokkaichi gives the following short statement. "On the night of the 20th ult. the agrarian insurgents attacked the town of Yokkaichi and set it on fire. The Mitsu Bishi Branch Office was destroyed by them. Five or six farmers were found dead near the ruins of the building. An extensive fire was seen in the directions of Tsu, Miya, and Kuwana, respectively, at night."

The following account of the doings of the agrarian rioters in the Mie-ken is one of the most authentic. "At first about two thousand five hundred men, belonging to six villages, viz., Kumotsu, Yano, Shimanuki, Yonetsu, Nagatsune, and Komori, in the district of Yasunotsu, Ise, including a few shinto priests of Daijingu, who were lately discharged from their duties, murmured against the alteration of the land tax. About 200 ex-retainers of the ex-Daimio Todo united with them, and produced much excitement in many villages. They destroyed all the bridges and posts of

the telegraph lines between Uyeno and Shirako, Kanbe and Yokkaichi, and set every house on fire whose proprietor or tenant refused to join their party. At about 6 p.m. on the 17th ult. the farmers burned down the telegraph office, primary school house, and police station, in the town of Tsu; and during the two following days they remained there collecting additions to their forces. On the 20th ult. their number amounted to about fifteen thousand. They were armed with swords, and lances manufactured out of bamboo, and they endeavored to kill every person belonging to the government whom they met. About five hundred advanced towards the village of Inari at the foot of the Tadoyama, and issued a notice to the effect that any one who refused to favour their party would be killed immediately. It is said that the local officials were once obliged to flee with important documents. When the garrison troops had overcome a party which had opposed them in front, another appeared in their rear. No house of the Kucho or Kocho was left standing. One battalion of infantry advanced as far as the villages of Fukuda and Nitta. At about 4 p.m. on the 19th ult. terrible conflagrations were seen burning in about sixteen towns or villages. About twenty farmers surrounded the building of Yoshino-Gakko within the old castle of Tsu, where they were encountered by about seven shizoku. The latter instructed them to disperse peaceably; but were assailed by them instead. The shizoku became very angry and killed five farmers, putting the rest to flight; and the heads of those killed were exposed at the entrance to the school. No building constructed according to European architecture escaped destruction. The villages of Nikko, Akitake, and Kachiba are yet guarded by about three battalions. No severe engagement has yet taken place between the troops and insurgents."

An Italian in the employ of the Shichi-ri-ri of the Okurasho, sent one hundred yen to the police station as a subscription towards alleviating the distress of the families of the policemen, who were burned to death in the recent terrible fire in Tokio.

A LARGE oil-seller, at whose house a fire broke out a few days ago, had coins and paper money to the amount of 20,040 yen destroyed.

THE *Choya-shinbun* says that the inhabitants of the province of Dewa are much excited; and that Mr. Sakai, ex-Daimio of that province, is said to have left Tokio a few days ago, with a certain Ishikawa, ex-retainer of Aizu, without reporting his departure to the local government.

THE *Nichi-nichi-shinbun* states that an order was lately issued from the Kunaisho to the Yokohama-Saibansho stating that, on H. M. the Mikado's approaching tour to Kioto he will personally visit the civil and criminal courts of the Saibansho.

THREE men-of-war, viz., the *Rinjo*, *Kasuya*, and *Seiki-kawan* have received orders to escort H. M. the Mikado to Kobe. His Majesty will embark at Yokohama on board the *Takao-maru*.

Good order has been restored in the Ebaragi-ken; and to-day all the policemen who were despatched from Tokio have returned.

MR. JONES of the Kangio-ri-ri and two Japanese officials of that section, namely Oku and Wasegawa, have been ordered to proceed to Philadelphia to make large purchases of various articles necessary for pastoral purposes. Mr. Jones left for San Francisco in the *Alaska*.

A SILVER mine has been discovered in the mountains of Asama, Settsu. Mr. Ito, Vice-governor of the Hiogo-ken, is appointed superintendent.

THE *Choya-shinbun* says that yesterday the Sei-in granted the request of the Rikugun-sho to be allowed to build a fort at Kuwan-no-zaki, in the province of Sagami.

OWING to the capitalization of the shizoku's income and the alteration in the land-tax, much excitement prevails amongst the inhabitants of the Kochi-ken, where many of the local officials have resigned their posts.

It is said, says the *Hochi-shinbun*, that Mr. Shimadzu, late *Sadaijin*, will shortly take a journey to Tokio by sea in order to make personal enquiry into the state of health of His Majesty the Mikado.

At about 11 a.m. on the 23rd ult. a fire broke out at the Buddhist temple, Fukuji, No. 26, Honjo, Tokio, which was entirely destroyed, as were also some other temples, attached to it.

THE *Takasago-maru*, of the Mitsu Bishi Company, has been masted and rigged for a sailing voyage. The *Niigata-maru* is shortly to be taken to the Yokoska dock, where she will also be rigged as a sailing vessel. Both the *Takasago-maru* and *Niigata-maru* will sail for England some time in February next.

At about 2 a.m. on the 26th ult. a fire broke out at Moto-Urokurocho, Nagasaki, which burned down about forty houses. Another fire on the 25th ult., which commenced at No. 16, Nichome, Nojinbashi, Osaka, was not extinguished till four houses were destroyed.

MR. TACHIBANA, of the *Tohoku-shinbun* in Sendai, has been repeatedly summoned to appear before the local Saibansho, for having violated the press laws.

ABOUT twenty ringleaders of the agrarian rioters of the Ebaragi-ken are being strictly searched for in Tokio, where they are said to have taken refuge.

At about 8 p.m. on the 25th ult. a fire broke out in the castle of Hiroshima. The entire building, with the Kencho and three private houses, was burned down. On the following day, a fire in Kuma-moto destroyed two houses and three large godowns.

On the 24th ult. about five hundred farmers of the Chiba-ken invaded the Government offices at Sawara, Shimosa, and compelled the officials to receive a petition they had prepared on the subject of the land-tax.

(From the *Hochi-shinbun*.)

Notification No. 44-A.

According to the Pilotage Regulations for vessels of foreign form of construction promulgated in notification No. 154 on the 15th inst., any foreigner holding a pilot's license will be permitted to land at any port on the sea-coast of the empire for pilotage business only, in conformity with the 12th article of the Pilotage Regulations. Should he wish to return to the place whence he sailed he will be permitted to make the journey overland without the customary passport.

OKUBO TOSHIMITSU,
Naimu-kiō

16th Dec. 1876.

On the 28th ult. an investigation into the circumstances of the recent broil between the natives and German sailors was opened before the Vice-Governor of the Kanagawa-ken and the German Consul.

and his partners, Kawamura Kei-itchiro, Ban Mitchi-itchiro and Yakumai Umpatchi, his contracts for employment.—That he, plaintiff, after this did duly all he could in order to buy for the company, and on credit from some foreign merchants of Yokohama, a certain quantity of sugar and cloth, and that he, plaintiff, has handed to the company samples of this sugar and cloth. But as for this transaction some immovables were to be given as security, and this not existing in Yokohama, said transaction could not be brought to an arrangement. That plaintiff consequently then tried to organise the situation of the branch office but that none of his propositions would come to something, that he then asked Umpatchi of the reason of all this, on which he was informed that Mori Motoharu was arrested at the Saibansho of Tokio for some affair, and that they, therefore, could not occupy themselves with any proposition that would be made, that notwithstanding this affair was going on in this way for some time, still defendants never paid any salary, nor did they procure any house for plaintiff conformably to the contract.

Consequently plaintiff claims now for salary and house-rent, from defendants the sum of 1,020 dollars.

Defendant, Mori Motoharu, states that in the 11th month of 8th year Meiji he entered as partner in the company called "Sanriku-shoko" on the proposition of a certain Kawamura Kei-itchiro (whose present whereabouts is unknown), and late Shimada Taiske. That they proposed to open their business in the buildings of the "Yusheisha," a company situated in Tokio Kakigiracho; that however its capital not being sufficient they could not commence business yet, consequently Kawamura Kei-itchiro and Ban Mitsu-itchiro were sent to Yokohama in order to raise money; that Mitsu-itchiro then returned to Tokio and told Mori Motoharu, that by advice of one Yakumai Umpatchi, a friend of Kei-itchiro, a certain quantity of merchandise could be bought on credit from some foreign merchant. Motoharu himself came to Yokohama then on the 17th of 12th month of 8th year Meiji, and having been told that they were going to be assisted by Welsh, a British subject, friend of Yakumai Umpatchi, he saw said Welsh, who told him that he could help them to arrange that transaction as much as for about some 7,000 yen of merchandise, on the condition that payment of a certain part be made as advance on the value; Motoharu accordingly requested Welsh to take the affair in hand. However, he, Motoharu, having been told that immovables were to be given as security in that transaction, and same not existing in Yokohama, knew that the above affair would perhaps not come to a completion. That all the parties arranged then to establish a branch of their Company in Yokohama. That during the meantime plaintiff requested Motoharu to be employed in their Company, and that the latter told plaintiff to this effect that if the above-mentioned affair of 7,000 yen worth of goods would be completed and after the branch office had been opened, that he would be employed, and that it was verbally understood also with plaintiff that upon the completion of the said affair, he, plaintiff, conformably to his own request, would get $2\frac{1}{2}$ per cent as commission on the said 7,000 yen. That from that time defendants and others were endeavouring to find a house for their branch office, and that Welsh also was busy arranging this beforesaid transaction. That one

day Motoharu being told that the proposed transaction seemed almost to be completed, came to Yokohama and asked from the plaintiff the name and residence of the owner of such merchandise, because if he did not know this no one would supply capital for it; but plaintiff said that if Motoharu would advance him 50 yen that he would then tell him the name and address, but otherwise he would not. That plaintiff did not say anything notwithstanding the eager requests that were made to him. That with these interviews several days were wasted, and that in the meantime defendant was arrested by the Police of Kanagawa Ken, respecting some other affair for which he was to be interrogated by the Tokio Saibansho; a thing which happened on the 30th of 12th month 8th year Meiji, and owing to this no further suit was naturally given to the said proposed transaction. Under these circumstances he, defendant, denies the existence of a contract for employment as alleged by plaintiff. With regard to the document, now produced by plaintiff, he, defendant, declares, that this was now in court for the first time he saw it, and that on the 18th of 12th month 8th year Meiji, when he, Motoharu, came to this port he authorised Kei-itchiro and Umpatchi if the transaction in question should come to an arrangement to make up and effect the contract for the said affair, and in order that they should be able to make such contract up, he, Motoharu, sent the necessary paper to the effect to Umpatchi through Mitsu Itchiro and that this paper was blank bearing nothing but the stamp of the company, but no writing was on it. That he now looking at this document recognizes same to be the hand writing of Umpatchi, and he supposes it has been said Umpatchi thus who wrote it; that he Motoharu declares having not only never given his consent for such a document to be made but he never authorized even Umpatchi to write such a contract for employment out, and that he never heard of such having been handed to Welsh; that he can thus not admit to be kept responsible for any claim plaintiff may lodge on the grounds of such a document.

Umpatchi states that in the 9th month of 8th year Meiji, Kawamura Kei-itchiro came to his place and asked him whether he knew any good means to obtain capital for the institution of a proposed company to be called "Sanriku-shoko," he Umpatchi asked Kei-itchiro then how he would think of getting Welsh, a friend of his (Umpatchi), to help them to arrange the purchase of some goods from foreigners on credit; that Kei-itchiro agreed to that idea. That on the 16th of 12th month 8th year Meiji Kei-itchiro, Mori Motoharu, and Ban Mitsu-itchiro held a meeting at Umpatchi's place where Welsh was present, and after due consultation Welsh was requested to give his assistance for the purchase of certain merchandise on credit. That a few days later Motoharu sent some blank paper bearing the above said company's stamp, to him Umpatchi through Mitsu-itchiro. That Kei-itchiro told Umpatchi then that as soon as the contract for the proposed transaction should be completed, as Welsh was then to be employed at their company, a draught of contract for his employment was to be drawn up in order same to be ready beforehand; that, he Umpatchi, accordingly made the contract in question up himself showed it to Kei-itchiro who corrected it, and that he Umpatchi wrote it then on the said blank paper which had been handed to him by Mitsu-itchiro. That then he, Un-

patchi, showed the same also to Welsh on the 23rd of the 12th month 8th year Meiji. That he, Umpatchi, told Welsh that if the proposed affair should be brought to a settlement he should be engaged on the same terms as contained in that contract; and that he, Welsh, was therefore to assist them diligently in order to complete the above transaction. That in the afternoon of same day Welsh came again to Umpatchi's place and said that in order to try to arrange said transaction on behalf of the company Sanriku-shoko he would have to show the contract he had shown to the owners of the merchandise, that he otherwise could not get anyone to trust in the affair, and that he, Welsh, for his own sake, wanted it also, as without he would lose the chance of obtaining the completion of that affair, and that whenever the same should be wanted by Umpatchi he, Welsh, would return it immediately. That, pushed by this eager request of Welsh, Umpatchi found himself obliged to lend the document to Welsh, and on that day Umpatchi informed only Kawamura Kei-itchiro of having done so. That a few days afterwards Welsh having declared that the transaction was almost completed, Motoharu, Kei-itchiro, Mitsu-itchiro, and Umpatchi all together went to Welsh's place, and asked for the name and residence of the owner of such merchandise: however, Welsh did not tell them, and it was Motoharu who was the most particularly anxious to know it. That in consequence of these arguments some days were wasted, and that in the meantime Motoharu was taken to the Police, and that under these circumstances the transactions were entirely stopped. That he, Umpatchi, was not only under the impression that the so intended branch office was not existing, but that the head office of the company was even not established yet, and that though plaintiff was in possession of that document or engagement, this is of course of no value, and that he, Umpatchi, did even not remember himself it till this day.

Ban Mitsu-itchiro states that he seconde entirely the whole statement of Motoharu as regards what happened or passed in Yokohama regarding the company, and that the blank paper in question bearing the company's stamp was handed over to Umpatchi by him by order of Motoharu, but that he, Ban, does not know whether any contract has been written on said paper, nor if anything of the kind has been given to Welsh.

Judgment is as follows:

1.—With regard to the claim of Welsh the only proof brought forward by him is a document bearing a stamp which says "Sanriku-shoko" and on this he grounds his claim of breach of contract and claims damages, but plaintiff advances no other satisfactory proof in support of this claim, nor does plaintiff produce any evidence as to the manner in which the document in question was delivered to him, and all the statements regarding this affair contradicting each other can thus not be taken as evidence. The Court consequently has to decide the case on the following points.

1.—On the situation of the "Sanriku-shoko" company; 2nd, on the nature of the document in question; 3rd, whether said contract is in accordance with the regulations; 4th, whether same has ever been or is binding, and 5th, on the point on which the claim has been based.

2.—The "Sanriku-shoko" company is said by plaintiff as being his employer, however, the same firm not having obtained any go-

vernmental permission for doing business in accordance with the regulations, said company's existence can not be acknowledged, nor can such company transact contracts with any other party.

3.—The contract for employment produced by plaintiff is merely a draft made up in Japanese and filled in a blank paper which bears a stamp meaning "Sanriku-shoko": this bears neither signature nor seal of the defendants, nor even the necessary signature of the plaintiff, and the accompanying English translation is different in the most important points from the Japanese which can thus not be considered to be a correction; but even the court considering for a moment same to be a correct one still it does not bear said company's stamp nor signature of neither of the parties: said document has thus nothing that can make it to be considered by plaintiff as being a real and binding contract. Any contract made between parties in order to be binding must be signed by both parties in conformity with the general rules and customs. However the above document having only on it the stamp "Sanriku-shoko," which company had no power to effect such contracts yet, and the same being neither signed nor sealed by the parties, is considered and found to be a document in contravention to the general rules.

4th.—In case of a Japanese employing a foreigner, each of the parties must make a copy of their contract in their own language first, and this after having been forwarded must receive the sanction of the department for foreign affairs, through the intermediary of the local authorities: otherwise such contract cannot become binding; and whereas the contract in question has never undergone any of these formalities, same can thus not be considered to be in conformity with the regulations.

5th.—Defendants in order to raise a capital for their "Sanriku-shoko" company proposed and tried to buy some merchandize on credit in Yokohama, and tried also to open a branch office in the same port, but that the above proposition did not come to a completion. That it is clearly shown by defendant's and Umpatchi's statements that a verbal arrangement was made for Yakumai Umpatchi and plaintiff Welsh to become the managers of the branch office, in case the above said transaction should succeed.

Plaintiff states that he duly endeavoured to assist the company as much as he could in accordance with the contract. But as he declares that defendants were his employers how is it then that he refused to tell the name and address of the owner of the merchandise to them? That the court, considering the affair well, finds that it is plainly shown that plaintiff was only acting as a broker in this affair, and was not yet to be considered as an employee of defendants, and that the contract in dispute has never yet been a true and binding one.

6.—Thus, whereas the existence of the Sanriku-shoko company has never been acknowledged yet, and consequently the contracts which such company may make being entirely in contravention with the general customs and regulations, same is found to be not actually binding, and notwithstanding it purports that plaintiff shall be employed, still, for the above reasons, same is considered to be null and of no value. It is consequently therefore decided that plaintiff has no right to claim anything from defendant.

This 28th day of 12th month, 9th year
Meiji (21st December 1876.)

YOKOHAMA SAIBANSHO.

In H. B. M.'s Court at Kanagawa In Admiralty.

Before H. S. WILKINSON, Esq.,
Acting-Law Secretary.

Friday, December 29th, 1876.

The Captain and Owners of the British Schooner *Rupak* were sued at the instance of William Braithwaite, Ramote Surata, Joseph Hooker, Keresey, Bidalla, Bomba, Peta, Detuna, Kang Ay, Ugotee, Ramotee, and Manuel de S. Nicoles, the crew, for wages due.

Mr. Kirkwood appeared as Proctor for the plaintiffs; and the vessel was not represented by Counsel.

Mr. Kirkwood in opening the case briefly related the facts which led to the suit being brought which were simply these. The *Rupak* left Singapore in January, 1874, on a voyage to the South Pacific Islands after which she was to return to Singapore. After a number of adventures and misadventures the vessel found her way to Yokohama in September. The Master finding that adverse circumstances prevented his continuing the voyage with any degree of success resolved to abandon it, which he did, so far as concerned the crew, on the 30th of November. The Master being unable to pay the men the wages that were due they instituted legal proceedings; and on the first of December the vessel was seized. Mr. Kirkwood further informed the Court that since the arrest of the vessel the necessary notices had been published in the local journals and it now lay with His Honour to decide the justice of the claim of the plaintiffs; and if His Honour's decision resulted in favour of his clients, then it would be necessary to issue a decree for the sale of the vessel.

The Mate of the *Rupak* was then sworn, and gave evidence to the effect that he entered the service of the vessel on the 10th of December, 1874, and was to receive \$60 per month; but on the 1st of August, 1875, his salary was increased to \$75 per month. From the time he entered the vessel until the 30th of November, when he was told by the Captain that the voyage had terminated, he had not received any of his wages.

The Master of the *Rupak*, Edward Benjamin Gall, being sworn, stated:—

I am part owner of the *Rupak*, and I was appointed by the other part owners as master of that vessel. I engaged William Braithwaite at Singapore, December 10th, 1874, as chief mate at \$60 per month. It is true that his wages were raised to \$75 per month on the 1st August, 1875. On the 23rd day of June at the island of Matadore, I engaged Ramote, Keresey, Ramotee, and Ugotee, for the remainder of the voyage at \$10 per month. On the 10th April at the island of Salibaboo, I engaged Joe Hooker for the remainder of the voyage, at \$7 per month. On the 17th May, 1874, at the island I engaged Bomba and Bidalla as able seamen at \$4 per month. On the 28th June, 1876, at the island of Darke-lange, I engaged Surata, Kang Ay, and Peta Delima to serve as seamen at \$4 per month. On the 13th September at Yokohama I engaged Manuel de S. Nicolas to serve as seamen at the rate of \$10 per month. All the seamen respectively entered my service on the day that I engaged them. Since the arrival of the *Rupak* in Yokohama I have notified them that I have given up all idea of prosecuting the voyage further, and that their wages would be paid only up to the 30th November. All the sailors mentioned in the petition have

duly earned the wages they claim. The agreement with the South Sea Islanders when I engaged them was to return them to their chief. I know of one captain who is fitting out a vessel to go down to those islands and he has promised to take them down. With the exception of the mate they all talk Pellow language. I understand enough to order them about. All the statements in the petition are correct. I have read it through carefully.

After the examination of the Master of the *Rupak*, James Jones Skinner was sworn, and corroborated the statements of the Captain. He also acknowledged being part owner of the vessel and super-cargo.

The Court having intimated to Mr. Kirkwood that it was entirely unnecessary to call the Islanders to give evidence, the learned gentleman specified his claims and quoted authorities to substantiate his application.

The vessel was then ordered by the Court to be put up for sale by Public Auction on Monday, the 8th January, 1877, and sold to the highest bidder, subject to the approval of the Court. The bidding to be reported to the Court on Tuesday the 9th January, 1877, when the Court shall approve the sale or order another.

It was arranged that the Registrar should settle the amount of wages due to each seaman; the said wages to be paid from the proceeds of the sale. A sufficient sum, to be settled by the Registrar, will be paid H. M.'s Consul for the conveyance of the seamen back to the place of their engagement.

The fees of Court and plaintiffs' taxed costs to be first paid out of the proceeds of the sale.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, January 3rd, 1877.

COPELAND & WIEGAND vs. M. SCOTT.

The plaintiffs claimed the sum of \$38 for beer sold and delivered.

Mr. Wiegand represented his firm and the defendant appeared personally.

The plaintiff stated his case and produced chits purporting to be signed by the defendant acknowledging the receipt of the beer.

The defendant on examining the chits disclaimed all knowledge of those which were only signed "M. S.," stating that he never signed his name other than in full.

The plaintiff said that he had witnesses of the delivery of the beer, but, not anticipating the defendant would dispute the signature of the chits, he had not thought it necessary to produce them.

His Honour said he would adjourn the case till ten o'clock to-morrow morning, in order to allow both parties the opportunity of procuring other testimony, and ordered plaintiff to pay the costs of the day, \$3.

Thursday, 4th Jan., 1877.

COPELAND AND WIEGAND vs. M. SCOTT.

(Continued from Yesterday.)

This morning the plaintiffs in this case produced a witness to prove the delivery of the beer to defendant.

T. W. Holm, sworn, deposed:—I delivered the beer to defendant: the writing in the body of these chits is in my handwriting but the signatures are his. By delivery I mean that I took the beer to Scott's house and saw it taken in. I also delivered the vinegar:

at least on one occasion, and I believe on both. Scott signed the chits himself and I saw him put his initials.

Defendant, deposed:—I did not receive the beer mentioned on the two chits signed "M. S." I did not write the initials on the chits. I did not write my initials on any of those chits. It is not true that the last witness saw me affix my initials to them. I do not keep any account of what beer I receive. I only keep English beer now. It must have been about three months ago since I received any beer from Copeland and Wiegand. I do not recollect when the last bill was paid to Copeland and Wiegand. To the best of my knowledge I have never signed my initials to any chit. I have no one to assist me except two female servants. I receive everything myself. That letter is in my handwriting. (This was a letter from defendant to plaintiffs, saying he would have paid them their account if they had not sent that man Holm with a threatening letter; and they could summons or do what they liked, he would pay when he was well enough.) I did not sign those chits for the vinegar. The vinegar was paid for long ago. I think I got beer from Mr. Wiegand after July last. I have had beer from Mr. Lewis. I got some the night before last. Previous to that time I got beer from Japanese town, in quart bottles. I left off dealing with Copeland and Wiegand because Holm refused to bring me 18 gallons of beer about October last. It depends on the weather how much beer I need in the course of a month. I used to pay Wiegand from \$40 to \$50 per month. Beer was then 40 cents per gallon. Sometimes I used from 300 to 500 gallons per month. In September I got two 10 gallon kegs; also an 18-gallon cask which I sent back and asked that it might be exchanged for Wiegand's beer, as Copeland's was sour and unfit for use. I cannot say whether I paid for the two 10-gallons. The last lots I know I have not paid for. I think I paid the last account in October.

The case was then adjourned till 1.30 p.m. in order to allow the plaintiffs time to produce their ledger, and the defendant his vouchers.

On the Court resuming this afternoon, the defendant was asked to produce his vouchers. He said he could not find the accounts he wanted, but produced some bills to show how often he had had dealings with the plaintiffs, and also as to how payments had been made. On being asked if he had any bills later than the 15th of June, the defendant turned over his accounts and finally came to the conclusion that the June account must be the last one, though he believed he ought to have some account of later date.

His Honour said that there was no doubt in his mind but that the beer, for which the chits had only been initialed, had been received by defendant; and that he, defendant, had initialed those chits. The defendant had laid himself open to a charge of perjury, but considering all circumstances he, His Honour, would not institute proceedings against him.

The Court gave judgment for the plaintiffs for the full amount claimed: to be paid within ten days.

In H. B. M.'s Court at Kanagawa

BEFORE RUSSELL ROBERTSON ESQ., Consul.

Monday, January 8th, 1877.

E. S. SMITH & Co. vs. S. LILLY.

The plaintiffs claimed the sum of \$16.25

for goods sold and delivered and money lent.

The defendant being ill was unable to put in an appearance; and Mr. G. Hodges having deposed to serving him with a summons this morning on board of the *Sunda*, Mr. Smith then stated his case.

It appears that the defendant signed chits at the International Hotel for refreshments to the amount of \$8.25; and afterwards borrowed the sum of \$8. After lending the money the plaintiffs ascertained that defendant owed several other persons certain sums, and that lending him money was not a safe investment. Upon this they made application time after time for payment, but were always put off with promises which were never redeemed. They ultimately threatened to take legal proceedings, whereupon the defendant gave them an order on Mr. Bevan for the amount. On presenting the order Mr. Bevan declined to pay, alleging that he had no money belonging to Lilly, but on the contrary, he, Lilly, owed him the sum of twenty dollars. They then instituted the present proceedings.

Judgment for amount claimed with costs.

In the Judicial Court of Kanagawa.

Before MR. ASAINO KANSUI, Vice-President.

Tuesday, January 9th, 1877.

THOS. ROSE & Co., vs. FUJIKURA ZEMPACHI.

The claim of the plaintiffs in this case was for \$1,000, value of a boiler and engine sold to the defendant, and ten per cent interest on the same. They expressed their willingness at the time of instituting the claim to accept \$200 damages for breach of contract if the defendant was willing, and to cancel the contract.

The Court intimated to Mr. Rose, who appeared on behalf of his firm, that on receipt of the claim by the Court the defendant was notified, and the case put down for hearing to-day. But in consequence of illness the defendant was not able to appear. However, the Court was quite willing to hear a detailed statement of the case from the plaintiffs.

The defendant sent a reply to the plaintiff's claim through his attorney, Furita, which, however, was not signed by the defendant himself, and the plaintiff's attorney, Mr. Goble, objected to it being put into Court as evidence, both on the ground that the document was not signed by the defendant, and also that there was nothing to show that Furita had power of attorney from the defendant, and therefore it might have been written by any one and never seen by the defendant.

The defence referred to was an acknowledgement of the contract for the purchase of the boiler and engine; but by the forfeiture of \$100 the defendant considered all further claim upon him was unreasonable, notwithstanding there being no provision in the contract specifying that on the forfeiture of the amount of bargain money paid, the contract was to be considered null and void.

Thos. Rose then deposed:—On or about the 14th of September last, the defendant called on me relative to the purchase of a boiler and engine. At that interview we could not agree as to price. After several interviews, we entered into a contract on the 16th, and the defendant paid me \$100 bargain money and promised to take delivery of the articles and pay me the balance, \$900, within sixty days. I wrote out an agreement in English and gave it to him, but he did not

give me anything in writing. In October another Japanese came to me and offered me \$500 more than what I had sold the boiler and engine for to the defendant, but I considered the contract between me and the defendant as binding, and therefore declined to accept. I only saw the defendant once between the time of the sale and the time for delivery. He then came to me about some wheels. Four days after the term of sixty days had expired, defendant came and asked me to grant him forty days longer in which to take delivery and he would pay one hundred dollars extra. He was to come the following day and pay the \$100. He did not come; and from that time to the present I have seen nothing of him. I was told by another Japanese that he (the Japanese) had advanced to the defendant the sum of \$600 on the boiler and engine, and he wondered why he had not received them, as he was very much in need of those articles.

To the Court:—I have no writings to put into Court. I did not keep a copy of the agreement which I wrote out and gave to defendant, but I embodied a copy in my complaint sent to the British Consulate.

Mr. Goble, who appeared to watch the case on behalf of the defendant, stepped up to the witness and informed him that the interpreter was not translating correctly to the judge.

Court, to witness:—Who is that gentleman?

Witness:—Mr. Goble, who has appeared to watch the case on my behalf.

Court:—How was it you did not inform the Court of your intention to bring a gentleman to watch the case.

Witness:—I thought it was quite allowable. Moreover the usher was informed before the case commenced that Mr. Goble attended to watch my case.

Court:—Did you tell the usher in English or Japanese.

Witness:—Japanese.

Court:—What countryman is Mr. Goble and where does he reside?

Witness:—An American; residing on No. 75A, Bluff.

The Court then informed Mr. Goble that he was quite welcome to watch the case and point out any mistakes that might occur in the translation by the interpreter.

Mr. Goble then explained some difference which had occurred in the translation relative to the agreement.

Court to Mr. Goble:—Before you proceed further in correcting the interpretation, the Court would desire you to ask permission to be present.

Mr. Goble:—The Court has already been informed, through the usher, of my presence and object.

Court:—The officer has not reported you: therefore if you will now ask permission you may stay.

Mr. Goble:—The fault is not mine that the judge has not been informed of my presence. However, I ask permission to be present.

Court:—You may then sit down behind the witness, and correct any wrongful interpretation.

The examination of the witness was then continued on the subject of the agreement in writing, and he stated that he had no further documents to put into Court, though he had of course entered the transaction in his books.

To the Court:—When I was offered the \$1,500 for the engine and boiler I did not inform the defendant of the fact, as, at that

time, I was not aware of his place of residence.

The plaintiff stated his desire to produce witnesses if the Court would allow him. Permission having been granted,

Okamoto Tenzo was called and examined by the Court; and at the close of his examination,

The Court informed the plaintiff that the witness really knew nothing personally of the transaction.

Mr. Goble, on behalf of the plaintiff, explained that the witness had only been called to show that the document which had been received from defendant was not duly signed or otherwise attested by the defendant, and could not, therefore, be received as legal evidence. It was not alleged that the last witness could personally testify to the conditions of the transaction.

The Court then adjourned till 1.15 p.m.

On the Court resuming this afternoon further evidence in support of the claim was called for and

Yasutaro was examined and gave his evidence with much perspicacity. After hearing his statement the Court notified the plaintiff that all the witness knew relative to the case had been elicited from him and written down. If he, plaintiff, had any other witnesses to call, the Court was willing to hear what they had to say.

Mr. Rose stated that he had no other witness present, but he had brought his books which would establish his own evidence concerning the contract.

The entry referring to the transaction was then pointed out to the Court.

The Court asked Mr. Rose on what grounds did he base his claim for \$200 in case the defendant did not take delivery of the articles, to which he replied that he claimed the \$200 for damages for breach of contract. He had been kept from using his money and had been compelled to decline a better offer and thought he was justly entitled to at least \$200 compensation for the loss he had sustained. If the defendant took delivery, then he claimed \$900 and interest at the rate of 10 per cent.

In answer to a question, Mr. Rose stated that at the time the contract was made dollars were high; he had to pay a percentage on all accounts over three months; and not only had he sustained loss by this means, but he had also been put to expense in looking after the machinery. Dollars were worth 4s. 5d. at the time of the contract, while at the present time they were not worth more than 4s. 1d.

The Court requested the plaintiff to make out a detailed statement of the loss he had sustained by the fluctuation of exchange and other means and send it to the Saibansho to-morrow. It also further intimated that as plaintiff's last witness stated that he had seen a document in Yedo from the defendant to another man stating that he had bought the machinery for the sum of \$1,500, it would be as well for the plaintiff to produce that document if possible.

The case was then adjourned till the 16th inst at 10 a.m.

In the U. S. Consular-General Court.
Before Gen. T. B. Van Buren, *Consul-General*.

Wednesday, January, 10th, 1877.

TOKIO FU vs. J. M. BATCHELDER.

MOTION FOR A NEW TRIAL.

Mr. Dickens appeared on behalf of the

plaintiffs. The defendant conducted his own case.

In Mr. Dickens' address to the Court for the granting of motion for a new trial, brought under clauses 66, 76, and 78 of the regulations of the United States Court, he mentioned that an affidavit and a statement had been drawn up, the former by himself, which he then read, and which ran as follows:—

AFFIDAVIT.

In the United States Consular Court,
Kanagawa.

The—day of December, 1876.

In the matter for application for a rehearing of a cause between Aka-naura Tsunekatsu, Tokio Fu, Chiusa Han, plaintiff, and J. M. Batchelder, defendant.

I, Frederick Victor Dickens, of number 28 Yokohama, Counsellor at Law, make out and say as follows:—

1st.—I am counsel for the above named plaintiff, who being unaware of the necessity of being properly represented was unrepresented by counsel or by any foreign adviser at the hearing of the above cause, and who therefore by this accident neither cross-examined upon the evidence then brought against him, nor could understand the necessity of producing and did not produce evidence in his own behalf that otherwise might have been forthcoming.

2nd.—Since the hearing, new evidence has been discovered very material for the plaintiff which could not well, and more especially under the circumstances mentioned in the first paragraph hereof have been discovered and produced at the hearing. Much of such new evidence has been volunteered by persons whose attention has been called to the case by the published reports of it and who were unknown to the plaintiff and tends to show among other things that as a matter of fact there never was any such condition or covenant understood as existing between the plaintiff or the Japanese Government and the land-renters of Ts'kidji as the defendant alleges; and further that the present condition of the owners of land within Ts'kidji Concession has been brought about not by any default of the plaintiff or the said Government but by purely natural causes.

F. V. DICKINS.

Sworn before me, this 21st Dec., 1876.

THOS. B. VAN BUREN,

U. S. Consul-General.

STATEMENT.

1st.—The damages, if any, are excessive, there being no distinct evidence whatever that the depreciation in value, if any, of the property held by the defendant is due entirely or chiefly, or at all to any other than natural causes, or that the plaintiff or his Government are in any way liable for such damage.

2nd.—The evidence already before the Court does not directly or by legal implication show any written or verbal agreement between the parties which the plaintiff has broken, and does not justify either the judgment in favor of defendant or the certificate as to damages awarded him. The judgment and certificate are against law in that among other reasons no condition or covenant can be legally implied from the documentary evidence, and even if such a covenant existed it would form no answer at common law to a claim for rent, but could only form the subject for a separate claim, the damages

recoverable on which might consist of more or less of the sums paid as rent and purchase money, but could not include loss of outlay or profits as too remote.

After reading the above, the learned gentleman proceeded to develop the statements briefly alluded to in those documents, taking as his guide the 76th article of the Regulations of the Court. He contended that the provisions of the treaty under which the title-deed had been drawn up particularly specified that payment of the rent of the land would be strictly enforced. It was not clearly stated in the title deed or treaty that in order to recover the rent it would be necessary to take legal proceedings in a court of law; and the plaintiffs did not consider that it would be necessary to obtain the services of a legal gentleman. Owing to this, proper evidence was not produced which might under other circumstances have been produced. Neither was the evidence which was produced subjected to that examination which was necessary to elicit the facts of the case. Under these circumstances the learned gentleman claimed that his clients were entitled to a re-hearing of the case. But not alone on these grounds did he base his application for a re-hearing. He could produce a large amount of evidence at a re-hearing which under any circumstances the plaintiffs could not have produced at the first trial. And on this ground the plaintiffs were entitled to have their application granted, as article 3 of clause 76 permitted a re-hearing on it being shown there was such evidence. The kind of evidence he, Mr. Dickens, could produce at a new trial would distinctly show that the Government never bound itself not to permit foreigners to reside *outside* of Ts'kidji. He was also prepared to show that the cost of preparing the land was not covered by the money paid for it; and also that the rent was not excessive, in fact not sufficient to keep the settlement in proper order. The new evidence would consist of correspondence between the Consulate and the Tokio Fu, statements of officers connected with the latter, and also statements of foreigners, which must be looked upon as impartial. He had no doubt that the case had been properly considered by the Court according to the amount of material that was brought before it. But still he objected to the whole of the judgment, as it was wrong through the insufficiency of evidence as well as according to law. The learned gentleman pointed out that the judgment not only granted the application on the part of the defendant for damages, but gave some thousands of dollars more than had even been claimed.

The Court here intimated that no judgment for damages had been given.

Mr. Dickens remarked that the certificate virtually amounted to the same thing, and continued his arguments, urging that the present action was one for the recovery of rent, which excluded a defence for the recovery of damages, though a set-off to rent might be pleaded. He quoted authorities both on English and American law to substantiate his arguments on this point; after which he contended that the only way in which the defendant could legally claim damages was by paying into court the amount of rent claimed by the plaintiff and adding a set-off. The manner in which the defendant had brought his case forward was altogether erroneous. This case was commenced in 1871 or 1872, when the plaintiff claimed the second year's rent which

was paid into the Consulate by the defendant and retained; at all events it never reached the Tokio Fu, Mr. Shephard advancing certain reasons for the detention which, in the event of his application for a new trial being granted, he would produce. In commenting upon the judgment given by the Court on the first hearing, the learned Counsel remarked that it was questionable whether that judgment could be sustained by the arguments on which it was based. According to that judgment the Japanese Government had pledged itself never to allow foreigners to reside outside Ts'kidji without paying the landholders some indemnity. It amounted to this. "I let a portion of my estate to strangers and therefore am debarred from letting any more of it unless I pay the first parties some indemnity." A mistake had occurred in connection with the right of the Government to permit foreigners to reside and its right to curtail them. The defendant could claim as a right freedom to live in the settlement of Ts'kidji, but that was not saying that, therefore, other foreigners could not live outside if the Government chose to permit them. It had never been intended by the Government to curtail its own power and right when the concession was ceded. It had been construed that, because the Government had allowed foreigners the privilege of residing within specified limits, its right to permit them to reside elsewhere was curtailed. Such reasoning could not be connected by a logical process. If the Government had made a specific promise at the time Ts'kidji was opened never to allow foreigners to reside outside of the settlement, and so enticed persons to purchase the land, it would have been different. But it could not be said the Government had done so. Consequently it, the Government, had not curtailed its right to allow persons to reside outside the settlement or exclude them from doing so at will. He, Mr. Dickens, was prepared to show that the cause of the reduction in the value of land in Ts'kidji was not on account of the action of the Government, but resulted from natural causes, namely, through the general depreciation of trade and also in consequence of the construction of the railway.

On these grounds Mr. Dickens asked that his application for a rehearing of the case might be granted.

The defendant replied as follows:

May it please your Honor:—I quite agree with the learned Counsel as to the importance of this case between the Japanese and Foreign Governments. We have certain guaranteed treaty rights under convention which have been legally sustained by this Court. I herewith present a brief argument against granting plaintiff's motion for a new trial.

Captain Batchelder then read and handed into Court the following statement:—

This is a motion made by the plaintiff's Counsel for a new trial, and annexed to and in support of the motion is an affidavit and statement.

The former assigns two reasons for granting the motion, which may be briefly stated as follows:

1st.—Accident occasioned by the plaintiff's neglect or want of knowledge.

2nd.—New evidence which the plaintiff could not well have discovered, especially because of his neglect or want of knowledge. The latter also assigns the following grounds

in support of the motion, which, for the sake of convenience, I shall number 3rd, and 4th, instead of 1st, and 2nd, as in the statement itself.

3d.—The damages, if any, are excessive.

4th.—The evidence does not justify the judgment, and the judgment is against law.

By reference to the U. S. Consular Court Regulations, it will be observed that a new trial may be granted for the following causes, among others, by which the substantial rights of the party aggrieved are materially affected; accident or surprise which ordinary prudence could not have guarded against.

Newly discovered evidence, material for the party making the application which he could not, with reasonable diligence, have discovered and produced at the trial.

Excessive damages appearing to have been given under the influence of passion or prejudice.

Insufficiency of the evidence to justify the judgment or other decision, or that it is against law.

The grounds assigned for the granting of the motion now proceeding before Your Honor are their own condemnation, and, with all due respect to the learned gentlemen who made them, I cannot understand how he can rely upon the reasons, while they are so at variance with the requirements of the Court Regulations.

Certainly the Consular Court Regulations provide for the granting of a new trial upon the grounds of accident or surprise, but it must be such an accident or surprise as ordinary prudence could not guard against.

The affidavit does not even claim that ordinary prudence might not have prevented the accident, but assigns as causes for the accident neglect and ignorance—two causes which the law looks upon with more abhorrence than any other, and which it will never excuse.

Besides it was absolutely necessary for the plaintiff to prove affirmatively that the accident was one which ordinary prudence could not guard against. This he has not done, but he has even assigned for the accident causes wholly repugnant to the law, and never admissible in extenuation or justification.

True, plaintiff was not represented on the trial by counsel, neither was the defendant; and so we appeared before the Court on precisely even grounds.

If the plaintiff lost anything by reason of his neglect or ignorance, (which I do not believe) then he must stand it, and not expect a court of law to do that which it would not be justified in doing had he been represented by counsel, and had his counsel pursued the course which he followed.

If the Court is justified in entertaining the motion on the grounds assigned in the 1st paragraph, then surely I would have had much better reasons for asking for a rehearing of the motion upon the grounds that the plaintiff is now represented by counsel and I am not.

It cannot be contended that the plaintiff was compelled to appear in person by reason of a dearth of legal gentlemen, either in the employ of the Japanese government, or others ready to accept retainers, and so it must have been the result of his own voluntary act, and by that act he must abide.

The 2nd paragraph of the affidavit in support of the motion is more unsatisfactory than the 1st, and the Court will observe, that the word "well" is very ingeniously smuggled into the paragraph making it read; "new evidence which the plaintiff could not 'well' have discovered."

This qualification undoubtedly satisfies the conscience of the applicant, but it certainly does not meet the requirements of the law.

The new evidence must be such as the party could not with reasonable diligence have discovered and procured at the trial, and does not allow the party making the motion to suit his own convenience.

But then follows a clause which nullifies the whole paragraph so far as the word "well" has not already done so.

The reason why this newly discovered evidence was not forthcoming is ascribed also to neglect and ignorance.

I can hardly imagine anything more fatal to the plaintiff's case than this admission.

The books are full of cited cases to the effect that, in order to support a motion for a new trial upon the ground of newly discovered evidence, it ought to be made to appear that the testimony has been discovered since the trial or that no laches is imputable to the party; that the testimony is material; that it is not cumulative in its character; that it does not tend to discredit or impeach the witnesses who have already given evidence; and, finally, that if the party knew of the existence of the testimony and could not procure it in time, his course was to apply for a postponement.

Again, it is stated in the affidavit that this newly discovered evidence goes to prove as a matter of fact there never were any such conditions or covenants understood as existing between the plaintiff or the Japanese Government and the land-renters of Ts'kidji.

Referring to the plaintiff's petition it will be seen it reads as follows:—"As provided in article 1st of the title-deed 'delivered to the defendant according to article 2 of the conditions of public sale, concluded between our minister for foreign affairs and the foreign representatives,' and at the same time it will be observed the title-deed refers expressly to the conditions of sale, and the arrangement under which lands were leased in Tokio.

Under these circumstances, even if it were possible to prove what the affidavit claims, the court would not be justified in admitting the evidence, for the reason it is in direct contradiction of, and at fatal variance from, the allegations set up in the petition, and the newly discovered evidence, for these reasons would not have been admissible upon the original hearing, and therefore cannot be more privileged now.

Article II, referred to in the petition reads:—"The highest bidder shall be the purchaser and in the event of any dispute between two or three or more bidders, the lot shall be put up again and resold."

Article VII. of the same conditions say—* * * "In the manner provided by Articles III and VI of the arrangement concluded between the Japanese Government and the Foreign Representatives on the 4th of May '1870,' while Article IV of the arrangement above referred to provides that, "The sale of the leases shall be conducted on the conditions annexed to this arrangement."

By these quotations I have shown that the conditions of sale and the arrangement or convention of May 4th, 1870, are one and the same thing. I have also shown that the plaintiff's petition refers directly to the conditions of sale as a basis for the action, that those conditions refer to the arrangement of May 4th, 1870, and that the said arrangement describes the conditions of sale as "annexed to" the "arrangement," and, furthermore, by showing these things I demonstrated the fact that the allegation of the

existence of the conditions or covenants between the plaintiff, or the Japanese government, and the landrenters of Ts'kidji, was first made by the plaintiff and not the defendant.

In reply to the allegation set up in the closing portion of this paragraph to the effect that "the present condition of the owners of land within Ts'kidji Concession has been brought about not by any default of the plaintiff or the said Government but by purely natural causes," it is only necessary to refer Your Honor to the testimony of Messrs. Doyle, Hartley, Moss, Clatand, Blockley, Rangan, Brennwald, and Schmidt, which directly contradicts the statement made in the affidavit.

It is absurd to say, with my answer in his hands, which clearly indicated my line of defence, and in a cause where I was compelled to assume the affirmative, and which extended over six months from its inception to its close, forty-four days of which period was after I had rested my case and before judgment was rendered, that if the plaintiff had any evidence such as is claimed he has in this affidavit, he should have produced it then.

The 3rd ground assigned in support of the motion resembles the previous two in this, that it does not meet the requirements of the Court Regulations, by which it must be made to appear that the excessive damages were given under the influence of passion or prejudice.

This is not even alleged in the statement, and even if it was, I should not consider it necessary, or myself called upon, to defend Your Honor and the gentlemen who sat with you on the trial from this absurd charge.

The reasons assigned why the damages (which this paragraph admits may not be damages at all) are excessive, consists in a portion of the newly discovered evidence which could not "well" have been introduced at the trial, and which consequently was not before the Court, and was not therefore passed upon.

The 4th and last reason assigned by the plaintiff as a cause why the judgment should be vacated and a new trial ordered is:—"That the evidence already before the Court does not directly or by legal implication show any written or verbal agreement between the parties which the plaintiff has broken, and does not justify either the judgment in favor of the defendant, or the certification as to damages, awarded him."

"The judgment and certificate are against law in that, among other reasons no condition or covenant can be legally implied from the documentary evidence, and even if such a covenant existed it would form no answer at common law to a claim for rent, but could only form the subject for a separate claim, the damages recoverable on which might consist of more or less of the sums paid as rent and purchase money, but could not include loss of outlay or profits as too remote."

When the action was begun, I filed a demurrer to the plaintiff's petition, setting forth among others the grounds that the action ought to be brought in the name of the real party in interest, whereupon plaintiff stated that he was duly authorized by the Japanese Government to sue for ground rent, and the demurrer was overruled by the Court and the action allowed to proceed.

I admit that personally the plaintiff may not have broken any covenant or convention, and indeed he personally may not have

entered into any with me; but what I do contend is that a mutually binding convention was entered into between the foreign representatives and the Japanese Government: that I was bound to keep that convention towards the Japanese Government and its subjects: that the Japanese subjects are bound to observe its covenants in their dealings with me, as is the Japanese Government itself; and the United States Government is bound to pay the same heed to it, where the rights of Japan or her subjects are concerned.

That convention is referred to not only in the title-deed produced in Court, but is referred to in the petition itself. A convention is simply a law of superior dignity to a statute, in short the supreme law of the land. If a statute or the common law conflicts with it, they must give way, and it is binding alike upon the Governments that entered into it, and upon their citizens and subjects; and all contracts made under it must be construed by it, just the same as a contract authorized by and made under a particular statute must be construed by that.

Whether or not a condition or covenant can be legally implied from the documentary evidence I do not care to discuss. It is sufficient for me to know that a court is bound to take judicial notice of treaties and conventions and statutes governing the questions at issue, and that in this case, in passing upon a contract made under a particular convention, it took judicial notice of its express covenants, and that in doing this, the court pursued the only legal course possible.

If the plaintiff is correct in his assertion that at common law the existence or non-existence of a covenant would form no answer to a claim for rent; then, provided I rightly understand this statement, the learned counsel means to say, if I rent land in Ts'kidji at the rate named in the convention of May 4th, 1870, viz. 37½ cents per tsubo, I am bound to pay this rent at this rate, even though a subsequent convention be entered into between the parties to the first, reducing the rent to 12 cents per tsubo, and that my only remedy would be to commence an action in the Japanese Court against the Japanese Government to recover back the 25½ cents per tsubo, because, forsooth, the title-deed so called which is not under seal, names the rental as 37½ cents per tsubo, and that at the same time the Japanese Government in the exercise of its sovereign rights as a nation may grant or refuse me permission to sue it in its Courts.

Perhaps, however, it was the intention of the learned gentleman to say that at common law a claim for damages would form no answer in an action for rent, but that a separate suit would be necessary.

I will not deny that this may be the common law rule of England, but I do deny most emphatically that it is the law of the United States. Nearly every state enacts laws and has adopted the modern codes of procedure, which generally provide, as do the Consular Court Regulations, for the counter-claims and set-offs. (See Sec. 16th, Consular Court Regulations.)

I apprehend that even in England if the tenant, being an English subject, should be compelled to appeal for his remedy to a foreign jurisdiction, and that too where it was for the landlord to decide whether he would consent to be sued, he, the tenant, would be entitled to an equitable set-off; and an English court in the exercise of its discretion would entertain his counter-claim.

The counter-claim was fully set forth in my answer, and the proper and only course for the plaintiff to pursue if he proposed to contest my rights to set it up was to demur. This he failed to do, and so he has no standing in Court to enforce against others a contract that he will not himself admit to be binding.

I ask Your Honor that the motion be dismissed with costs.

J. M. BATCHELDER.

Mr. Dickins having briefly replied to the defendant's remarks, contending that the allegation of the defendant that the plaintiff was on the same footing as himself, both being unrepresented by legal counsel, was wrong. The defendant understood his own language and was presumably somewhat acquainted with the laws of his country; but the plaintiffs were ignorant of the law and mode of procedure of an American Court, which entitled them to a privilege which might not be extended to an American.

The Court reserved its decision.

THE RECENT TEST CASE *in re* FOREIGN LEASED LAND.

We have hitherto withheld expression of opinion, more than a concurrence in the judgment of the United States Consular Court, and in general terms mentioning the obligations of the Government of Japan towards foreign land-renters on the Concession in Tokio. But as it appears that our reticence—which has been maintained only to allow of the free expression of private opinion—has been taken by some as indicating want of argument to uphold our views, notably in the case of an article in the *Nichi-nichi Shinbun* of December 11th, in which the writer says,—"Were the Japanese Government, having the sovereign rights of an independent Empire, to open to-day two or three more ports to foreigners, and American citizens of Yokohama and Kobe should say that they would not pay their rent because foreigners could live at newly opened ports, what would the Consul General say?"—we will be more explicit.

In the first place the treaties of 1858 are in existence, unrevised and unrevoked, notwithstanding that the contracting parties could demand revision after July 1st, 1872: consequently all parties to them are still bound by their provisions. One provision is that from January 1st, 1862, foreigners shall be allowed to reside in Yedo, when "a suitable place, within which they may hire houses," &c., "shall be arranged." On November 20th, 1867, such arrangement was made between the Japanese Government and the Foreign Ministers, and in no way contravenes any stipulation in the original treaties, which as we have said above are in force now. Nor had either the Foreign Ministers or the Japanese Government the choice to interfere in any way with the stipulation of those treaties until 1872.

Secondly, our correspondent "Common Sense" has shewn the connexion between the land regulations, the title deeds, and the treaty and convention, and the liability of either side as government or individuals, arguing very properly that, as "Under all constitutional governments a treaty or covenant between governments is necessarily a treaty between the people of those governments, hence it arises that the subjects or

citizens of Treaty Powers have a right to claim damages from any such government for any violation of their treaty rights or covenants."

On these two premises we hold that foreigners in Japan leased land at the ports and places of trade under an agreement that, at earliest not before July 1st, 1872, or till the treaty revision should be made, no material alteration in the places of residence for foreigners could be made; and the value of the leases acquired by them depended on the stipulated length of this term. We will not, however, say that the values of these leases may not have been enhanced by the general opinion then prevailing that Japan would not be opened for many years; but this was entirely a matter of speculation, and the purchasers stood the risk so far. But until the term mentioned in the treaties had expired, it was not in the power of either Foreign Governments or the Government of Japan to alter the condition of foreign residence, without breaking faith with the land renters, a disregard of which—even although perhaps owing to a conciliatory spirit—has placed the Japanese Government in the dilemma it now finds itself in with respect to individual interests.

It is to be regretted exceedingly that this state of matters has come about, and General Van Buren, very naturally, as a prelude to his judgment, remarked upon it; "but," said he, "in the cause under consideration I am dealing with the equitable rights of an individual, which rights I have no authority to ignore, even to secure what may be esteemed a public good."

In our former article we thought proper to counsel the Government to take prompt action in a liberal spirit "to adjust all such claims as Captain Batchelder's." We hear now, however, of a motion for a new trial. We are sorry that the Government has been advised, or has, of its own accord, adopted this course. Far better would it be to accept the situation as unavoidable, and extricate itself on the easiest terms, and with the best grace possible; for we cannot see how any impartial judge, even on any evidence the Government is able to bring forward, can decide otherwise than in favor of a land-renter, under existing treaties and conventions.

Over two years ago we published the judgment of a "model Consul" in an hypothetical case, and as it contains some remarks on the state of foreign relations, we here reproduce a couple of extracts from it.—"His Honour addressed the prosecutor as follows:—

"You prosecute Mr. A—— B—— for having exceeded Treaty Limits, and he does not deny having done so; but, as there is no penalty specified in the Treaty, it will be incumbent upon you to make it clear to this Court that the Japanese Government has sustained damage by the action of the accused; for the law by which I have to judge Mr. A—— B—— is the law of his own country—a law which allows every freedom to those subject to it, so long as they do not trespass on private rights or offend against public morality. If you can prove to this Court that the Government of Japan has, as I have before said, sustained damage, and you can likewise prove the extent of that damage and place a money value on it, it will be my duty to entertain your case, and decide according to the evidence which may be brought forward on either side. But it appears to me that, forasmuch as by Treaty there are certain limits of travel allowed to foreigners, it is at the option of the Government you represent to place barriers at those limits, to prevent the passage of foreigners beyond them. But, having allowed the passage of a foreigner, the Japanese Government has only the right to arrest such transgressor and bring him

before his Consul. Whether the expenses incurred in such arrest and transport would be allowed if claimed in this Court, I shall not decide before such specific claim is brought before me."

"There is one doubt, however, in my mind, and it is one on a very serious question—namely, as to whether there is or there is not, at the present moment, any treaty in existence,—the revision having been delayed for two years. And I think it very uncertain whether my government would support me if I were to enforce any penalties under the former treaty; rather, whether—treaty right having been allowed on the part of the Japanese Government to become void—I should not be justified in insisting on "natural rights." You will do me a favour by bringing to the notice of the government you represent in this Court, what you well know yourself, that in civilized societies certain laws and customs are recognized as necessary to the existence of society. For instance, in a populous town, chemical works from which nauseous vapours may proceed, are prohibited; private privileges which interfere with municipal governments are broken down; in fact, individuals have to conform to regulations for the general weal of the bulk of the inhabitants. Similarly, in an advanced state of civilization, we now look on the various nations of the world as a society on the grandest scale, and naturally ask why the government of any particular country should be allowed to hedge itself round with a restrictive policy, and prevent free intercourse between its own subjects and citizens of other countries. Nations are gradually assimilating in manners, customs, and ideas, and are in many ways uniting in this grand cosmopolitan association. The mis-rule of a government over its own subjects is jealously watched by the people of other countries, and common cause is made against imperious governments. It would be well, therefore, for the rulers of Japan to be alive to this fact, and so re-model her institutions as to keep pace with the spirit of the age. For it may otherwise happen, that external pressure brought to bear on a government in which its own subjects have lost confidence, and which they may have ceased to venerate, may facilitate internal dissensions, and bring about its ruin. I speak in the spirit of friendliness, as the representative in this Court, although in no exalted position, of a great country in the van of advancing civilization; and one that would, if it saw Japan trying to advance in the same path, only be too ready to hold out a helping hand.

"With these remarks, I dismiss your case as it now stands, with the assurance, which you will please make to the government you represent, that I am ready on all occasions to listen to such representations as it may be inclined to make, either through yourself or otherwise, as may be in accordance with law and equity, and based on an enlightened and liberal policy. But I must distinctly say that I shall ever—and I consider it my duty to society in general—set my face against frivolous and vexatious complaints made in that spirit of hostility which I regret to have noticed seems of late to have infested the Japanese Government in their dealings with foreigners; and by taking such stand, if I am not greatly mistaken, I shall be doing an equal service on the one side as on the other."

THE second annual course of popular lectures in Japanese was begun on Thursday, 4th January, in the large waiting room of Ts'kidji Hospital. The introductory lecture, which was full of instructive thought, was delivered by Dr. Verbeck, after which Mr. Tsuda gave an interesting address on ferns.

The hall was crowded with Japanese. A course of twelve lectures on various religious, moral, and scientific subjects has been arranged.

A MEETING of subscribers to the Episcopal Church Establishment was held at the British Consulate yesterday afternoon. Mr. Russell Robertson occupied the chair, and the following subscribers were present.—Messrs. W. W. Cargill, A. J. Wilkin, J. J. Keswick, G. P. Ness, H. Barlow, F. S. James, J. Mackrill Smith, J. Rickett, Jr., M. Kirkwood.

The Chairman stated that this meeting was held instead of the two meetings as in former

years, and proceeded to read the following report of the Committee.

Yokohama, January 7th, 1877.

Gentlemen:—The Church Committee beg to submit their Report together with the accounts for the year ended December 31st, 1876.

ACCOUNTS.

	Dr.		Cr.
To amount of subscriptions from seat-holders received during 1876	\$2,852.08	By balance due Treasurer 31st Dec. 1875	\$ 790.10
Special subscription (collection)	110.50	Incumbent's stipend, 12 mos. at \$200 per month	2,400.00
Sustentation fund (as per list)	1,187.00	Premium on Fire Policies, Church, Parsonage, and Organ for \$10,000	260.00
Balance due Treasurer 31st Dec. 1876	82.28	Sundry repairs during 1876	87.25
		Incidental expenses during 1876	694.51
	\$4,231.86		\$4,231.86

1876, December 31st, by balance\$ 82.28

The small amount of the Balance due the Treasurer while a matter of congratulation to subscribers is attributable, it should be borne in mind, to the exceptional aid derived from the sustentation fund. An amount of \$1187 was so obtained, and the Committee gladly record their acknowledgment of the generous assistance thus afforded.

The income derived from pew rent and sittings during 1876 compares favorably with that of 1875; and there is reason for believing that the income from this source will remain steady for the present year.

In May last Mr. W. G. Howell resigned the direction of the choir and his place at the organ. The Committee in accepting Mr. Howell's resignation expressed the sense of the obligation the congregation was under to him for his kind and able services; and the acknowledgments of the Committee were conveyed to Mr. Howell in a letter.

Mr. Griffin consented to fill the vacancy thus caused, and Mr. Henley continues his kind assistance.

It having been intimated early in the past year that the Ladies' Benevolent Society did not charge themselves with the working of the school situated on the Church compound, its management was taken over by the Revd. W. F. H. Garratt at the request of the Church Committee.

The Committee beg to tender their thanks to those ladies who have taken such kind interest in, and given such effectual aid to, the choral services of the Church: also to those who assisted at the Christmas decorations.

We remain, gentlemen,

Your obedient servants,

RUSSELL ROBERTSON.
W. W. CARGILL.
J. MACKRILL SMITH.
JAMES J. KESWICK.
GAVIN P. NESS.
F. S. JAMES, Treasurer.

Mr. J. Rickett, Jr., moved, and Mr. Wilkin seconded, that the report be received and adopted.

The Chairman said it was necessary for the meeting to elect a Committee for the ensuing year.

Mr. Cargill then moved that the retiring Committee be re-elected with the exception of himself, and proposed that Mr. Rickett be elected to fill his place. This was seconded by Mr. Wilkin and carried.

Mr. Wilkin proposed a vote of thanks to the retiring Committee for their services during the past year and complimented them on their success in the management of the Church funds, more especially as the overdraft to the treasurer had been reduced by so large an amount during the year. This was seconded by Mr. H. Barlow and carried.

The Committee as at present constituted is thus composed:—Mr. Russell Robertson, Chairman, Messrs. J. Mackrill Smith, Gavin P.

Ness, F. S. James, James J. Keswick, and J. Rickett, Jr.

Mr. Cargill said the committee did not merit much thanks for the management of the finances; but the thanks of the committee and the public were due to the subscribers to the sustentation fund, as it was evident that the receipts from pew rents were insufficient to meet the necessary expenditure. He thought that an effort should be made to keep up the sustentation fund and would suggest that a subscription list be sent round again this year. This was absolutely necessary if the deficit was to be kept down. Mr. Wilkin enquired of the Chairman if the terms of subscription to the sustentation fund were for one year only.

The Chairman said it was for 1876 only, and as would appear from the Treasurer's report over \$1,100.00 had been subscribed to this fund during 1876.

There being no further business before the meeting Mr. J. Mackrill Smith moved that thanks be tendered to Mr. Russell Robertson for his kindness in presiding. This was carried unanimously and the meeting dispersed.

THE foot paper hunt this afternoon brought a good number of competitors on the ground. Several of the resident athletes and ten seamen and marines started. The chase commenced shortly after four o'clock and was finished a few minutes before five. The first over the last leap was Mr. A. H. Dare, with Mr. J. J. Dare a couple of yards behind. Of the competitors from the *Modeste*, Thos. Finley was first in, and to him the first prize was awarded. Prizes were also given to the seamen who ran second and third. The race was well contested throughout by the salt-water competitors.

We hear that the German sailor who was so badly wounded in the head in the late *fracas* between the *Vineta's* men and the Japanese, is progressing favourably under the able treatment he is receiving at the British naval hospital. Another of the wounded men who was left behind by the *Vineta*, is now almost convalescent.

THE British Schooner *Rupak* was put up at auction this morning by Messrs. Bourne & Co. The attendance was very good; and the bidding, while it lasted, was spirited, commencing at \$2,000. The vessel was ultimately knocked down to Capt. Schmidt, of the *Kuroda*, for the sum of \$3,800, subject, of course, to the provision imposed by the British Consular Court, in which the Court retained the power of accepting the bid or ordering another sale.

AFTER an absence of 14 days Mr. S. Hodges H.B.M. Consular Constable, returned on Saturday last in the *Taihei-maru* from his mission to the Bonin Islands. There are seventy-nine foreigners of various nationalities on the islands, exclusive of Japanese.

HAKODATE, Jan. 4th, 1877.—The weather during the past week has been fine and mild. Range of temperature 22° to 52° F. Prevailing winds have been from the N.N.W. with occasional snow-squalls. For the last five days we have had a continuous thaw. On the 2nd instant, the Mitsu Bishi Mail Steam Ship Co. gave a dinner in Japanese style at Masingata to which most of the foreign residents and Japanese and Chinese shippers were invited. The arrivals and departures of shipping during the week have been confined to our immediate neighbourhood.

H. B. M.'s Consul has approved Captain Schmidt's bid of \$3,800 for the British schooner *Rupak*, put up for sale yesterday in Admiralty.

Mr. Brennwald, Consul General for the Swiss Confederation, has received a decoration of Officer of the Crown of Italy, as an acknowledgment of the good services rendered by him during the period for which he acted as Consul General for Italy. The order was handed to him a few days since by the Minister of Italy.—*Tokio Times*.

The decoration bestowed by H. M. the Mikado upon Mr. de Struve, the Russian Minister, is the first of the highest class of the Order of Merit which it represents given to a foreigner, other foreign acolytes having received stars of a lower class. Persons invested with the first class receive a ribbon in addition to the star. This latter is a handsome decoration, three and a half inches in diameter. From a circle in the centre, composed of a slightly convex carbuncle, issue thirty-four rays, of white enamel edged with gold, of three degrees in length, and each widening from the centre, their outer extremities being indented with sharp angles. Twenty-four rays of silver, similar in form to the others, and arranged in sets of three, one longer supported on each side by one shorter, issue from the circles formed by the inner rays. The ribbon of the order is a broad white one with blood-red borders. Pendant from it is a clasp, fashioned in green enamel, with tender veins of white, to resemble the Kiri crest of the Emperor, and sustaining a star resembling that of the order, save that it has no outer circle of silver rays. The insignia are as chaste and rich, as, in Mr. de Struve's case, they are well-deserved and will be worthily worn.

A New York newspaper states that Mr. Tanaka, Vice Minister of Public Instruction, travelled, in the course of his recent tour of inspection in America, as far north as Canada and as far south as Raleigh, N. C. As one result of his visit, it is said that he has selected, as a model city school, one of the Boston institutions, and will soon establish a similar one in Japan.

We understand that Mr. W. E. Griffis, author of "The Mikado's Empire", is engaged in the preparation of a new Eastern work, intended to deal with a country thus far little known to Americans or Europeans.

On New Year's Day, we are informed, H. M. the Emperor inaugurated a new decorative order, the distinguishing mark of which is a small crysanthemum, and which is destined for bestowal upon sovereigns and, in exceptional cases, upon high nobles and persons of eminence.

The marriage of the Vice Minister of Foreign Affairs, H. E. Samesima Naonobu, with a daughter of the *Rusui* of the former daimio of Chikuzen, has attracted greater attention in foreign circles, and been the occasion of more cordial and universal congratulation, than any similar event of many years.

Count Fé, the representative of Italy, awaits the arrival of a Secretary of Legation, who will be permanently attached to his mission. Soon after his advent this gentleman will assume *ad interim* the duties of Minister Plenipotentiary, while his chief is absent for a time in Europe, whither he proposes to go on a few months' leave.

Vessels in Harbour.

Belgia, Brit. str., Metcalfe, 2,627 tons, from Hongkong.—O. & O. Co.
Caroline, Danish schr., Müller, from North Pacific.—Captain.
Charles L. Pearson, Am. barquentine, Swain, 666 tons, from New York.—Chipman, Stone & Co.
Courier, Russ. str., Lemascheffsky, 495 tons, from Hakodate.—Walsh, Hall & Co.
Devana, Brit. ship, May, 850 tons, from London.—L. Kniffier & Co.
Flintshire, Brit. str., Thomas, 1,243 tons, from London via Hongkong.—Wilkin & Robison.
John Maclean, Brit. schr., Jordan, 198 tons, from San Francisco.—C. A. Fletcher, Jr.
Jupiter, Russian schr., Johnson, from North Pacific.—Captain.
Lottie, Russian schr., Ostensen, 35 tons, from Pacific.—Captain.
Mary Jane, Am. schr., Blinckmeier, 160 tons, from Kobe.—E. C. Kirby.
Massilia, Brit. str., Cand, 1,083 tons, from Hongkong.—P. & O. Co.
Menzaleh, Frch. str., Pasqualini, 1,008 tons, from Hongkong.—M. M. Co.
Rupak, Brit. schr., Gall, 100 tons, from Guam.—Master.
Stonewall Jackson, Am. bark, Arbecam, 1,103 tons, from New York.—R. Isaacs & Brother.
Swallow, Brit. brig., ———, 172 tons, from Shinagawa.—E. H. Hunter & Co.
Tanais, Frch. str., Reynier, 1,010 tons, from Hongkong.—M. M. Co.

Ishikawa, Yamada, Mr. and Mrs. Yano, Hirano, Tazira, Izaki, Kokan, Honda, Kawachiyama, Ushizimi, Takami, Yamada, Inoye, Nakashima, Omara, J. W. Smith, Gubbins, G. Allen, Nakihe, Kijima, C. J. Strome, E. C. Kirby, and Alexander.

REPORTS.

The British steamer *Flintshire* reports:—Left Hongkong December 28th, 1876; had strong Northerly winds on China Coast; strong N.W. winds to Rook Light-house; thence to Yokohama fair weather. Arrived in Yokohama on the 6th, at 7 p.m.

The French steamer *Menzaleh* reports:—Had a fresh monsoon off the Coast of China; thence to port fine weather with variable winds. On the 1st January at 4 p.m. met the *City of Tokio* off Turuabout Island.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

A better business has been done in the import market during the past fortnight. Cotton yarns especially have shown a marked improvement both in the amount of sales and in the prices realised for 16/24 and 28/32; though nothing has been done in 38/42, and prices for the former kinds are rather weaker since the holidays. More has been done, too, in Sateens, Indigo Shirtings, and Black Velvets; but the demand for Grey Shirtings is almost nominal. There have also been some sales of Lawns and Prints. In Woollens, Blankets and Italian Cloth are saleable at quotations; and Mousselines are in better demand.

The barque *Stonewall Jackson* with kerosene and general cargo from New York, and the steamer *Flintshire* from London, have arrived. Transhipped cargo ex *M. M. Str. Indus*, *P. & O. Str. Indus*, and *Euphrate* from London, *Priam* from Liverpool, and *Sindh* and *Meikong* from Marseilles, is also to hand.

Metals:—The improvement noticed in our last has not been continued. Bar Iron is sold in small lots, but chiefly of the inferior kinds imported from China. Holders of the better sorts are firm, and dealers refuse to meet them.

Sugar:—Rates have fallen, and business is still depressed.

Kerosine:—The market, which was firm a fortnight since, has had a considerable upward tendency. 7,000 cases have been sold at prices between \$4.35 and \$4.70, a rise of from 60 to 85 cents over last quotations.

ARTICLES.	PRICES.	REMARKS.
COTTON PIECE GOODS.		
G. E. Grey Shirtings—		
7 lbs., 38½ yds. 39 in. per piece.	\$1.40 to 1.80	} Very difficult of sale even at these low rates.

Kerosine Oil, 10 galls. per case.	3.50 to 4.70	

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—A remarkable firmness has been noticeable in this market since our last summary. Purchases have not fallen off: they have been sustained as much as was possible considering that the Silks which were most in demand, that is to say the finer sorts, become daily scarcer. On the average there has been a rise of from \$20 to \$30 per picul; and the general feeling is that in the absence of new complications in European politics, the season will close with very firm prices, if not with a fresh rise upon those current at this date.

The total of arrivals since the commencement of the season is 23,130 bales. Exports 18,611 bales. Present stocks about 2,300 bales, principally composed of coarse and inferior sorts.

TEA.—A moderate business has been transacted since the date of last issue: prices remaining much as last reported and the better grades receiving a little more attention. Settlements for the period amount to piculs 4,600 and arrivals being on a very limited scale stocks are much reduced.

It entirely depends on the instructions from home side whether our total Export exceeds 22 million pounds for current season, but judging from the general tenor of advices from the home markets we are inclined to believe that limits, either now on the spot or in course of transmission, will be so low as almost to preclude fulfilment.

The Charles L. Pearson will have early despatch for New York direct.

The Japan Gazette

MAIL SUMMARY, SHIPPING AND MARKET REPORT.

PUBLISHED TWICE A MONTH.

Per P. M. Str. "City of Tokio."

YOKOHAMA, MONDAY, JANUARY 22ND, 1877.

Single Copy, 25 cents.

THE "Japan Gazette" MAIL SUMMARY.

FROM 11TH TO 20TH JANUARY, 1877.

MARRIAGE.

On the 16th instant, at Christ Church, Yokohama, by the Rev. W. F. H. Garratt, assisted by the Rev. John Piper, GAVIN PARKER NESS, Barrister-at-law, of the Middle Temple, to FRANCES DRUMMOND, eldest daughter of William Walter Cargill, Esq.

BIRTHS.

At No. 100, Bluff, on the 14th instant, the wife of Captain J. W. EKSTRAND of a daughter.

At Yokohama, on the 14th inst., Mrs. ROBERT BISHOP, of a son.

OUR last Mail Summary was despatched per O. & O. steamer *Belgic*, which left this port at daylight on the 12th instant. Since then we are in receipt of the following mails:—

	DUR.	ARRIVED.
English Mail	Jan. 13.	Jan. 12.
French "	Jan. 21.	Jan. 20.
Latest dates are:		
London..... Letters	Dec. 1.	
"..... Telegrams	Jan. 17.	
New York .. Letters	Dec. 8.	
"..... Telegrams	Jan. 1.	
San Francisco Letters	Dec. 16.	

Summary.

THE most important event of the last ten days has been another of those sweeping measures of reform with which the Government delights to astonish its subjects. Without previous notice the national annual expenditure has been reduced by eight million yen or by nearly one-half of that in former years. Offices have been abolished; officers dismissed, and the salaries of those allowed to remain in office ruthlessly curtailed. After

all this measure, comprehensive as it is, is not so startling as, and will be submitted to with composure equal to that which met, others which have preceded it. The Government which, with one stroke of the pen, could abolish the feudal system, and with another compel the abolition, in a set term of years, of the perpetual hereditary pensions of the nobility and gentry, is strong enough to carry this less, but still tremendous reform.

A DISASTROUS fire has occurred on the block Lot No. 59, between Main Street and Water Street in the settlement. The houses and godowns on that lot were destroyed on the morning of Sunday the 14th inst. Messrs. Lane, Crawford & Co.'s large store and premises, the Chamber of Commerce Rooms, Messrs. Geffeney's, and Kelly & Co.'s, and Stillfried and Andersen's establishments were burnt to the ground. The loss of property though very great is mostly if not entirely covered by insurance. Messrs. Lane, Crawford & Co.'s stock was insured in Home offices for \$105,000: while the buildings were insured in the local offices for \$25,000. The insurance on Messrs. Kelly & Co.'s goods was for \$3,000: Mr. Geffeney's stock was insured for \$2,000: the Chamber of Commerce property for \$1,500: and Messrs. Stillfried and Andersen's for \$7,000. The loss principally falls upon the North British and Mercantile, Phoenix, Manchester, China Fire, Scottish Imperial, and Staffordshire Offices.

ANOTHER case, similar in principle, but coming under the jurisdiction of another Court, to that of the Tokio-fu vs. Batchelder, in which the Japanese authorities lay claim to arrears of ground-rent withheld by defendant, on the plea that property has deteriorated in value through the non-compliance of the Japanese Government with the terms of the Convention, is pending. This time it is a British subject, Mr. J. Blockley, who is sued, and the case will be heard shortly before the British Vice-Consular Court in Tokio.

A MOTION was heard on the 10th instant in the U. S. Consular-General Court, in the case of the Tokio-fu versus Batchelder, for a new trial on the general ground that evidence not brought forward at the first trial would be forthcoming at a new one. The decision of the Consul General on this motion has not yet been given.

ROBERT T. American charged with mutiny at sea. The had no au so committed United States, whither he ordered him to be conveyed a prisoner in the *Stonewall Jackson*.

second mate of the *Stonewall Jackson*, was S. Consul General and illtreating the crew neral decided that he ry the case finally; sed for trial in the United States, whither he ordered him to be conveyed a prisoner in the *Stonewall Jackson*.

In our last Summary we stated, on the authority of Japanese newspapers, that the Japanese Minister to the United States and the Secretary of his Legation were about to return to Japan. This report has since been denied.

MEETINGS of the Yokohama Racing Association and the Yokohama Rowing Club have been held. The affairs of both Clubs are in a flourishing condition. A proposal made at the Racing Association's meeting to allow professional riders and bettoes to ride in certain races, fell through.

JAPANESE postal agencies have been established at Chinkiang, Kiukiang, Hankow, Chefoo, Newchwang, Ningpo, Foochow, and Tientsin, in China.

SAMUEL PERKINS, ship's steward of H. M. S. *Modeste*, shot himself through the head in his cabin on board on the morning of Saturday, the 13th inst. An inquest which was held in the afternoon of the same day before H. B. M.'s Consul resulted in a verdict of suicide while of unsound mind.

MR. G. Cullen Pearson has purchased the Japan Mail.

MAJOR J. R. Wasson of the Monbusho has received the decoration of the 4th Class of the Japanese order of merit. He will return to the United States shortly, where he will resume service in the army.

THE first examination of foreign candidates for pilots' licenses for the Gulf of Yedo under the new pilotage regulations has been held, and certificates have been issued to five persons.

AN Exhibition will be held this year, in the Goshu, Kyoto, and will remain open 100 days, from the 15th March inclusive.

COMMANDER C. W. Jones, R.N., Director of the Imperial Naval College, died on the 15th instant at his residence in Tokio.

FIRE AT No. 59.

The numerous and extensive fires which have so rapidly succeeded each other in Tokio have been followed by two in our own settlement, the latter of which, occurring on the morning of the 14th inst., if it did not extend over such a large area as the Tokio fires, has consumed in a small space an immense amount of property. The origin of the fire is, as yet, unknown; and indeed it is difficult to point with certainty to the precise spot where the flames first originated, though it is generally reported that the fire was first seen in the front part of the ground floor of Messrs. Kelly & Co's premises, where there is every reason to believe that it commenced. It is certain that the first signs of the fire were observed in that house by two foreign gentlemen who, hearing a hissing, crackling noise, drew the attention of a Japanese policeman to the circumstance; and in company with the officer proceeded to inspect the premises whence the ominous sounds came, and peering through the shutters observed a light and had no further doubt that the building was on fire. They raised the alarm of "fire," and the Japanese officer went speedily to inform the native fire brigades; who, with commendable promptitude, were soon after rushing with their engines and ladders towards the scene of destruction.

In the meantime access had been obtained to the bell in the Roman Catholic Church which was vigorously rung. The native fire bells then chimed in and raised such a clamour as to effectually arouse the whole neighbourhood. By this time there was no mistaking the direction in which the destructive element was committing its ravages, for the darkness was lighted up by a lurid glare which cast its reflections all around the immediate vicinity; and dense wreaths of smoke were curling upwards towards the heavens.

The first fire-engine on the spot was No. 2, of the native Fire Brigade, followed immediately after by Nos. 1, 4 and 6. In fact in a remarkably short space of time the whole native army of firemen, with their nine engines, were located at the various wells around the burning building, but even before they could commence to play upon the fire it had assumed serious proportions. The local Fire Brigades also turned out in force. The Relief steam fire-engine was located at the tank which has so very recently been constructed in front of the Catholic Church, and threw a continuous stream upon the fire and the neighbouring houses. But the flames seemed to sport with the efforts to extinguish them and greedily drank up the water as it was poured upon them; and with seemingly renewed fury continued their devastations.

Messrs. Kelly & Co's and Mr. Geffeney's establishments, together with the Chamber of Commerce Rooms were hopelessly enveloped in flames. All the valuable documentary collections which the Chamber of Commerce has been years in gathering together, the loss of which no insurance could cover, were rapidly passing to ashes before the eyes of those who valued them so highly and who were reluctantly compelled in helpless inactivity to witness their destruction. For a time Messrs. Wetmore & Co's store and godown were in imminent danger, but fortunately what little breeze was blowing at the time was not in that direction. Fears were at one time entertained that the Chinese banking establishment on the opposite side of the road would also catch fire, but the stream of water applied to the front helped to counteract the great heat.

It was soon plainly visible that nothing could save the whole block on which the fire was raging. The photographic establishment of Messrs. Stillfried and Anderson which adjoined Messrs. Kelly and Co's, was soon one mass of flames; and but little was saved except a number of negatives. From Messrs. Stillfried and Anderson's the fire spread to Messrs. Lane and Crawford's large store, which first, ignited at the eaves of the roof. The fire having caught it did not take long to ravage the whole building, being fed with all manner of combustible articles. A detachment of seamen had been landed from the *Modeste* and another contingent was supplied by the Japanese men-of-war, and now both bands rendered effective service in carrying away to Nos. 8 and 11 the most valuable goods from the store. We hear all the silver-ware was saved and also a considerable quantity of miscellaneous goods, such as carpeting, sails, copper tubes &c. But though the amount saved seemed large, it was small in comparison with the quantity of stores contained in the building and which were most consumed. Seeing that the entire building was completely gutted with fire and that it was useless endeavouring to save the premises, the firemen directed their efforts towards preventing the conflagration spreading to the adjoining lots, and in this they were successful. A continuous stream of water was thrown by the various engines on the neighbouring houses until it was running ankle deep in the gutters. By four o'clock the roof had fallen in; and from that time the fierceness of the flames began to diminish and by five o'clock all danger of the fire spreading further was remote. Every now and then explosions would take place, though no damage was done by them. Indeed the explosions continued off and on all day yesterday (14th) and even to-day (15th).

We are happy to say that no very serious personal catastrophe took place though there were some narrow escapes. Mr. Geffeney, who was asleep upstairs when the fire broke out was woken by Mr. Monte, who was also sleeping on the premises and both escaped without injury; but with the loss of all of the personal effects but the scanty clothing they wore. Mr. Gray of No. 70 was badly cut in attempting to save some of Messrs. Stillfried and Anderson's negatives. A portion of the ceiling having fallen in cut off his retreat by the way he had entered and he had to force his exit through a window.

Of course there was pilfering going on though not so much as might have been expected. The native police, who turned out in large numbers, were very active and succeeded in arresting five delinquents, including one Chinaman, who were marching off with various small articles. Police Constable Hazell, of the municipal police captured one thief, a Japanese boy, who was shouldering a bag of sugar. His protest that some one had given him the sugar, though he did not know who, was unattended to, and he was marched off to quarters he little anticipated occupying a few hours before.

To-day (15th) the fire has been smouldering and it has been necessary to keep a constant flow of water on the burning debris next to Messrs. Ahrens & Co's godowns. The iron safe of Messrs. Lane Crawford & Co. stands like a grim spectre in the midst of the ruins, apparently uninjured; but it is difficult to say in what condition the contents may be. From all appearances the iron safe at Messrs. Kelly & Co's was in excellent condition, but on forcing it open, the contents, with the exception of a few silver dollars, were found to have

been reduced to a charred mass; everything in the shape of books or documents being completely destroyed. When the Chamber of Commerce safe was opened all the documents it contained were found to be singed; but legible. Most, indeed probably all, of the loss is covered by insurance. Messrs. Lane, Crawford & Co's stock was insured in Home offices for \$105,000; while the buildings are insured in the local offices for \$25,000. The insurance on Messrs. Kelly & Co's goods was for \$3,000; Mr. Geffeney's stock was insured for \$2,000; and the Chamber of Commerce property for \$1,500. The loss principally falls upon the North British and Mercantile, Phoenix, Manchester, China Fire, Scottish Imperial, and Staffordshire Insurance Offices.

FUNERAL OF COMMANDER
C. W. JONES, R. N.

On the 17th inst. the remains of Commander C. W. Jones, R.N., late Director of the Imperial Naval College, Tokio, were consigned to the ground.

At 10:30 a.m. the procession left the Commander's late residence at Hanabusa Yashiki for the Shinbashi Railway Station where it arrived at 11:30. The procession numbered over 400. On arriving at the station preparations were carried on as speedily as possible, but notwithstanding that the train, which was double the usual length, intended to convey the corpse and attendants to Yokohama, was detained fully half-an-hour, and therefore did not arrive at the Yokohama Station until 1.25 p.m.

Long before the arrival of the train, a crowd of friends had assembled at the Railway Station, waiting in expectation. At length it arrived; and it had hardly stopped, before a miscellaneous crowd emerged from the various carriages. It had been anticipated that the coffin would be borne through the main entrance, which of course was densely thronged. The crowd was kept back from the platform by means of a rope drawn across the gateway, and about 120 cadets and a large number of Japanese officers connected with the Naval College were drawn up four deep as a guard of honor. The coffin was taken from the train, lashed on the carriage of a nine-pounder field-piece, which accompanied the cortege from Tokio, and was now drawn by eighteen of the foreign naval gunnery instructors, dressed in British naval uniform, and taken out of the Station grounds through the gateway at the right hand side of the main entrance. The procession then formed. It was headed by the Mikado's Band numbering over thirty; followed by the undertaker, after whom came the gun-carriage with the coffin, followed by the personal friends of the deceased gentleman, amongst whom we noticed H. E. Sir Harry Parkes. One hundred and twenty-five cadets, four deep, marched afterwards; then came a number of Tokio and Yokohama residents, and about thirty-five or forty Japanese officers, next to whom was a nine-pounder field-piece, drawn by a detachment of eighteen men from H. B. M. *Modeste*, who had been landed by Captain Buller as it was not known that a field-piece would be brought from Tokio. The rear of the cortege was brought up by a carriage, drawn by a pair of black ponies, in which was seated Admiral Kawamura, Vice-Minister of Marine, and Admiral Nakamura.

The procession having been formed in the order named, the word "Forward" was given,

and the march to the cemetery was commenced in slow time, the Band playing "the Dead March in 'Saul,'" until it arrived opposite the First National Bank, when the music ceased and the march was quickened until arriving opposite H. B. M. Consulate, when the slow, solemn march was resumed. The Band again playing "the Dead March." At the French hutoba a firing party of forty sailors from the *Modeste*, and a number of officers, including Captain Buller, from the same vessel, were waiting. The firing party took up its position behind the Band, and the procession continued its march in silence. After crossing the Creek the men at the gun bearing the corpse were double-banked by the men from the *Modeste* field-piece—the latter piece of ordnance not being required had by order of Captain Buller been detached from the procession and taken to the Victualling Depot—which, having now thirty-six men attached to it, was taken up the hill without difficulty, notwithstanding that the road had become very heavy through the snow, which still continued to fall.

On arriving at the cemetery the coffin was detached from the gun, and carried by eight of the gunnery instructors to the grave. The burial service was then read by the Rev. A. C. Shaw, of the S. P. G. Mission, Tokio, and the remains of the deceased gentleman were lowered to their last resting place. The bluejackets fired three volleys over the grave, and the procession dispersed.

Commander Jones was only in his thirty-fourth year. He had been employed in the Naval College, Tokio, for the last four years, and greatly aided Captain Douglas, whom he succeeded in the directorate, in the formation of that now efficient institution. His unassuming kindness of disposition had greatly endeared him to all who knew him; and his assiduity in the discharge of his duties had gained for him the respect of the Japanese officials of his own and other departments. The cadets of the college, who owe so much to his instruction, are inconsolable for his loss. Captain Jones' memory will long be green in the hearts of numerous admirers both in the foreign and native circle of his acquaintance.

YOKOHAMA RACING ASSOCIATION.

A MEETING of subscribers of the Yokohama Racing Association was held at the Grand Hotel on Saturday afternoon, 13th inst. The following gentlemen were present: N. P. Kingdon, E. de Bavier, John Robertson, Edward Fischer, R. de Monbel, M. Kirkwood, Dr. Buckle, Henry Allen, Jr., H. Haswell, Jr., G. Blake-way, F. Beato, H. Reuter, T. Wallace, C. D. Moss, A. Langfeldt, J. Ph. von Hemert, P. E. Petrocchino, A. Jaffray, R. Jaffray, T. C. Swift, C. Wirgman, J. A. Stewart, J. R. Anglin, G. Booth, W. E. Clark, D. Anderson, J. Reynaud, A. Clarke, and W. H. Henriques.

Mr. John Robertson having been elected to the chair, on the proposition of Mr. N. P. Kingdon, the minutes of the last meeting were read over by the Secretary.

The Chairman then congratulated the meeting on the state of the finances of the Association, and said that the business of the meeting would have to do with both the past and future. With the past in the first place by approving the by-laws, and with the future regarding the next Spring Meeting, as it was not the intention of the Association to stand still.

Mr. Kingdon: I see no use in reading over the by-laws as they are well known to all

present. I propose that they be accepted and passed with a few further additions. I wish to interpolate the following rule between numbers 2 and 3.

"That, between the 1st and 2nd bells, owners shall deposit in the box provided for that purpose in the weighing room the name or names of the pony or ponies they intend to start for the race to be then run. All ponies so declared to start and not competing will be disqualified for the rest of the meeting."

"After the second bell has been rung, the box containing the names of the ponies declared will be opened, and their names and numbers declared, after which no further declaration will be allowed."

"One of the stewards or committee-men appointed shall draw for the places of the ponies declared to start, and hand a list thereof to the starter, who will proceed to the starting post and start such ponies as are ready on the Course in the order of the list as drawn."

And that rule number 6 be altered to read as follows:—

"Salaried persons as grooms or bettoes will not be allowed to ride except in such cases wherein special provision may have been made by the Committee previous to the entries for each meeting, and as published in the official programme."

Mr. T. Wallace thought that professional riders or salaried grooms should be excluded from riding in any and all of the races, and thought it would be better if a competent starter were appointed.

The Chairman:—I presume the rules and by-laws are passed.

Mr. Kirkwood seconded the first three proposals of Mr. Kingdon, which were carried.

The Chairman:—I understand that Mr. Kirkwood proposes that the riding of professionals or salaried grooms be admissible in certain races only. I think this admissible, but would prefer leaving the matter to the meeting.

Mr. Kingdon only wished that, if the Committee thought it better that certain races should be open to other than gentlemen riders, the Committee should have the power of exercising their own judgment in the matter.

Mr. T. Wallace said that if professionals were allowed to ride they should carry additional weight; but from experience he thought it better that they should not be allowed to ride at all.

Mr. Kingdon was said that as a rule salaried grooms and bettoes were such inefficient riders that it would be but a poor compliment to the amateurs to suppose that they ought to receive weight from them.

The Chairman thought it might be left to the Committee in certain races, and that professional riders might be allowed. The question now was whether they should be allowed to ride, subject to the judgment of the Committee, or not.

Mr. Kingdon would like the riding of professionals or salaried grooms to be restricted to two races on the first, two on the second, and one on the third day of each race meeting, and that those races be appointed by the committee.

Mr. Kirkwood suggested, as an amendment, that professional riders be allowed only in the handicaps.

Mr. Jaffray having seconded Mr. Kingdon's motion as originally put, the amendment was seconded by Dr. Buckle, put to the meeting, and lost after some discussion, in the course of which Mr. J. R. Smith said he thought it would be better if the Committee should only open races of a mile or more in length to grooms and bettoes.

Mr. Kingdon's motion was then put to the meeting and lost.

The Chairman:—We now come to the finance part of the business which it is satisfactory to

find has been a success. Three months' ago we had nothing; now we have a great deal of fun already. Tickets and subscriptions amount to over \$2,000. The rent and other expenses have been paid, still there is a balance in hand, and a good outlook for the future. The year's subscriptions are estimated at \$2,000. Still, large receipts did not necessarily go with good sport.

Mr. Langfeldt proposed and Mr. Blakeway seconded that the accounts be accepted as they stand. Carried.

The Chairman:—We have now to consider the arrangements for our next spring meeting. A skeleton programme has been placed before you. I would ask any member of the Association to send any remarks he thinks proper thereon to the Honorary Secretary before the 20th instant, when the Committee will consider the several remarks, and from them form a programme to suit the general views of the Association. I have only now to inform you that the Committee, having completed their first term of office, place their resignations in your hands, but they are eligible for re-election.

Mr. A. Langfeldt proposed that a vote of thanks be returned to the Chairman and that the old Committee be re-elected. This was carried by acclamation and the meeting separated.

ANNUAL MEETING OF THE YOKOHAMA ROWING CLUB.

At half-past five p.m. on the 18th inst. the Annual Meeting of the Rowing Club was held at the United Club. Fifteen members were present viz:—

Messrs. J. Rickett, A. Milson, J. Dodds, J. D. Hutchison, F. Walker, C. G. Danlop, J. Leckie, H. Hartman, Newbury, H. B. Henley, Towse, J. J. Darg, A. H. Darg, E. B. Jones, and C. P. Halt.

Mr. Dodds, who was voted to the chair, briefly alluded to the business on hand; after which

The Secretary read the minutes of the last Annual Meeting, which were confirmed.

The Chairman intimated that perhaps it would be adhering too strictly to the Rules of the Club if the election of officers were proceeded with before the Secretary read the Statement of Accounts and Report which the Committee had drawn up. But he would suggest that the Accounts and Report be read before proceeding with the election.

The Meeting having expressed its approval of the Chairman's suggestion, the Secretary was called upon to read the following

REPORT.

On presenting their Sixth Annual Report to the Club, your Committee feel that they have reason to congratulate the members upon the successful financial year, which has just drawn to a close. We began the year 1876 with a debt of nearly \$400, amount due for cost of new boats ordered from London. This debt has been paid off and there is now a balance in the treasury of over \$200, and the rent of the Boat House premises for the present year, is paid in advance.

Nine active and twenty honorary members have been elected during the year, and the Club now numbers seventy members in all.

The Spring Sculls Races were well contested and the number of entries showed that the interest in boating has not decreased, despite the many attractions offered to lovers of sport on the land.

During the summer several Swimming Matches were held at the Boat House, and passed off successfully, affording much amusement to both contestants and spectators. It was intended to give

prizes to the winners of the different events, but as the original programmes were not carried out as at first drawn up, and in some instances, non-members were allowed to take part in races, the subscriptions which were to pay for the prizes were not called in. If the funds of the Club are in a sufficiently flourishing condition this year, your Committee would suggest, that Challenge Cups be offered for stated distances, to be won twice or more times, during the season, before becoming the property of the holders.

Your Committee would inform the Club that the Japanese owners of the land, which we now rent and on which the Boat House stands, intimate that they may require the space, after our present lease expires, on the 31st October next. Should it be necessary to remove the Boat House, arrangements can be made later in the year. After some persuasion the rent was reduced from yen 120 to yen 110 for the present year.

In the early part of May last, invitations were sent to the Rowing Clubs of Kobe, Nagasaki, Shanghai, and Hongkong to meet here in April next for a grand Regatta; the only acceptance was from the Victoria (Hongkong) Club; and this was necessarily not positive; the other Clubs assigning different reasons for refusing. Having learned that the Victoria Club is building a new boat expressly for our Regatta, in order to meet the visitors on equal terms, your Committee have sent an order to Hongkong for a new four-oar, to be built on the same lines as the Hongkong boat; the cost of this boat will be about \$225.

The programme for the April Regatta will be published shortly, and it is hoped that all who can will take an active part in the training, when the season opens and the Committee look for the cordial co-operation of every member of the Club, in order that Yokohama may be well represented on the day of the Regatta.

Yokohama, 18th January, 1877.

The Meeting expressed its satisfaction, at the reading of the Report, by applause; and only one gentleman called in question the utility of sending to Hongkong for a new boat.

The minutes of the last General Meeting were called for, read, and confirmed. The next business of the Meeting was to read and pass the

STATEMENT OF ACCOUNTS.

The following is a Summary of accounts for the year ending 18th January, 1877.

Cr. Balance from 1875	21.02
Subscriptions, 74 active members @ \$10	740.00
Subscriptions, 36 Honorary members @ \$10	360.00
Entrance Fees, 8 Active members @ \$15	120.00
1 Active member @ \$10	10.00
	934.00
Entrance Fees, Scratch Races	34.00
Club Ribbon sold	38.75
Rent collected from owners of canoes and private boats	60.00
Entrance Fee to Kobe Regatta	50.00
	182.75
	\$1,116.75
Dr. Sando's wages	\$110.76
Cost of new boats with interest	396.48
Repairs to boats	98.42
New Pier and Bathing Stage	82.00
Repairs to roof of Boat House &c.	12.00
Printing Club rules and by-laws	15.00
Prizes for Spring Scratch Races	32.50
Sando's expenses to Kobe	24.68
Rent to 31st Oct., 1877. Yen 110 @ 391	112.53
Entrance Fee to Kobe Regatta returned	50.00
Sundry Expenses, Varnish, Oil, Leather, Wire, Rope, Tube, Coolie hire, &c. &c.	58.95
	963.27
Balance at Credit	204.50

E & O. E.

Yokohama, 18th January, 1877.

C. P. HALL.
Hon. Sec. and Treas.

In answer to a question put by Mr. J. J. Dare, the Chairman stated that all the boats the Club possessed were paid for, with the exception of the one that had been ordered in Hongkong.

Mr. J. J. Dare proposed that the Report and Statement of Accounts be adopted and a vote of thanks tendered to the Committee. Mr. Dunlop seconded the proposition, which was unanimously carried.

The election of officers was then proceeded with in the usual way, and resulted in the gentlemen who were retiring at the expiration of their term of office being re-elected, viz:—

Messrs. Hamilton (Captain) C. P. Hall, (Secretary) Dodds, Rickett, and Milsom.

The Chairman expressed in high terms the satisfaction the Club felt at the way in which the Hon. Secretary had performed his arduous duties; and a vote of thanks having been voted to that gentleman and also to the Chairman, the meeting was brought to a close.

THE AMATEUR DRAMATIC CLUB.

The seventh performance of the Amateur Dramatic Club, given on the 10th inst. in the Gaiety Theatre, was to the full as successful as the last. As usual the theatre was crowded. "Cox and Box," that lively trifle which never appears stale, was the opening performance, given as an appetiser, sherry and bitters before dinner, to the more solid piece which was to follow. Messrs. Newcome and Fredricks as Cox and Box respectively, with Mr. N. Lee as Bouncer, acted and sung to perfection. An attempt was made by the audience to have the "Buttercup" duet encored; but the repetition was wisely refused by the actors, and was not insisted on by the spectators. Indeed there was quite enough before both audience and performers, as was proved by the fact that half past twelve o'clock had arrived before the curtain dropped on the last "situation" in "The Critic." We presume the delays between the pieces and the acts are unavoidable; as, were they not, we are convinced that the management of the Club, which has shown itself so careful for the convenience of the audience, would have succeeded at least in curtailing their duration. So we will put up with them without grumbling, or rather endeavor to regard them as somewhat prolonged fillips to the enjoyment which is to follow.

The "Critic" itself is too well known to playgoers to need describing here. Indeed it has been rendered already familiar to the Yokohama public; and many of the players who performed in it before were included in the cast for last night. It is one of the most brilliant efforts of its brilliant author, and sparkles throughout with the diamond glow of wit of the first water. It is as immeasurably superior to the trashy farces, plagiarised from weak French originals, of the modern English stage, as Tennyson as a poet is superior to Martin Tupper. The cast was very good, Mr. Spurgeon having made the best use of his material. The happiest vein of Mr. Toddles could be and was elicited in *Sir Fretful Plagiary*, and Mr. Spurgeon as Puff, and Mr. Newcome as Snear, had parts which suited them admirably. An opportunity was availed of to introduce some new talent to the Yokohama boards, and to employ old talent in a new direction. Mr. N. Lee made an excellent

Dangle, and the appearance of the new ladies, Miss Stella Collars and Miss Pict (the Nieces) was very creditable. New scenery had been prepared under the supervision of Mr. Newcome, who caused to be evolved a splendid view of old Tilbury Fort, and an effective battle scene, in which the designer's art was for everything but the cannonading and the lurid glare of burning ships and the smoke of the powder.

Not the least pleasant part of the entertainment was the music discoursed by the orchestra, which was as well prepared for the evening as were the players themselves. It is perfectly honest criticism to say that our Yokohama amateur actors and musicians will compare favorably with those of any other port in the East.

Miscellaneous.

A SLIGHT shock of earthquake was felt on the morning of the 11th inst. at about a quarter to eight o'clock. A severe one was sustained on the evening of the 20th.

On the morning of the 11th inst. H. M. the Empress Dowager started for Kioto, leaving her palace at 7 o'clock. Thence she proceeded direct, in a carriage, to the Shinbashi station, and left for Yokohama in the 8.15 train. Upon her arrival at the Kanagawa station salutes were fired by all the men-of-war in harbour. All the vessels, both men-of-war and merchant, were gaily decorated with bunting in honour of the occasion. The *Hochi-shinbun* informs its readers that a special correspondent accompanied the Empress Dowager on her tour, which was made, as was that of the Empress, *via* the Tokaido.

We have no wish to detract from the value of the eminent services rendered by Mr. Griffin to the cause of harmony in his efforts to improve the efficiency of the amateur band, which owes, we are aware, much to his patience and industry for the high standard of excellence it has already attained. But we are convinced that Mr. Griffin would be the last person to claim credit which does not belong of right to him; and especially he would not endorse the statement in the *Herald* that he "arranged the overture, of Cox and Box for the orchestra." We are informed that, in point of fact, that overture was arranged by Mr. Wagner, as were also the Prince Alfred waltzes, the "Peter Schmoll" overture, and "Mauer and Schlosser."

We have been requested to state, that an Exhibition will be held this year, in the Goshu, Kioto, and will remain open to the public for 100 days, from the 15th March to the 22nd June inclusive. During this time, foreigners will be permitted to visit Kioto, and also to exhibit any articles at the Exhibition. Foreign exhibitors will further be allowed to visit Kioto one week before and one week after the above dates respectively. All the other rules are the same as those enforced at the former Exhibition.

Seasonings to the *Japan Weekly Mail* are fortunate in that that journal has changed hands, but are still more to be congratulated that the new proprietor and conductor is so amiable and accomplished a gentleman as Mr. G. C. Pearson. Whether he for his part has to be felicitated upon his purchase remains to be proved. Certainly there is room for grave

doubt on the subject. How far the publication of the *Tokio Times* may have been instrumental in hastening the ex-proprietor's long cherished project of sale, and in causing him to abate the very extraordinary price he asked for his property, may be matter of amusing speculation.

THE attendance at the Temperance entertainment on the 13th inst. was above the average, and the programme was an excellent one, several ladies contributing to the evening's amusement. Mr. F. R. Wetmore presided; and the Rev. I. H. Correll delivered the opening address. At the close of the proceedings seven or eight persons signed the pledge-book.

MR. J. R. WASSON has received at the hands of the Mikado, the decoration of the fourth class of the Japanese order of merit.

THE *Tokio Times* gives the following sketch of a project, agreed to by the foreign Ministers and submitted to the Foreign Department of the government, to solve the questions pending between the land renters of Tsukidji and the Tokio-fu: "Its provisions were simple. The full amount of rent due was to be paid, up to a fixed date. A reduction of fifty per cent. was afterward to be allowed to the present holders of premises in Tsukidji.* The agreement of 1870, and all other kindred agreements were to be considered at an end, so that the government should be subject to no question or remonstrance, for the future, as to its right to admit foreigners to residence in any place. The whole control of that matter was to be restored to the hands of the Japanese. On the face of it, the proposal appears to be one of the fairest that could be conceived. It is not easy to discover any point which should not have been acceptable to the government. The accumulated indebtedness was to be discharged. The future rents of land holders were to be fixed at an unusually remunerative rate. With regard to tenants that might come hereafter, the local authorities were left free to make their own terms. And the sovereign right of determining where and to what extent foreigners should be admitted into the country was to be placed again in Japanese keeping."

If the information on which the *Tokio Times* bases its assertions is correct, most evidently the Japanese government has placed itself in a false position and has been badly advised in not at once accepting this proposal. "By accepting the proposal, they would have gained important political benefits, and the trifling pecuniary stake at issue, as well; and they would have saved themselves the trouble of a burdensome litigation, the first stage of which has been adverse to them while the ultimate result is obscure. Their rejection of the compromise—if that can be called a compromise in which they were offered almost everything, and called upon to surrender nothing of value—is in all respects to be regretted."

We have nothing to add except the expression of a full concurrence in the concluding remarks of our contemporary. "Allowing the case of the Tokio-fu to be the strongest ever presented, it would still have been better to keep it out of Court. If the government win it, here or elsewhere, they get a barren victory; with none of the political gains they might have secured. Omitting all consideration of the merits of their cause—calling it

either the best or the worst in the world—we are sorry that they failed to respond to the invitation given them. If it could be done without loss of dignity, we should be glad to see them accept it even now."

REFERRING to paragraphs which appeared recently in our daily and our last mail summary, announcing from reports published in the native papers the expected return shortly to Japan of Mr. Yoshida Kiyonari, Minister of Japan to the United States, we now read in the *Tokio Times* that the report is without foundation, and that Mr. Yoshida has no intention of leaving his post for the present.

THE case of the *Tokio-fu vs Blockley*, a case precisely similar in its principles and bearing to that of the same plaintiff against Batchelder, still in a measure pending in the U. S. Consular Court, will be heard in the British Vice Consular Court at Tokio, at an early date.

THE following are the names of the candidates for pilots' licenses for the Gulf of Yedo, who passed the examination for pilots yesterday held by the Marine Board at the Old Custom House, Tokio:—Messrs. Jacob Ewalt, Henry Johnson, Richard Connor, Patrick Hodnet, and Daniel Jamieson. Licenses have been issued to-day to these pilots; and it is to be hoped that they, or such other persons as may from time to time replace them after passing the Examining Board, will be the only persons employed in future by masters of vessels entering or leaving the harbor.

THE praiseworthy intention of the Government to reduce all but the most necessary expenditure in the various departments, is evidenced in the comparative table of future and past expenses, given in the *Nichi-Nichi-shinbun* of yesterday, and translated into these columns further on. It will be noticed that no change has been made as yet in the expenditure for the Imperial Household, the reductions contemplated in that department having been postponed until the return of H. M. the Mikado from his projected visit to Kioto.

JAPANESE postal agencies have been established at Chinkiang, Kiukiang, Hankow, Chefoo, Newchwang, Ningpo, Foochow, and Tientsin, in China.

The report that the elder Shimadzu, of Satsuma (formerly Shimadzu Saburo) had come to Tokio was incorrect. Throughout the year, at short intervals, it appears to be a regular form of newspaper announcement that Mr. Shimadzu has arrived. The paragraph seems to be kept standing for repeated use. But he never does arrive, and, in strict truth, it is a matter of small importance whether he comes, or goes, or stays tranquilly at his home in Kagosima. He will always be welcomed with the respect to which his services, performed in other days, entitle him; but his presence has no more effect upon the political situation than that of any other distinguished kuzoku out of office.—*Tokio Times*.

OF the Sho Kun Kioku—the newly formed Bureau of Decorations—the President, or Cho Kuwan, is H. E. Ito Hirobumi, Sangi; and the Vice President, or Fuku Cho Kuwan, H. E. Ogino, Gi Kuwan of the Genro Ii. These gentlemen finally decide upon the bestowal of decorations of the Order of Merit of Meiji, acting upon the suggestions of the Gijo Kuwan, who examine into the eligibility of candidates, and virtually determine the nominees and the special grades to be

conferred. The Gijo Kuwan were originally four in number—H. E. Samasima Naonobu, of the Foreign Office; General Torio, of the War Department; Mr. Hijikata of the Sei In, and Admiral Akamatsu of the Navy. More recently the number was increased by the addition of three Imperial princes, Arisugawa, Higashi Fusimi, and Fusimi. The Chief Secretaries, or Hisho Kuwan, are Messrs. E. M. Hirai (Secretary of the Dai Jo Kuwan) and Kitagawa. There are also several subordinate officers attached to the Bureau.—*Idem*.

ONE of the foreign residents of longest standing in Japan is about to leave the country. Mr. J. R. Jaquemot has, we believe, determined upon settling in some part of America, whither, accompanied by his two sons, he will go shortly. Apart from the loss the community will sustain in the departure of Mr. J. R. Jaquemot, those who have made a practice of attending the amateur theatrical representations in the Gaiety Theatre of Yokohama will greatly miss the valuable aid lent by Mr. Ronald Jaquemot to many histrionic performances, which have owed much of their success to his art. Who shall step into the buskins of "Miss Ella Herbert," and tread, in her place, the Thespian boards?—*Idem*.

MR. OLIVER SMITH has received from the Examining Board a license to pilot vessels anywhere between the Gulf of Yedo and Hiogo, both inclusive.

HAKODATE, January 11, 1877. The range of temperature during the week has been between 22° and 40°. The weather has been unseasonably mild, and light winds have prevailed. The shooting regulations were enforced on the 10th inst.

A FIRE broke out at Tobe on the afternoon of the 14th inst. a bath-house, and spread rapidly to the adjoining buildings, which, to the number of twenty, were destroyed before the course of the fire was arrested. We are informed by a correspondent who witnessed the fire, that a foreigner rendered good service in preventing the spread of the flames.

THE *Niigata Maru*, having been masted, has been towed up to Shihagawa, to complete fitting, after which she will load with rice for London.

WE have to announce, with regret, the death, after a short illness, of Commander G. W. Jones, R.N., the esteemed director of the Imperial Naval College at Tokio. Captain Jones succeeded Captain A. L. Douglas, R.N., in his important post, on the departure of the latter officer for England some twelve months ago.

ON the 13th inst. a Russian, named Kloff was arrested on the information of a Japanese for stealing a watch. The following day, Kloff having produced bail for \$1,000, he was liberated and ordered to appear before the Russian Consul, Mr. Pelikan, on Tuesday. Accordingly at ten a.m. on the 16th his trial commenced, and lasted the whole day, the Japanese prosecutor producing a number of witnesses. The evidence, however, was not of such a nature as to prove that the prisoner had stolen the watch; and his own admission that he had purchased it from a Japanese woman was favorably entertained, though, as there seemed a very great probability that he bought the watch knowing it to have been stolen, he was sentenced to pay a fine of 50 roubles and \$5 for damage alleged to have been done to the watch, or four days' imprisonment. The prisoner at once elected to go to gaol rather than pay the fine.

* Not a reduction of fifty per cent. on ground rents in Tsukidji generally, but a reduction only for grounds already occupied.

The performances of the 18th in the Gaiety Theatre showed a marked improvement upon what was already excellent. Both "Cox and Box" and "The Critic" were acted with much more verve than on the previous occasion, and the intervals between the two pieces, and between the first and second acts of the second one, were materially reduced. In fact a saving of half an hour in the time occupied by the representations and the intervals was effected. The audience was not so large as at the previous representation, but it evidently enjoyed the performance, especially that indiscribable burlesque, which provoked boisterous merriment. By midnight the curtain had fallen and the Queen had been sung, and actors and spectators well pleased with their evening's amusement, had dispersed in excellent spirits.

We learn that two young Japanese, Messrs. Okino and Yamaguchi, who had followed the course of the French Section of the Kai-sei Gakko up to the month of June last, were received, at the November examinations, with good marks into the Central School of Arts and Manufactures in Paris.—*Echo du Japon.*

The *Echo du Japon* gives the following account of a marriage which was celebrated in Christ Church yesterday. Yesterday was celebrated in the English Church a marriage which attracted in addition to the invited guests a crowd of sight-seers. We would not wish to be accused of casting too rash a glance over the barrier which protects private life, but, as it is now question of a ceremony performed in a temple, that is to say in a place accessible to all, people will not be very angry with us for our indiscretion. The entire party, bridegroom and guests in front, went to the Church in riding dress, the women in habits and the men in boots and breeches. This is an eccentricity which can scarcely have many precedents, and which would have a peculiar effect in France. But in English countries this most singular eccentricities are the best appreciated. After the ceremony the bridal party went, in cavalcade, to Tokio, where a splendid pique nique (probably a wedding breakfast is meant by this) was provided and given.

The report published in the native papers that the *Nishinohri* had been towed up to Shinagawa to load is quite without foundation. Both that vessel and the *Takusago-maru* will load rice in Yokohama for London.

A TELEGRAM has been received by Reuter's Agents at this port announcing that the political telegraphic service recently withdrawn from certain agencies is to be re-established. This gratifying result is evidently due to the fact of sufficient monetary support having been obtained to defray the expenses of the service of those agencies. We hear that the Agents here intend to endeavor to raise subscriptions to extend the service to Yokohama and we trust that any appeal he may make for assistance will be promptly responded to. Hitherto we have been chiefly beholden to telegrams received from China for political news of importance. We do not think that residents in Japan will expect to share in the benefits to be derived from this service without contributing to the expense; and indeed their unwillingness to bear part of the burden might be the cause of depriving not only themselves, but others of the advantages to be derived from the contemplated change.

We call attention to the translation, further on, from the *Kinji Hiron*, of a well written and well considered article on the subject of Japanese trade with foreign countries. The article shows a correct appreciation of actual circumstances which it is as pleasing as unexpected to find in native writings. The conclusion arrived at by the writer is the one to which all Japanese, well wishers of their country, should come. The future prosperity of Japan depends upon the development, through the length and breadth of the land, of native arts and native industries.

The *Tokio Times* suggests that the work of the various Volunteer Fire Brigades might be more efficiently conducted if those corps were working under one directing head. "Why" asks the editor "should not such a head be elected by the members of all the corps at a general meeting? The choice of the firemen would doubtless fall upon the person best fitted for the post: a willing obedience would be accorded to his instructions when a fire should break out; he would be able to dispose his forces so as to obtain every possible advantage, work would go on smoothly and well; and the public would feel an additional sense of security in the improved discipline of the volunteer firemen, in whom they have already much confidence. Further, there would probably be no difficulty, in the event of fires within the settlement, in inducing the Japanese authorities to place the officers in charge of the native brigades under the orders of a chief recognised and obeyed by the foreign community. In fine, at all times when the services of the brigades should be required, order would reign in place of the disorder which under present arrangements is too evident to be passed over without the expression of a friendly feeling of sorrow for its existence and a suggestion of how it might be made to disappear."

Writing on the subject of salvage at fires the *Tokio Times* says:—"Probably the useful work done by the firemen could be greatly supplemented by a salvage corps. Much valuable property might have been saved, which was hopelessly destroyed in the burning of Messrs. Lane, Crawford & Co.'s premises, had such a corps been in existence. Instead of the salvage work being only commenced by the English and Japanese men-of-war's men on their arrival from their ships; or, after the flames had been playing the very mischief for an hour, it would have begun within a few minutes of the first note of the alarm bell, and certainly some time before the arrival even of the engines. An idea of what excellent service might be rendered by an exercised corps of salvors was conveyed by the good work of a few volunteers who were instrumental in rescuing the valuable negatives of Baron Stillfried, thereby preserving that artist from a loss which perhaps no insurance could cover. A salvage corps would have effected an entrance into Messrs. Lane, Crawford & Co.'s establishment, and removed, long before the flames could have reached them, many thousands of dollars worth of goods, the ashes of which have floated into the air, or are buried beneath the mass of ruined and crumbling masonry which indicates the site of what a few days ago was an immense business repository. Insurance offices would have been gainers in so far that their actual losses would have been much reduced; and

it is to their consideration that we especially commend our suggestion of the prompt formation of a salvage corps in Yokohama, where, doubtless, volunteers will be found in plenty."

SCENE AT A THEATRE.

(FROM THE JAPANESE.)

The red curtain which hides the platform and performers from the gaze of the audience when required and on which are written several large characters, is down, and the audience are waiting for the performance to commence. At length the sound of a drum is heard, together with the tones of the samisen and the clapping of the hiyashigi (blocks of wood used as a signal) and the curtain rises slowly. The scene represented is an imitative view of midnight. There is a lonely road, on each side of which is a dense wood; and beyond is a stream spanned by a narrow and dangerous bridge.

Near this bridge, hand in hand, stand a young man, who is fashionably dressed, and a young woman with her head and face wrapped up. They are contemplating suicide by drowning in the stream. A merchant is accidentally passing that way. Observing the young couple, and divining their purpose, he walks up to where they are standing and lifting up his lantern scans their features. They are greatly astonished and taken aback at the action of the merchant and endeavour to escape; but he detains them by catching hold of the sleeves of their garments.

"Please let go your hold," exclaims the young man. "We have resolved to die together by drowning in the stream."

"Oh, foolish! Oh, foolish young people! Had I arrived a moment later, a pair of young blossoms, just budding into life, would have been destroyed. What is the matter with you that you have resolved to carry out such a purpose?"

"If you will please listen I will tell you what has caused us to come to the fixed determination of putting an end to our lives," replies the young man. "This young woman," he continues, "is the daughter of my teacher. It is a long time ago since I entered his school; and ever since his daughter and I first became acquainted we have entertained a mutual affection. We kept the matter of our love secret from my teacher, but it was finally discovered by a schoolfellow and also by the young woman's father. Oh! I could not save my name from disgrace, nor indemnify my action. We were desirous of running away, but the want of money prevented us from putting that plan into execution; and as we could not overcome our affection for each other, we resolved to put an end to our lives by drowning ourselves in this stream."

The merchant, who has listened attentively to the young man's sorrowful story, says: "I think you have parents, who, when they should hear of the melancholy event of your suicide, would be very miserable ever after. Neither could I permit you to carry out your design and afterwards look on the beauty of my own children."

With these remarks the benevolent merchant puts his hand into his pocket and brings forth a bag, which he presents to the young man, saying: "I will make you a present of this money, which will defray the expenses of your journey; and you had better start from this place at once."

The young man receives the bag of money and, bursting into tears, says: "How shall I be able to thank you sufficiently; or ever

be able to repay the kindness bestowed upon us by a stranger." The female puts her hands together as in the attitude of prayer, and would fain speak but that her utterance is choked by the tears which flow from her eyes. At length, recovering herself somewhat, she says: "You have made a withered tree to blossom again. I resolved to die, yet I did not like to go to the realms of darkness. Ah! surely this is a visit from Kuwanon (one of the Buddhas); your favour is higher than the lofty mountains."

"Don't talk thus," says the merchant. "It is better that you should leave Tokio before daybreak; therefore don't be standing here wasting your time."

The young couple then return their benefactor many thanks and joyfully resume their journey. After they leave, the merchant stays for a moment, smilingly watching their retreating figures and congratulating himself on having been instrumental in saving the lives of two young people. He thinks of the time, long ago, when he killed a man and for which act he has suffered great remorse. "Now," he soliloquises, "I am quite satisfied. Having saved the lives of these two persons my sin is entirely washed away." He then slowly proceeds on his way home.

A man, dressed in the habiliments of a samurai, with the usual long sword encased in a red scabbard by his side, and in a state of intoxication, suddenly rushes forward and intentionally knocks against the merchant who exclaims:

"What are you doing?"

"I am one of the Shogun's respected samurai. If a person of an inferior class touches the body of a samurai, as you have done, his guilt is very great."

"I did not touch you; but on the contrary you rudely pushed against me," replies the merchant.

"You are trying to evade the consequences of your wrong-doing by clever talking," retorts the other.

"You are a saucy fellow," says the merchant with a look of scorn; "but, however, I beg to be excused if you think I have insulted you."

But the samurai drawing his sword cruelly murders him upon the spot; and after committing the deed walks away laughing.

The scene is changed. The merchant's son, becoming anxious at the protracted absence of his father, is travelling along the road, seen at the commencement, accompanied by a banto, in search of him. As he walks swiftly along in the dark he suddenly kicks against something lying in the road. He stops and examines the obstacle, and on finding that it is the corpse of his murdered father wallowing in its blood, an agonized cry of horror bursts from his lips. After recovering himself a little he searches his father's pocket and finding no money, nothing but a bundle of bills, he concludes that his parent has been robbed and afterwards murdered to prevent the robbery from becoming known.

While the young man and his servant are meditating, as to what had better be done, a *kocho*, (local magistrate) passes that way, and, on observing these two men, stops and asks:

"Who are you?"

"A robber has slain my father," answers the young man.

The *kocho* expresses his sorrow at the sad event and informs the bereaved son that a paternal government would not allow such atrocities to be committed and the perpetrators to go unpunished; and he might rely on the

miscreant being arrested within a few days. He then enquires their names and number of their dwelling, and intimates his intention of immediately reporting the affair to the authorities.

Again the scene changes. The wood, stream, and road have disappeared, and instead thereof is a teahouse situated on the highway. In front is a large tree, beneath which are placed seats for the accommodation of travellers desiring to rest for a short time and partake of some refreshments. On the opposite side of the road is a sign-post pointing out the direction to Oisomura, Ashigara Ken.

Two travellers arrive in a jinrikisha. One is a young man and the other a young woman. They alight; and the coolie having received his fare returns homeward. Shortly after the young woman is taken very ill, and at the same time her companion finds out that he has left his purse in the vehicle which brought them to the teahouse, and expresses his intention of pursuing the jinrikisha.

"And leave me here, sick and alone! What shall I do if you don't come back?" She enquires.

"Don't be a buzzard. If I don't succeed in finding the money we shall not be able to continue our journey." With this remark the young man starts after the jinrikisha. He has not proceeded a very great distance before he beholds the coolie coming back with his money, which he at once hands over, explaining how he had found it in the jinrikisha.

"I love your honesty and shall ever rest under an obligation to you" exclaims the young man in an ecstasy of delight at receiving his money back; and taking a ten-dollar note from his purse presents it to the honest coolie as a reward for his virtue.

"Ten dollars!" exclaims the poor fellow in astonishment. "This is the first time I have seen such a large sum of money. I cannot take such a large sum."

The young man, however, finally persuades him to accept the note and then both proceed on their respective ways.

The coolie goes on until he comes to another teahouse, where two travellers have stopped to refresh themselves. He also stops; and wishing to ascertain whether the ten-dollar note is genuine or not, he presents it to one of the travellers and desires his opinion respecting it. The traveller taken it in his hand and scans it for a moment, then comparing the number of the note with some numbers he has marked down in a book, he suddenly exhibits deep emotion.

"At length I have found mine enemy. Where did you get this note from," he enquires.

"I got it from ———"

"That fellow murdered my father," says the traveller.

The jinrikisha man is astonished at this information and explains how he had refused to accept it, but had his objections overruled by the pertinacity of the young man; and, of course, he was not supposed to know that the man was a robber.

"Do you know where the giver of that note has gone," abruptly interrogates the traveller?

"Yes," he told me that he intended to go to the hot springs of Hakone; but I am not certain whether he really has gone there."

"You must take me thither in your jinrikisha or I shall consider you an accomplice of the robber."

"With pleasure. Even if I had to go alone it were better for me to do so and arrest him, otherwise my reputation would be permanently injured."

Again the scene changes. A view of the Hakone hot springs is presented to the audience. A young woman may be seen combing her hair in front of a looking-glass, having just returned from indulging in a hot bath at the nearest spring. By her side is a young man leisurely smoking his pipe. They are the same young couple who had been rescued from an early death by the unfortunate merchant who was murdered.

A commotion occurs outside the hotel, and directly after a couple of men rush into the room where the young couple referred to above are domiciliated with naked swords in their hands.

"That is the robber," ejaculates one of the invaders, pointing to the young man. The other instantly rushes forward and is about to cleave the young man's skull with his sword, but he cleverly avoids the cut, and indignantly asks:

"For what reason do you thus wantonly attack me?"

"Oh! you can't escape by feigning ignorance. The other night you murdered my father and robbed him of seventy dollars. You are the murderer of my father," furiously exclaims the person who made the attack.

"Have you any proof?" quietly asks the accused.

"Oh, yes. You gave a ten-dollar note to this jinrikisha driver, the number of which exactly corresponds with a note of the same value taken from my father on the night he was murdered."

The young man then takes the notes out of his purse and compares them with the numbers produced by the merchant's son; and, finding that they correspond in every particular, exclaims in a sorrowful tone,

"Your father was indeed my benefactor. Permit me to thank you for his kindness. I am not afraid to die, but I am ashamed to be considered the enemy of my preserver. If you will please put your sword in its scabbard, and listen to my story I will tell you all I know." He then recounts his adventure with the merchant.

"The dead man cannot speak, and I am unable to believe your story," says the merchant's son, once more drawing his sword with the intention of avenging his father's death on his supposed murderer.

An officer now appears and orders the would-be avenger to put up his sword as he would not be allowed to take the law into his own hands. The young man and young woman are then given into his custody on the charge of murdering the merchant and robbing him of seventy dollars.

Some kumosuke are resting on the highway beside their kago in which is seated the samurai who slew the merchant. The officer is also leading the supposed murderer and his accomplice that way. After the latter has left the hotel at Hakone, the jinrikisha man remembers the prisoner's kind action and follows them saying aloud to himself, that he could not be such a great profligate. He also remembered that the prisoner was the friend of his former master; and the tears ran down his cheeks. The man in the kago listens to his wailing and is struck with the tone of his voice which resembles his former servant's. He also thinks the voice of the male prisoner in charge of the officer is exceedingly like that of a former friend of his. He gets out of the kago for the purpose of making enquiries, but the party has now passed by, and the night is so very dark that he can see no traces of them.

The curtain now falls and an interval takes place. On the performance being renewed, a miserable looking habitation is presented to the view of the spectators. Inside of this dwelling may be seen in a sitting posture and presenting a most forlorn appearance the samurai who murdered the merchant. The landlord brings the newspaper, but the samurai declares his inability to read and asks his visitor to read it to him. He complies with the request and reads the account of how—and the daughter of—, had slain the merchant and stolen his money.

The samurai listens intently and is horror-stricken to find that the accused man is his own particular friend. He tries to console himself with the reflection that, after all, it may not be his friend as there are many people bearing the same name. Whilst in the midst of his meditations an old servant enters and exclaims.

"I have been looking for you everywhere and at last received information concerning you from a man to whom you sold your sword. Your old mother is on the verge of departing from this world and sent me to seek you. I have heard of your debauchery and drunkenness; your friend—also is in trouble, having behaved very badly and is now a prisoner."

"Pray let me hear about my friend?"

The servant explains how he has been arrested for murder and robbery and will soon take his trial.

On hearing the state of affairs the samurai bursts into tears and exclaims,

"Oh! I have done wrong; I have done wrong. It was not he who killed the merchant, but I. I am very sorry to hear that my friend is a prisoner. I will pay my mother a visit, then proceed to Osaka and take the local mail for Yokohama from whence I will proceed to Tokio by the railway. It will take me some days to reach Tokio, therefore I must not delay, or perhaps my friend will be executed. I think I will communicate with the authorities by telegraph."

After another brief interval the last act in the drama is performed.

The place is a Court room. There is the judge sitting gravely in his seat. The prisoners at the bar are the young man first introduced to the audience and the young woman. The judge is questioning the male prisoner. He, the prisoner, says:

"I know I shall be punished by the law for killing the merchant. I did not kill him; and though I do not fear being punished, yet I very much regret being considered the enemy of my benefactor."

While the judge is questioning the prisoner a samurai bursts into the Court, and, addressing the judge, confesses it was he and not the prisoner who had slain the merchant, because he the merchant had killed his father. Some witnesses are produced who proved the samurai's statement to be true. The young man and the young woman are then declared not guilty and ordered to be liberated.

The merchant's son is impressed with the story of the samurai; and taking into consideration that he committed the murder out of revenge, he pleads that he might not be punished; and the judge willing to take a favourable view of the case discharges the samurai also. Then are all parties exceedingly joyful.

The curtain falls and thus ends the entertainment.

SAINICHI (OR DAY SET APART FOR WORSHIP.)

FROM THE "YEDO HANJOKI" OR "JOURNAL OF THE PROSPERITY OF YEDO."

An old song says "The eighth day of the month is the day for Kayabacho and the worshippers of Daishi and Fudo." This proves the custom of the Yedo people, who have loved and observed the Sainichi for a very long time. All streets in the neighbourhood of any temple are thronged with tradesmen and fortune-tellers on the days of Sainichi. And in the summer evenings, when the vendors spread their goods on mats, or on temporary stalls, which are all brilliantly illuminated with lighted Satsuma candles, a brisk business is carried on with the crowd. Vendors of eatables usually spread their wares temptingly on broad stands or tables; and persons may obtain fruits, rice cakes, roast cuttle fish, sushi, fried cakes &c. according to their desire. A man arrays his goods upon mats and a hundred useful articles for household purposes, or in the way of tools, may be obtained for the sum of one sen nine rin each. Another man disposes of his cakes by lottery. The girls who sell tea are all nicely clothed: the cries of the water-seller are as cold as his water: the water-melon man is distinguished by a red lamp which he keeps lighted: sellers of jelly are covered by huge umbrellas. Hozuki are sold in sets of ten in each; and bean cakes are sold at four rin per bag. Gold-fish are to be seen in glass vessels, and fire-flies in small boxes covered over with black cloth. At every tea-shed, barley water—a favourite drink—may be procured as well as kudzu water; eggwater, and a variety of scented waters are served up at command. At one end of this night-fair are a number of trees and plants of various kinds all nicely arranged and sold by gardeners. There you may see five different kinds of bamboo growing together; tiny leafed acorns springing out of the rocks; prickly pears embraced by fine poppies; while sago palms are mixed up with hollies. There are orange trees, omoto, senrio, creepers, noble pines and graceful bamboos, and a number of other trees and plants, making quite a forest. Common flowers and plants are arranged on the ground in front of the larger specimens. The obanas look as if desirous of bringing themselves prominently into notice; and the fair omi-nameshi looks lovingly upon the celosia christata. The dew on the leaves of the shukaido glistens like tear drops; and the essence of valerian perfumes the atmosphere. The celosia christata are standing in stateliness and the balsam looks particularly noble. Morning glories shed forth expressions of quiet dignity, while the pinks are exceedingly bright. The lily looks too slender. Among morning glories and Indian flowers is the Korean chrysanthemum. Beside these beautiful specimens of horticulture are the stalls of the sellers of singing insects, where are weaving insects, bell ringers, pine and bridle insects, all singing sweetly in their tiny cages. The last named being the noisiest of the lot. The combined lights of the stalls produces a vivid glare visible for a long distance in the darkness of the night. A number of yetta are employed to keep the streets clean and prevent the accumulation of rubbish. Some persons come to worship flowers, others to worship rice cakes and fruits, but very few come for the purpose of paying adoration to Buddha.

THE TEMPLE OF HACHIMAN AT ICHIGAYA.

(FROM THE SAME.)

Situated on a hill north of Kojimachi, and opposite the castle gate known as Ichigaya-Gomon, is the temple of Ichigaya Hachiman. Close to the temple are some small theatres and shooting galleries; and at the foot of the hill are some eating houses which help to constitute this place one of the busiest and most prosperous in Yedo. On the top of the hill in a South-eastern direction are a number of tea-houses built for the accommodation of persons visiting the hill for the purpose of obtaining a view of the surrounding country. A company of samurai are regaling themselves on tea and enjoying the scenery presented to their view from the eminence. One of the party says, meditatively, "It is curious that almost all the towns on the east and west are in a prosperous condition. Shitamachi which is situated in the South-eastern part of Yedo is bustling and flourishing; but towards Yamanote (hilly district) the buildings are more scattered, and the temples of the kami as well as Buddha are comparatively lonely. If there were no splendid residences belonging to the three great han, Owari, Kii, and Mito, and no prosperity such as is to be seen at the temple of Miohoji, the aspect of this neighbourhood would be different from what it is now. It is our misfortune that we live in Yamanote." "Your residing there may be the reverse of a misfortune," interrupts the companion of the first speaker, "for if you lived in Shitamachi recollect that it abounds in places of amusement; and as the flower season is approaching you could not pass the spring in that locality without indulging in pleasure to excess." The old tea woman then chimes in:—"Indeed, young gentlemen, you are exceedingly fortunate in residing here where there is nothing to trouble you, while in the thickly populated city you would be subject to disastrous fires. Still happier should you be in Shinjiku, young gentlemen, where the splendour of the houses and beauty of the belles are nearly equal to what you may see in Fukugawa; and the system of entertaining guests is similar to that obtaining elsewhere. Besides, the wide halls of Shinjiku are far preferable to the narrow and dirty rooms of temporary lodgings." "That is all very true," remarks one of the samurai, "and I think you have been very clever and beautiful in your young days." "Sir," returns the old woman smiling, "in my youth the large paper elephant was exhibited at the Matsuri of Sanno. The world was very simple then. Now that I am old I suppose I shall soon be transformed into a ghost." "Mother, is your husband still alive?" enquires one of the old woman's visitors. "Oh, yes. He is alive and as strong as can be expected: and this year we have a great-grandson. It was when H. E. Tanuma was in power that I was wedded to my man." "Indeed!" exclaims the Samurai. "Have I not said that you were clever and beautiful?" "Oh, it was only by accident that I became acquainted with him. At that time the Government was attempting to improve the corrupt customs of the day; and put down the extravagant habits of the samurai. They then took to wearing long swords and short dresses: in the morning they would read moral books and in the evening devote their time to military science, and—" "Don't

preach, mother," pleads the samurai, "don't tell us such old stories, but please inform us how you and your husband have contrived to keep yourselves in such health and strength for such a long period." "As to that," she replies, "we were particularly careful to abstain from indulging in all vicious practices, which, like an axe, cut short the lives of so many." "That is an excellent reason. But at what age did you commence to be so temperate?" "Well, sir, if I must tell you, it was when we were seventy years of age." The samurai burst out laughing and promise to follow the example of the old woman.

Nippon Notes.

(From the *Kinji-Hiron* No. 28.)

A REVIEW OF THE CONDITION OF TRADE BETWEEN THE JAPANESE EMPIRE AND FOREIGN COUNTRIES.

In the consideration of this subject we have gone back to the very origin of trade between the Japanese empire and foreign countries, and have found to our sorrow that changes have been effected which are very detrimental to the interests of the country.

In the very commencement of the Ashikaga Shogun government, a Portuguese vessel was shipwrecked on the coast of the islands of Loo-Choo. One of the Portuguese on board happened to have a gun, with which he seldom missed his aim when shooting at birds. The king of the Loo-Choos expressed a wish to possess it, and so firearms were introduced into the islands. At this time the daimio of the island of Kiu-shu had friendly relations with the king of the Loo-choos. Otoma, daimio of the province of Bungo, Kiu-shu, was very ill at the time, and having been informed of the arrival of strangers at the Loo-Choo islands, he wished to obtain some medicine from them to cure his illness, and requested, through the king of the Loo-Choos, that they might visit him. The king, fearing to excite his anger by refusing his demand, complied with it, and the Portuguese having crossed the sea landed in the island of Tanegashima off the coast of Satsuma. This was the first arrival of any western people in Japan. So the Portuguese were the first to have any knowledge of the far country of Japan in the eastern ocean. After this, many vessels from foreign countries arrived on the coast of Kiu-shu wishing to trade. The Spaniards, Dutch, and English followed the Portuguese to Japan for that purpose, and foreign trade was not only done on the coast of Kiu-shu, but extended gradually to the Nankaido of the main land. But its prosperity was greatly interrupted on account of the various difficulties arising out of religious questions between the western powers, as well as because each country wished to have a monopoly of the trade of the eastern ocean. Hence arose a struggle for supremacy amongst the western powers. The Dutch and English entered into an alliance and drove away the Portuguese from Japanese waters. Then the Dutch obliged the English to quit Japan, thus leaving the whole foreign Japanese trade in the hands of the former people. Such is a brief narrative of our foreign trade during the reign of the Ashikaga, and the commencement of that of the Tokugawa, Shogun. Since that time, or during an interval of about three hundred years, Holland and

China only were allowed to have any commercial relations with Japan, and all intercourse with other western nations was entirely suspended. The foreign trade of the country became dull, and the sails of the ships of strangers were seldom seen on our coast. It now becomes a question worth discussion whether this seclusion was beneficial or prejudicial to Japan. At first sight it seems that it was beneficial; for the country enjoyed uninterrupted repose for about three hundred years. But, on closer consideration, we find that it was greatly injurious, and we yet suffer from calamities which had their origin in that long period of peace. Especially did our internal industries languish from the state of isolation in which we lived. For, no communication being held with foreign countries, every thing required for consumption had to be produced in our own country, satisfying merely actual wants regardless whether the productions were good or bad. Still, owing to the richness of our land, all demands were satisfied in our own country; but the spirit of the people was entirely destroyed and they had no ambition to improve the resources of their country so as to make it the equal of foreign lands, nor to manufacture articles which should equal those produced by foreign industry.

Even at the present day, although we are deriving some benefits from external trade, yet we produce nothing so important that foreigners would be anxious to have it at a high price. Has this not also its origin in the peaceful period of three hundred years? Or, if not, to what else is it due?

We will proceed a little further. Consider the condition of trade at the date of the opening of the ports in the year of Kayei (1852). Our nation then, having been shut so long to foreigners, had no knowledge of the utility of foreign things; and some of our people were even afraid to touch those articles which are most useful and convenient. Thus, imports at first were not large; and our own productions being badly manufactured could not satisfy the requirements of foreign merchants, though the cheapness of their first cost, in comparison with the prices they realised elsewhere, led to their being largely exported, and a good trade was done till the first year of Meiji, up to which time the total value of exports surpassed that of imports. We gather this from the following comparison of imports and exports for the 1st year of Meiji.

Exports.....yen	15,553,472.87.
Imports....."	10,693,071.84.

Or an excess of exports over imports of yen 4,860,401.03.

But, from this time, the condition of affairs began to change; and, in the 2nd and 3rd years of Meiji, the demand for foreign goods remarkably increased. Those who formerly looked upon them with contempt, changed their minds and even dressed in foreign clothes. Our males adopted the European style. They put on fine tall hats instead of wearing large eues on their heads, and took to carrying sticks after discarding their swords. They dressed in coats of the English fashion, and trowsers of the American. They would only eat from tables, and use knives and forks instead of chop-sticks; and nothing would satisfy them but French cookery. Such radical changes caused domestic made articles of use and clothing to disappear before the innovation in favor of foreign goods, the price of which was greatly increased, while our own productions

made no improvement. Thus the balance of trade, which before was in our favor, was lost. The following is a table of imports and exports from the 2nd to 8th years of Meiji inclusive.

2nd year of Meiji.		Deficiency of Exports,
Exports yen	12,908,978.02	7,674,665.15
Imports "	20,783,633.17	
3rd year of Meiji.		
Exports yen	14,543,012.89	19,198,624.97
Imports "	23,741,637.56	
4th year of Meiji.		
Exports yen	17,968,608.71	3,948,119.02
Imports "	21,916,727.73	
5th year of Meiji.		
Exports yen	17,026,647.21	9,148,167.73
Imports "	26,174,814.94	
6th year of Meiji.		
Exports yen	21,142,014.77	6,475,249.27
Imports "	27,617,264.05	
7th year of Meiji.		
Exports yen	18,780,078.79	4,144,508.29
Imports "	22,924,587.08	
8th year of Meiji.		
Exports yen	18,077,888.33	7,665,275.33
Imports "	25,743,114.17	
Total.		
Exports yen	136,000,632.88	53,594,198.76
Imports "	189,594,830.59	

This great deficit between the exports and imports has naturally caused a large outflow of coin from Japan, and in consequence has raised a great clamor among some discontented agitators. Some of them, indeed, were so anxious on the subject as to go so far as to calculate the number of years and months, at the end of which no gold nor silver coin would be found throughout the country. All this was the natural result of the country being closed to trade with foreigners, and the relapse into the observance of ancient customs and manners, which prevented the people from availing themselves of opportunities to improve the native productions of the country.

Now, however, the great rise in the price of silk which took place in June and July this year (1876) has caused the enormous export in this one staple alone shown in the following table.

Export of Silk in the 9th Year of Meiji.

		Value.
July,	187,710 kin (pounds)	yen 1,210,649.30
Aug.	506,198 "	" 3,551,076.10
Sept.	386,154 "	" 3,294,303.33
Oct.	177,475 "	" 1,722,522.47
Total	1,257,536	9,778,551.20

The high price realised by silk continued only for four months, but it was the cause of exports being made to so large an amount of money. In regard to trade, large imports must not be blamed for causing our poverty; but we feel very anxious about the exiguity of our exports heretofore. This year we have exported large quantities of silk owing to the mere chance of bad crops having been raised in Italy and France. It was not caused by any improvement in our national industries. There is no regular period for good and bad crops; and we cannot foresee calamities caused by the powers of nature. What then can be done to establish a prosperous trade on a firm basis, and preserve an equal balance between exports and imports? To do so we have merely to develop to the utmost industry and the arts throughout the empire.

SMALL-pox prevails in the Tochigi, Ishikawa, Fukuoka, Kuma-moto, and other kens.

About five hundred policemen and ninety police officers have left for Kioto, for service in that town during the visit of H. M. the Mikado.

LARGE numbers of farmers have assembled in the village of Narawa, Aichi-ken. They talk of drawing up a petition praying for the reduction of the land-tax.

THE *Nichi-nichi-shinbun* states that a telegram from the south-west, stating that Messrs. Saigo and Kirino of the Kagoshima-ken will shortly arrive in Tokio with a petition, was received by the government a few days ago.

THE *Pirus Japonica*, Japanese "*Boka*," grows extensively in Osaka, where plants are found worth from thirty to fifty yen.

THE *Hochi-shinbun* says that the press regulations will shortly be altered and that imprisonment for press offences will be abolished.

THE same paper says:—Mr. Nakayama, late Kenrei of the Ebaragi-ken, was lately ordered by the Central Government to resign, for his bad management of affairs during the suppression of the recent agrarian riots. His great fault was that he employed, to kill the ringleaders of the rioters, without having reported the matter to the Central Government, six prisoners who had themselves merited the punishment of decapitation or hard labor for life.

THE Genro-in was opened on the 18th inst.

THE *Choya Shinbun* says that the business of the Japanese Post Office at Shanghai will henceforth be transacted at the residence of the Japanese Consul in that port.

VARIOUS rumors are heard, says the *Choya Shinbun*, about difficulties in the Kagoshima ken. According to information, said to have been received by a certain department in Tokio on or about the 28th ultimo, great excitement prevails among the shizoku, and the Government officials are very anxious. Shizoku have formed themselves into three parties, viz., Shimadzu-to, Saigo-to, and Borou-ka. Each party differs in opinion from the others, and the last mentioned consists of shizoku whose violence increases from day to day. Even Mr. Saigo, the elder, who is a popular man among them, cannot arrest their movement. Shonai, in the province of Dewa, is also much excited.

At about 2.20 a.m. on the 6th inst., a fire broke out at the house of Oshita, No. 20, Shiodome-cho, Hakodate, and was not extinguished till twenty houses were burned to the ground.

THE Army and Navy Gazette says that a fort will shortly be built at Kuwanonazaki in the village of Kamoi-mura, Miura-kori, Soshu, where 75,000 tsubo of ground was lately allotted to the War Department for the purpose.

It is rumored, says the *Nichi-nichi-shinbun*, that the shizoku of the Mie-ken have petitioned that their pensions may be continued for ever to their families, on account of the aid they (the shizoku) rendered in the suppression of the recent agrarian riots, at the risk of their lives, in prompt obedience to the Kencho's order.

THE *Hochi-shinbun* says:—A Chinese Steamship Company, named the *Kansho Etsoku*, in Shanghai is doing well and the Company is said to be about to open shortly a new line between Kobe and Shanghai in opposition to the

Mitsu Bishi Company. Two large steam vessels have already been prepared for the purpose.

THE *Choya-shinbun* states that Mr. Saigo the elder left Kagoshima for Tokio on the 6th inst., and that Mr. Okumi of the Kagoshima Saibansho and four or five subordinate officials followed him on the following day.

(From the *Nichi-nichi-shinbun* of 29th Dec.)

TIME flies as swiftly as an arrow from a bow, and in a few days the present year will have passed away. As is the custom at the close of the year, everybody is very busy; and numberless difficulties have occurred between debtors and creditors, which is one of the inevitable consequences of the struggle for existence in society. To-day we retire from our journalistic business of the present year, only to commence again in the 10th year of Meiji with clean pen and inkstone. In glancing back we observe the almost numberless difficulties and changes which have taken place during the past three hundred and sixty-five days. Professional and amateur writers have discussed every event of importance, such as the formation of parliament, personal and political rights, alteration of the educational laws, a free press: in fact they have left no subject of importance without a full ventilation of its merits.

THE *Hochi-shinbun* says that about ten cadets from the Marine School of the Mitsu Bishi Steamship Company will proceed to England in the *Niigata-maru* and *Takasago-maru*, when those vessels leave, in order to receive practical lessons in seamanship. A number of other students from the same school will also be detached for vessels plying in the inland sea. A number of sailing vessels are about to be built by the Company on foreign plans. The machinery of the *Yuko-maru*, *Kanagawa-maru*, *Genio-maru*, and two or three other steamers will be taken out and they will be fitted up as sailing vessels.

THE Prime Minister, Sanjo Saneyoshi, has issued a notice to the effect that the departure of H. M. the Mikado to Kioto on the 14th inst. has been postponed to the 22nd inst.

It is said, says the *Hochi-shinbun*, that Shimadzu and Saigo the elder, will arrive at Tokio at the head of about seventeen regiments within this month. The rumour is not very reliable; but the price of rice has become very high.

At 1.20 a.m. on the 7th inst., a fire broke out at a certain Kurosawa's house at No. 28, Hommachi, Numadzu, on the Tokaido, which burned about two hundred and eight houses to the ground.

A DETACHMENT of artillery is to be stationed in Hakodate.

A BRANCH office of the War Department has been opened at Misaki, Honnoku. It will shortly be connected by telegraph with the main office.

On the 4th inst., H. M. the Mikado went to the Sei-in with the *Daijin* and *Sangi*, and re-opened the assembly. At 11 a.m. he returned to the palace of Akasaka.

At about 3.30 a.m. on the 5th inst., a fire broke out at the house of a certain Kawai, No. 11, Shi-chome, Bakurocho, Tokio, owing to an accident with kerosine oil. The fire was not extinguished till four hundred and seventy-seven houses were burned down. Mr. Hachisuka, ex-Daimio Awa, has distributed five hundred yen among the sufferers by the fire: and Mr. Hayashi, late governor of the Hama-

matsu-ken, one hundred yen. Many others have contributed more or less.

A NUMBER of Koreans, who drifted in their boats on to the coast of Takushima, Kagoshima-ken, during last year, have been sent back to their native country.

THE Tokio Exhibition, inside the gate of Yamashita, was closed on the 26th ultimo, and re-opened on the 6th instant.

OWING to the alteration in the land-tax, agrarian riots have broken out at Takasaki, where about fifty men have assembled. Disturbances have also occurred in the Nagano-ken.

(From the *Nichi-Nichi-shinbun* of the 6th January.)

Our readers! Please read respectfully the copy of the Mikado's command, and the notifications No. 1 and 2 of the Daiji-kuwan, which appear in our issue of to-day. Our honoured Tenshi having seen personally the hard work of the agricultural classes, and moved by a true wish for the promotion of their welfare and peace, has decided to reduce the land tax to two and a half per cent on the value of the land, and ordered a reduction of the annual expenses as much as possible. The prime minister promptly obeyed His Majesty the Mikado's order, and immediately issued notifications to the effect that the land tax for and after this year is decided to be reduced to two and a half per cent on the value of the land and that also the national taxation shall not exceed more than one fifth per cent. Who of our countrymen will not be grateful to our benevolent Tenshi? It is well known that the reduction of the land tax was really determined by H. M. the Mikado in person, but we are able to say that the cabinet of the Mikado afforded great assistance.

If our informant is not greatly mistaken, the whole sum of the land tax for one year, which was collected at the rate of three per cent, amounted to above 48,000,000 yen. The reduction to two and a half per cent will effect a saving to the farmers of 8,000,000 yen. The public expenditure, which amounts to 16,000,000 yen, is now reduced to about 8,000,000 yen in accordance with the recent alterations.

WHEN the Imperial Naval Department resumed its business for the new year, all the foreign ministers were invited to be present. His Majesty the Mikado with many civil and military officials attended.

THE *Mainichi-shinbun* says that the Mitsu Bishi Steamship Company in Hakodate gave a banquet to its native and foreign customers on the 2nd inst. About fifty cod-fish can be purchased for one yen and the same number of salmon may be bought for a similar amount in Hakodate.

A NEW journal, to be called the *Kioto Nichi-nichi-shinbun*, will shortly be published in Kioto.

MR. TANAKA, vice minister of the Monbusho, and Mrs. Tanaka returned to Yokohama from America in the *Gaelic*. Mr. and Mrs. Tanaka were met by Dr. Murray and other officials of the Educational Department at the Shinbashi Station.

(From the *Nichi-Nichi-shinbun*.)

What is the reason that trade has been so profitable during the past year? Is it not in consequence of the quantity of goods exported? The production of silk, silk worms' egg cards and tea, has been very beneficial to the country, which is a well known fact. But in relation to indigo very few of us know anything about the

benefit attached to its cultivation; and the Government has allowed us to export it free of duty.

Our correspondent in Osaka has sent us an interesting despatch in reference to the establishment of the *Polygonum Tinctorium* dye factory in Osaka by Mr. Godai.

If a very great mistake is not contained in his letter, our yearly crop of indigo is worth from 8,500,000 *yen* to 9,000,000 *yen*. And we are right in saying that out of every ten pieces of indigo four are wasted in our present method of dying. Some improvement in the method of dying blue would effect a saving of at least from 3,400,000 to 3,500,000 *yen*.

We hear that the annual export of indigo from the East Indies and South America to Europe, is not less than 25,000,000 pounds; and that to London alone is exported indigo to the value of £70,000,000 in one year (i.e. £70,000,000 is equal to 350,000,000 *yen*, or three and a half times the amount of paper money now current throughout the whole Empire.) We recommend our countrymen to plant and cultivate indigo in large quantities, so that there may be plenty for export, and we are sure the result will be advantageous to the country.

DURING the night of the 31st ultimo, a large number of farmers in the county of Kuko, Ebaragi-ken, assembled round the Kocho's houses in the villages of Shima-mura and Fujita, in order make some inquiries about the land tax. They were much excited, but a body of police persuaded them to disperse peaceably early the following morning.

Mr. Iro, of the *Nichi-Nichi-shinbun*, was summoned to appear before the Tokio-Saiban-sho on the 10th instant.

STORE-HOUSES will shortly be built in three different places in Japan, where large quantities of rice may be stored to provide against a bad harvest.

A TEMPORARY judicial court was lately opened at the judicial department, where Nagaoka and two or three ringleaders of the Kumi-moto rising, who were arrested in Tokio and Echigo, were examined before H. E. Mr. Oki.

THE *Nichi-nichi-shinbun* says:—The Italian Consul in Kobe has expressed to the Hiogo-ken, that when H. M. the Mikado visits Kobe, he would be glad to entertain him at his residence. When this was reported to the Kunaisho, a reply was received that, as H. M. the Mikado would not stop at Kobe, the kind offer of the Italian Consul could not be availed of.

THE *Hochi-shinbun* says that eleven or twelve telegrams from the Kuma-moto Kencho were received by a certain government department on the 11th inst. But nothing of their contents is yet known.

H. E. MR. FUKUSHIMA, Consul for Japan in Amoy, accompanied by his wife, and two officials left in the *Tokio-maru* on the 10th instant, for his post.

THE *Choya-shinbun* asserts that the Kaitakushi has bought the *Rupak*, and that that vessel will shortly be sent to Hokkaido. The other day she was towed up to the bay of Shinagawa by the *Raiden-maru* a steamer belonging to the same department.

THE *Choya shinbun* says that the Daijokwan has issued a notice to the effect that the Kiobusho and Keishicho are abolished and that the business of those offices will be transacted in the Naimusho in future. Further, the branch offices of every department are said to have been abolished and officials under the rank of *Shoyo* have been dismissed from their posts.

On the 11th at about 5 a.m. a fire broke out at No. 4, Kuroemon, Osaka, and destroyed about forty houses.

THE *Nichi-nichi shinbun* publishes the following table of the present, as compared with former, yearly expenditure of the Government Departments, showing a considerable reduction.

Departments.	Former Expenditure. Yen.	Present Expenditure. Yen.
Sei-in	494,000	300,000
Gen-ro-in	207,000	150,000
Gaimusho	185,600	180,000
Legations & Consulates in foreign countries..	548,300	500,000
Naimusho	3,699,812	2,520,000*
Okurasho	1,793,600	1,300,000†
Rikugunsho	7,250,000	6,000,000
Kaigunsho	3,549,700	3,300,000
Monbusho	1,704,800	1,200,000
Kobusho	49,000	3,000,000
Shihosho	1,420,500	1,280,000
Kunaisho	316,000	280,000
Chisokaisei Kioku.....	471,000	150,000
Keishicho	1,195,000	1,100,000
Kaitakushi	1,905,660	1,525,660

The total amount of reduction thus shown is *yen* 7,060,312.

The salaries of the first and second official classes are not reduced, but officers of those ranks will pay a tax of one-fifth of their official salaries. The salary of third-class officials is *yen* 280, on which they will pay a tax of one-tenth. The salary of an official of the fourth-class is *yen* 200; fifth, *yen* 150; sixth, *yen* 100; and seventh, *yen* 80; officials of each of these last four classes will pay a tax of one twentieth of their salaries. The fourth to the seventh classes will consist of secretaries, and the officials of lower rank will be divided into ten-classes with the following annual salaries, viz.:—1st, *yen* 60; 2nd, *yen* 50; 3rd, *yen* 45; 4th, *yen* 40; 5th, *yen* 35; 6th, *yen* 30; 7th, *yen* 25; 8th, *yen* 20; 9th, *yen* 15; and 10th, *yen* 12.

(Probably, though it is not stated specially, officers of these ten classes will be exempt from taxation of their incomes.)

NOTIFICATION No. 4b.

THE Kiobusho (Department of Religion) is abolished. Its business will be transacted by the Naimusho in future.

The Tokio Keishicho (Prefecture of Police) is abolished. Its business will also be transacted by the Naimusho in future.

Notice of these alterations is hereby given.

SANJO-SANEYOSHI.

Daijo-Daijin.

11th January, 1877.

THE first commencement of trade between Japan and Corea has been made. The *Naniwa-maru*, which took a large quantity of rice to Corea, brought back cotton to Nagasaki on the 5th instant. Tallow and various animals, with skins useful in commerce, abound in Corea. Especially tiger skins can be bought there cheap.

H. E. MR. NOMURA, Governor of the Kanagawa ken, has issued a notification, dated the 6th inst., to the effect that, as licenses for shooting will be given to foreigners, those provided with licenses are not to be molested in their pursuit of sport.

THE *Akebono-shinbun* says that a Russian Naval Station will shortly be established in Inasa, Nagasaki.

BRANCH barracks for detachments from the Nagoya garrison troops are to be built at Uchishibu and Nagaoka, Mie-ken.

* Including the former pension of Mr. Okubo, while he relinquished to defray in part the expense of the Kangio-rio.
† Exclusive of the expense of the Zohai-rio.

THE *Mainichi-shinbun* states that on the 12th inst. H. E. Mr. Kido, *Naikaku-komon*, attended the Sei-in and presented a document to that body.

AGRARIAN riots are said to have broken out at the village of Uyeki, which is about fifteen *ri* north-east from Nagoja, Owari.

THE *Mainichi-shinbun* says:—As Her Majesty the Empress Dowager was travelling through the village of Hodogaya on the 11th instant, two foreigners, who were in a carriage, drove furiously past the procession. Just after passing, the hat of one of them was blown off by the wind, and they did not stop to recover it, but continued to drive on.

THE number of the officials of the Okurasho and its branch sections amounts to about 2,390. One-third of this number is to be dismissed.

A FEW days ago a volcano in the Island of Idzu broke out. Some foreigners in the service of the Monbusho have received permission to visit it at their own expense, and left yesterday.

On the 15th inst. the Genro-in will be reopened by H. M. the Mikado.

THE *Mainichi-shinbun* publishes the following on the Bonin Islands, which it has received from a person recently returned thence:—The chief of the islanders is represented to be a man of about 50 years of age and very rich. It is said that there are only two Japanese women on the islands, though there are a number of Malay women. The complexion of the latter is as black as *mokuranji* (a fruit of a glossy black colour.) Their hair hangs in a dishevelled mass, and they cover their heads with a yellow cotton cloth, while they clothe themselves with deer-skins. In fact their appearance is such that a person with a weak stomach does not care to have a second interview with them. The islanders have one good custom, and that is that, when a vessel is seen near the islands, they light fires so as to let the mariners know the whereabouts of the land.

THE *Choya-shinbun* says: Mr. Shinagawa, Japanese Consul in Shanghai, has received orders to return to Japan. His secretary, Mr. Wada, has been appointed Consul at Amoy. Mr. Soyeshima, late minister of the Gaimusho, proceeded into the interior of China, as far as Saiko, last year. Having finished his tour he returned to Shanghai, where he is now sojourning at Mr. Tajiro's. The Chinese officials received him everywhere with marked politeness.

HIS MAJESTY the Mikado visited the Genro-in on the 15th inst. to reopen that assembly for this year's business.

THE Kogaku-rio, (Engineering College) and Seisaku-rio (Manufacturing Section of the Public Works Department) will be amalgamated and called the Kosaku-Kioku.

THE Okurasho will issue paper money of five *sen* in March of this year. The factory at Oji, Tokio, is very busy manufacturing the paper to be used for this purpose.

THE *Mainichi-shinbun* says:—An English resident in Yokohama wishes to establish a company with a capital of one million dollars for insurance against fire in Japanese brick and stone houses. On receiving a license, he will establish his principal office in Tokio and branch offices in Osaka, Hiogo, Yokohama and Nagasaki.

THE same paper says that a diamond, the property of Mr. Komatsu, chief officer of the *Kasuga-kwan*, is about seven inches in diameter!

About eight officials of the Yokohama Custom House have been dismissed.

THE *Hochi-shinbun* says that the recent reduction in the yearly expenditure of government being insufficient, many more ken will be abolished, and the empire will be divided into three fu and twelve ken. Governors of ken will be promoted to the rank of *Chokunin*. Messrs. Shishido and Okubo, vice-Presidents of the late Kiobusho, have been appointed *Gi-kuwan* of the Gen-ro-in.

NAGAOKA, one of associates of the rebel leader Mayebara, was severely wounded when he was arrested at the bridge Shianbashi, Tokio. He died in gaol at about 11 a.m. on the 12th instant.

MESSRS. Nakayama, Matsudaira, Ikeda, Date, and Mori have gone to Kobe in the *Hiroshima-maru*, preceding H. M. the Mikado on this tour to Kioto.

MR. ABAR of the *Akebono-shinbun* has been summoned to appear before the Tokio-Saiban-sho. Mr. Takase of the *Kofu Nichi-nichi-shinbun* was condemned to fifty days' imprisonment at the local Saiban-sho, on the 12th inst., for having violated the press regulations.

THE Mie-kencho spent yen 35,000 in the suppression of the recent agrarian riots.

About three hundred officials of the Okura-rasho have been dismissed.

On the 5th proximo the ceremony of opening the railway between Kioto and Hiogo will be performed in the presence of H. M. the Mikado and foreign ministers.

DR. DAVID MURRAY, of the Public Educational Department, on the 17th inst. had the honor of an interview with H. M. the Mikado at his palace.

(From the *Choya Shinbun*.)

OUR Government, being desirous of promoting the wealth and welfare of the people, has reduced the yearly expenditure one-sixth, or by about eight millions of yen. Then the question as to what method shall be adopted for the transaction of public business, so as to carry out His Majesty's the Mikado's desire in reference to his late edict, has created some excitement among the people. On the 11th instant a great revolution took place in the forms of government and amongst the officials.

The exigencies of the times have necessitated the change and we knew that it was in contemplation; but the suddenness of its coming has caused us some little surprise. The departments and their branch sections, according to their present form, were established in the 1st year of Meiji, and since that time many changes have taken place. The establishment or abolition of even a branch of a department is of great consequence to the executive. We are therefore sure that the ministers must have been considering this change for the past six or seven months, and that it has not been decided in one day. If such a great change was only contemplated after the promulgation of the Mikado's edict on the 4th instant, we wonder much at the promptness of action. In the present peaceful reign, business should not be transacted so hastily; so we dare to say that the change has been under discussion for some months.

Yesterday, the 12th instant, many branch sections of each Department were abolished; and also the Kiobusho (Religious Department) and Keishicho (Prefecture of Police); and the business of both these Departments will in future be conducted by the Home Department. All the officials under the class of *Daishojo* were dismissed and their positions filled by

Secretaries. A Chief Secretary will rank as a 4th class official and receive the sum of 200 yen per month. A fourth Secretary will rank as 7th class official and receive 80 yen per month. Their subordinates will be divided into ten classes. Officers of the 8th class will receive a monthly salary of 60 yen; and the salary of the lowest officials or 17th class will be 12 yen. The salaries of the first, second and third official classes are not reduced at all, but they must pay a tax of one-fifth of their salary; whilst the *sonin*, or fourth, fifth, sixth and seventh classes will pay a tax of one twentieth of their salary.

The yearly expenditure of each department has been decided to be as follows:—Sei-in, yen 300,000, Genro-in, 157,000, Gaimusho, 180,000, Legations and Consulates in foreign countries, 500,000, Naimusho, 2,520,000, Okurasho, 1,300,000, Rikugunsho, 6,000,000, Kaigunsho, 3,300,000, Monbusho, 1,200,000, Kobusho, 3,000,000, Shihoshu, 1,280,000, Kunnisho, 280,000, Chiso-Kaisei-Kioku, 150,000, Keishicho, 1,100,000, Kaitakushi, 1,525,660. The reduction in the expenditure of these departments will amount to 7,060,312 yen; and besides this a large number of officials will be dismissed from each department, which will further reduce the expenses of the Government.

According to the above our Government has already settled the ranks of the official class, and made a considerable reduction in their salaries. Not only have two departments and several branches of other departments been abolished, but the annual expenditure of each department of the Government has been greatly reduced. This is the greatest change which has taken place since the foundation of the present Government. But we say it is not very difficult to reduce the number of officials, to abolish branch sections, or to change the forms of Government. The question which wants our special attention is whether the business will be carried on as well as formerly; for if they are necessary the establishment of departments or employment of officials is no waste of money; but a bad arrangement of affairs causes a large expenditure.

Now a remarkable change has been brought about by this reduction of expenditure and dismissal of officials, but if the manner of conducting the affairs of the country is not improved upon, the benefit of this change will amount to nothing. It is very important that politicians should resolve upon a systematic method of conducting the business of the nation, otherwise confusion will result.

We shall keep our eyes open and watch how the Government's new method of conducting the affairs of the nation will answer.

(From the *Akebono-shinbun*.)

Our countrymen must be quite sure that we are not of course of those who wish to attain their ends relying upon force, or who take pleasure in bloodshed. But as we have always desired to see perfected the constitution of government, and to talk about freedom and the rights of the people, we will report whatever our ears have heard and comment upon it in the hope to promote good and diminish evil.

Many days ago, we heard the following rumor in the street. Several telegrams have been exchanged between the government and the Kuma-moto-kencho, and on the 11th instant, especially, about ten telegrams were received by the government from that provincial office. This rumor induced some persons to think

that a disturbance had broken out in the province of Satsuma, and others enunciated various opinions in reference to the rumor. We do not know whether the report is right or not, and so did not publish it in our paper, thinking it would be of no benefit to our readers. But now we must inform them what we have heard, and in addition give our opinion on the matter.

When the Kuma-moto insurgents attacked the barracks of the garrison troops, all the citizens of the town of Kuma-moto were much surprised on account of the sudden outbreak, left their houses removing nothing with them, and took refuge in the villages of neighborhood. After the garrison troops had re-taken their barracks from the insurgents the soldiers forced their way into the houses which had been deserted by poor citizens, and stole thence money and clothing. On the return of order, the robberies were discovered. Each proprietor desired to have what was stolen from him returned. But the soldiers having sold their booty, there was nothing to be given back to the proprietors, who became very angry. Thus a feeling of indignation was excited among the *shizoku* of the Kuma-moto-ken against the soldiers' bad conduct. We cannot be sure that the troops really acted in the manner described; but if they did what can be expected to follow such conduct?

Now we will suppose that the rumor is right. The troops have violated the rights of property of the citizens in direct opposition to their duty. Some persons say that the troops will be disbanded and their duties transferred to the *shizoku*, who are provoked by their outrages. The garrison troops must be tried and punished in accordance with military law, so as to satisfy the claims of the citizens.

PRINCE Arisugawa-no-miya, *Gicho* of the Gen-ro-in, left for Kobe en route to Kioto in the *Hiroshima-maru*, on the 17th inst.

MESSRS. Nagaya and Ni-iai, late *Gikuwan* of the Gen-ro-in, were dismissed on the 15th inst.

THE *Choya-shinbun* says that a Japanese Consulate in China will be abolished, owing to the late reduction in the expenditure of the government, and that sundry district offices in Tokio will also be amalgamated in order to reduce expenses.

THE Mitsu Bishi Company spent yen 20,000 in masting the *Niigata-maru* and *Takasago-maru*, after taking out their boilers and engines.

THEIR Excellencies Messrs. Sanjo, *Daijo-Daijin*, and Iwakura, *Udaijin*, have received the decoration of the first class of the order of merit. This is a mark of recognition of their good service during the ten years since the foundation of the present government.

(From the *Hochi Shinbun*.)

The reduction of $\frac{1}{2}$ per cent. in the land-tax has reduced by yen 8,000,000 the yearly income of the Government. This reduction has brought about another, namely one of about one thousand officials in the various departments, while the abolition of some departments and branch sections has been effected, and a great change in the form of the Government has taken place, in order to meet the reduction of yen 8,000,000 in the revenue. The national taxation (apart from the land-tax) amounted formerly to about yen 16,000,000 levied at the rate of one-third per cent. But it was decided

that the tax should not exceed more than one-fifth. Thus it was reduced by nearly one-half, and the national expenditure was also brought down to about yen 8,000,000.

On one hand we are glad of the generous conduct of the Government in reducing the national expenses, and on the other we think that it is very difficult for the Provincial Government officials to preserve good management in conducting the affairs of the nation in face of so large a reduction of expenditure. What change will be effected in the form of the Provincial Governments? We are sure that some good alteration in that form must have been decided on by the Central Government. We do not know what it is; but we will consider the coming change of affairs in relation to several ken.

How shall we consider it? We must do so in the same spirit as we brought to bear upon the great change in the government on the reduction of the land-tax. We cannot say whether our opinion is right or not on the subject of the reduction of the national taxation, but the Provincial Government officials will not be able to follow the same course as before. Then on what new method will they conduct the affairs of the districts under their jurisdiction? The work will demand, of course, the same expenditure as before to promote the welfare and convenience of the people. We are afraid that the reduction of expenditure will affect that welfare and convenience more or less. If the transaction of affairs is interfered with, the change and reduction will produce nothing but confusion. Will, then, the same amount of taxes be collected under some other name? This is surely not the desire of our benign government. We foresee much difficulty in making a remarkable change in the form of the provincial governments. What method of conducting the affairs of the provincial governments will be adopted if a reduction of nearly one half in the national expenditure will not leave sufficient for the salaries of the district officials of every fu and ken? If we are not greatly mistaken, there will remain nothing to be paid them in the way of salary. Does our government intend to meet the reduction by abolishing some ken and amalgamating others? Most of the ken must not be abolished; and, with abolition and amalgamation even, ends cannot be made to meet after the reduction by half of the national taxation. What can be done? Some persons say that the district offices of every fu and ken will also be abolished, and this, perhaps, will be no great injury to the people. But yet this abolition will be insufficient to meet the reduction.

NOTIFICATION No. 3A.

To Fu and Ken.

Ceremonies in honor of those who died in the struggles during the suppression of the insurrection in the Kuma-moto, Yamaguchi, and Fukuoka-ken in October of the 9th year of Meiji (1876) will be held at the Shokonsha, Kudanzaka, Tokio, on the 25th inst.; and it is hereby notified that henceforward similar celebrations will be performed yearly at the same temple on the 6th November.

The officers of Fu and Ken under whose jurisdiction they live will inform the relatives of the dead on the matter.

YAMAGATA ARICHIKA,

Rikugun-kio.

13th January, 1877.

NOTIFICATION No. 5.

When any one, having received a summons from a judicial court, is not able to appear, or should appear later than the appointed time on account of illness or other causes, he must report the matter to the court before the appointed time. If he should make a report after that time, or should not appear at all, or appear later than the hour for which he is summoned, without having made a report, the judge can condemn him to a fine of not less than 5 sen and not more than 10 yen.

Notice is hereby given.

SANJO-SANEYOSHI,

Daijo-Daijin.

17th January, 1877.

THE *Hochi-shinbun* says that the Daijo-kwan has issued a Notification to the Fu and Ken, stating that the salaries of the *Chiji* of Fu and *Kenrei* of Ken are fixed at yen 250, and those of their immediate subordinates at yen 200. All other subordinate officials' salaries will be the same as those of officers of corresponding ranks in the departments.

On the 17th inst. all the officials of the Tokio-fu, says the *Hochi-shinbun*, were dismissed, with the exception of the *Chiji* and *Sanji*.

DURING the absence of Prince Arisugawano-miya, Mr. M. Mutsu, *Gikuan* of the Genro-in, will act as *Gicho* of that body.

(From the *Choya Shinbun*.)

Our Government has considerably reduced the working expenses of their various Departments, and changed the system of management of their Branch Sections. Sympathy for the great number of officials who have thus been thrown out of employment caused the tears to flow from our eyes and fall upon our desk as we wrote about their misfortune.

A person who sat by us laughed and asked if we did not desire reduction in the expenditure of the Government and the dismissal of a number of officials; and asked why it was we manifested sorrow for those officers instead of congratulating the Government upon its famous decision?

We replied that the dismissal of the officers was no doubt rendered necessary by the exigencies of the times; and that our sympathy for them was on account of the privations to which they would be subjected in consequence of their dismissal. We complimented the Government upon its action in effecting the recent changes; at the same time we could not help feeling for the unfortunate officers who were in consequence thrown out of employment.

What class of persons is it that mostly fill positions under the Government? They are of high rank, men who spent their youth, during the Shogun's reign, in learning the art of war and fitting themselves to undertake the management of a county or province. But, on the overthrow of the Shogun's Government, the career they had marked out for themselves was cut short; and a large portion of the aristocracy came to a level with the lower classes. Their pensions were also considerably reduced; and ultimately were issued in public bonds. A great many of the gentry consequently congregated in Tokio in the hope of getting employment under the Government; and the extent of the injury that will ensue on their dismissal we do not dare to estimate.

The effects of the great change in Government affairs will be experienced chiefly among

those officials who rank as *Sonin*, *Hannin*, and *Togai*, for it is these classes that have been dismissed. With the exception of those who are happily provided for, great confusion will fall upon these classes. If they would engage in agricultural pursuits, they have no land to till. If they would engage in mercantile business, how can they do so without capital? They can think of nothing to relieve their distress, and starvation stares them in the face. Who is he that will not drop a tear while thinking of the misfortunes which will fall upon those persons in the future?

Still this unfortunate state of affairs is brought about mostly through their own foolishness. They fondly hoped that the customs and manners existing in the Shoguns' time would continue, and therefore they neglected to provide for a season like the present. Those officials who received the order notifying them that their services would no longer be required, were very much surprised. But they have no cause to be displeased with heaven or earth, for their misfortunes have been brought about by their own misconduct. They will have to be very careful in future. They must forget their recent prosperity and work willingly to maintain themselves and their families. The change brought about in January of the 10th year of Meiji is calculated to chasten our minds and assist us in following the right way in the future.

NOTIFICATION.

No. 1A.

Junks of Japanese construction are feebly and coarsely built and very liable to capsize, especially in the winter season, when it is dangerous to sail in them on account of the stormy weather and wild North sea. Having become accustomed to them their proprietors do not consider whether they are profitable and care not for their loss; and their crews are also regardless of the danger attached to sailing in them. The sailors also often convey secretly on board the junks large quantities of goods. Unfortunately for them they seldom sail through the North sea without encountering stormy weather; and frequently the only means of preserving their lives is to throw away all the cargo, and often even this device is of no avail and the crew are drowned.

During the 7th year of Meiji, 175 junks were wrecked, 68 men were drowned and 45,775 koku of cargo were lost on the island of Yezo alone. During the following year, 120 junks were wrecked, 49 men were drowned, and 20,919 koku of cargo were also lost. Both steam and sailing vessels of foreign construction can freely go, or return in safety to harbour, as they are informed previously of the approach of a storm or change in the weather by the barometer.

Our junks find it very inconvenient to enter or pass out of harbour; and are so coarsely built that they are unable to sail upon the ocean in rough weather. When a strong wind is blowing they are compelled to keep close to the shore and so run very great danger of becoming wrecked upon some rock; and they scarcely evade destruction even at the mouth of the harbour. Owing to the wrecks chiefly occurring close to land the number of persons drowned is not very great. But the wrecks are greatly increased in number through overloading. Therefore a Notification, No. 14, was issued in February, 1874, regulating the number of koku to be carried by each junk, and ordering the examination of all junks upon

leaving any harbour. It is now notified that, from the 1st of February this year, all cargo over and above the amount of koku allowed to be carried by each junk will be confiscated to the Government.

KURODA-KIYOTAKA.

Kaitaku-Chokuwan.

11th January, 1877.

THE *Nichi-nichi-shinbun* of the 19th instant contains the following:

Foreign newspaper writers write selfish articles, regardless of law, and desire to provoke us to do the same. In reading through the *Japan Herald* of the 11th instant, we find it contains a most hateful, detestable article. The wording of this article does not seem to have been dictated by a very wise man, nor are the propositions those of a good man. Not only is it calculated to excite discontent amongst its readers, but it instigates our journalists to engage in a bad practice; and as it is likely to have a very bad effect upon the people we cannot allow it to pass without a word of comment. Shall we not direct the point of our pen against the camp of the *Japan Herald* writers and destroy it in a single attack and so lead its readers back into the right way. It is necessary in the first place to translate the article in question for the convenience of our readers.

(Here follows the translation of a short article in the *Herald* of the 11th on the prosecutions of the native editors, and satirically recommending that the French system of vicarious editors, to bear the punishments inflicted on the actual writers, should be adopted by the Japanese press.)

Having read this translation of the article what do our readers think of it? Are the views expressed considered righteous, and regarded as worthy of being respectfully preserved for ever? We decidedly state that we consider it a most careless, cruel, useless and injurious article. Foreign newspaper writers do not know much about the constitution of our government, our laws, feelings, customs and manners. They write about us as their imagination dictates; and publish articles which are full of evil expressions towards us. And the article we are commenting upon is one of the most injurious.

In France the newspaper regulations being very severe, the position of editor is often supplied by a "straw" man. But our press regulations do not obstruct or prevent our talking, and we are not inconvenienced by them. Those writers who occasionally transgress the regulations and meet with the misfortune of being sent to prison, do not intend to offend against the press-laws, but the careless writing of a paragraph necessitates their appearing before the Courts. Who of our writers will intentionally violate the regulations and provide straw men to supply their place, as does Rochefort?

If any of our newspaper offices should be led astray by the opinions of the *Japan Herald* writers, and provide straw men to bear their punishment, they intend to violate the press regulations. If such should be the case the publication of the article will not only have had the effect of exciting the newspaper writer, but will also affect the power of our laws, and may justly be considered a manifesto which has disturbed our spirits. Are the writers in the *Japan Herald*, who live under the protection of the English Government, not gentlemen who write their opinions for the benefit of others? How is it therefore that

they are indifferent to the ridicule of learned men for having instigated us to do wrong.

Oh! the Japanese are not so foolish! They are not so nonsensical! We are capable of discerning between good and evil. We advance with faithfulness, but retire from dishonour. Will the *Japan Herald* writers please be careful of their words in the future, and not disseminate poisonous impressions throughout our country. Fortunately for them they escape from well merited punishment through the protection afforded by extra-territoriality, but they cannot escape from the punishment which invariably falls upon those guilty of immorality. Let them look to themselves.

On the 25th and 27th inst. horse-races and wrestling matches will be celebrated at the Shokonsha, Kudanzaka, Tokio, in honour of the dead, who fell during the suppression of the recent insurrection.

From the night of the 18th inst., says the *Choya-shinbun*, the residences of four high officials of the government have been each guarded at night by ten policemen.

THE *Aichi-shinbun* says that on the 15th and 16th inst. about seventy or eighty shizoku of the Aichi-ken assembled at the temple of Manshoji.

THE first number of a new magazine, named *Somajijo*, has been published by the Shushisha Company in Tokio.

THE *Choya-shinbun* states that a notice has been issued to the effect that only \$100,000 will be expended in exhibits for the Japanese section at the approaching International Exhibition at Paris.

Correspondence.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

To the Editor of the *Japan Gazette*.

SIR:—As you have seen fit to translate a piece of gratuitous impertinence from the *Echo du Japon* regarding a recent marriage ceremony in the English Church, perhaps you will permit me, as an uninterested eye witness, to make a few remarks for the benefit of your elegant contemporary.

1st.—I do not think more people were present in Church than has been usual whenever a marriage among any of our prominent residents has occurred.

2nd.—It is a gratuitous falsehood to assert that any gentlemen went to Church in boots and beeches.

3rd.—Japan is not an "English country," nor (fortunately for the Japanese) a French country either.

4th.—If the English Derby were to be run on a Sunday or the Oxford and Cambridge Boat Race, or any Regatta, or the Theatres to be open, upon that day, it would have a very peculiar effect in England.

5th.—In all probability the arrangements were made without a thought of what *M. le Redacteur* might think, or the possible effect upon his compatriots.

6th.—*M. le Redacteur's* taste, as exhibited by the remarks under comment, "can scarcely have many precedents" among gentlemen.

I am, Sir,

Yours faithfully,

"*La critique est aisée, et la vérité est difficile.*"
Yokohama, 18th January, 1877.

INQUEST.

Before RUSSELL ROBERTSON, Esq., H. B. M.

Consul, Coroner.

Jury:—Messrs. John S. Cox, Ed. Flint Kilby, and Henry Steele.

An inquest was held on Saturday afternoon (13th inst.) on board the *Modeste*, on the body of the ship's steward, Samuel Perkins, who shot himself in the head with a revolver about nine o'clock in the morning. The following evidence was adduced after the Jury had viewed the remains of the deceased.

Robert Squire, sergeant of marines, sworn:—A few minutes before nine this morning I heard the report of firearms and found the sound came from the ship's steward's issuing room. I tried the door and found it locked. I then reported the circumstance to the master-at-arms, who caused the door to be broken open. I was present when the door was broken open and saw the deceased lying insensible on the deck. I think he shot himself with a pistol. The body was removed. The door must have been locked from the inside. I did not see the key of the door. The carpenter broke the door open.

William Davis, master-at-arms, sworn:—About nine this morning the sergeant-major and school-master reported to me that a pistol shot had been fired in the ship's steward's cabin. Seeing the carpenter I warned him to be prepared to force the door open. I then went on deck and reported the case to the senior lieutenant, who came down with me. As soon as the door was forced open I found the ship's steward with his head down towards the door, and legs on the back of a chair. A blanket was lying loosely over him. I lifted him up by the shoulders and pulled him partly outside the door, and then directed that he should be removed to the sick-bay. The pistol was found lying in the bed, with the muzzle pointing towards the ship's side. I have only known deceased about ten weeks, since he joined the ship. I have always considered him a very eccentric man. He had a habit of walking backwards and forwards with his hands clenched and drawing in his breath for half an hour at a time. The door was locked from the inside. I found the key in the door. He was not dead when I found him, but he did not speak. The ship's steward has to keep accounts, but has no control over money. His accounts were kept carelessly but there was nothing otherwise wrong. He was responsible to the paymaster. The pistol (produced) is still loaded in five chambers.

James Williams, schoolmaster, sworn:—I was standing in the mess-room this morning a little before nine o'clock when I heard a report of firearms. I thought it came from the issuing room. I asked the colour-sergeant of marines if he heard the report, and he said "yes," and went to try the door. He found it locked so we went and informed the master-at-arms, who sent for the carpenter and then reported the circumstance to the commanding officer. The commanding officer ordered the door to be forced open. The master-at-arms then entered. I saw the steward carried out bleeding, and a pistol in the master-at-arms' hand. That is about all I know. I saw the deceased about a quarter to nine last night. He joined in the conversation occasionally. He seemed rather depressed. He was a

peculiar man and was in the habit of walking about by himself and throwing his left arm about. He seemed rational enough in his remarks. I also saw him about half-past seven this morning walk up to the table and take a basin and go to the pump to obtain a drink. I saw him return and go to his cabin. That was the last I saw of him. He belonged to my mess. He was not in the habit of drinking. I do not know what caused the depression, unless he had some secrets on his mind. He was a very close man. This peculiarity of manner was observable from the time he joined the ship.

Charles Ed. Hall, sworn:—The last time I saw the deceased alive was about 8 o'clock this morning. I saw him at that time go into his cabin and shut the door. I did not see him again until the door was broken open. I heard the report of a pistol about nine o'clock and saw the door of the steward's room broken open. I observed, as they were taking him to the sick-bay, he was shot in the left temple. He seemed rather depressed last night and spoke but very little. He was reading the paper to himself. I spoke to him two or three times but he did not give me any direct answer. He has always been a peculiar man ever since he joined the ship, and seemed as if he had some trouble on his mind but he never referred to anything of the kind. I have been as much with him as any body. He seemed rather more depressed than usual last night. He was a quiet man and addicted to walking about by himself. I went on shore with him once and he departed himself the same as usual on that occasion. I never heard any body pass any remarks about his peculiarities. From the first when he came on the ship I have always considered that he had something on his mind.

Patrick Ezekiel, seaman, sworn:—Last evening, about 7 o'clock, the steward remarked to me that I was not to be particular about his bed as he was not going to turn in. This remark made no impression on me at the time, as I thought he meant that he was not going to retire early. He was a very quiet man.

William Jeffers, seaman, sworn:—My opinion is that the deceased was not in his right mind from the number of mistakes he continually made. He would send for me sometimes, and when I went to him he would not know what he wanted me for. The last I saw him was last night when the beef was being served out.

R. R. Siccamo, staff surgeon, sworn:—I performed a post mortem on the deceased, the result of which showed a circular opening on the left temple made by a bullet. The bullet passed through the brain and was found on the opposite side of the skull lying under the scalp, near the right ear. I examined the brain and found that it was quite healthy. The deceased's death was caused by a gunshot wound.

Some letters were produced, one of which was from the ship's steward of the *Thistle*, informing the deceased that he had remitted five pounds to his, deceased's, sister on his account.

Thos. Nelson Farth, paymaster, sworn:—The deceased kept his accounts in a very slovenly manner. No money ever passed through his hands. He joined the ships in October and during November I had to find fault with him. He promised to try and do better and did improve afterwards. He was of a flighty, nervous temperament. He brought a very good character from the *Thistle*. I

did not scold him severely for his slovenliness in his accounts and he did not seem to take it much to heart.

Alexander Buller, Captain of the *Modeste*, sworn:—I saw deceased on Tuesday last in my cabin and told him that though his general conduct was reported as being very good. I regretted I could not report favourably of the way in which he kept his accounts, and I hoped there would be a marked improvement in the next half-year. He made no reply that I remember; my remarks would scarcely call for any answer.

The jury then retired and after considering their verdict found that the deceased met his death by means of a pistol bullet fired by his own hands, he being of unsound mind at the time.

Law Reports.

In the U. S. Consular-General Court.

Before Gen. T. B. Van Buren, Consul-General.

Wednesday, January, 10th, 1877.

TOKIO FU vs. J. M. BATCHELDER.

THE following arguments of the Counsel for the plaintiff, chiefly of a technical nature, were omitted or insufficiently stated in our report of the proceedings in the U. S. Consulate in the case of Tokio Fu vs. Batchelder contained in our issue of the 10th inst.

Referring to the fact that no counsel had been employed by the plaintiff it was admitted that it was true that in a rent case tried recently in the British Court the authorities of the Kanagawa ken were duly represented by counsel; but this was because the proceedings were in charge of a foreign gentleman connected with the Kencho, who of course was perfectly well aware of the advantage of employing a lawyer.

As to the 3rd ground mentioned in the 76th Section, the affidavit shewed clearly what kind of evidence was forthcoming and what was its object, and if such evidence should actually be produced and sustained the judgment would have to be reversed. Thus, then, the only question was whether under the circumstances such evidence could not have been with reasonable diligence previously produced by the plaintiff. In considering what is reasonable diligence we must remember the position of the plaintiff.

... Much of the evidence is what has been offered by third parties whose attention has been called to the subject by the previous proceedings. This is of course strictly new evidence and is of such a nature as to show among other things that no such agreement as that alleged by the defendant at the hearing in support of his contention ever existed. Then there is other evidence, much of it contained in correspondence which the plaintiff could hardly be expected to have unearthed or even sought for without being properly advised, by a foreigner at least, if not by a lawyer, and the less seeing that until the trial actually commenced he could not know what the defence really was. Counsel having sufficiently referred to the new evidence he proposed to adduce closed this portion of his address by observing that it tended generally to prove that plaintiff was fully in his right in denying defendant's claim to hold land without paying rent and to ask damages from the plaintiff.

The Court intimated that nothing has been said about the land-right. Mr. Dickins admitted this, but said it was impossible to

avoid referring to the fact that the defendant's claim practically amounted to this.

In answer to a remark from the Court as to the insufficiency of the statement, Mr. Dickins replied that he had annexed an affidavit and a statement that sufficiently complied with the requirements of the 77th and 78th sections. He did not object to a part of the evidence or the judgment, but to the whole of both, and it was not therefore necessary to pick out certain portions of the evidence and make these up into a statement. It was only when exceptions had been made at the hearing or where portions of the judgment or evidence were objected to as insufficient or incorrect that any statement of particular evidence could be necessary. The 78th section does not make any statement of evidence necessary when the judgment is objected to as against law and no special exceptions have been taken at trial. Finally, as sufficiently shown by the statement actually produced, he went on the whole record and it surely cannot be pretended that he was bound to copy out the whole record and annex it to his motion. Besides, the absence even of a statement did not preclude him from argument upon and reference to the whole record; and if the defendant objected to the statement as insufficient he should have demurred to it and not appeared upon the present motion:—by so doing whatever right he may have had was waived.

The plaintiff's Counsel continued by saying the previous action was irregular. What the defendant ought to have done was this: he ought to have paid up his rent, paying the money into Court perhaps, and then made his claim for breach of agreement against us by a separate action in the nature, if allowable by the Court, of a cross action; and in that action he ought to have included in his claim the rent he had paid, and it is possible that such a form of proceeding would have been held correct. The present was undoubtedly irregular and incapable of being sustained. The title-deed only referred to two special articles of the convention of 1870; and on the Court's own maxim the mention of these excluded the other article of the convention from the lease. The deed being accepted by the defendant is the agreement between the parties; and if the convention is to be brought in at all it is to be so as a part of general law only, and not as (except so far as the articles of it quoted in the deed are concerned) forming a contract between the plaintiff or his principals and the defendant. A covenant may be (see "Woodfall on Landlord and Tenant") in words of one party: Thus there may be covenants in a deed poll. A condition must be in words of both parties (See Woodfall) or if not expressed gathered from words of both parties. Even putting the whole convention of 1870 into the title deed, no such condition as that alleged by the defendant can be found in it or implied from it, for here we have the words of one party only. Even, however, if signed by both parties, no such condition as will shortly be shown could be inferred. Again, if the condition existed and were pleadable it must have been if pleadable in bar of rent a *condition precedent*. It is clear it could not have been such a condition, the party defendant having entered into occupation and even paid the first year's rent—at a moment, too, as the new evidence would show, when hundreds of foreigners were to his knowledge and had long been living out of Ts'kidji. Not only that, but in 1872 rent was paid into Court and this waived any condition precedent that may have existed.

Finally the judgment is wrong in the face of it and its conclusion cannot be sustained by its premises. The sentence *expressio unius, (i. e. unius personæ,) exclusio alterius* applies to the defendant who has a right to live in Ts'kidji without further permission from the Japanese but who does not possess a right to live out of Ts'kidji without such a permission. He still possesses the right he always did possess, and which any one, even if not a treaty foreigner, possesses of living anywhere in Japan with Japanese permission. The Government has curtailed its right to exclude foreigners, but this is no curtailment of its right to admit foreigners. We have the minor proposition and the conclusion of a syllogism; but where is the major premise? The only one that could fit in would be a proposition to the effect that whenever a right of exclusion is curtailed the corresponding right of admission is also curtailed, a proposition absurd in itself and incapable of any sort of proof. The only ground on which the defendant could have founded his claim would have been a showing that the Japanese had knowingly held out as an inducement to foreigners to buy land in Ts'kidji, that they, the Japanese, would never allow under any circumstances foreigners to live elsewhere in Yedo, and that after having so induced foreigners to buy land they knowingly and wilfully broke their agreement not to allow foreigners to live out of Ts'kidji. This would have been a fraud, and if this is alleged as a defence, being a fraud it should have been alleged specifically, plainly, and positively, not as a possible but as a certain inference from stated facts. Nothing of the sort has been attempted, or in view of history of foreign residence in Japan could have been attempted.

Friday, January 12th, 1877.

ROBERT THOMPSON, second mate of the American barque *Stonewall Jackson*, was charged by the Master, H. P. Arbecam, with abusing the men and trying to raise a mutiny on board that vessel during her passage from Boston to Yokohama.

The prisoner pleaded guilty to the charge of abusing the men, on the Court reading over the affidavit, but pleaded not guilty to the charge of mutiny.

H. P. Arbecam, sworn:—I am master of the *Stonewall Jackson*. Shortly after leaving New York, I gave orders to Thompson, as I had had trouble on board the barque *William H. Thornby*, telling him at the time what the trouble was, that I would not allow him to strike or raise his hand to any man on board. The first I heard of his striking the men was from the mate; and the prisoner told me himself in the presence of the carpenter of the ship that he had disobeyed my orders and struck John Borrison with a belaying pin. I afterwards heard that he had struck the boatswain. I gave him strict orders not to raise a hand against another man on board. Complaints were afterwards made that the prisoner had taken away some clothes from the boys. I made him return the things—shoes, handkerchiefs, &c; and again gave him orders not to attempt to lay his hand on any man on board my ship, for I had heard that he struck a boy who cried at his telling him that he had "nigger blood" in him. Up to this time the men had laid no complaints against him. He struck Frederick Worm, and stood over another man with a belaying pin. I sent for the men, who stated the circumstances of the case. The prisoner came to me and said he wanted to have some conversation with me. I told

him that I would have a conversation with him at 12 o'clock before all hands. After that I concluded to talk with him in the cabin, privately. He came. I told him that I knew of his conversation with the men, in which he had said that I was incompetent to navigate the ship; of his insulting language about myself and wife; and of his abuse of the men, and not wishing to disgrace him in the presence of all hands, I gave him a friendly warning once more, and allowed him to go on with his duties as second officer. He promised to act rightly in the future. The only thing he said about the charges was, that he had not said anything against my wife and myself. I heard shortly after, through the carpenter and a boy, that he had again been speaking to the crew accusing me and my mate of incompetency. On the morning of Dec. 31, at 4.15 I heard a scuffle on deck. I went on deck and found the second mate clinched with the first officer. I took Thompson by the hair of the head. He had a belaying pin in his hand. With this belaying pin I struck Thompson on the head several times, reduced him to submission, and put him in irons, considering it necessary for the safety of the ship and the lives of all hands. On arrival here I reported the affair at the Consulate. The charges against the prisoner are entered in the log. When the men thought it was safe to do so, they brought these documents to me, in which complaints were made against the prisoner. I hold the log in my hand and now produce it in Court. It was read to the prisoner at noon on the 31st December in the presence of all hands, except the man at the wheel.

The Prisoner made a rambling statement about what the mate had done, but had no questions to ask the witness.

Alexander McAllister, sworn:—I am carpenter on board the *Stonewall Jackson*. I know the statements contained in the log and know that most of those statements are true. I saw the second mate strike John Borrison in the stomach, push him down and threaten to pound him. I saw no cause for the assault. He assaulted the boy Morrison on the head with a belaying pin. He did not knock him down. I did not see him strike John Daly, though I heard him threaten him. I have heard him speak in disrespectful terms of the captain and mate. He said the mate had never sailed in a large vessel and was not fit to be first mate. He nick-named the mate "Idaddis." He said the captain was no navigator, was afraid to put on sail, would never be able to take the vessel through bad weather, &c. He had to show him how to take cross-bearings in passing islands; if he had had command of the vessel he would have gone a different route and been in Yokohama long before. This was said before the men. I heard him threaten to whip the steward and the passengers. He used to imitate the Captain's actions in bad weather, ridiculing him. He had a by-word (a whistle) signifying "keep her north," another for "keep her south," &c. I heard him speak of the women on board.

To Prisoner:—I think it was in September when you struck John Borrison. You struck him on the head and made him go aloft.

John Borrison, sworn:—I am seaman on the *Stonewall Jackson*. I made a complaint to the Captain that the second mate had struck me. I don't remember the date; but I reported the circumstance as soon as it was done. I was pulling on a rope when he

struck me in the back with a belaying pin. I looked round, and he swore at me and struck me again. I had done nothing to cause him to strike me. Another time he struck me because I had been rather long in furling a sail. I told the boatswain the sail was hard to furl and he heard me and called me out of the fore-castle and struck me with a belaying pin. I have seen him assault every man forward. I heard him insult the steward and challenge him to fight. I did not see the fight between him and the first mate. I have heard him say that the mate knew nothing: that he could do better than he could if in his position, and so forth.

To Prisoner:—You did not strike me on the head but on the shoulder. You struck me for nothing. At the time you abused the steward, I was at the fore-castle door.

Thomas Kelly, sworn:—I am acting second mate of the *Stonewall Jackson*, but shipped as boatswain. Thompson assaulted me on one occasion, some time in September. He "shoved" me down and called me out of my name. He did not strike me. I don't know why he pushed me down. I was witness to his assaulting Fred Worm with his fist. He did not knock him down. I saw the mate and second mate take hold of each other, but what occurred after I know nothing about. Before they got into holds the mate told Thompson that he would not take any more of his short answers. I have heard him say that the mate was not qualified for the position he held.

To Prisoner:—I did not hear you say to the mate, "Hold on Sir; no belaying pins there." You did not strike me in the stomach but pushed me down.

Fred. Worm, sworn:—I am seaman on board the *Stonewall Jackson*. The second mate struck me with a belaying pin and capstan bar, because I did not answer him quick enough. He struck me five or six times. I saw him strike some of the other men—Morrison and Daly. I have heard him talk disrespectfully of the captain and mate, saying they did not know much about sailing a vessel. He was going to be "square" with the mate on arriving in Yokohama. I saw the fight between the mate and second mate. The mate told him to go and look after the top-gallant sail, and he said the boatswain would do that and went away. Afterwards the second mate came back and the mate said he did not want any of his back answers. I did not hear what the second mate said, but they clinched directly after. The Captain then came on deck.

To prisoner:—I did not see the Captain strike you. I assisted to carry you away, but do not recollect seeing any blood on your face.

The Court adjourned the case till Monday, at 1.30 p.m.

Monday, January 15th, 1877.

The case of Robert Thompson, second officer of the *Stonewall Jackson*, was resumed this afternoon.

Albert A. Meyers, sworn:—I was a passenger on board the *Stonewall Jackson*, and frequently had occasion to notice the behaviour of the prisoner during the voyage. I saw him strike the men with belaying-pins. One morning I opened the door of my cabin to let in some fresh air, and the sea happened to come in. The second mate swore at me and threatened to whip me for this accident. One morning I was watching on deck, and

he wanted to fight me and called me names. A short time after he apologised. The next time he insulted me was in a boat at the island of Ombay. After that, while I was standing in the pilot house, he again called me names, and threatened to whip me when we got to Yokohama. I thought at first I would stand his insults and not report him until we arrived in Yokohama, but ultimately concluded to report his conduct.

To prisoner:—The captain accused me of carrying tales from the boatswain's house. It being my first voyage I was unacquainted with the discipline of a ship and thought it no harm to repeat what I heard until the captain warned me not to do so. I saw you mark one of the men you struck, a Japanese stowaway. It was at night. You threw a belaying pin at him and the next day he showed me his hand where the belaying pin had struck him and it seemed as if his finger was broken.

Andrew Anderson, sworn:—I am seaman of the *Stonewall Jackson*. I have been assaulted by the second mate. I also saw him assault another man. He kicked him twice. He struck me over my shoulder with a belaying pin when I was aft hauling on the main sheet. At another time he struck me on the back of my head with a belaying pin and kicked me, and threatened to knock my brains out. He struck me while I was at the wheel. The captain had told me to keep the vessel to the wind and he struck me because the sails were not full. I have heard him say that the captain was a bad man. He also threatened to be "square" with the mate on arriving at Yokohama.

The prisoner said that he had no witnesses. He was told before joining the ship that it was useless for him to join that vessel as it was a usual thing for the captain to run every second mate out of the ship. He only pleaded guilty to striking the men.

The prisoner was committed to gaol until the *Stonewall Jackson* should be ready for sea, when he is to be sent in her to the United States to take his trial. His Honour remarking that he had no power to try him here.

The prisoner protested against being sent back a prisoner in the *Stonewall Jackson*.

He was removed in the custody of the deputy-marshal.

In the Judicial Court of Kanagawa.

Before Mr. ASAINA KANSUI, Vice-President.

Tuesday, Jan. 16th, 1877.

(Continued from the 9th instant.)

T. ROSE & Co. vs. ZENPACHI.

As will be seen from our report of the first hearing of this case, the plaintiff claimed the sum of \$1,000, value of an engine and boiler sold to the defendant, or \$200 damages for breach of contract.

Upon the Court assembling, this morning, the judge announced to the plaintiff that as the defendant did not put in an appearance on the first day of the trial, nor to-day, the Court had decided to exercise its right to exclude him from the privileges the law would allow him on his attending, and would give a verdict for the plaintiff, according to the merits of the case, on the 18th instant.

According to the request of the Court at the previous hearing, the plaintiff filed a detailed statement of the loss he had sustained through the defendant not concluding his contract, as follows:—

Loss on Bills of Exchange on London	\$90
Interest to date	15
Storage, &c.	30
Boy's expenses	9
Court expenses	60
	<hr/> \$200

The plaintiff also put into Court the letter which his witness at the first hearing testified having seen in Tokio. This document was from the defendant to a Mr. Okawa, informing him that he, defendant, had purchased a boiler and engine from Mr. Rose for Mr. Genzaimon for the sum of \$1000, but he considered that by judicious management \$1,500 might be obtained from Mr. Genzaimon; and he therefore asked Okawa to become a party to the transaction and state that Mr. Rose had sold him, Okawa, the articles for \$1,500, and that Genzaimon might have them for that amount. If Okawa would agree to this they could make \$500 clear by the business.

Mr. Okawa declined to have anything to do with such a dishonest transaction.

Judgment to be given on the 18th.

Thursday, January 18th, 1877.

The following judgment, in favor of the plaintiff, was delivered this morning.

(Official Translation.)

JUDGMENT.

Defendant forwarded an answer on the 27th of 12th month, 8th year of Meiji, containing his objection and remarks against the claim brought against him by plaintiff for the non-fulfilment of contract for the purchase of a boiler and machinery, but defendant not appearing at the sitting held on the 8th of 1st month of 10th year of Meiji, neither at that held on the 16th of same month, has lost through so doing the entire right of defence and is considered as accepting the entire claim of plaintiff. Consequently, defendant is hereby condemned to pay to plaintiff the balance claim of \$900 with interest from the day such should have been paid, and to take delivery of the boiler and machinery; or, in case of his being unable to do so, to pay as indemnity to plaintiff's firm the sum of \$200.

YOKOHAMA SAIBANSHO.

18th of 1st month, 10th year of Meiji.

FOR AMERICA.

Mrs. Taylor and 2 children, and 1 in the steerage.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

The improvement noted in our last in the staple of Cotton Yarns has not been maintained. Despatches received from Manchester have induced a greater firmness on the part of holders; but buyers have shown no alacrity to meet them, and a state of inactivity has been the result; though at the last moment we hear of a resumed enquiry for 16/24. With increasing stocks Shirtings are dull and prices lower. In other Cottons, Velvets and Prints are fairly, and Drills and Victoria Lawns barely, saleable. In Woollens, Plain Orleans and Lustres, Italian Cloth and Blankets, move slowly; but the demand for Mousselines has fallen off, and nothing is doing in any other kinds.

No vessels have arrived direct in the past ten days. Transhipped cargo ex *Khedive* from London, and *Diomed* from Liverpool, has, however, come to hand.

METALS.—There are absolutely no transactions in Iron of any kinds.

SUGAR.—Large stocks, prices lower, and no transactions.

KEROSENE.—A further rise of about 10 cents per case has to be noted, and the market is steady. 7,500 cases have been sold at quotations.

ARTICLES.						PRICES.			REMARKS.
COTTON PIECE GOODS.									
G. E. Grey Shirtings—

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—This market has been tolerably quiet since our last. Some purchases were made in the early part of last week, but a considerable portion of the lots dealt for, not having been inspected at first, the greater part was returned on Friday and Saturday, after the arrival of the despatch announcing the probable failure of the Conference. The unwillingness of buyers to operate on the one hand, and on the other the wish to realise displayed by sellers, have caused prices to lose the ground they had gained since the beginning of the month. Further, the market having been almost inactive during the past four days, the quotations which we give below are so to speak nominal.

One circumstance to be particularly noticed is that good staples become scarcer and scarcer. Except Oshius and some rare lots of Hanks Nos. 2 to 2½ there remains on the market nothing even passable.

Stocks are about 2,200 bales. Arrivals to date 23,400 bales. Exports 18,850 bales, not including the amount to be shipped by English mail leaving to-morrow.

TEA.—Quietness prevails in this market also; though a little more activity was noticeable at the commencement of the period elapsed since the date of our last Market Report. Settlements for that period are about 2,400 piculs, about half of which are of common grades. Stocks much reduced. Prices are correspondingly firmer, especially for lower qualities. Settlements to date 114,872 piculs, against 122,211 piculs for same period last season.

The *Charles L. Pearson* is fully engaged and will sail immediately for New York. Another sailing vessel is expected to take the berth.

The Japan Gazette

MAIL SUMMARY, SHIPPING AND MARKET REPORT.

PUBLISHED TWICE A MONTH.

Per O. & O. Str. "Gaelic."

YOKOHAMA, SATURDAY, FEBRUARY 10TH, 1877.

Single Copy, 25 cents.

THE "Japan Gazette" MAIL SUMMARY.

FROM 21ST JAN. TO 9TH FEB., 1877.

BIRTHS.

At Yokohama, on the 23rd inst., of Commander S. BAUER, H. I. R. Bayen, of a daughter.

January 28th, at No. 139, Bluff, the wife of R. W. THORPE, of a daughter.

MARRIAGE.

In Christ Church, Yokohama, February 7th, by the Right Rev. C. M. Williams, D.D., Rev. Wm. B. COOPER, of the Protestant Episcopal Mission, Yedo, and ALICE MINNETTE, daughter of Rev. R. S. MacLay, D.D., Yokohama, Japan.

DIED.

Suddenly, on the morning of the 25th inst., GEORGE HURLBUT, aged 39 years.

At Yokohama, on February 4th, FRANCIS WALTER MARKS, Solicitor, aged 33 years.

On the 5th instant, at No. 119 Bluff, MRS. ANNA MEIER, née KAUFFMANN, of Heidelberg, Germany.

On the 8th instant, at No. 244 Bluff, FREDERICK H. MEYER, the beloved son of F. A. Meyer, aged 4½ years.

OUR last Mail Summary was despatched per P. M. Steamer *City of Tokio*, which left this port at daylight on the 23rd ultimo. Since that date we are in receipt of the following mails:

	DUE.	ARRIVED.
American Mail	...	Jan. 24.
English "	Jan. 27.	Jan. 28.
French "	Feb. 3.	Feb. 2.
English "	Feb. 10.	Feb. 8.

Latest dates are:

London.....	Letters	...	Dec. 22.
"	Telegrams	...	Feb. 4.
New York	Letters	...	Jan. 27.
"	Telegrams	...	Feb. 4.
San Francisco	Letters	...	Jan. 3.

Summary.

On the 24th ultimo H. M. the Mikado left Yokohama in the *Takao Maru*, accompanied by Messrs. Tokudaiji, Sanjo, Iwakura, Okubo, Ito, and a number of other high officials. He arrived in Kobe on the 27th instant in the morning and proceeded, after a short rest, by rail to Kioto. He was followed by Mr. Hirobumi Ito, Minister of Public Works, and other officials in the *Thabor*, in which vessels passages were also kindly provided for members of the press, native and foreign. Most of the Foreign Ministers left for the same destination in the *Meiji Maru* on the night of the 1st instant. The official opening of the Kobe-Osaka-Kioto line was effected with great ceremony in the presence of the Mikado and the distinguished visitors on the 5th instant. A full report of proceedings will appear in our next mail issue.

Mr. Okuma Shigenobu, Minister of Finance, has put forward his financial statement of estimated revenues and expenditures for the current financial year ending 30th June next. These estimates, which have been carefully prepared, and show increasing knowledge of financial matters on the part of the officials of the department which has charge of the income and disbursements of this nation, will be found further on, as will our comments upon them.

THE thirteenth anniversary of the death of the father of the present emperor, the late Komei Tenno, has been celebrated with great pomp throughout the empire. At Kioto, in consequence of the presence of the Mikado, the Empress, and other members of the Imperial family, the ceremonies were more than usually imposing.

THE splendid buildings of the Gaimusho, Foreign Office, were entirely destroyed by fire on the afternoon of the 1st instant. From the moment when the disaster first became apparent at about one o'clock, it was evident that there was no hope of saving the buildings; so the efforts of the officials, firemen, and spectators were concentrated, first on the rescue of the archives and documents of the department, and next on the salvage of portable property. Although the flames raged so fiercely that in little more than an hour the buildings were levelled

with the
of the
Fore
ists
cap
mens
archite
restora
daimio

been supplied with temporary offices in the buildings of the Kobusho, or Public Works Department, close to the site of the fire.

THE 1st instant was a disastrous day for Tokio. In addition to the destruction of the Gaimusho, there were no less than five fires the same day and the following night. One of these destroyed the stables and some other buildings attached to the Military College at Ichigaya.

MR. THOMAS BRASSEY, M.P., of the Royal Yacht Club, with his family and some friends, arrived in this harbor from Honolulu in his screw steam yacht *Sunbeam* on the 29th ultimo; and left on the 3rd instant for Kobe, en route to Europe, via China, India, and the Suez Canal.

COUNTERFEIT notes of \$500 have been manufactured by a photographic process. An American, Antoine Williams, was arrested in the act of attempting to utter one at a Chinese Exchange Shop in the Homura Road. Information given by him led to the arrest of four men who are now in custody; and the matter is under investigation.

THE S. S. *Nevada* has been finally transferred to the Mitsu Bishi Mail Steam Ship Company. She has been re-named *Saikio-maru*.

O-OSHIMA, or Vries Island, at the entrance to the Gulf of Yedo, is still in active volcanic eruption.

MR. C. D. MOSS, lately one of the proprietors of this journal, goes out of the firm from the 31st December last.

THE *Japan Gazette* Hong List and Directory for 1877 has been published; and will be found complete and accurate.

THE M. B. M. S. S. *Tokio Maru*, which on her last trip to Shanghai was for some hours on a rock in the Inland Sea, has been repaired, and brings the now due mail from Shanghai and the way ports.

THE ESTIMATES FOR THE CURRENT YEAR.

THE Finance Minister is to be congratulated upon the increased lucidity with which his estimates are prepared. Already the improved system adopted by the Government in keeping its public accounts is bearing good fruit; and indeed to it, and the consequent light which it throws upon the figures dealt with—to the severe truths made plain by the first four rules of arithmetic—may be greatly due the wise retrenchment brought about in all departments of the Government. One contemplated improvement in the preparation and presentation of future budgets is directly traceable to it. The Finance Minister promises:—"In future years I will show the estimates for the then current year in comparison with the revenues and expenditures of former years, indicating the increase and decrease in the various items." By the adoption of this natural and commendable process, the accounts of the nation will be rendered clear, and open to such criticism, as having a basis and figures to base its comments upon, instead, as in the past, of more or less erroneous or altogether ungrounded assumptions, may fairly point out fairly pointed out faults and commendations. The admission of this reason why the 7th year's estimates are in comparison, is that it has not yet been accurately compared with the coming year's estimates from the Head of a department of a nation, as its candor is manifest.

The estimates for the current financial year, that is from the 1st July 1876 to the 30th June, 1877, are, however, compared with those of the previous one. Taking into consideration the newness of the officials of the Department to the Western systems on which their own is now based, and the darkness, so to speak, which will now each year be progressively illumined, in which they have so far been working, it is not surprising that the budget should be published, at present, in the middle instead of at the commencement of the year. It would be mere hypercriticism to find fault with this plan, which enables the Minister to avail himself of the actual expenditures and receipts, shown by the accounts of the previous year, as differing from the estimates for that year, in the preparation of his scheme for the current one. In this instance Mr. Okuma admits having done so, and the internal evidence of the increased expenditure in various departments and the reduction in others, is sufficient proof of the fact even without that admission. Indeed, it is not improbable that, and no blame need attach to the Department if, the last year's budget was found, by the text of actual experience, imperfect in many particulars.

The one now before us is compiled from "information collated from minutely detailed accounts furnished by the various Government Offices," as stated in the introduction, which, after noting the fact that the estimates have been prepared on the new model above mentioned, alludes to the thorough alteration in the system of the land tax, whence it arises that it is not possible to estimate exactly the amount of revenue to be derived from that tax, although approximate accuracy may be hoped for, the estimates on this subject having been calculated on the information furnished to the government from every Fu and Ken. The introduction goes on to consider some alterations of detail, and points out the increase in the business, necessitating an augmentation in the expenditures, of the

Home, War, Navy, and Mining Departments, and the Stamp Office, Judicial Courts, and especially, the Land Tax Office. Police, Public Works, and—very important work in a country like Japan, dependant to a great extent upon properly regulated irrigation for its agricultural prosperity, repairs to and construction of dykes—have all required an increased outlay.

Turning to the details, first, of the estimated expenditures, we find, among the items showing an increase, that of the reduction of the national debt, augmented by more than Yen 1,200,000 over the amount paid last year. The item for Imperial expenditure (probably the privy purse) and payments to the Emperor's relations, is increased by Yen 100,000, and the Imperial Household expenditure by Yen 93,500. As is proper, these two items, which in former years were shown together, are now and will be henceforward provided for separately. As indicated above the estimated expenditure of all the departments is increased; so is that of the Legations and Consulates in Foreign Countries by Yen 33,300 over the Yen 515,000 allowed for this branch of the public service last year. This augmentation is certainly not a great one, but we would willingly have seen the balance on the other side, as the diplomatic and consular services of Japan are just those which would probably best stand retrenchment in their expenditure. The cost of "The Three Fu" is decreased by Yen 101,083, or by one-fifth of the amount allowed "last year"; while that of "The Ken" shows also a small, but by no means corresponding, diminution. We must not forget to notice the large increase of Yen 432,000 in the expenses of the Land Tax Bureau, which, owing no doubt to the extensive official machinery required for the carrying out of the new regulations, have mounted from 48,000 in 1875-6 to 471,000 in 1876-7. The total estimated decrease in the expenditure for the current year is Yen 5,504,659, arrived at, in face of the large augmentations we have referred to, by a reduction of upwards of six millions in the item of "Miscellaneous Expenditures," one million in that of "Loans by the Government," and nearly three millions seven hundred thousand in that of "Reserve Fund for Contingencies," all necessarily funds of remarkable elasticity.

With the reduction in expenditures that in Revenues almost coincides, and the excess of the latter over the former is so fine drawn as scarcely to deserve notice. If ends are made to meet in accordance with the Finance Minister's scheme, this fine drawing will be creditable. The greatest decreases in the national income are in the Land tax, and the repayment of Debts due to the Government, the former showing a diminution of nearly five millions, and the latter of one million seven hundred dollars. The taxes on official incomes, pensions, northern productions, stamp duties, manufactures, sales of government property, all show a decrease. The item of "Taxes collected in the Riu Kiu Han" is reduced from Yen 50,744 to Yen 34,925. This is the item which the *Herald* last night "misses," probably rather through the Editor's ignorance of the fact that "Riu Kiu" and "Loo-choo" are identical, than his carelessness in looking through the tables. The *Herald* is, however, most likely right in saying that the Government sales of rice are included in the item of "Miscellaneous Revenues not derived from taxes."

With national liabilities of only one hundred and forty-nine million yen, inclusive of

ninety-four millions in paper money in circulation: with her magnificent resources yet to be largely developed; with no schemes of foreign conquest to pursue, no danger of foreign aggression to apprehend, no fear of any internal troubles other than the paltry ones arising out of cases of class discontent, which the government can suppress in a moment: under a beneficent rule; and with careful statesmen at the head of her departments, in all human probability the future peaceful prosperity of Japan is assured; and the duties of future Finance Ministers will be easy ones.

THE MAIL'S PROGRAMME.

THAT "impersonality" which the editor of the *Japan Weekly Mail* affected to look upon as the elysium on earth of newspaper editors, but which he in his arrogance was the very last person to aspire to, is to be striven after by his successors. For the manifesto published on the 27th inst. under the *Mail's* new management, shows that not one but many will be its editors and that they hope, among other things, "that the journal may benefit and be rendered more useful by a change from the autocratic system of government." The key-notes sounded are certainly not uncertain:—opposition will be offered to the abolition of the extra-territoriality clause; while "conciliation of the suffering class as the only safeguard against reiterated and ultimately successful rebellion," and "reform," word of wide scope, are to be advocated. That this country is not yet ripe for the elimination of the extra-territoriality clause from the treaties we admit; but it is going a vast deal too far to assert dogmatically that "no prospect of the abolition of that clause can be held out to the present generation;" and to assert it so dogmatically as to "decline to admit it as a possible subject for argument," savors more than a little of conceit and obstinacy. In our opinion, when the laws of the country are reformed, or rather when the Government has adopted, with natural and necessary modifications, that code which is the result of centuries of practice of the enlightened jurisprudence of many countries, and the judges now in training are found equal to administer it impartially and in the spirit of its laws, then there can be no objection to the granting, on the part of those nations which express pleasure at Japan's progress, and delight at the prospect of admitting her to their comity, the very reasonable request she will have to ask. And this, in spite of the cumulative wisdom of the new editors of the *Mail*, and in spite even of their opposition, to be dreaded as that may be, we think there is every prospect of being realised in this generation. There is no fear of the heaven falling even though justice be done in this particular. With the mode of treatment to be pursued by the *Mail* towards the friends of Japan, native and foreign, who would see, through enlightened action on her part, and consequent just concession on that of the Western powers, the last barrier which shuts her out from participation in the full advantages of civilisation broken down, we have and can have no sympathy: indeed the childish dogmatism of its foreshadowing almost excites our indignation. How can one help feeling angry with those who say, "our minds are made up upon this subject. We may be wrong: we may be proved to be wrong a hundred times, but neither reason nor argument shall induce us to admit it; and we will persist in

our opposition though the whole world see, know, and say that opposition is both ill-advised and futile?" This is to be the tone of the *Mail* on the extra-territoriality question; and, being so, we much fear lest its advocacy of "conciliation of the suffering class" may resolve itself into mere pessimist denunciation of every authoritative act of the government, and its pleas for "reform" degenerate into mere querulous repinings at every expenditure, however necessary, at every financial scheme, however well considered and matured.

HOW THE LAND TAX IS ASSESSED.

THE tax on rice fields is estimated at their supposed average yield, the best lands at—kokus per *tan* and the poorer at—kokus per *tan* severally, from year to year. The same general principle holds good for all other crops. In former times the taxes were paid in kind, at so much per cent of the estimated average crop. At present the farmer pays his taxes as before, so many kokus per *tan*: only he must pay in cash the market price of so many koku of rice as his fields may be assessed at. This works to his disadvantage in many ways. First is the difficulty of fixing the right market price. Greedy tax collectors often use various expedients to get a few koku of rice sold at fancy prices, much above what any rice will bring in a fair market sale. Then the Government, for the purpose of raising the price just at the right time, export rice on their own account, or indirectly operate through their agents for a rise, just as stock gamblers in other countries operate for a rise when they wish to sell stock. But the farmer is in the interior of the country, having no convenient and cheap means of transport to bring his crop to the best market. So he becomes the victim of a cross fire between the rice merchants who want his rice at the lowest local figure, and the tax collectors who demand the taxes, payable at the highest quotations (perhaps even fictitious quotations) ruling in any of the export markets at so much per koku.

Perhaps, if the farmer could wait for a few months for a good opportunity to sell his crop, he could sell it for a price somewhat approximating the value in the export markets, less the actual cost of transport. But the tax collector is inexorable, and brooks no delay; and the travelling rice buyer is cunning and sees that the farmer's extremity is his opportunity. So, between the upper and the nether millstones, the poor farmer often gets his rice ground very small; and is frequently compelled to sell a portion of his crop at, perhaps, half the legally established market price, to pay his taxes. This also tends to reduce the local market price of the remainder of the farmer's crop. He wants money to pay the tillers of his land, and has, besides, other needs and expenditures to meet, so that the entire crop is sold under pressure at ruinous prices, leaving the proprietor of fruitful fields involved in penury and want.

Even under the old system, when the taxes were paid in kind, there were frequent risings among the farmers, on account of what they supposed to be the unjust demands of the tax gatherers, and the Government often made concessions to calm the agrarian tumults. But this new system of paying the extreme price of so many kokus per *tan*, as the yearly tax of the land, seems to the farmers more unbearable than the old style of tribute in kind.

Such is the origin of the recent troubles

in the various districts, and the reduction lately made in the percentage of taxation will not reach the real difficulty. Dishonest tax collectors, and cunning merchants who travel over the country to buy up the crops, still have the same opportunity as before to squeeze the poor farmer; and he will still be found, in the future as in the past, appealing to bamboo spears for protection against those who deprive him of his just profits. It seems strange that the native government has failed to see the true difficulty in its system of tax gathering; and has therefore not applied an adequate remedy.—*Communicated.*

WITH reference to the paragraph from the *Nippon Standard* to the effect that the U.S. Consul General had "on reliable authority, agreed with the Government of the Tokio-fu to reopen the Court for the rehearing of the Batchelder case," we have it on better authority still that the report is utterly baseless. In fact this paragraph is of the same stamp, and about as credible, as the article from the *Bun-mei Shinshi*, which we find translated into the *Echo du Japon*, and from thence to the *Tokio Times*, insinuating that the judgment given by the Consul General was influenced by a feeling entertained by him against the Japanese Government, arising out of the refusal to adjust a long-standing claim of Captain Batchelder's for the loss of a vessel formerly owned by him, which he purchased from Mr. Enomoto, then in arms against the Mikado's government, and which was subsequently seized, and only restored, after a long delay, to be lost in a storm on the passage to Shanghai.

It is hardly necessary to undertake a lengthened defence of the U.S. Consul General against such charges as these. It might be sufficient to say to both native and foreign editors that his judicial conduct has always been above the suspicion of unworthy motive; but it is only his due to add that he is a painstaking, intelligent, and upright jurist, and that all who have had business in his Court are unanimous in testifying to his courtesy, patience, and impartiality. Even the Japanese papers which express surprise at the decision given in the Batchelder case, temper their astonishment or excuse it, by pointing to General Van Buren's reputation for acumen and impartiality.

But, as regards the question mooted by the *Nippon Standard* on "reliable authority," we repeat that there is no truth whatever in the statement that an agreement has been made to have a rehearing of the Batchelder case. A motion, as is well known, for a rehearing, was argued in the Consular General Court, but, as is equally well known, no decision has yet been given. Judging from the remarks made by the Judge on the hearing of the argument, we venture to think that there is every probability of the decision when given being adverse to the motion. But, however the judgment may go, we feel that the Judge is above the suspicion of being actuated by unworthy influences. He is friendly to the Government of Japan, and no doubt anxious to see measures of improvement and reform carried through; but his personal feelings one way or the other are not likely to influence his judicial decisions, and we must deprecate all insinuations to the contrary.

DEPARTURE OF THE MIKADO.

On the morning of the 24th ult. His Majesty the Mikado started on his tour

to Kioto. He left the Palace of Aka-saka at 7 o'clock and proceeded at once to the Railway Station at Shinagawa, which he left by the 8.15 train. On arriving at Kanagawa His Majesty rested a short time, and then proceeded to the Port Admiral's Office, from which it had been arranged he should embark. His coming to Yokohama does not appear to have been generally expected; but the news of his arrival spread rapidly, and some thousands of spectators crowded all the available positions from which it was possible to obtain even a distant glimpse of His Majesty or his procession. A rush was made to take possession of the open space seaward of the Admiral's Office, but the surging crowd was met by a *posse* of native police who most unceremoniously drove them back. Of the Japanese only a few officials were privileged to occupy this conspicuous position; but as there was no opposition to foreigners, a large number availed themselves of this opportunity of obtaining a close view of the Mikado. About ten o'clock preparations for the embarkation were rapidly made; boats were placed in position and moved round the corner of the Creek where their crews rested on their oars, and the imperial barge was placed in readiness at the steps. At length His Majesty appeared, accompanied by Messrs. Tokudaiji, Sanjo, Iwakura, Okubo, Ito, and a number of other high officials. With the exception of a rather solemn performance by the band, a profound silence reigned. His Majesty stepped into the barge, the oars were dipped and he was already twenty yards on his way to the *Takao-maru*, when the stentorian lungs of a foreigner broke the silence. "Give him three cheers! Three cheers for His Majesty the Mikado! Hip, hip, hurra!" The call was heartily responded to. His Majesty lifted his hat and bowed three times in acknowledgement; and the procession passed on, the imperial barge taking the lead, followed by eight boats containing the retinue of the Mikado. The vessels in the harbour presented a gay appearance as all the men-of-war and several merchantmen were duly decorated with flags, while the yards of the former were manned by their crews. As the Mikado's barge rounded the stern of the *Takao-maru*, which vessel was to convey His Majesty away, the men-of-war fired a royal salute, as did also the Kanagawa Fort. The spectators then wended their way homeward, and at 10.45 a.m. the *Takao-maru* steamed out of the harbour amidst the smoke and roar of artillery afloat and ashore. The vessels which escorted the *Takao-maru* down the bay, returned to their anchorage at 3.30 p.m.

ATTEMPT TO PASS A FORGED NOTE.

A DARING attempt to pass a counterfeit note was made on the 6th inst. at a Chinese Exchange Shop in Homura Road. At half past five p. m. a foreigner went into the Exchange Shop of Cheng Zing at No. 136, and producing what appeared to be a note of the Hongkong and Shanghai Bank asked for change. When asked by the Chinaman in charge what sort of money he wanted, he replied "anything can do," but afterwards expressed a preference for Japanese money. In answer to another question he replied that he had lately come from Hongkong, and that he was stopping at No. 20, the Grand Hotel. The "feel" of the note not being satisfactory, and its appearance a little suspicious, the money changer made an excuse that, the amount being large, he had not the full change in the house and would have to go and get it. He went immediately to the Hongkong and Shanghai Bank where he called

a shroff, who verified his suspicions that the note was a counterfeit. Mr. Cook, who was on the premises, was sent for and he at once communicated with Mr. Walter who was at his house, 145 Bluff, and he, with Mr. Haselwood, the Acting-Accountant, who also resides on the Bluff, came promptly to the Bank. The man had been detained in the Exchange Shop, and by half-past seven was given into custody on a warrant which had been procured by the Bank Manager from the U. S. Consul-General, and was taken to the Police Station. There he stated that his name was Antoine Williams; that he was an American; and demanded to see his Consul. General Van Buren, having been notified of his desire, sent Mr. Elmer, the U. S. Deputy Marshal, who brought the man up to the Consulate and lodged him in the gaol. Before being locked up he stated that he had received the note from one Antoine Bennett, a Dane residing at No. 93. At the request of Mr. Walter, addressed to Mr. Ernest de Bavier, the Acting Consul-General for Norway, a warrant for the arrest of Bennett was issued to the Municipal Police, and Sergeant Loxton at once proceeded to his abode, where he arrived at about a quarter past ten, and, finding the man in bed, arrested and lodged him in the Police Station, having previously carefully searched his place, where, however, he found nothing to incriminate him. Bennett is a photographer: Williams a sailor; and both men were at one time employed together in the *Nevada*, if not in other vessels of the P. M. S. S. Company. The note has been manufactured thus. The front and back have each been photographed on albuminized paper, such as is in common use by photographers, and then the two sides have been carefully pasted together. All, to the shroff's stamp, is there. This and the four "\$500" marks on the front have been painted in red by hand, and the green design on the back has been most elaborately worked in in the same way, the whole forgery being quite cleverly enough executed to be dangerous. The "feel" of the counterfeit, however, is perceptibly different to that of a good note, and now the coloring has been rubbed and smudged, clearly showing that it had been painted on. Further the sharp lines of the figures, and especially the minute and numerous "five hundred dollars" which go to make up the opaque band bisecting the note, have suffered in distinctness in the process of photographic transmission; but still, in a dim light, and perhaps in daylight without a close inspection, it might pass among Japanese or even Europeans; though an experienced Chinese money changer would probably detect the imposition in the dark. The number in the forgery is 0494: the date 25th October, 1874: the signatures are those of J. G. Hodgson, Acting Accountant, and T. Jackson, Manager; and the note purports to issue from the Yokohama Branch of the Hongkong and Shanghai Banking Corporation. The holder of the original note, or any person through whose hands it may have lately passed, will probably render good service to justice in coming forward and giving some account of it. Williams has been remanded by the U. S. Consul General for further enquiries. Bennett was brought up before Mr. E. de Bavier this afternoon at two o'clock and after a private inquiry of some length remanded to gaol: another man, named Hansen, residing at 119, has been arrested this afternoon. He has no papers to establish his nationality; but he formally claims British protection. A warrant is also out for the arrest of another person suspected to be implicated in the forgery. It is feared that more of these forgeries of various

amounts may be in existence; so it behoves those receiving money in notes to look closely at what may be tendered to them. Indeed it is stated that some counterfeits have been successfully passed in Tokio.

JAPAN GAZETTE HONG LIST.

ONCE again we have the pleasure to announce the publication of probably the most useful annual issued in Japan. Our Hong List and Directory for 1877 is ready, a few days later perhaps than in some previous years, and certainly later than we had hoped and expected. This delay was owing to our anxiety to obtain the very latest information available, and to our having, in consequence, to await returns from departments in which serious changes have been effected. We trust and think that its contents will be found reliable. The numerous orders which we have received from residents convince us that the "only reliable Hong List in Japan" is still looked forward to as the necessary addition to every foreign mercantile desk and tradesman's counter here and in Tokio, while extensive orders from Japanese houses and Government offices prove that our native friends, who are shrewd judges of what is best suited to their needs, know now that the Japan Gazette Hong List is the only one whose information can be depended upon.

As in former years the work contains lists of the Diplomatic and Consular bodies in Tokio, Yokohama, and the outposts, of foreigners in all branches of the Imperial Government service; of Religious Societies, Associations, Insurance and General Agencies, Companies, Firms, and Private Individuals; Ladies' Bluff, and Alphabetical Directories; and well arranged and most useful number of advertisements, the latter containing the names and describing the specialities of nearly every foreign firm of importance in Japan as well as a number of others in various parts of the world. To these we have added this year lists of the British, United States, and German Naval Forces on the East Asiatic Station corrected to the end of 1876. We regret that we were unable to give the list of the French Naval Squadron, as, probably through the movements of the vessels, the returns we asked for never reached us. The death of Commander Jones, R. N., and other causes have caused considerable alterations, either effected or impending, in the staff of Officials of the Imperial Naval College the full extent of which was unknown when our Hong List went to press. We will, as soon as the final alterations are decided upon, publish a list of the foreigners employed in that important institution, in the *Japan Gazette*, and furnish slips to subscribers to our Hong List on application.

The Yokohama list shows 901 foreign residents in that settlement against 1064 in 1876, and 980 in the previous year. A slight increase is noticeable in the number of Tokio Residents, of whom there are now 614, while at the commencement of 1876 there were 600.

INSURANCE AGENTS' MEETING.

A meeting of Fire Insurance Agents was held on the afternoon of the 2nd inst., at No. 3. Subjoined in an extract from the minutes:—

The following gentlemen were present:—

Mr. Dodds, representing { Royal Exchange Insurance Co; London & Lancashire Insurance Co.

Mr. Kingdon,	"	Phoenix; and Manchester Insurance Cos.
" Bavier,	"	Norwich Insurance Co.
" Wilkin,	"	Sun Insurance Co.
" Willcox,	"	Lancashire Insurance Co.
" Reiff,	"	London Assurance Co.; Lubeck Insurance Co.
" R. Jaquemot,	"	Britannia Insurance Co.
" Dunlop,	"	North Brit. & Merle; Scott. Comm. Insurance Cos.
" MacMahon,	"	Staffordshire Insurance Co.
" MacPherson,	"	Imperial Insurance Co.
" Cruickshank,	"	China Insurance Co.
" Abbott,	"	Queen Insurance Co.
" Gleunie,	"	Commercial Union Insurance Co.
" E. Smith,	"	Guardian Insurance Co.
" M. Smith,	"	Scott. Imperial Insurance Co.
" Cobden,	"	Hongkong Insurance Co.
" Rohde,	"	Hamburg Bremen Insurance Co.
" Francke,	"	Berlin Cologne Insurance Co.

Mr. Wilkin was called to the Chair.

The following resolutions were passed.

1st.—That a surveyor be appointed for a twelvemonth from date of appointment, to at once inspect and report upon all chimneys of stoves in insured buildings, and to do so again at the commencement of the cold season, at a fee of — to be borne by the companies interested in proportion to their risks.

2nd.—That no application for renewals after 1st January, 1878, or fresh risks from date, on Buildings in which fires are used, be entertained, until a report has been received from said surveyor, cost not to exceed —, and to be paid by the applicant.

3rd.—That the appointment of a surveyor be left in the hands of the standing committee at a fee to be fixed by them.

THE OPENING OF THE KOBE-KIOTO RAILWAY.

As our special report of this event cannot be expected before the arrival of the mail, we translate the subjoined account from the *Nichi-nichi-shinbun*, which has received it by telegraph:—

His Majesty the Mikado left his palace at Kioto at 9 p.m. The procession was formed in the following order and proceeded to the Railway Station. The governor of the Kioto-fu on horseback, the Mikado's standard, a troop of cavalry, officers of the Mikado's Guard in two lines, the Mikado's attendants and their superintendants, in carriages. His Majesty the Mikado accompanied by the chamberlain in a carriage. Princes Arisugawa-no-Miya and Yamanashi-no-Miya, Daijo-Daijin, Naikakukomon, Sangi, Minister of the Imperial Household, Daijo and Shojo of the same department, Vice-Minister and Secretaries of the Naval Department, President and Vice-President of the Shikibu-rio and Secretaries of the Finance Department and others all in carriages. A troop of cavalry in double file, followed by the Mikado's horse and a large number of officials, brought up the rear. The

troops of the Guard formed a line on each side of the streets between the palace and the station of Shichijo. On the Emperor's arrival, the Minister of the Public Works Department, the President of the Railway Section, and many nobles received him and led him to the room temporarily built for his accommodation, where he was met by the foreign Ministers who were presented by the President of the Shikibu-rio, and each in turn saluted His Majesty, who courteously returned their bows. After this the Mikado took his seat, and the President of the Railway Section in person presented a plan of the line of railway to him, and then retired and informed the Chamberlain that all was ready. The Mikado then, preceded by the Minister of Public Works, Superintendants of the Railway Section and Shikibu-rio, and followed by Princes, Ministers and several officials, and the Foreign Representatives, went towards the railway train. Every part of the enclosure of the station was decorated with flags and lanterns. The band played as H. M. the Mikado took his seat in the magnificent carriage which was built on purpose for him. In the same vehicle were Princes, Ministers, Foreign Representatives and a number of other officials of high degree. At a given signal the music ceased; and at the same moment a royal salute was fired and the train began to move. On arrival at the Osaka Station, the strains of music again burst forth, and flags were hoisted to denote the arrival of the train, salutes were also fired from the men-of-war in harbour. His Majesty the Mikado left the train, and, on entering the station, was received by the Chiji of Osaka-fu, the foreign employees in the Railway Section, and the Foreign Ministers, who were again presented to the Mikado by the President of the Shikibu-rio. The Mikado saluted each one and took his seat, surrounded by his relations, the Ministers and other officials. The principal merchants in Osaka presented a congratulatory address to the Mikado, who replied through the Chiji of Osaka. After a short rest at the station, H. M. returned by train to Hiogo, where a similar ceremony was performed. When the Mikado had taken his seat, the Foreign Representatives read an address, for which the Mikado in person expressed his thanks. The principal merchants in Hiogo also presented a congratulatory address, and His Majesty replied through the *Ken-rei* of Hiogo. At 4 p.m. the Mikado returned to the Shichijo station, Kyoto, where he called the Minister of Public Works, the Superintendent of the Railway Section, and the chief foreign employees of the same Section, and personally expressed his satisfaction at the progress of the works. The ceremony now came to a conclusion and all returned homewards. In spite of the snowy weather last night, numerous crowds assembled to witness the proceedings at Osaka, Kyoto, and the neighboring towns and villages.

BURNING OF THE GAIMUSHO.

(From our Special Correspondent.)

That magnificent building, which was such a thing of beauty that it should have been a joy for ever, the eye of Tokio as it were, the one place above all others in which the inhabitants of the city, whether foreigners or natives, took pride, the delight of tourists from all parts of the world, and the study of artists, has, by a deplorable calamity, owing beyond a doubt to mere carelessness in effecting improvements, vanished into ashes and smoke. A few carved and painted doors alone remain to

testify to the perfection of the art employed in the decoration of the interior, and some of the massive, quaintly embellished, corner pieces of that majestic roof, whose graceful curve will dwell in so many memories, are all that is left as samples of the masterpiece of modern Japanese architecture. All those who have ever seen the Gaimusho must grieve over a loss, which is now, alas, in many respects irreparable. All those who might have seen, and did not see it, must regret that they have missed an opportunity never to return, of gazing on one of the most marvellous of representative structures, whose outlines and details are at best imperfectly preserved in the transient sketches of the artist and photographer.

The buildings occupied as offices for the last eight years by the Foreign Minister and his staff, were built about thirty years ago by, and on the town property of, Mr. Kuroda, ex-daimio of Chikuzen, who brought from that province the white pine wood used in the structure. All the posts, beams, and other wood-work to the minutest joint were carefully smoothed and polished, while the utmost care and the highest and most cultivated art obtainable were employed in its internal embellishment. The sloping roof above alluded to, the carved *mon* or *onigawara* surmounting it, the magnificent portico acknowledged to be the finest specimen of its type in Tokio, were the distinguishing features of its outward beauty, while within the carved and decorated ceilings, the panels, the handsomely painted sliding doors, of which a few were rescued yesterday at great risk, made an ensemble of grace and richness, probably never equalled even in the profusion of Japanese art. And it is sad to think that now there is no hope of the loss being replaced, for the reason that the art itself which was employed in the structure and its decorations is vanishing.

An idea of the magnitude of the fire can be best conveyed by a few statistical details. The Gaimusho buildings were some twenty in number, and covered an area of about 1,800 tsubo, or nearly an acre and a half of ground. One hundred and fifty persons were regularly employed in the offices. The main building was from 45 to 50 feet high. When the staff of the Foreign Office was transferred thither eight years ago from Unemecho (opposite to where the Seyoken Hotel is now) about one quarter of the then existing buildings were removed. Before the revolution Kuroda's gardens were held to be among the most beautiful of all the lovely pleasure grounds of the capital—indeed they were probably only surpassed by those of the Mito Yashiki—and were especially famous for their cascades, fountains, and lakes. To put the reservoirs and water-works merely in order, exclusive of repairing and embellishing the courses and beds, would have cost the other day \$3,500. What then must have been their original cost? As many as from three to four thousand men-at-arms have been quartered there at one time in the latter days of the Shogunate.

There is no time now nor is this the place, to enter at length into the interesting associations connected with the ground and buildings: so I will confine myself to two remarks on this subject. The first is that one-half of Mr. Kuroda's property, that portion where now stands the mansion of Prince Arisugawa-no-Miya, was bought by Mr. Soyeshima: the second that within the Chikuzen Yashiki was born, seventeen or eighteen years ago, a daughter to O-ota. Mr. Kuroda's *karo* or high seneschal; and this young lady is to-day the lovely and accomplished wife of Mr. Sam-

shima, Vice Minister of Foreign Affairs.

The fire broke out at about one p.m. on the 1st inst. and its origin can be traced, beyond a question, to a beam passing through chimneys quite recently erected in two modernly designed and splendidly furnished rooms, converted out of a suite of old apartments in the south-western corner of the main building, and intended for and used as Conference Chambers in which the Heads of the Department met the Foreign Ministers for the transaction of international business. Fires had only been lit in the new grates a few times, but unfortunately once too many. At the hour indicated smoke of much denser volume than appeared at all proper was observed by a coolie to be issuing from their chimneys. He at once gave the alarm, and almost simultaneously clouds of smoke pervaded every part of the main building, which instantly after was struck as if with a squall of fire. Mr. Peyton Jaudon, who had just finished tiffin, was alarmed by his servants, and rushed to the translating room, whence in spite of the blinding smoke the books, papers, and furniture were all removed. The room itself was saved from destruction—and it is the only part of the building which escaped—by the exertions of Mr. Jaudon, aided by a band of coolies, who succeeded in isolating it by breaking down a covered wooden corridor, some twenty-five feet in length, which connected it with the other buildings. All the native officials were at their posts; but, within a very few minutes of the first alarm, it was painfully evident to all that the destruction of the building was inevitable; and so all efforts were devoted to the salvage of papers, books, and other property contained within the walls. This work was rendered practically very easy, in spite of the rapid advance of the flames and the almost equally obstructive invasion of all the rooms and passages by the smoke, by the system of the department. The books and documents of each official are kept in a box, which during the day is placed beside him, and during the night is stored in a mud godown. On the intelligence of the calamity being spread from room to room, books and papers were hurriedly consigned to their respective chests, which were shouldered by zealous coolies and carried to the godowns, and these as they were filled had their doors closed and sealed with the mud all ready prepared. Hence there is every reason to believe that not a single paper has been lost. When Mr. Jaudon had seen the things for which he was responsible safely stowed, and returned to the main building, he found that, in the few minutes which had elapsed, it had become a mere seething furnace. Twenty minutes after the first alarm the roof fell in, so rapid had been the spread of destruction. The atmosphere was perfectly calm; but the draft caused by the rushing upward of the flames and the suction inwards from all sides of currents of air, acted like an artificial blast upon the burning mass, which, by a quarter past two, or seventy-five minutes from the outset, was levelled with, but continued burning on, the ground. Meanwhile from all the surrounding police stations bodies of men had been detailed, and eight hundred policemen formed a cordon round the compound to prevent stealing and preserve order. Within half an hour twenty-five companies, (2,500 firemen), with eight engines and the proportionate number of hooks and ladders had arrived from the neighbourhood of Nibonbashi, Shimbashi, the Kobusho, the Rikugunshi, the Kutakushi, and Akasaka, and streams of water were playing upon the furnace but all in vain. The reckless daring for which Japanese fire-

men are famous was more than once apparent. Sixty men with *matoi* streaming were seen at work on the roof encircled with flames, from which it is a wonder they escaped. Two men who fell with a falling roof were injured but not seriously. Among the dense crowd, attracted by the magnificent sight of the flames and murky crowds rising in a huge pillar into the clear still air, were nearly all the foreigners in the capital. Two gentlemen, whose names we are pleased to know, Messrs. Kniffer and Rymer-Jones, were conspicuous by the efforts they made to save property. Their Excellencies de Struve and Eisendecker, Messrs. Mounsey and the brothers Siebold were present. Grave fears were entertained for the premises on the compounds occupied by the Russian and Italian Legations; and the detention of Mr. de Struve in Tokio caused a delay in the departure of the *Meiji Maru* for Kobe. His Excellency only leaving the capital in the 5 p.m. train, when all danger of the fire spreading had virtually passed, though the flames were still so high that, on my arrival at Shinbashi at six o'clock, they caused a bright sheet of light in the gathering gloom, and were still visible when I left the same station at ten o'clock. The officers of the French Military Mission had come with all speed. Some of the Princes were there: so were Mr. Iwakura and his son, General Oyama, Messrs. Terashima and Yamaguchi, and, of course, the officers of the Foreign Office. So tranquil was the air that, as I have before said, the column of mingled smoke and flame rose sheer into the air; and so great was its volume that, seen from Kaga Yashiki, a distance of about four miles, it was described as appearing quite a mile high.

It is worth mentioning, as evidencing the zeal with which the arduous salvage work was thoroughly done under the most trying circumstances, that almost all the furniture was rescued, and that, notably, some hot stoves which had been in use before the fire broke out were dragged out of rooms to which the flames indeed had not yet penetrated but which were filled with pungent, literally blinding, smoke. As usual there is some matter of congratulation even in such a great calamity. To the fact of the day being calm is due the salvation, unquestionably, of the Russian and Italian Legations on the one side, or of Prince Arisugawa-no-miya's house on the other. Some or all of these buildings must have ignited had any wind been blowing in their direction. Naturally the heat was intense during the time of the greatest force of the conflagration. In all the buildings I have mentioned it was more than merely sensibly felt. In Mr. Jaudon's house, fortunately preserved and the safety of which is due to the same tranquillity of the weather, it was more than perceptible: it was actually dangerous.

Five years ago the calamity which has now resulted in the destruction of the Gaimusho was threatened. A fire broke out in one of the out-buildings attached to the side of the main edifice: but the smaller structure was promptly pulled down, and the fire was literally beaten and stamped out.

I was still in the Gaimusho compound at half-past eight o'clock on the evening of the 2nd when I heard of and saw another fire, whither I went. It was in Atagashita, Shiba, and was practically extinguishing within an hour; but in that brief space of time it had annihilated twenty houses. To my knowledge there were no less than five fires that day in Tokio: that at the Gaimusho; the one I have just mentioned: a third at Ichigaya which destroyed a large portion of the Military College there; a

fourth at Higakobu, Asabu; and the last I know of in Hirikawa-cho, where flames broke out from some unknown cause in a temple used generally for religious dances. In this instance only was the fire extinguished before it had attained any serious proportions.

THE YACHT "SUNBEAM."

A few days ago Thomas Brassey, Esq., M.P., arrived in Yokohama in his Screw Steam Yacht *Sunbeam*, accompanied by Mrs. Brassey and several members of his family. The voyage has been made from England via the Brazils, Straits of Magellan, San Francisco, Honolulu and Fiji, and the intended homeward route is via the Inland Sea of Japan, China, India and the Suez Canal. We had the pleasure of inspecting the *Sunbeam*, a vessel of 560 tons, rigged as a three masted schooner and of a most beautiful model. The hull was built at Mr. Brassey's Canada Works, Birkenhead, and the engines are by the well known engineering firm of Laird and Sons, of the same place. They are on the compound principle, of 70 nominal horse power, and are fitted with Bevis' patent feathering screw, by means of which, when the vessel is under canvas only, the blades of the propeller have their angles altered so as not to impede her speed. The saloon is fitted up with the greatest taste and is more like a drawing room than anything else. We saw some splendid specimens of corals and a number of weapons and curios collected at the various places touched at. We had a glance at the journals kept by Mrs. Brassey, illustrated with splendid photographs, reminiscences of trips to the Mediterranean and other places, and regretted time would not permit us to linger longer over them. In the engine room hangs Mr. Brassey's certificate as a Master Mariner, the first we believe ever granted to an English yacht owner. He commands and navigates the *Sunbeam* himself. He is in all respects a worthy son of that fine old gentleman, the late Mr. Brassey, whose name is so well known as one of the greatest railway contractors of his time. We regret to learn that Mr. Brassey's stay in Yokohama has been shortened by the news of his mother's death. We wish the *Sunbeam* and all on board God-speed on their journey home.

Miscellaneous.

The transfer of Messrs. F. R. Wetmore & Co.'s well-known and extensive Book and Stationery business to Messrs. Kelly & Co., long of Shanghai and now of Yokohama also has been effected. Judging from the reputation enjoyed by Messrs. Kelly & Co. in Shanghai, the business they have taken over here will be as well managed in the future as it has been in the past, and that is saying in advance a good deal in the favor of the new proprietors.

The name of the *S. S. Nevada* has been changed to *Saikio-maru*, on the final transfer of the vessel to the Mitsu Bishi Mail S. S. Company.

It is reported in the native press that a rock, situated in the vicinity of Idzu, formerly entirely covered by water, is now to be seen above the surface of the sea.

We have received from the Lighthouse Department a list of the Japanese Lighthouses, Buoys, and Beacons for the tenth year of Meiji, 1877, published by order of the

Government of Japan. This compendious little manual, arranged and bound in cheque-book form, so as to be easily portable, costs only twenty-five cents. It should be the inseparable companion of pilots and mariners navigating the Inland Sea.

THE *North China Daily News* says:—"It is seldom that a magazine article elicits such a chorus of disapproval as has attended Sir Charles Dilke's effusion about China and Japan, lately published in *Macmillan*. The Japanese papers testify to the ridiculous blunders he makes about Japan; and people here laugh at the pretensions of a man who was just 27 hours in a country, to speak with authority about China. Even the Indian papers take up the cudgels against him. * * * * * The *Pioneer* likens the blockade of Hongkong (which Sir Charles makes the basis of a charge of smuggling against the residents)—to England setting ships of war to patrol the French coast, and board foreign vessels in advance if they were found to be proceeding to an English port; and very pertinently remarks that Sir Charles Dilke would be the first man, if such an attempt were made, to shriek at the overbearing audacity of his ruffianly compatriots."

ABOUT half-past eight a.m. on the 26th ult. Mr. J. W. Hall, of No. 67, perceived signs of fire in the ceiling, close to the chimney, in a room on the upper story of the building. He at once gave the alarm and then attacked the flames, which were assuming proportions not only threatening the destruction of the house where they originated but the whole adjoining block. The Catholic Church bell was set ringing, and its call for assistance was speedily echoed by the fire-bells. Within a very brief space of time the engine of the Private Fire Hook and Ladder Brigade was upon the spot, and was quickly followed by the Volunteer Brigade. Mr. Hohulholz's men were joined to the Volunteers, and helped to man their engine, while Messrs. Hohulholz, Graham, Pagden, and Davieson mounted the roof, through which they burst an opening and directed a stream of water upon the flames, which, thanks to their efforts without, and Mr. Hall's strenuous exertions within, the building, were extinguished before serious damage was done. The origin of the fire was traced to the ignition, from the concentrated and continued heat in the chimney, of a beam which traversed the flue; and thence to the woodwork of the ceiling the transition of the flames was an easy matter. This is, we believe, the third instance which has occurred this winter of narrow escapes from destruction through fires originating in this manner; and it is not impossible that the two recent conflagrations may have been due to the same source. There is now some probability of a competent person being appointed, none too soon, by the Insurance offices, to survey, and report upon the condition of houses covered by insurance within the foreign settlement.

In the French Consular Court Mr. A. W. Glennie sued Mr. J. J. Fourcade for \$420, arrears of rent on premises on lot No. 52 for the owner of which the plaintiff is agent. The defendant set up a counter claim of \$500 for alleged improvements, which was not entertained by the Court, who held that the proper time to make such counter claim was at the expiry of the lease. Hence defendant was ordered to pay the full amount claimed and costs of Court.

THE sum of \$92 in all was collected on behalf of the European residents in Tokio who lost their property by the fire of the 29th-30th November; and this sum was divided equally between eight of the most deserving sufferers.

A TELEGRAM from Kobe despatched at 10.35 a. m. on the 28th ult. says that at 7 o'clock that morning His Majesty the Mikado arrived. He landed immediately, and took dinner in Kobe, leaving in the 2.20 train for Kioto, where he arrived at 6.30 p.m. Her Majesty the Empress Dowager arrived in Kioto at mid-day on the 27th ult. The Empress went as far as Ke-age to meet her.

THE *Osaka-Nippo* says that during the half year from July to December, 1876, the tax on stamps for legal documents &c., amounted to yen 19,416 in Osaka. Tobacco duties brought yen 1,092,70. in the same place.

THE 30th ultimo, being the anniversary of the death of Komei-Tenno, was observed as a general holiday by the natives. No Government office was opened, and no native papers issued in Tokio or Yokohama.

THE American Consul in Kobe wished H. M. the Mikado to honor his residence with a visit. If His Majesty had arrived in Kobe in the evening, he would have passed the night in the Consul's house. But as the Imperial party arrived early they proceeded the same day to Kioto.—*Nichi-Nichi-shinbun*.

THE magnificent Royal Yacht Squadron steam Yacht *Sunbeam*, Mr. Thomas Brassey, M. P., Captain and owner, arrived in harbor on the 29th ult. from Honolulu, on a cruise round the world.

THE splendidly complete Chronicle and Directory for China, Japan, and the Philippines, for 1877, was received by us from the publisher, the proprietor of the *Hongkong Daily Press*, by last mail. In addition to directories for Hongkong, Shanghai, Yokohama, Singapore, Macao, and the open ports of China and Japan, it contains an almanac for the year, maps of the coast of China and Japan and other places, tables of mails, historical and statistical descriptions of the ports and countries treated of in the Directory, the treaties with China, Japan, Siam, and Cambodia, Orders in Council, and a quantity of other general and useful information, all conveyed in a condensed and readable form. Advertisers have largely availed themselves of so useful a medium for making known their specialities, and a large and varied assortment of advertisements, most useful for residents in the East, is added to the work, which contains altogether nearly nine hundred pages not one of which is too many.

THE *Nichi-Nichi Shinbun* publishes the following account from a correspondent, of a recent trip to the volcano, now in actual eruption, on Vries Island:—

Wishing to inspect a volcano in the Island of Ooshima, Messrs. Atkinson and Smith, and Dr. Naumann, Professors of the Tokio Kaisei-Gakko, three other foreigners and myself, started with that object in view in the *Yokoska-maru*, a vessel belonging to the Yokoska Arsenal, on the 19th instant. About 7 o'clock the following morning, the vessel cast anchor in the port of Nami-u, Ooshima. We immediately landed and proceeded to our work of inspection. As we neared the island

in the *Yokoska-maru*, we perceived only a small quantity of smoke during the day; but after nightfall the glare of the fire and smoke from the volcano presented a grand but terrible spectacle. Nami-u, the port at which we landed, bears every appearance of having once been the site of a volcano, because the ground is composed of a mass of pumice stone. There are two roads leading from the port to the volcano of Mihara-yama, one of which goes across the mountains, and the other is along the coast. The distance is about five *ri*. We preferred the mountain route, and arrived at the summit of Mihara in due course. When a distance of three *ri* from the crater of the volcano, we could distinctly hear the terrible sound of fire and lava being vomited forth. We ascended to the highest point of the mountain, which is variously estimated at from 2,300 feet to 2,500 feet, and from that height gazed into the burning crater. The entire island seems to have been volcanic as there are several extinct craters, one of which is about twelve *cho* in diameter, and three hundred feet deep. To the west of it is a small crater about twenty feet in diameter, from which still issue fire and smoke. We observed numerous indications of lava having streamed over various parts of the island, which itself is a mass of pumice. When we reached the summit of the mountain rain commenced to fall heavily. Looking down into the crater, we noticed stones bubbling up and down as if in boiling water; and at intervals of from two to five minutes, jets of lava were thrown up to a height of from one hundred to one hundred and fifty feet. About two o'clock in the afternoon the weather became very stormy and it rained heavily; then columns of lava were shot up to a height of about one thousand feet, but most of it fell again into the crater. Sulphur is not very plentiful, though we saw some burning on the edges of the crater. To the north of the volcano there is a hot spring. About five o'clock we descended the mountain, and proceeded to the port by the coast road. According to accounts given by the natives, the volcano was active some twenty years ago; but about that time it ceased to emit lava until the third year of Meiji (1870), only sending forth volumes of smoke during the interval. But on the 27th or 28th of December, 1870, it again cast forth fire and lava, but soon ceased eruption and did not become active again until about the 4th of January this year.

We have seen the annual report of the Ladies' Benevolent Association of Yokohama, an admirable institution which does a great deal of good in a quiet way, and which requires only to be better known to be more extensively supported.

CAPTAIN TAYLOR of the *Iris*, who passed Vries Island on the night of the 29th ultimo, on his way to Yokohama from Takao, informs us that the volcano is in an active state of eruption. He estimates the height of the flames from the mouth of the crater to be from one seventh to one sixth of the actual elevation of the mountain above the sea level. This would give the column of flame the immense height of from three to four hundred feet. Captain Taylor says that the sky was illuminated as though a city were on fire, and that huge masses of rock, plainly visible from the deck of his vessel, were hurled into the air and, describing a curve, fell, leaving behind them trails of fire, like so many gigantic rockets.

THE navigation of Homura creek having become impeded by the accumulation of mud and rubbish of every description, the authorities have deemed it expedient in the interest of the traffic to deepen it. This by no means easy task has been undertaken by a Japanese contractor, who for several days past has had a number of men actively engaged constructing a couple of breakwaters and pumping the water out between them by steam pumps; and to-day the task of deepening was commenced. The work so far is progressing favourably; and if it is continued with the same amount of energy as has been displayed at the commencement, the creek will soon be open for traffic again. We also observe that the Mayedabashi is undergoing repairs, not certainly before they were needed.

H. M. THE MIKADO is expected to return to Tokio on or about the 17th instant.

JUDGMENT in the matrimonial case *Blockley vs. Blockley* was to have been given in H. B. M.'s Court at Yedo on the 1st inst. but circumstances rendered it necessary to postpone the decision for a period of sixteen days.

THREE Japanese lawyers are practising in the Saibansho at the present time, one, at least, of whom has studied English law. But the native litigants are either not acquainted with the fact, or have not yet learned to appreciate their services, and the briefs of these counsel are therefore as few and far between as angels visits.

H. I. J. M. S. *Seiki-kuwan*, one of the vessels which escorted the *Takawo-maru* with the Mikado on board to Kobe, is expected to leave that port shortly for Corea.

THE *Hochi-shinbun*, in giving some statistical details about the Philadelphia Exhibition says that after its close the building of the Japanese section was sold for \$2,600, or about one tenth of its first cost. All the Japanese exhibits were much appreciated. Kaga bronzes and Suruga lacquered ware, whose prices were exceptionally high, attracted especial attention. All the articles which were unsold during the exhibition were finally put up at auction, and found purchasers at figures altogether unexpected.

TELEGRAPHIC communication between Shanghai and Nagasaki is restored.

THE *Meiji-maru* whose departure, at first fixed for 3 p.m., on the 1st inst. at was delayed through the detention in Tokio of H. E. Mr. de Struve owing to the burning of the Gaimusho, left at night for Kobe. On board were their Excellencies Sir Harry S. Parkes, K. C. B., and the Ministers for Italy, Russia, Germany, the United States, Austria, and Spain, accompanied by their Secretaries and interpreters, and the Secretaries for the Belgian, French, and Dutch Legations. Mr. de Groot is detained in Yokohama through ill health.

HAKODATE, 26th January, 1877.—The M. B. M. S. S. *Seirio-maru* arrived on the 24th inst. from Nemoro.

Range of Temperature for the week 19½° to 43°. On the 24th Standard Barometer corrected for temperature and reduced to sea level 30.656 in. (Remarkably high). Weather changeable with variable winds. Slight falls of snow and some rain.

We hear from Dr. Simmons, whose position at the Japanese Hospital gives him the opportunity of observing the epidemic diseases of the country before they appear among foreigners, that diphtheria, or a disease very much resembling it, which is so prevalent and fatal in the west, has appeared here and in Tokio in an epidemic form. We are pleased to hear, however, that though fatal cases have occurred, more especially among children, the disease has not yet assumed the very virulent type which is met with at home. But, since it is probably contagious, we take upon ourselves to bring it to the notice of heads of families whose children may be accidentally thrown into company with those of natives.

EFFECT is soon to be given to the Treaty made by Mr. Kuroda, on the part of Japan, with Corea last year. The *Tokio Times* says: "Arrangements have already been made for the opening of commercial relations between Japan and Corea. Some enterprising merchants of Tokio have applied to their government for permission to establish a direct trade from Fusan Kai, the port which has for centuries been in Japanese possession, to the interior of the Korean Kingdom, and have received the necessary authorization. They will start upon their errand by the next regular steamer."

We are given to understand that H. B. M.'s Consul, Mr. Russell Robertson, will shortly leave Yokohama on a visit to Canton: that during his absence Mr. H. S. Wilkinson will act as Consul; and that the Vice-Consulate at Yedo will be presided over by Mr. Aston.

At 3.14 P.M. on the 2nd inst. there was a smart shock of earthquake of about thirty-five seconds duration.

THE British barque *Parmenio* has, we hear, been chartered to load rice in Kobe for Melbourne.

A SMART shock of earthquake, of about twenty-five seconds duration, was felt on Saturday evening the 20th instant.

NOTWITHSTANDING the unpropitious state of the weather, the entertainment at the Temperance Hall on the 23rd ult. was numerically, as in every other respect, quite a success. Mr. F. R. Wetmore directed the proceedings as usual. An able address on the advantages of total abstinence was delivered by the Rev. J. H. Ballagh. Several persons signed the pledge at the close of the entertainment.

A NOTIFICATION, dated the 29th ultimo, has been issued, describing the regulation pilots' flag, which is to be nine feet in length by six feet wide, and composed of two horizontal strips of equal widths, the upper one of white, and the lower of red stuff. Further, the upper strip will be inscribed with the four Chinese characters signifying "licensed pilot."

We will do nothing to disenchant those who are possibly looking forward with mingled feelings to the startling revelations to be made next week by that voice from the dead which is expected to speak under the name of "the late extraordinary discovery in Yokohama." It depends very much upon the perpetrator whether that, always in journalism more or

less dangerous, resort, the hoax, shall be, if amusing, harmless. Probably, in this instance the public have no real ground for alarm, but that is no valid reason why they should not feel it. Some years since we heard of such over anxiety on the part of the friends of a gentleman at his absence that the creek was dragged for a body which was in perfect life and health not many miles away. To unquiet ones we would say, "Await results, and do not go to meet trouble half way."

EXCEPTION which strikes us as being at best but trivial has been taken to the use of the word "budget" as applied to the financial estimates prepared in this country. It is quite true that the word has been generally used in connection with the financial estimates laid by the Chancellor of the Exchequer before the British Parliament, being in fact derived from the French *bougette*, meaning a sack or wallet; and this is not the first instance of the first meaning of a thing being transferred in a secondary sense to its contents. But "budget" itself, in the meaning of financial statement, has now become almost cosmopolitan. The French themselves, from whom it was first derived, have re-adopted it into their language in its modern form. A comparatively modern English Dictionary gives this as its meaning "the bag that contains prepared documents to lay before parliament on financial matters." Webster thus defines "to open the budget":—"to lay before a legislative body the financial estimates and plans of the executive government;" and this is precisely what Mr. Okuma has done, and will probably do annually in future for some years to come. So that the application of the word "budget" to the Japanese financial estimates is not only permissible but correct, while it has the great advantage of conveying in one word an idea which, without it, would require two or three to express. Probably the criticism which objects to it would find fault with Mr. Okuma if he were in English to style himself the Japanese Chancellor of Exchequer; and yet he has a perfect right to assume that style. Is there not something approaching to captiousness in such fault-finding. What saith Slender? "Ay, forsooth, I have spoke with her, and we have a nayword, how to know one another. I come to her in white and cry, 'Mum': she cries 'Budget'; and by that we know one another." And wise Mr. Shallow replies:—"That's good too; but what needs either your 'Mum,' or her 'Budget'?" The white will decipher her well enough."

A dog, evidently rabid, was running about the settlement nearly all day on the 6th inst., snapping at and biting other dogs. The brute, a yellow one, rushed foaming at the mouth into the compound of a gentleman whose office is close to our own, and bit two dogs which he keeps there, and which he is now compelled to poison. A well-known resident was nearly bitten by the rabid animal, which, as far as we know, has escaped destruction.

It seems that the question of protection is to be forced into discussion by a portion of the foreign press. When Japan has any industries which may be fostered by protection will be early enough to enter upon the subject, we should think. At present she has none that are not amply protected. In *faience* she has nothing to fear from importations from Sevres, Dresden, or Belper; and Manchester is

not likely to compete with her in her own markets in the manufacture of dressing gowns, any more than Lyons is in her peculiar kinds of silk. To introduce protection now would be to paralyze the import trade without the slightest corresponding benefit. For many years to come Japan will be dependant upon foreign countries for machinery of all kinds and many articles of clothing and daily use; and those who would see a protective policy enforced would advocate the imposition of increased burdens upon consumers. *Festina lente* is not a bad motto after all.

A CENSURE was implied the other day by one of our contemporaries on the Government for having neglected an opportunity to insure the late Foreign Office buildings. Probably if the authorities refused such a chance they acted according to their lights; for no European Insurance Office could accept such a risk except at a premium which any government or private individual might hesitate to pay. The real remedy against a perpetuity of the frequent fires which make one wonder whether the fate of Sodom and Gomorrah is reserved in detail for Tokio, is in solid reconstructions in all cases in which buildings are destroyed.

We have to acknowledge receipt of a little work reprinted from the *Far East* and consisting of ten papers, translated by Mr. Rufino F. Martins, on the manners and customs of the Chinese at Macao. The preface informs us that the translations are in part made from a work published in Macao in 1867 by Mr. Manuel de Castro Sampaio, and dedicated to the Asiatic Society, and are now published in "pamphlet form for private circulation only." The chapters on Marriage Ceremonies, Various Superstitions, and Feasts and Festivals are not only interesting but contain much that is new in the way of information.

HAkodATE, 1st Feb. 1877.—The steamer *Dragon* arrived from Yokohama on the 30th ulto. The Kaitakushi steamer *Gemba*, which, with the *Sumida*, is circulated to leave for Yokohama and Tokio to-morrow (2nd) came in on the same day from Oraru. Range of temperature 32½ to 40. Weather mild and changeable with more or less snow every day for the past week. A walrus was washed ashore in the straits and is now in Hakodate. It will probably be taken down to Tokio in the *Gemba*.

SOME years ago the Japanese authorities dug an immense hole, about 40 feet wide and sixty feet deep, near Tobe, into which the bodies of decapitated criminals were thrown. Between four hundred and five hundred bodies were thus thrown into the pit. Last year the roof began to decay and the sides of the fosse to fall in, and the place was abandoned as a burial ground. Some two months ago the authorities determined to fill up this receptacle of dead men's bones, but before doing so they caused to be extracted all the skulls of the dead. The hole was then filled up and the skulls gathered together and placed over the site in a heap, where they still remain, presenting such a spectacle as one might expect to find in the King of Dahomey's dominions, but which one would not unreasonably be likely to consider as inconsistent with the boasted civilization of a country like Japan. Some of the skulls have the hair still adhering to them.

According to announcement the Annual General Meeting of the Yokohama Fire Brigade was held on the afternoon of the 25th ulto., at the Grand Hotel.

The Chairman called upon the Secretary, Mr. Leckie, to read the minutes of the last meeting, which were duly confirmed; after which the Secretary read the following report and statement of accounts:—

The Committee of the Yokohama Fire Brigade, at the close of their term of office, have pleasure in presenting their Annual Report, and in submitting the accounts of the Hon. Secretary and Treasurer for the past year.

At the General Meeting held on the 19th January, 1876, it was resolved "that the Yokohama Fire Brigade accept the offer of the members of the American Engine Corps, to transfer, in the manner of a purchase, the American Engine for the sum of about \$500, being the balance due to the treasurer of the corps." The actual amount paid for the Engine was \$511.52. Owing to the Suction Hose being out of order this Engine has been of little use. A New Hose arrived from America a month ago, but was found to be too small. Another has since been ordered out. By the kind permission of the French Catholic Mission the Committee have been allowed to sink a Fire-well in their compound, Lot 80, in front of the Church. This makes the fourth. viz :

The Committee think it is a subject for congratulation that fires have been less frequent during the past year, and that they have been extinguished before serious damage was done. Whilst on this point the Committee desire to express the thanks of the Brigade to the other Fire Companies of Yokohama, for the efficient aid lent by them during the past year, viz., The Victoria Steam Fire Engine Company, the Private Fire Brigade, and also to the Japanese Authorities, who have in all cases promptly sent their Engines to our assistance. To the Naval Authorities of the different nationalities, they also beg to tender the thanks of the Brigade for all assistance rendered.

The members of the outgoing Committee, consisting of Messrs. Benson, Glennie, MacRitchie, Dodds, and Leckie now beg to tender their resignation and trust the Community will be satisfied with the result of their labors.

Yokohama, 31st December, 1876.

Jan. 12, Lot 81,	Foreign	Concession,	confined to a room up-stairs.
Mar. 2, " 179,	Bluff	"	cook-houses and outhouses.
May 10, " 70,	Foreign	"	outhouses and kitchen.
Dec. 31, " 46,	"	"	building used as store and dwelling house.
Dec. 31, " 30,	"	"	Grand Hotel; damage done very slight.

The Yokohama Fire Brigade in account with
John Leckie, Honorary Secretary and Treasurer.

Yokohama, 31st December, 1876.

A vote thanks to the retiring Committee was then carried, after which the following gentlemen, on the proposition of Mr. Willcox, seconded by Mr. Pratt, were unanimously elected as a Committee: Messrs. Benson, Allen, Dodds, Glennie, and Leckie.

This concluded the business of the meeting.

(From our own Correspondent.)

JANUARY 14TH, 1877.

For the first time this year it is snowing, and the neighbouring hills are white with it though the streets are wet and sloppy. Older residents say that it is the first time for some years that so much has fallen. As yet the weather has been very mild and the thermometer seldom below freezing point.

The *Mary Fraser* has been on the slip since the end of last month, and it is uncertain if she will be off before the 20th. People in Kobe had their doubts as to the possibility of the slip taking so large and heavy a vessel, but no difficulty whatever was experienced in heaving her up, beyond that arranging the blocks, owing to much of her false keel having been carried away. However, she is now being thoroughly repaired below water. The false keel is being renewed altogether, and such of the lower planks as were much damaged in her sojourn in the Akashi Straits are being replaced by new ones. The rudder has also been unshipped, and is being repaired. There is not the least doubt that all work done at the slip takes a fearful time in comparison with such work in Europe or America, and however well it may look it cannot be superior to foreign jobs of the same sort, and it must cost much more here than at home. In the first place the labour, ostensibly cheap, is much dearer, partly on account of the greater number of men being needed to do an equal quantity of work; absence of appliances for assisting labour; and time wasted by the men engaged, in a dozen different ways. As

A handicap billiard match was decided here on the 10th in favour of Mr. J. C. Smith. As the *Rising Sun* in a local paragraph mentioned that the stakes were going to be generously handed over to the theatre to help towards partly freeing that edifice from debt, Mr. Smith was called upon for the amount, \$30, but it appears that he had other intentions, nearer home, and had already donated it, or promised it, to a charitable institution in which he had a strong interest, personally. Meanwhile in order to meet the liabilities incurred in completing the Public Hall it is proposed to get up a concert and appropriate the receipts to paying off as much as possible. Unfortunately the drama, like most other popular recreations in this place, is in very poor feather just now; and the receipts of the Hall during the last year very small indeed. Some of the subscribers think that, if there was a little more publicity about the doings connected with it, there would be more sympathy shown than there now is.

We have been quite lively here during the past fortnight in auctions. The Belle Vue Hotel on the 27th and 28th last month; Messrs. Kassburg & Co. on the 3rd and 4th instant, and the Occidental Hotel on the 10th and 11th instant. Considering the stagnation of the times it is remarkable how well the things sold and in many cases it is surprising where the money comes from. At present we are reduced to two hotels "Smith's," and the "Hotel des Colonies."

At last the sporting license programme has found its way down here; but it has been fortunately delayed so long that, with the extra month's grace accorded, preparatory to taking out the license, it is probable that few will care to expend \$10 this season.

A valuable and much gifted tobacco horn which had seen better days; travelled in various parts of the world; and passed through divers hands, turned up in a curio shop here the other day. It was identified by a private mark of one of its owners, from whom it was said to have been stolen some years ago during a short residence in the Fiji Islands. How it got to this port has not yet been clearly shown.

The *Number one* is having new boilers put in at Akunora which will keep her here two or three months.

January 18th.—The *Tokio-maru* on her way down here met with an accident having run on a reef near; but as she was not going very fast at the time, and the weather had moderated somewhat, no great damage resulted, and she proceeded on her way to Shanghai, where she will be docked and repaired.

AVENGING HER FATHER'S DEATH.

(TRANSLATED FROM THE JAPANESE.)

Kiyogoku Ko was a celebrated general who lived some five-hundred years ago. In a regiment of foot soldiers under his command there was a man named Iwabuchi Dennai, who became enamoured of the beauty of the wife of a companion in arms named Amagasaki Royemon. One day when Amagasaki was absent Dennai went to his wife and used all his eloquence in endeavouring to persuade her to elope with him, but in vain. When the woman's husband returned she told him all about it, whereupon he became very angry and reproached his companion for his perfidy. Dennai had not a word to say in extenuation of his conduct, while his face was diffused with blushes. Suddenly, however, he drew his sword and smote his companion so that he died, and he then ran away. The wife of the murdered man took her deceased husband's sword and went in search of his slayer. At length she found him; and walking to within a few feet of the murderer she flung the sword at him with the intention of killing him. But she failed in her object and only succeeded in wounding him in the shoulder. After this attempt to take his life he disappeared.

According to all accounts, the widow with her infant daughter was looked after by her brother-in-law, Sekine. But the following year she died. The child was now entirely thrown upon the bounty of her uncle and aunt, but they cared for her as though she was their own child. Indeed she grew up under the belief that her aunt was her mother. As she gained years however, she became aware of some mystery being attached to herself: so her aunt felt that the time had come when her adopted daughter ought to know the origin of her birth and of the death of her parents, and calling the child to her one day she said,

"Come here, my dear child, till I explain something to you concerning yourself and your birth. You must know that I am not your real mother but only your aunt, your mother being my elder sister. Your father was a soldier, serving under the great general Kiyogoku Ko, and was murdered by a companion named Iwabuchi Dennai. Your mother followed her husband's murderer and endeavoured to kill him, but in this she failed and he afterwards disappeared. From that time until her death, which sad event took place the following year, your mother was continually bewailing her loss and would burst into tears as she nursed you upon her knees."

"Ah, indeed!" remarked the child as she listened sorrowfully to her aunt's narrative.

"Yes, your mother would talk to you as she sobbed, and say: 'Ah, my darling, if you were a boy, instead of a girl, you would avenge your father's death when you grew up; but as you are a girl you will not be able to do anything'. This constant grief and wailing caused your mother to become ill, and from that illness she never recovered."

Having listened to her aunt's explanation concerning her birth and the death of her parents, at its conclusion she burst into tears and said:

"I did not even dream but that I was your own child. How shall I ever be able to recompense you for your kindness to me for so many years?"

After this the young girl brooded over the sad termination of her parents' lives: and when she had arrived at the age of sixteen, she asked permission of her aunt to go to

Yedo, for the purpose of employing the servant of some official to search for her father's murderer. Her aunt endeavoured to dissuade her from her purpose, telling her that as she was only a young girl it would be impossible for her to search out and wreak vengeance on her father's enemy. But she was not to be put off thus, and urged time after time for permission to go on her proposed errand. Finally, seeing that the girl was not to be diverted from her purpose, permission was granted; and her uncle gave her a letter of introduction to a friend of his in Yedo, named Murase Toma. This friend received the maiden with much kindness; and on his recommendation she procured a situation in the family of a *samurai*, called Nagai Gensuke.

As the girl was scrupulously honest and careful in the execution of her duties, she soon acquired the favour and high esteem of her master. One day he questioned her closely on circumstances relating to herself, such as, "where was her native place?" "what was the rank of her father?" and to all his enquiries she replied with simple truthfulness. She related the details of the circumstances attending the death of her parents, and her own intention of seeking out the murderer of her father and avenging her parent's death. She found a ready sympathiser in her master, who promised to assist her in her undertaking. He commenced by teaching her the art of fencing, at which she speedily became an adept.

After a few months more had elapsed, Gensuke informed the young girl that, in order to accomplish her purpose, it would be better if she sought service in a number of places than to remain in one place, as by changing about there was a greater likelihood of her receiving information as to the whereabouts of the person she was in search of. After thanking her master for his kindness and the sympathy he had manifested in her undertaking, the young girl sought another situation. During the next twelve years she prosecuted her search with unflagging zeal, and changed her place of abode seventy times, but without meeting with any success.

At length she became employed in the service of a *samurai*, named Sakabe Yasube. Among the servants of this *samurai* was a man named Koizumi Bunnai, who was upwards of fifty years of age and a great drunkard; and when he had imbibed too much *sake* he usually became very communicative. One evening the girl was serving Bunnai with *sake*, and after he had drunk rather more than usual, he became very talkative.

"When I was a young man," he remarked, "I endeavoured to induce the wife of a companion to elope with me, but she refused, and informed her husband. He reproached me for acting so, and I killed him with my sword and made my escape. But the wife pursued me and endeavoured to take my life, but only succeeded in wounding me very severely in the shoulder. This event is as fresh in my memory as if it only occurred yesterday, though it happened over thirty years ago."

On hearing this the girl became actuated with strong feelings of revenge; but she restrained herself in order to obtain positive proof that the man before her was none other than the murderer of her father. In order to lead him to further commit himself, she feigned a disbelief of his statement, and said,

"Don't you be telling such lies; I don't believe that you did any such thing."

"Yes, indeed I did," he thoughtlessly replied. "My name was Iwabuchi Dennai, but after I committed that deed I changed

it to the one I now bear, Koizumi Bunnai. My native place is Marugame Sanshin, the same as that of the man I slew. Though it is so long ago, I distinctly remember that he had no son, but only one daughter. In consequence of this event I have kept myself very quiet ever since."

The old man then took off his dress and showed the girl a scar on his shoulder, on seeing which she became very much gratified, as it was now clear that, after so many years of patient search, she had at length found her enemy. That night she remained very quiet and did not appear as if she had discovered her father's murderer. Early the following morning she started to inform her former master, Nagai Gensuke, of what she had found. He was overjoyed at the intelligence and immediately went with her to the great general, Kiyogoku Ko, to whom they reported the affair through the medium of an officer named Murase Toma.

The general ordered Dennai to be arrested and cast into prison. In those days it was customary for the accuser and the accused to settle their affair by mortal combat publicly; and if the accused slew his accuser he was deemed innocent of the charge brought against him; but if the accuser killed his enemy, it was considered that he had proved his allegation.

In accordance with this custom, the great General ordered that a certain spot should be fenced off, and then fixed a day for the girl to prove her charge against the prisoner by force of arms. When that day arrived, the young woman who had so persistently tracked the murderer of her father appeared in the arena clad in a coat of mail composed of a multitude of iron-links, which fitted tight on her body. Over the coat of mail she threw a gaudy dress, while her head was merely covered with a piece of white cloth. She was armed with two swords.

Dennai was brought from his dungeon and placed in the arena in front of his female accuser; while on the outside was the General and a great crowd of people who had assembled to witness the combat. Upon perceiving her enemy the young woman turned to the crowd, and said:

"That rascal, Dennai, is the man who murdered my father. I now challenge him to mortal combat, and he will not be able to escape from my vengeance."

This challenge enraged Dennai, and, looking scornfully at his slender antagonist, he said:

"You are only a woman: therefore it is impossible for you to succeed in killing me. Come hither! Come hither!" quoth he again and again, lifting up his sword as if he would cut her down. His antagonist then ran forward to meet her enemy and with a quick dart she wounded the old man in the chest. In the next pass she succeeded in cutting him across the face, whereupon he became dizzy. Gathering herself together for a final struggle, she flung herself on her enemy and stabbed him through the heart, and he fell dead at her feet. The victorious damsel then stooped down and cut off Dennai's head with her own sword, and carried it to the officials, exclaiming,

"How glad I am that after so many years I have succeeded in my resolve to avenge the death of my father. How glad my dear parents' spirits will be."

The crowd raised a deafening shout as a manifestation of the pleasure they experienced at the result of the combat.

General Kiyogoku Ko rewarded the young heroine by bestowing upon her the rank of *samurai*, and appointed her teacher to his daughters.

DECEIVING A BILL COLLECTOR.

(From the Japanese.)

There was once an old couple who lived very peaceably together, and the only thing that sometimes cast a cloud over the tranquility of their lives was their poverty. In consequence of not having treasure enough to satisfy the claims of a money-lender, the old man conceived a plan for getting rid of the troublesome creditor for at least a time. His scheme was to feign death; and in order to further this he procured a large box, resembling a coffin in size and shape, and embellished the outside until it looked very like one.

During the time the old man was engaged on the box his wife was out, and he had barely time to complete his arrangements before she returned. When she entered the door he remarked smilingly:—

"You have returned earlier than usual. Have you been successful in effecting a sale?"

"Yes," she replied, at the same time bowing respectfully to her husband. She then walked through the passage into the bedroom where the coffin met her alarmed gaze, and crying out she said:—

"Ah: what is the matter with you, old man? Have you gone mad?"

"Why?" her husband laughingly asked.

"Have you resolved to depart for *Gokuraku* (Buddhist paradise) and leave me behind? How shall I be able to live alone after you have gone?"

"You know nothing about what I am going to do. I will tell you what I propose. This evening I feel pretty sure a man will come with the bill from the money-lender and I have no money to pay him. So when he comes I will hide upstairs and do you exercise your ingenuity and deceive him. You can tell him that your husband died last night, and show him the decorations on a part of the coffin, and then you can ask him for a postponement of the payment of the bill.

"You have acted wisely," said the old woman, "and now I understand, and my fears are at rest."

After they had completed their plan the old couple observed the man with the bill approaching. He came and knocked at the door crying "Moshi!" Moshi!" The old man immediately ran upstairs, and his wife went, in an indifferent manner, to the door.

"Babasan (old lady) how are you this cold weather?" enquired the man, at the same time taking his money bag from his shoulder and putting it on the floor.

"Pretty well," she replied, "but you must be tired." She then brought the bill-collector a cup of tea, and *tabakobon* or box in which fire and smoking utensils are kept.

"No, no," he said, shaking his head solemnly. "I do not feel the cold much because the weight of my money-bag keeps me warm."

He then took a bill from his bag and passed it to the old woman, on receiving which she said:—

"Will you kindly wait till the end of the month. I am very sorry I cannot pay you, but my husband died last night, and I am therefore put to unexpected expense."

She then took him into the bedroom and showed him the coffin. He muttered "poor fellow," and said no more but remained thinking for some time, while his countenance betokened sympathy for the supposed widow. At length he started from his reverie and putting his hand into his bag he took out a packet of silver money and offered it to the old woman, saying:—

"Permit me to present you with this trifle,

which will enable you to give your deceased husband a respectable burial."

"No," she replied, "there is no reason why I should receive this present from you."

"Why? I give it you freely, therefore you had better receive it."

While this dialogue was being carried on between the old woman and the bill collector, the old man was listening upstairs and muttering to himself "How stupid that old wife is, why doesn't she receive the money?" At length he could restrain himself no longer and without thinking what he was doing he cried out:—"Receive the money!"

It now became useless to attempt to carry on the deception any further, as the bill-collector discovered that the aged couple were playing a trick upon him in order to get an extension of time in which to pay their account.

Whenever an attempt is made to call attention to some of the points in which the action of foreign governments bears heavily upon this nation, there comes a shrill outcry that "writing of this kind is mischievous, and 'only serves to stir up bad feeling between 'natives and foreigners and to embitter their 'relations.' This has been a favorite refrain, executed with more or less diverting variations, for the past six or eight years. Writing of another kind, we are expected to believe, is judicious, liberal, humane and in every sense commendable. Persistent abuse of this empire and its people, personal ridicule of the Sovereign, charges of incapability and dishonesty on the part of the government, unvarying onslaughts upon every object and idea associated with the name of Japan—these are entirely the correct thing, no doubt, and should be encouraged. They are not calculated "to stir up bad feeling." Treatment of that sort is precisely what the Japanese like, we are to suppose. No matter to what extent it may be pushed, it cannot "embitter the relations" between those who apply it and those against whom it is directed. But the instant a word is uttered on the other side of the question, then the world is coming to an end. This description of argument would lead to melancholy reflections if we could imagine that the persons who employ it were not themselves aware of its absurdity. But as the nonsense they utter is probably intentional and premeditated nonsense—

"A mighty maze, but not without a plan"—

we must be satisfied to laugh at it. Nobody seriously supposes, whatever he may say to the contrary, that the relations of Japan with other countries will be imperilled by public statements based upon the plain and obvious facts recorded in the Treaties. Frank discussion may lead to an improved re-adjustment of these relations, but can never endanger them.—*Tokio Times*.

The following remarkable paragraph appears in *The London and China Express*:—

"In the course of his report upon the trade of Canton for the year 1875, Sir Brooke Robertson, H. M. Consul at Canton, calls prominent attention to the abuse of weighting shirtings with what is termed 'heavy sizing.' He points out that the *ruse* is now perfectly understood by the Chinese, and is at a loss to understand why it is persevered in."

We desire to ask, in the first place, why the nefarious operation here alluded to is described under the mild and amiable designation of a "ruse." If a tradesman sells chalk for cheese, or sand for sugar, we call him a cheat and a swindler. Why the

merchant who palms off starch and clay, pretending that they are cotton, should be charged simply with practising a "ruse," we have no power to comprehend. In the next place, we should like to be informed as to the quality of a commercial morality which "is at a loss to understand why" a fraud is "persevered in," only because it "is now perfectly understood" by its former victims. According to the language of the above extract, it would be quite legitimate to continue the deception, if it had not been found out; but, having been exposed, it might as well be discontinued. Let us hope that the real meaning is not that which is almost unavoidably implied. As to the trick itself, we may trust that its grossness will speedily bring its inventors and perpetrators to grief. The extent to which it is carried is hardly to be calculated. Goods are actually put upon the market, of which 33½ per cent. of the weight vanishes—not "into thin air," but in water—at the first washing. It is not only upon Chinese markets that these adulterations are forced. The home manufacturers have the dauntless assurance to offer them in Manchester itself, as a consequence of which the importation and sale of American cottons in England has already begun.—*Idem*.

A writer in the *Hochi Shinbun* of the 19th instant, who says that he is indebted for his idea to Mr. Inouye, finds a parallel to the Batchelder case in the suit of the Charles River Bridge Company *versus* the Warren Company, (in Massachusetts) which was decided by Judge Story against the plaintiff. The first named company having obtained, for ten years, a charter, which was subsequently renewed for a further term of thirty years, conveying the right to levy tolls, built a bridge across the Charles River between Boston and Charlestown. Before the expiry of the first term the Warren Company also obtained the grant of a charter and built a second bridge distant only sixteen rods from that constructed by the other corporation, which suffered considerably from the consequent diversion of its traffic, and sought to recover compensation in a court of law. The judge found, however, that the same privileges were given to both companies, and the charter allowed to the first contained no stipulation that other bridges should not be built on other parts of the river. The first charter was granted in the public interest, and it conferred no exclusive rights. Although it was true that the Charles River Company lost greatly from the building of the other bridge, it could not be admitted that the second charter conflicted with the legal right of the first. Applying Judge Story's decision to the law of the Batchelder case, the writer argues that as the Tsukiji leases and the conventions contain no declaration that foreigners may not reside in other places than the lands known as the concessions, therefore they may properly be allowed to reside out of them, and that the claim of the Tokio Fu should have been sustained.—*Idem*.

Professor David Murray has been re-elected to membership of the Council of the Asiatic Society of Japan.—*Idem*.

Rumors of pending trouble with the Satsuna people continue to come in, and bring in their train, inevitably perhaps, reports of discontent in other quarters. Hagi is not so quiet yet—according to the *Osaka Nippo*—as could be wished, and there are unsatis-

factory symptoms in the neighborhood of Nagoya. Perhaps the most ominous report is that General Saigo has disappeared from Tokio, and of course there has not been wanting plenty of suspicion that to this and other causes ought to be attributed the detention of the Mikado at Tokio, rather than to the bad weather which is given as the official reason.

Nippon Notes.

NOTIFICATION No. 7b.

NOTICE is hereby given that the roads through the Empire are classified, as under.

KUSUMOTO-MASATAKA.

Gonchiji of Tokio-fu.

20th January, 1877.

First class: Kokudo (high roads):—Tokaido Nakasendo, and Riku-u-kaido. Third class Kokudo (high roads):—Koshu-kaido, Rikugen-hama-kaido, and Sakura-kaiko. Third class:—kendo (provincial roads):—Asugi-kaido, Ome-kaido, Kawagoye-kaido, and Iwaki-kaido.

THE departure of the Mikado was postponed until the 23rd ultimo, in consequence of the receipt of a telegram from Hiogo at about 3 30 p. m. on the 21st ultimo, stating that a heavier snow-storm than had been experienced for several years had fallen in that district.

At about 6 30 a. m. on the 21st ult. a fire broke out No. 9, Miyashita-cho, Toyohashi, Mikawa, and burned about ten houses.

On the 20th the Foreign President of the Board of Arts attended the Imperial palace and had an interview with H. M. the Mikado.

ABOUT three hundred convicts will shortly be sent to Sapporo, Yezo.

THE last English papers received inform us that a high Turkish dignitary has been assassinated, and that among his slayers were two Turks, a Pole, and a Greek.

Peace and repose are a species of torture to us. We are madly delighted in sanguinary struggles in which iniquity falls. We mourn over the old time: we should like to thrust our swords into the hearts of the men who betray their country, since we could not turn the whole world topsy-turvy by beating foreigners. Unhappily the era of Meiji has brought with it tranquility and peace.

We have no longer any field of battle on which to exercise our valor; there are no more traitors to strike; and, besides, we have no longer the right to wear that weapon which formerly served us to defend the country. We are reduced to scribble in a newspaper, to cast a look of envy and regret upon the swords which we can no longer wear, a look of pity upon our arms which grow soft and lose their vigor. Having no better way of easing our weariness our sole distraction is to stamp upon the frozen earth, and to crush the flies which fall, numbed with the cold, from the ceiling upon our head.

When we learnt this news of the assassination of the Turkish official we cried out, "bravo! well done!" Were we Turks we would not be far behind the slayers. But unfortunately we were not born under the Turkish rule.

Among the best enjoyments of life is, most certainly, that of seeing flow the blood of a wicked and culpable man, fallen beneath the steel of an assassin, when he has caused the misfortune of an entire people. Yes, that is, in our opinion, an unspeakable pleasure. But in our country it is a pleasure which we cannot obtain.

Is there in this world a country where it is allowed? If there be we beg that we may be transported thither and allowed to make there our fixed abode.—*Bun meishinshi.* (*Echo du Japon* translation.)

THE *Nichi-nichi-shinbun* publishes the following extract from a letter from Shanghai, dated the 13th instant:—About the end of this month (January) Mr. Shinagawa, Japanese Consul in Shanghai, will hand his office over to Mr. Tomita, his successor, and return to Japan after having visited every open port in China. Mr. Onodera, his secretary, will accompany him on his tour. * * * The Chinese make no progress in civilization, obstinately stopping at the same point as they had reached ten years ago. They conduct themselves generally in a disgraceful manner, and cheat persons with whom they engage in trade. They put foolish faith in the opinion of a physiognomist or fortune-teller and gamble publicly. No progress in the natural or medical sciences is made in China, the people tenaciously retaining their ancient practices and using the roots and bark of various plants and trees as medicine, which may probably do them neither good nor harm. Very few of the Chinese use European medicine; and vaccination is hardly known among the people, nearly all of whom, however, smoke opium. The railway between Shanghai and Goshu and the Shoshokioku S. S. Co. are in a prosperous condition. The latter have many large vessels, which run here and there. None of our merchant chops in Shanghai are flourishing.

A LETTER from Hakodate to the Himuro-Kaisha, Ice Company, in Tokio says that ice of only about five inches in thickness has been formed. This year a large quantity will be exported and the work of cutting out the ice will be commenced about the 10th Feb. next.

On the 25th ult. at about half an hour after midnight a fire broke out at the house of Wada at No. 11, Ichhome, Kobikicho, Tokio, and destroyed about nine houses.

H. E. Mr. Iwakura, *Udaijin*, made a present of a set of the Buddhist sacred books, known as the *Issai-kiu*, to the library of the British Museum. The British government regarding the gift as of great value has in turn presented about fourteen volumes of various books, and some maps and globes to Mr. Iwakura.

FROM four to five hundred of those concerned in the recent riots in the Mie-Ken are daily captured. There being no gaol large enough to contain them, four rice godowns which belonged formerly to an ex-Daimio, have been set apart for them in Mie. About one thousand five hundred men are imprisoned in each of them.

ABOUT 33 out of 447 policemen in the Kanagawa-Ken and three or four officers of the force have been dismissed.

MR. AI-BARA, chief retainer of Mr. Shimadzu, who lately arrived in Tokio, appeared recently at the Daijo-kuwan where he asked to have an interview with H. E. Mr. Iwakura, *Udaijin*; who, however, happened not to be at his office at the time.

MR. ARAI, of the *Akebano Shinbun*, was fined twenty yen at the Tokio Saibansho, for having violated the press laws, and the editor of the *Yomiuri-shinbun*, whose name is also Arai, was fined an equal sum for a similar offense.

H. E. Mr. Ito, Minister of the Public Works Department, left Tokio, en route to Kioto on the 26th ult.

ABOUT midnight on the 23rd inst. a fire broke out in the town of Honcho on the Nakasendo, and destroyed three hundred houses.

THE *Hochi Shinbun* says:—All the foreign Ministers and representatives of the foreign press are invited to be present at the opening of the railway between Osaka, Kioto and Kobe on the 5th proximo.

On the 22nd January, H. E. Mr. Kusumoto, *Gonchiji* of Tokio-fu, was promoted to the rank of *Chiji* of the same fu.

(From the *Hochi-shinbun*.)

Notification No. 7.

Notice is hereby given that the regulations for the sale of drugs are as follows.

SANJO-SANEYOSHI,

Daijo-Daijin.

20th January, 1877.

SECTION 1.

Art. 1.—The drugs referred to in the regulations are pills, plasters, medical paste, medical waters, powdered medicines, medical decoctions, and medicines prepared according to private prescriptions.

2.—All drug sellers must make application for a license to the Naimusho, through the local office under whose jurisdiction they live, when they must present a document specifying the ingredients of the medicines, the quantity of each for each dose, their purity; and also the name and address of the applicant.

3.—The document shall be examined at the Naimusho; and if any medicine is found entered therein which is thought likely to produce an injurious effect, a license authorising its sale shall not be granted.

4.—As mentioned in Art. 8, if any druggist wishes to change the ingredients of which his doses of medicine are prepared, during the term for which the license is granted, he must report his intention, return his license and receive a fresh one.

5.—Any person desirous of retailing medicines, having obtained permission from the druggist, must report his desire to the Naimusho through the local office. He shall also give in a document containing his name and address, together, with a copy of the license held by the druggist and also a copy of the contract between the applicant and the druggist, and he may then receive a license from the Naimusho.

6.—Druggists and all retailers of medicine must hang a sign-board denoting their trade outside their respective places of business.

7.—Should druggists and retailers desire to hawk their medicines about the streets, or to employ persons for that purpose, they must report to the local office, where they will receive a ticket authorising them to sell in the streets, which ticket they must carry with them on all occasions of hawking.

8.—Each license shall be granted for a term of five years from the time it is taken out. At the expiration of that term, each person holding a license shall, if he desire to continue his business, return it and take out a new one.

9.—As mentioned in Art. 4, any person desirous to alter the composition of his medicines, must take out a fresh license, which license shall be valid for a term of five years from the month in which it is granted.

10.—When a medicine shall be found to be injurious through bad compounding on the part of the druggist or from other means,

the license of the person selling it shall be confiscated and the sale of the medicine prohibited.

11.—Upon a druggist relinquishing business, or on his being deprived of his license, the retailers or street vendors of his medicines shall be prohibited from selling.

12.—Any person losing his license by fire, water, robbery, or any accident, shall report the circumstance to the authorities and receive another license.

13.—When the holder of a license is desirous of transferring his business to another, the parties concerned shall report the matter and get the name on the license altered.

14.—Should a druggist or retailer of medicines dispose of his license to another they shall notify the authorities, but no alteration shall be made in the license thus transferred.

15.—On a druggist or retailer forfeiting his license, it must be returned.

SECTION 2.

16.—The following fees and taxes shall be paid for a license:—

A druggist shall pay twenty sen for a license and a tax of two per cent per annum. A retailer of drugs shall pay the sum of twenty sen for a license.

17.—A person receiving a new license after having lost his old one by fire or accident, shall pay half of the usual fee.

18.—The tax shall be paid in two half-yearly instalments, the first half year ending on the 31st of July and the last half on the 31st of January.

The license-fee must be paid at the local office at the time the license is granted.

19.—A person obtaining a license before the end of June must pay the tax for the whole year; after the beginning of July for a half year. Any one relinquishing business after the 1st of July shall pay a license for a full year; or if he relinquish business before the end of June he shall pay a tax for a half year only. But when any person shall be prohibited from carrying on business, the tax that he shall pay shall be calculated according to the number of months he has carried on business.

20.—In the event of a person being discovered selling drugs without a license, he shall be fined five yen. Or if a person borrows a license from another the license shall be confiscated.

21.—Should a person retail medicines without a license, or borrow a license from another, or be found trading on a license the term of which has expired, both the medicine and the license shall be confiscated, and the offender shall be fined ten yen.

22.—Any one who changes the composition of medicines, or alters the mode of using them without obtaining a license, or falsifies the quality of the medicines in order to induce persons to purchase them, shall have his medicine confiscated and shall be fined a sum not exceeding twenty-five yen and not less than ten yen.

23.—If a druggist shall carry on business without first obtaining a license, all his medicines and the money he has already received shall be confiscated, and the offender condemned to pay a fine not exceeding fifty yen and not less than twenty-five yen.

24.—Any person forging the form of a license or counterfeiting medicines manufactured by another man, shall have all his medicines confiscated together with the profit he has derived from his sales; and he shall be fined in a sum not exceeding one hundred yen and not less than fifty yen.

25.—If a person be discovered privately selling injurious medicines, his medicine and the money he has received shall be confiscated and he shall be condemned to pay a fine of not more than five hundred yen and not less than one hundred yen.

26.—Any person informing shall, upon the conviction of the offender, receive half the fine as a reward.

(From the *Hochi-shinbun*.)

The recent determination for reform having taken possession of the government, the abolition of departments and branch offices, and the reduction in the number of officials has been suddenly effected, and the sum of many million yen has thus been left among the people. We consider that the government's earnest desire to promote the welfare of the people has caused this great and startling reformation. Was this change effected of the government's own inspiration? Or was it impelled by others?

Some persons say that the poverty of the farmers caused them to rise, armed with swords and bamboo spears, against the government, and thus, agrarian disturbances breaking out here and there, the government became convinced that bad as was the rising of the agriculturists against authority, they must be impelled by some great afflictions to take up arms against the provincial authorities, and, sympathizing with their troubles, effected the reform which we now consider.

We cannot concur in this opinion. But, if the change was owing to the government regarded the afflictions of the farmers as their own, it cannot be held to have been brought about by the farmers, who did not directly cause the government to carry out the change. The machinery which effected it was managed by officials who, becoming acquainted with the trouble of the farmers, worked the machinery to alleviate it. But, if the farmers did not help directly in the change, they caused it indirectly. The government effected a reform, which was indicated by the farmers; and the desires of the latter could never have been consummated without the action of the authorities. Let us remember that the movements of agriculturists have never had any effect upon the politics of our country. Such a thing has never been recorded in history. During the last two thousand years no movement of the agricultural classes has caused any change, either directly or indirectly, in the conduct of public business. Not one of the thousand changes recorded can trace its origin to farmers, who depended for their prosperity or ruin upon the military class. Farmers and people of the lower classes were not privileged, and no alteration was wrought in the government by their will.

If, however, we concede for the sake of argument that the recent reform was brought about by the will of the farmers, we have seen such an event in January of the 10th year of Meiji, as has never occurred before in history. This is so famous an event that some persons will consider the Imperial edict of the 4th instant, on the reduction of the land tax, as a Japanese Magna Charta. But our object is quite different to that which actuated the English barons. John, king of England, was obliged to grant his Charta by his subjects. But our government, out of sympathy with the affliction of the farmers, issued its edict. The English king granted Magna Charta against his desire, but our Emperor was pleased to issue his edict. We consider this the most important event in the history of

Meiji. We do not wish to compare our Imperial edict with the Magna Charta. How much less can we place in the same category with the latter the illustrious conduct of our government in reducing the national yearly expenditure and the number of officials?

As before said, the recent change in the government was indirectly caused by the will of the farmers; and the government dismissed a considerable number of officials and reduced the salaries of others. Even the officials who have been discharged from their posts, will not complain of the change. They will be contented with their lot in the consideration that the alteration was made by the will of the farmers, the masters of the government. Oh, blessed change! Agreeable reform! Your appearance in the political system at this day was indirectly caused by the farmers. It is right to say that the reform is a source of happiness to the Japanese.

NOTIFICATION No. 21b.

To *Kucho* and *Kucho* of each district.

It is hereby notified that the postponement of H. M. the Mikado's departure on his tour to the provinces of Yamato and Kioto was due to the severe wind prevailing at the time.

NOMURA YASUSHI,

Gon-rei of Kanagawa-ken.

22nd January, 1877.

The *Hochi-shinbun* says that the thirteen provincial governments, viz, Chiba, Awomori, Shiga, Gifu, Nara, Nagasaki, Hiroshima, Mie, Ehime, Mitsumata, Tochigi, Okayama, and Miyagi, will shortly be abolished, and the whole empire divided into three fu and twenty-three ken.

The monastery of Higashihonganji in Shanghai has decided to build a hospital, where any poor persons will be cared for in their illness. Five million yen will shortly be subscribed by the principal temple in Kioto for a similar purpose. Hospitals will also be established in Tokio and Osaka.

The *Choya-shinbun* publishes the following items:—On the 20th instant seven war vessels from the Kagoshima-ken arrived off the coast of the Sakai-ken. Numbers of Kagoshima-men arrived lately at Mr. Shimadzu's residences in Shinagawa and Osaka. A telegram from the south says that Saigo the elder landed at Hiogo a few days ago.

The Minister of the war department has sent a circular to the commanders of provincial garrisons to the effect that, at any time when the provincial civil officials may call upon them for assistance in the case of risings, troops are to be despatched promptly.

Half a battalion from the Osaka garrison troops will be stationed at Fottori in the province of Iuaba.

Mr. AT-BARA, chief retainer of Mr. Shimadzu, arrived in Tokio recently.

The *Mai-nichi-shinbun* says that seven men-of-war said to belong to Mr. Shimadzu, are anchored off the coast of Boshu.

The *Hochi-shinbun* has received the following telegram from its correspondent in Kobe, dispatched at 8.35 a.m. on the 25th inst. During the night of the 25th, the *Tokumaru* and her escort anchored in the harbour of Toba, Shima, in consequence of the strong wind and heavy sea prevailing.

THE FINANCIAL STATEMENT AND ESTIMATES.

NOTIFICATION No. 12.

To In, Sho, Shi, Fu, Ken:

It is hereby notified that the following tables of the Revenues and Expenditures for the year between July of the 9th and June of the 10th year of Meiji, inclusive, have been presented by Okuma Shigenobu, Minister of the Finance Department.

SANJO SANEYOSHI,

Daijo Daijin.

20th January, 10th year of Meiji.

According to annual custom, Okuma Shigenobu now presents the estimates for the year from July of the 9th to June of the 10th year of Meiji. At the present time the working of the alteration of the land tax reduces, more or less, the year's revenues, whilst, on the other hand, the expenditures on the whole are much increased, some few items, only, showing a diminution. Indeed, in comparison with past years, the expenditures present a considerable augmentation, owing to large outlays for many hundred different purposes necessitated by the exigencies of the times. Our home productions are not yet sufficiently rich to meet these expenses, nor is trade in a prosperous condition. So it is impossible to levy new duties to provide for them. And when it is found that the revenues, which are necessarily limited, do not suffice to meet the expenditures, the difficulty must be solved by equalizing them in some way. To this end I have prepared comparative tables showing the increase and decrease, as the case may be, of the annual admitted expenses of every public office, and the increase or diminution, also as the case may be, of the revenues of the current and the last financial years. This has been done in order to show clearly the condition of the difference between our annual revenues and expenditures. I forward this statement with the accompanying tables for the purposes of public convenience; and I respectfully express the hope that you will give the subject your serious consideration.

OKUMA SHIGENOBU,

Minister of the Finance Department.

To SANJO SANEYOSHI,

Prime Minister.

INTRODUCTION.

This budget for the 9th year of Meiji is compiled on information collated from minutely detailed accounts furnished by the various government offices. Before proceeding to the budget itself, I will briefly consider it in outline. The method formerly followed in keeping the accounts of this department has lately undergone reform, and the system of foreign book-keeping has been introduced, so that accurate records of the national revenues and expenditures may be preserved. In pursuance of this reform, the accounts of the various taxes are separately kept in order to facilitate the transaction of business; and the entire estimates have been framed upon the new model.

The whole system of taxation throughout the Empire has been thoroughly altered this year, and the holdings of land considerably modified. Hence, to what extent the land tax is increased or diminished, is not yet apparent. But the estimates on this subject have been calculated on the information

furnished to the government from every Fu and Ken.

The taxes to be paid by druggists, only coming into operation this year, the revenue to be derived therefrom has been estimated very roughly.

The expenses of maintaining the Imperial Palace and providing pensions for members of the Imperial family, have hitherto been supplied out of the sums set apart for the Imperial Household. But from this year forth, they will be separately allowed for. Comparison of the expenditures of all departments for the current, with those of the previous year, will easily show how the increase or decrease apparent may be accounted for. Thus, it is evident that the business of the Home Department (Naimu-sho) has been greatly extended; the number of people in the Rikugunsho, (War Office) the vessels of war and the sailors at the disposal of the Kaigunsho (Navy Department) much increased, while the mines of the Kobusho, the Stamp Office of this department, the provincial Saibanshos, and the land tax office have all required extensive additions to their staffs. Further, the Police, Public Works, and the necessity of making new and repairing old dykes have involved much increased outlay.

The cost of construction of the new Imperial palace is estimated at about one million yen. The works will be commenced this year and finished within five years. The amount required this year for this special purpose is shown in its proper place in the table of expenditures.

An amount provided for contingencies, some other items, and especially one providing for loans to the people will be found in the table. The reason of the reduction in the amount paid on the debt owing to the country is, that pensions returned, and monies to defray domestic debts owing to the government, are funded. An increased sum has been paid towards the reduction of the foreign debt of the country. I now hasten to submit the following estimates showing the increase or decrease in the several items of the annual revenues and expenditures.

COMPARATIVE TABLES OF THE REVENUES AND EXPENDITURES FOR THE EIGHTH AND NINTH YEARS OF MEIJI, SHOWING THE INCREASE OR DECREASE IN THE SEVERAL ITEMS.

TABLE I.

REVENUES.

SOURCE.	9TH YEAR.	8TH YEAR.	DIFF'NCE.

Total Estimated Expenditures...	62,993,847	68,498,506	Decrease 5,504,659

In the foregoing table the Revenues and Expenditures for the 8th and 9th years of Meiji are compared and the amounts are arrived at by careful calculation. In some particulars the 9th year shows an increase over the preceding year, and in others the reverse is the case. In both revenues and expenditures we have a perceptible decrease. With reference to the amount lent to the people (described in the table as Loans by the Government) I have given an explanation in my Introduction, and the large decrease in other items of expenditure is also explained, as is the very large increase in the expenditures for the local governments. As already said, in this table the 8th and 9th years of Meiji are compared. The reason why the 7th year is not included in the comparison, is that its accounts have not yet been accurately compiled. In future years I will show the estimates for the then current year in comparison with the revenues and expenditures of former years, indicating the increase and decrease in the various items.

TABLE III.

ESTIMATED REVENUES OF THE YEAR, FROM THE 7TH
MONTH OF THE 9TH, TO THE 6TH MONTH OF
THE 10TH, YEAR OF MEIJI.

1.—Duties of the 1st class	1,762,554

Out of this latter sum, yen 72,775. is reserved for Contingencies in Government Offices, and yen 9,382 485. for possible loans.—*Tokio Times*.

THE GOVERNMENT AND THE LAND TAX.

Certain writers contend that the recent reduction was effected on account of the rising of farmers armed with bamboo spears: that is to say, that, although those weapons did not directly induce it, yet they were its indirect cause, and that thus the people compelled the passing of the measure by the Government. This is making a very superficial estimate of the matter by merely tracing the facts of, and marks left by, the insurrection, and is not the profound deduction of a writer who can follow up effects to their cause. Such an argument does not at all differ from the jocular expression "With a bamboo spear we can easily dig out two and a half per cent." Naturally the bamboo spears appear to have hastened the matter to some extent. But it is absurd to regard them as the immediate cause of it. Relegating the question whether the new system of taxation is or is not adapted to Japan to another day, we will merely say that, when the government passed their edict altering the mode of taxation, they believed it to be suitable to the condition of the country, and practicable in its working; and they calculated probably upon some outcry when the system should be carried into effect. And if, when

it came into operation, the people of some two or three prefectures rose in insurrection, is it likely that authority would therefore change its plans suddenly? If Government were to modify their schemes every time they encountered some public outcry no new laws would ever be framed. But, taking events as they happened, the theory falls to the ground. The first troubles occurred in the fifth month last year and were confined to some villages in Kishiu. After a few days they were pacified. This was a trifling matter. The trouble in Haraki originated in November last year, and, spreading through many counties, was of great importance, but even this was put down in a few days. We cannot regard these events as so serious that the government was frightened by them and changed their plans in consequence. The last rising of the farmers was that of Ise. It spread through Shima, Ise, Owari and Mino. For a time it seemed somewhat considerable. But it happened at the very close of the year, while the Imperial edict for the reduction was issued on the fourth of January, or the very first day devoted to public business, in the new year. Thus it is clear that the question of reduction was already settled last year. Although the ordinance evidently emanated from the Emperor himself, yet, previous to its issue, there must have been some consultations among the members of the Cabinet for the calculation of the amount of reduction in the yearly income, and the proportionate diminution of the funds expended by the various departments. More than ten days were necessary to settle these affairs. Hence, we can safely conclude that, before the intelligence from Miye Ken arrived, the determination as to the reduction had already been absolutely arrived at by the Government. However, as we have said above, the insurrections in the various districts occurring at the time when the reduction question was yet under deliberation in the Cabinet, may have accelerated the issue of the ordinance. Yet we cannot say that the insurrections were even the indirect cause of it. To the question, "What then was the cause?" we answer that the Government, having tried for some years the new mode of taxation, and observed the real hardships borne by the people, thought that there could be no other way to relieve them than through the reduction of the tax, and saw that, in order to realize this, some great economical changes must be made in the various departments. This was the real cause of the change. Advancing a step further, we shall not be in danger of going far wrong if we say that, since the Emperor heard, through the local officials, of the hardship of the farmers, especially during his progress through the northern provinces, when he personally witnessed their deplorable condition, as for instance when to his great grief the Kenrei of Iwade showed him a farmer's patched dress made of the feathers of *azura* and his hood of leaves of *akaza*, he determined upon the promulgation of this ordinance. When we take all this into consideration, and applaud the reduction, we need not ascribe it to the bamboo spears but to the fact that the government considered the changes necessary and that the Emperor thought the reduction requisite. But leaving the field to the writers who believe in the bamboo spears, we will turn to something which compels us to laud the action of the government still more. We reflect on past events and find that they have given proof of unlimited power. They can easily and immediately crush any rising. Therefore they might fall into errors and not reflect upon or correct mistakes. Even though they might find that they had been in error, when convinced by such arguments as an insurrection of farmers armed with bamboo spears, they might not introduce any innovation, lest they should be accused of weakness; for the public might think that they were influenced by the insurrection. But our Government would not entertain any such mean idea, but executed a great change without regard to what motives might be ascribed to them, a thing which is not commonly done by any government. This makes us praise them more. There is such a great work as has rarely been seen in any year or any country. The administration of the year of Meiji must be called a godly one. —*Nichi Nichi Shinbun*.—January 23.—(Tokio Times Translation.)

A LARGE school building for the education of young nobles will shortly be constructed at Nichome, Nishikicho, Tokio. Her Majesty the Empress Dowager has given 30,000 yen, towards defraying the expense of its construction.

(From the *Hochi-shinbun* of 23rd and 24th instant.)

The reduction of a half per cent in the land tax was made by the Government for fear that the people would be distressed if the tax was not reduced. The establishment of *johaise* (store houses for rice) by the Government was considered advisable in case the people should find much difficulty in paying the amount of the tax in coin. During the present month the Government has manifested its desire to promote the welfare of the people by its illustrious action in connection with the land tax. We will now proceed to discuss the manner of collecting this tax.

According to various rumours the farmers are much afflicted in consequence of having to pay the Land Tax in money, as the market price of rice is so very low this year. Wishing to rescue the farmers from this hardship, the Government has licensed the exportation of rice, hoping that such a course of action would result in the price becoming higher. Fearing however that this would not have such a beneficial result as was required, the Government has also resolved to establish *johaise*.

We cannot say whether this rumour is based upon a reliable foundation or not. But premising it to be true, we suppose the Government will purchase large quantities of rice. Will this action enable the farmers to obtain money to pay the land tax with? And will the Government be able to raise the price of rice so high that the farmers will find payment of the Land Tax in money no inconvenience? And where will the Government get the money to purchase the rice? And on what principal will the buying and selling of rice be carried on? We will not discuss these questions at present. If the principal object of establishing the *johaise* is to enable the farmers to pay the land tax in money, we certainly think there must be some other plan which would prove more beneficial to the farmers.

The most convenient system of payment of the land tax in our country is both in rice and money, according as to how the individual provinces are able to pay. It would be very inconvenient for the cultivator of tea, mulberry, vegetables &c., to pay the tax in rice. If the law compelled him to furnish so much rice, he would have to sell his productions and purchase the necessary quantity of rice with the money, which would cause him much trouble. It would be much more convenient for such a person to pay the tax in coin. But the owners of rice fields could easily pay the tax in rice; so if the Government is desirous of assisting the farming population to pay the tax, the best way to do it is abolish the law making it necessary for the tax to be paid in money, and establish a system by which each province can pay the tax according to its convenience. If it is decided that the tax shall only be paid in specie, the result will be to injure the circulation of money and increase the poverty of the people.

The Government is saved much trouble by the payment of the tax in money, just as the farmer is if he is permitted to pay it in rice. Still it is not very curious that the Government should prefer the tax being paid in money, notwithstanding it being an affliction to the people. But since we are given to understand that the farmers are seriously inconvenienced in consequence of having to pay the tax in money, we do not think the convenience of the Government should be considered at the sacrifice of the interests of the farmers.

Is it considered that the establishment of *johaise* and the purchase of large quantities of

rice by the Government will enable the farmers to pay the tax in money? If this is the case would it not be much better to collect the tax direct from the farmers in the shape of rice which the Government could sell? This would be much more convenient to the farmers than having to pay it in coin. By one of these methods the farmers first receive the money from the Government and afterwards pay it back again; while by the other method the farmer pays direct in grain. Consider well which of these two systems are the most convenient.

If the establishment of the *johaise* is to enable the farmers, by raising the value of rice, to meet the requirements of the Government, it is not easy to estimate the result of such a course of procedure, as the low price of rice is caused by the quantity of money which flows from the provinces to the capital, whence but little of it returns. The farmers pay annually large sums of money into the local offices, and from the local offices it is forwarded to the Central Government. How much of it ever returns? Through this, the circulation of money in the provinces is very limited. And it is clear that this scarcity of money in circulation in the provinces is in consequence of the land tax having to be paid in money. Even if the market price of rice be increased through the establishment of the *johaise*, the circulation of money in the provinces will not be increased, as the money the farmers receive for their rice will have to be given to the Government in payment of the land tax. And even a fool could understand that the farmers would not be benefitted by the forced rise in the price of rice. The only method therefore by which the difficulty can be obviated and the farmers relieved from their distress, is to permit them to pay the amount of the land tax in rice; and then the money that is in the provinces will remain there. The system of payment of the tax is of great consequence to the provincial people but not so to the Government. What is there to fear from the farmers paying the tax in rice? If they pay in money they want that money themselves, and if they pay in rice the Government wants money. The question is therefore shall the Government be benefitted at the cost of the farmers. The farmers find it difficult to support themselves in consequence of being compelled to sell their produce so hastily, as they have but small capital at their command. On selling their rice the farmers are pressed on the one hand by the officials for money, while on the other hand they have to contend against the merchants who want to purchase as cheaply as possible. This is very detrimental to their interests. But the case is different with the Government. It always has money; and even if money has to be raised by the sale of rice, the Government is not so much affected as the farmers would be. The Government can obtain money without much difficulty, but private individuals cannot; and it is not right for the Government merely to consider its own convenience regardless of the trouble and affliction it in consequence brings upon the people.

Some persons say that the payment of the tax in rice is much more troublesome than the payment in specie, which is the most convenient. If we only regard the convenience of the Government and not that of the people it may be so. But let us look at the affliction that will be brought upon the farmers through only considering the convenience of the Government. In such a case the Government would be instrumental in bring-

ing distress upon the people. And in our consideration of the convenience of the Government shall we disregard the sufferings of the people?

Others contend that if the tax is paid in rice the Government will not only be put to much inconvenience but will be liable to pecuniary loss. It is unnecessary to point out the fallacy of such an opinion as it is apparent, because, if the payment of the tax in rice should happen to reduce the income of the Government, a notice will soon follow ordering an increase of the tax. Is it right that the Government should become enriched by the payment of the tax in money?

It is also argued that, as the Government pays the officials their salaries in money, the payment of the tax by the farmers in rice would entail much inconvenience as well as loss: therefore as a matter of necessity the tax must be paid in money. This view may be right but we cannot see it. Whether the tax is paid in rice or in money will be immaterial to the officials, as their salaries will not be affected thereby. And since there will neither be advantage nor loss to the officials whether the tax is paid in money or in rice, we see no reason why the people should be restricted to pay it in money. We have heard that on the formation of the present Government the salaries of the officials were paid in rice; and that it was abolished on the idea that when the price of rice was high, it was an advantage to the officials and loss to the people, and therefore the salaries of the officials were paid in money. We are not certain that this was the cause of the change but think it very probable. But if it is a matter of indifference to the officials whether they are paid in coin or rice, it will be much more convenient to pay them with the latter. The quantity of rice they should receive should be in accordance with the price of that article at the time their salaries are paid. In ancient times the officials received their salaries in money, the amount of which was calculated according to so many koku of rice at the prevailing price. It is also a good plan to pay half of an official's salary in rice and other half in money.

The only inconvenience attached to paying the officials in rice is that of transporting it to their places of residence. But this may easily be obviated by the issue of Government tickets. And if these tickets are allowed to circulate among us, like our present paper money, the people would be glad to avail themselves of the advantages offered by the medium of this new currency; and none of the officials would be at all inconvenienced in consequence of receiving those tickets. So we think, that if the farmers are allowed the option of paying either in rice or money it will be much the better way. We hope, for the sake of the farmers, that the Government will see fit to adopt this system. Should it do so the land will have to be assessed and taxed according to its value; and the quantity of rice to be paid must be regulated by the price of that commodity when the tax falls due. Thus, when there is a bountiful harvest the farmers will have to give a larger quantity of rice than when the harvest is bad, for in the former case it will be cheap and in the latter dear; and such a method of payment will be an advantage to them.

Though perhaps this system may cause the Government some trouble, yet that trouble will be more than counterbalanced by the benefit which will be derived by the farmers.

We have been induced to write this article through a conversation we held with a person who has recently arrived from the provinces, and who portrayed the sufferings of the

farmers in consequence of the drainage of currency from the rural districts and their inability to meet the demands of the Government. We leave our views open to criticism from those who are acquainted with the condition of the provinces.

Before laying down our pen we will just recapitulate the principal points of our argument.

1st.—That the payment of the land tax be both in money and rice; the cultivators of rice to pay in that article, and others to pay in money; though if the rice grower desires to pay in coin he may be allowed to do so.

2nd.—That the land be assessed according to its value; and that the quantity of rice taxed shall be regulated by the market price.

3rd.—That the officials be paid part in money and part in rice.

4th.—That rice tickets be issued to the official instead of the quantity of rice they are entitled to.

THE *Choya-shinbun* publishes the following notification, to In, Sho, shi, Fu, and Ken.

It is hereby notified that during the absence of the *Daijo-daijin*, I, Tomomi, have been appointed by His Majesty the Mikado, to act in his place.

IWAKURA TOMOMI,
Udaijin.

25th January, 1877.

THE *Nichi-nichi-shinbun* publishes the estimates, which have lately been presented to the Prime Minister by H. E. Mr. Okuma Shigenobu, Minister of the Finance Department, and comments on them as follows:—

If they have given their consideration to the subject, our readers must have observed the remarkable benefits of the scheme. The tables were composed during last year, and, as the estimates were prepared before the issue of the Imperial edict on the reduction of the land-tax, both the revenues and expenditures may differ from those detailed in the table. The land-tax in the 9th year of Meiji (1876) is yen 46,556,743, according to the last year's estimate. Now, one-sixth of this amount, or about yen 7,759,457, having been abated, the land-tax for the 10th year of Meiji (1877) amounts to about yen 38,797,285. The comparative difference for three years is thus shown.

1877.	1876.	1875.
Yen 38,797,285	Yen 46,556,743	Yen 51,505,967

Thus the land-tax has been reduced by yen 12,505,967. Further, the government has considerably reduced the yearly expenditures of every department, or by a total of yen 7,060,312. So this diminution of expenditures will, within yen 700,000, meet the reduction of one-sixth of the land tax; and the revenues and expenditures will balance. When the Minister of the Finance Department prepared his estimates, there was no question of the reduction of taxes under consideration by the government. But Mr. Okuma says in his introduction that the expenditures must be reduced to keep them on an equality with the revenues, which will be considerably diminished. This is reasonable. We observe two or three matters in the estimates which demand comment, but, as we have no room to notice them in to-day's paper, we will postpone the matter to some other day.

(From the *Nichi-Nichi Shinbun*.)

A heart-rending account of the desertion in the middle of the Pacific Ocean of three Japanese, is published in our issue of to-day (Jan. 26th.) When we were told the story

we trembled at the cruelty it showed; and our hearts were filled with sympathy as we are sure those of our readers will be on perusing the narrative.

From the accounts related, it would seem that the vessel was named the *Hisayoshi-maru*, and was of foreign construction, schooner rig. She was manned by seven men and was capable of carrying 350 koku. It will therefore be seen that the vessel was only a small one, and only intended to ply along the coast. On the 1st of December the *Hisayoshi-maru* encountered very stormy weather when off the coast of Hakodate, and all the efforts of the seamen could not prevent her from drifting towards the coast. One mast had to be cut away and an enormous wave carried away the rudder. The vessel being thus disabled, the crew who were greatly fatigued became discouraged and gave themselves up for lost, allowing the vessel to be blown in whatever direction the wind pleased. While she was in this position the *City of Peking* hove in sight, and, perceiving the condition of the schooner, bore down upon her. This was on the 19th inst., and it is estimated that the ill-fated vessel was at least twelve or thirteen hundred English miles from the shores of Japan.

On the *City of Peking* coming in sight, the shipwrecked mariners hoisted signals of distress. The steamer hove to and despatched a boat to the schooner, and four of the crew availed themselves of this opportunity of saving their lives and were taken on board. But, alas! three out of the seven refused to quit the vessel, and the *City of Peking* steamed away leaving them to their fate.

As we have already mentioned, the mariners had given themselves up for lost. It may therefore be imagined how they started with joy at the prospect of deliverance, when the American steamer appeared. But those three obstinate fellows from the uncivilized provinces, foolishly considered that they were not justified in appearing before the owner of the vessel alive after having deserted her and the cargo in the middle of the ocean. They desired that the *City of Peking* should tow the schooner to Yokohama, and resolved that, if their request was not acceded to, they would remain in the vessel and perish with her; but they desired the other four men to go, as it would not be any disgrace for them to appear before the owner of the vessel alive. Is this not very sad intelligence?

Some persons will probably say that the Americans were cold-hearted to thus leave these three men to perish on a disabled vessel. But it must be considered that the Americans could not understand the language of the shipwrecked men, who, when they were requested to embark on board the steamer, shook their heads in token of their desire to remain; so the Americans were compelled to leave them behind. We cannot blame the conduct of the Americans, but we must deprecate the conduct of the Japanese passengers on board the *City of Peking*, among whom there were seventeen or eighteen officials and private persons returning from the Philadelphia Exhibition. We are sure some of them must have been able to understand and speak more or less of the English language; and, though it might not have been a point of duty, they might have desired the Captain to lower the life-boat and have gone themselves and endeavored to persuade the men to leave their vessel. If they had requested the Captain to do this he would have granted their desire, and the three men would have been saved. And if the three men resisted all persuasion, they should have used force and compelled them to quit the ship. This would

have been a benevolent act on their part. Have they done all that possibly could be done to save these men? If it is considered that they have, then it is useless saying any more about it. But if they have not, then they may expect that their conduct will be blamed. We are very sorry for those three men whose sense of duty to the proprietor of the vessel would not permit them to save their lives when the opportunity offered.

Hizen-no Kuni is a large and fertile province in Kiushiu, including within its boundaries Saga, Nagasaki, and Karatsu. Formerly it was called Hino Kuni, or "Five Provinces." As Hizen-no Kuni means "fertile province," probably the name was changed on account of the fertility of the soil, and the abundance of rice, wheat, and other cereals which were, and are to the present day, raised; to say nothing of the coal in which the province abounds, and the manufacture at Arita of the best porcelain obtainable in Japan. This part of Japan seems to have been peopled much earlier than the adjacent provinces, as evidences bearing out this surmise exist at the present day. There is a village in this province called Tashiro, in the neighbourhood of which are to be found rude huts, built of massive rough stones, some of which are almost covered with earth, while others stand as much exposed as when they were occupied in ancient times. The entrance to these rude huts is through an aperture in the side, while a huge stone working on pivots in the sockets of others serves for a door.

The largest of these huts is to be found on the domain of a person named Kusano Sakunoshiu at Tashiro. It consists of two rooms of about four yards square, and is constructed of immense stones; and the roof, which is flat, is also of stone slabs. It will easily be conceived that the inside is very gloomy when we say the only aperture in the walls is the hole at the entrance serving for a door. Near where the hut is situated, there is a hill called Shogenzizuyama, which some ten or twelve years ago was beautifully adorned with groves of pine trees, the top of which is table land. The Government thought this would make a splendid place for a parade ground for the troops if it were cleared of the pines and levelled somewhat, and gave orders for the necessary work to be performed. During the process of levelling, a stone hut similar to the one described above, only of smaller proportions, was discovered intact, completely buried in the earth. In this hut, which was only two yards square, were found two roughly manufactured porcelain water pots, rounded at the base, and a brass ring. It is supposed that these articles were the property of the last residents in that dreary hut.

At about 10 p.m. on the 28th ult., a fire broke out in the town of Shidzuoka on the Tokaido, and was not extinguished until about fifteen houses were burned to the ground.

MR. UYEMURA, *Gon-Chiji* of Kioto-fu, was promoted to be *Chiji* on the 26th ult.

200,000 *koku* of rice from the store houses at Nanba, Osaka, have been exported to foreign countries by the local authorities.

THE *Hochi-shinbun* says that a telegram from Osaka reports that, on the 30th ult., the castle of Osaka was closely guarded by the troops; but the reason for this precaution is not stated.

THE *Hochi-shinbun* publishes the following in reference to H. M. the Mikado's voyage to Kobe:—

On the 25th ultimo the weather was stormy, and the Mikado's vessel was obliged to anchor

in the harbour of Toba, Shishu, where she arrived at about 11 o'clock a.m. On the following morning, the Governor of the Mie-ken paid his respects to the Mikado on board the *Takawo-maru*. His Majesty landed at about 1 o'clock p.m. and passed the night at the Buddhist temple of Yoanji. The weather was fine on the 27th, and at 8 a.m. the Mikado re-embarked on board the *Takawo-maru*, which left soon afterwards for Kobe escorted by the *Seiki* and *Kasuga-kwan*. On their nearing the port the *Riujo-kwan*, which arrived before the others, fired two guns to announce the arrival of the Emperor. On land all were ready for his reception. Thousands of pupils of the primary schools were formed in ranks under the command of their teachers. All were in holiday dress. Mr. Morioka, Governor of the Hiogo-ken, went alongside the yacht in a steam launch. The Mikado landed at the third hatoba. Thence, he proceeded direct to the post office, where he took a short rest before leaving for Kioto in the 2.20 p.m. train. On the 31st ult. he visited the local offices, the Goshu of Omiya, and the Exhibition.

A TELEGRAM, received by the *Choya-shinbun*, states that the festival of H. M. the late *Komei Tenno*, father of the Mikado, was celebrated at 10 a.m. on the morning of the 30th ult. with great pomp, at the sepulchre of the deceased monarch. The Mikado, the Empress, and Empress mother were present; as was also a vast crowd of spectators.

ACCORDING to the *Mainichi-shinbun* all letters sent to the Kagoshima-ken during some days past have been opened on the road. A number of samurai whose correspondence has thus been tampered with have complained to the proper authorities.

RICE which was very cheap at the end of last year has risen in price considerably. Large quantities are being sent from the villages round about Tokio into that town, where they find a ready purchaser in Mr. Itohei, a merchant and one of the directors of the Mitsui Company.

THE *Mainichi-shinbun* says that an iron underground strong-room is shortly to be constructed at the offices of the Finance Department. The iron plates of which it is to be made will be, it is said, fourteen inches in thickness. An immense safe is to be placed inside this room.

DURING the past year, one hundred and seven bridges were built in Osaka.

THE streets between the Kiobashi and the buildings of the Rikugunsho in Osaka will shortly be lighted with gas.

THE *Nichi-nichi-shinbun* publishes the following notification issued by H. E. Mr. Iwakura Tomomi, *Udaijin*, on the 29th ult.:—

It is hereby notified that all the expenses of the local offices, and for the construction and repairs of public buildings, which have hitherto been borne by the people under the several jurisdictions, will henceforward be paid by the government.

A TELEGRAM received by the *Hochi-shinbun* says that on the 2nd inst., H. M. the Mikado visited the Shusho-in (library) and pasture grounds.

On the morning of the 2nd inst. at about 1.30 a fire broke out at Kita-shinbori-cho, Tokio.

THE *Osaka Nippo* mentions that the Mikado's visit to Kioto will cost each of the citizens about three yen for flags, lanterns, and other decorations.

MESSRS. OSHIMA and Nakaye, the well known scholars, are said to be going to establish a law school.

MR. TACHIBANA, of the *Tohoku-shinbun* in Sendai, has been repeatedly summoned to appear before the local Saibansho. But in spite of this his paper is flourishing and improving.

THE *Mainichi-shinbun* says that Messrs. Shibusawa and Masuda have gone to China on behalf of the First National Bank and the Mitsui Bus-sau-Kuwaisha to transact the business in connection with a loan to the Chinese Government of a quantity of rice, to the value of 3,500,000 yen and timber and tea to the value of 6,500,000 yen; which the Chinese Government is to return in ten annual instalments. In consequence of this, rice has risen very high. On the 1st instant the price in Kakigaracho, Tokio, rose in the course of a few hours from 5.30 yen to 5.70 yen. Yesterday the price rose still higher, and there is a possibility of it soon reaching six yen.

On the 2nd inst. Hidszka, of the *Yokohama Mai-Nichi-shinbun*, was condemned to one month's imprisonment and fined ten yen at the Yokohama-Saibausho, for having infringed the press regulations.

ABOUT one a.m. on the 2nd inst. a fire broke out at Kita-shinpori, Tokio. Unfortunately a strong wind was blowing at the time and the flames spread with such rapidity that seventy houses were soon destroyed. Mr. Yamaguchi, a *kuwazoku*, has subscribed one hundred yen towards the relief of the sufferers.

THE first number of a native journal called the *Sekkai-shinpo* has appeared in Kobe.

MR. KATO-Hiroyuki, late *Gikuwan* of the Genro-in, is appointed Director of the Tokio Kaisei-Gakko.

On the 11th ultimo, a man named Hirada was arrested in the Fukushima-ken. He was a friend of Mayebara, the ringleader of the Yamaguchi insurgents whose example it is stated he wished to follow by an attack which he had already organized upon the Yamaguchi Kencho with a chosen band of *shizoku*. He was betrayed, however, and arrested with several of his associates.

THE amount of duties collected in the Yokohama Custom House during last month was yen 80,000.

(From a Correspondent of the *Choya Shinbun*.)

Which is the most important for us to do at the present time, build ships or construct railways? In glancing over the maps of Europe and America we observe that the various countries are interwoven with a net-work of railway lines which can only be compared to the intricate thread of a spider's web. America can boast of possessing between 17,000 and 18,000 miles of railroads, and England has over 5,800; France has 4,130 miles, Prussia 2,830, Austria 1,560, Spain 1,270, Belgium 790, Sweden 430, and even such small countries as Holland and Portugal have between 200 and 300 miles each. How fortunate those nations must be!

The construction of a railway is the foundation of a flourishing trade, because it increases facilities for transportation of merchandise; and the wealth of foreign powers has been greatly enhanced in consequence of their railroads. But in our country the only lines we have are those connecting Tokio and Yokohama, and Osaka, Kobe and Kioto. These are inadequate to the requirements of the country. But a careful consideration shows that the construction of railways is not so necessary at the present time as the building of ships. Our reason for saying this is on account of the nature of our country. It con-

sists of a group of large and small islands, between which it is impossible to hold communication except by water.

The vessels we have are rough in construction and so feeble as to be entirely unfit to cope with rough seas and stormy weather; and are not to be compared with foreign ships. If they happen to be caught in a storm they are nearly always wrecked, and valuable lives lost. How shall we be able to promote the commercial interests of our country unless we alter and improve the plan of our shipping? In fact the time has arrived when we should change the form and increase the strength of our vessels. And how shall we change them? In western countries schooners are in general use. They are large and strong enough to resist the dangers of navigation, and there is but little fear of their being wrecked. Vessels of this form would be of inestimable value to the extension of our trade and the promotion of our wealth; and it is evident that we are more in want of them than railways.

Western nations are so situated that railway communication is an absolute necessity. But with us it is different. In order to trade with America or France it is necessary for us to have ships; and the importance of our building good ships is therefore apparent. The geographical position of our country renders it imperative for attention to be given to ship-building before the construction of railways, which may be carried on when our shipping requirements are supplied.

H. M. the Mikado left Kioto for the tomb of Jimmu Tenno, on the 7th instant, where he will worship. On returning to Kioto he will stay there about one week and then return to Tokio.

The *Nichi-nichi-shinbun* says that the Eigo Gakko in Aichi, Hiroshima, Niigata, Nagasaki, and Miyagi, and the normal schools in the first two Ken, under the jurisdiction of the Monbusho, have been shut; and that the female normal school and library in Tokio is also going to be closed shortly.

Her Majesty the Empress will return by sea to Tokio.

The Tenth National Bank, with a capital of yen 1,500,000, was opened in Kofu, Kai, on the 1st inst.

About two hundred farmers in Echū, Ishikawa-ken, have held a meeting at which they murmured at the alteration in the land tax. On the 26th ultimo, an order from the district officers induced them to return peaceably to their homes.

The *Hochi-shinbun* complains that no Japanese lawyer has sufficient knowledge and talent to conduct the case of the Tokio Fu against the Blockleys now pending, and that in consequence it has to be intrusted to an English practitioner.

Two Japanese Companies will be established, one at Hongkong and the other at Shanghai, by Mr. Shibusawa, chief agent of the First National Bank in Tokio.

In Kioto the first number of a journal, named the *Kioto-shinbun*, was published on the 30th ultimo; and two others, the *Kioto-Nichi-Nichi-shinbun* and *Kioto-shinshi*, will shortly be published.

The Lewkewians are steadily improving their relations with Japan, with a view to pushing a trade between here and their own islands; there are now about one hundred of these islanders settled in Osaka, enquiring into all matters concerning trade,

and it is surmised that by next summer they will have established a firm basis of commercial operations.—*Nippon Standard*.

From the *Osaka Nippo*:

The amount of stamp duties collected in the Osaka Fu during the half year ending with last December was: Revenue stamps and forms, yen 16,781.50; forms for appeals to the Saibansho, &c., yen 2,633.50; tobacco stamps, yen 1,092.70.

A report from the Eastern district of Hiroshima Ken says the people of Onomichi, Tomo and Fukuyama are very cunning; the telegraph offices stand on Kintomiza and the school and ward office are on Nakayashiki Kuto; Onomichi contains many Buddhist temples, but the people are not of a good disposition; the wards of evil repute are in a bad way and passengers hear no sounds of music; at the theatre in Fukuyama a performance is being held of the murder of a postman in O-ushitoge, but visitors to it are few; in Tomo the takes of the fish called *Ida* are large at this season, and the people hail with gladness the reduction of the land tax.

The day and night police returns of Osaka Fu for the 23rd instant, are: robbery with arms, 1; secret thefts, 21; attacked by a pickpocket, 2; money stolen, yen 96.25; grain stolen, 2; clothes stolen, 59 pieces; various articles stolen, 151; secret thieves arrested, 9.

In connection with the reduction of the land tax the editor has something to say to those who desire to become officials. Office is not a school, and official rank is not heritable property—were it heritable the people would be distressed. If any think official rank to be heritable, they will be disappointed. Intelligent and able men may be in the official ranks for a long time and obtain inheritable property. Those who are not so intelligent must lose their rank, though they may think it to be permanent, when official changes take place. Some say the most profitable business is to become an official, while the really great profitable business is private business. But these great private businesses are not seen in Japan, because the gentlemen decline hard labor and like to live easily. If they give up the idea of becoming officials and make up their minds to promote business, they will find in the latter their profit.

It is said that when the Mikado is in Osaka he will visit the schools to inspect the studies of the children.

In the Mameda (Osaka) station a seat has been prepared for His Majesty, where he will receive the officials and the Kucho and Kocho who are to pay their respects to him. It is said that on the occasion about twenty flags will be hoisted.

On the 25th ultimo the first festival of the Tenjin of Temma was held, but the weather was bad and the visitors few.

On the 5th instant the opening of the Railway was celebrated. Four of the most distinguished children were chosen from each school, and the school officials led them into the presence of His Majesty, to offer their congratulations and wishes for his happiness.

It is said that paper money of 5 sen denomination will be issued from next March.

It is reported from Bingo that some time ago the people of Numokumagori, Bingo, were very much disturbed about the payment of the land taxes, but that since the reduction they have settled down and are in joy instead of sorrow.

On the 23rd ultimo twenty-four policemen were appointed by the Osaka Fuchō.

The police returns of the 24th ultimo are: robbery with arms, 1; grain stolen, *sho* 1.3; clothes stolen, 5; various articles stolen, 4; armed robbers arrested, 4; secret thefts, 19; money stolen, yen 4; clothes stolen, 57; various articles stolen, 45; secret thieves arrested, 6; drowned, 1; minor criminals, 4.

The ex-Rei of Nara Ken, named Fujii, was popular in the Ken, and since the abolition of it he has lived in Mitsumura and purchased land. In the day time he tills the ground and in the evening occupies himself with reading, writing and drawing. He has been promoted to the Jugoi, at which the people who used to be under his jurisdiction are glad. When he was sick the people were very anxious about him, offering prayers for his recovery and visiting his house in great numbers every day.

In Okayama the school for foreign languages had fallen into a decaying state, but was restored by Hadano, Sugiyama, Awoki, &c.

In one district of Yamato during the drought last year all the *daikon* seeds perished.

Yoshimoto of Sonezaki has bought the cremation ground at Mameda for yen 500 and has planted it with peach trees. Many persons are now erecting temporary tea houses there, for the accommodation of those who will come to see the blossoms.

A man has proposed a scheme to cultivate some waste land in Gamano, Funaigori, Tamba, with an area of 150,000 to 180,000 *taubos*. If done by hand labor 9,000 yen will be required, but if by machinery 3,600 will suffice.

Near the prison in Osaka there is a house which exposes the sign-board "Firewood and charcoal sold here," while billiard playing is going on inside.

It is rumored that the Captain of the *Nevada* will go home and bring out two American Mail steamers, and the Mitsu Bishi Company are again "suffering from headache."—*Huigo News*.

(Translated from the *Choya-shinbun*.)

SCENE IN A NEWSPAPER OFFICE.

Proof Reader.—"I have finished my tiffin, which was a very good one, and now I will commence my work upon the 'leader' and the 'correspondence'."—(reads) "With regard to the present prospect of public affairs we deem it our duty to consider most hotly"—again such a mistake! the compositors are never careful enough to distinguish between the characters for 'closely' and 'hotly,' notwithstanding my repeated warnings."

Editor.—"Are there any excellent things among the correspondence, that can be published to-day?"

Assistant Editor.—"Oh yes, there are so many that I don't know which to take, but I think this one is tolerably good, though the last part of it seems a little dangerous."

Editor.—"Well, hand it to me, please; but I will not publish anything, at any rate at my own risk, that has the smell of the jail about it."

Manager.—"Shew me, please. Ah! this is quite safe if we cut off these five columns, but they are the most important part of the article."

Assistant Editor.—"I can assure you this is also very good."

Editor.—"Ah! this is another excellent discourse, but it is a fault of the writer to write so closely on the paper that the compositors are not able to make him out. Will

any of you, gentlemen, rewrite it, if you have an idle hand?"

Servant, (coming up stairs).—Mr. Manager, Sir, here is a letter from the Hiogo Ken."

Manager.—"Ah! from Mr. Hatakenata Hiotazayemon! I have no acquaintance with any such man. What does he want? (opening the letter) 'I am very sorry to receive your repeated requests to pay for your paper, for which I have subscribed, and I beg to inform you that I will send the money through my son Hiotaro, who is going to Tokio, during the next month.' Kotsuk i, take this to the accountant's room."

Servant.—"Yes, Sir. (Turning to the editor) "Mr. Editor, Sir, Mr. Imomura, the porter, begs to inform you that there is another messenger come from Gantetsuji of Azaba, to ask when the writing sent by him yesterday will be published."

Editor.—"He has sent again, eh? Tell him that it shall be published in a few days."

Proof Reader.—"Of this character we have no type. Shall I fill the space up with another character of the same meaning, or shall I send to Hirano for it?"

Manager.—"That writer always employs such troublesome characters; it is the habit of all learned writers to do that, though. Well, fill its place up with another of the same meaning."

Servant (coming up again).—"Mr. Editor, Sir, a retainer of a Kwazoku, Hana-no-Shita Nagai, begs a minute's interview with you, Sir."

Editor.—"Oh, I know, he has come to have an item corrected which we had published about him. I am busy now; will any of you gentlemen who may be at leisure see what is the matter with this man?"

Servant.—"And here is a bill, Sir, from the eating house."

Everybody.—"Nobody from this room has ever been there! Show the bill. Ah! this is for some of the composers, below. Take it there."

(The clock strikes four and some reporters come back.)

Manager.—"Well, what news?"

Reporter.—"There have been a good many Government proclamations issued, Sir."

Assistant Editor.—"That is a bother. What shall we take out of the paper to make room for them, Mr. Manager?"

Manager.—"Well, withdraw that second correspondence."

Editor.—"Ah! but that is the one which has stood over so long that we have been frequently dunned by the writer for the publication of it, so we must have it published to-day."

Manager.—"Then withdraw some of the foreign items."

Proof Reader.—"Any amusing items?"

Reporter.—"Oh yes, there is one about a servant, driven away from her master."

Assistant Editor.—"Another farce of yours, eh? You always bring an amusing item, but half of it is not true."

Reporter.—"I beg your pardon, Sir. Look at my notes Sir."

Editor.—"Well, what next?"

Reporter.—"Here is another, Sir."

Editor.—"What! Mr. Sukeno Shiokusho, a shizoku of Tokio Fu, residing at Shibaguchi; Ichomo, Tokio, got very drunk last night, and having assaulted a policeman he was lodged at the police station, where he remained till this morning, when he found himself sober and apparently conscience-struck; having paid a fine, he was allowed to proceed home. This is a good item; we will have it published to-day."

A Newsboy (coming hastily).—"Please, Sir, don't do it, Sir; that shizoku is my own uncle! Please don't, Sir!"—*Idem*.

THE REDUCTION IN THE LAND TAX.

Since the notification was published announcing the reduction in the land tax we have heard various opinions propounded concerning its wisdom. Some of those opinions were in favour of the reduction, considering it a measure of national advantage, while others are very sorry at what they look upon as a proof of the poverty of Japan. . . . We happened to overhear a conversation between two noblemen on Sunday last, on the subject of the effect likely to be produced on society by the recent notification of the government. They talked as follows:—

A:—The measure will tend to lessen the expenditure of the government, from the fact of its diminishing its income; and it is only proper to dismiss all unnecessary officials, in order to save expense. But in such a case as the present it is useless to pass opinions on government affairs, as there are officials whose place it is to manage them. For my part I think it quite right to diminish the number of officials in the employ of the government, and also to reduce the salaries of those who remain, as by those means the expenditure of the government will be lessened. Look at the condition of the country at the present time. There is much that ought to be done, but only a little can be undertaken. Still, though the government is right in dismissing the officials, those men who are discharged will find it very hard to obtain other occupations. All the local authorities as well as the Imperial government have approached the highest degree of perfection in their administration; and as all the executive power of the country is collected in Tokio, it is not likely to suffer through the dismissal of some officials. What is your opinion on the state of affairs?

B:—There are others beside Japanese officials who should be dismissed from the service of the government, namely, foreigners. While there may be some whose services are valuable there are a number of others who are not necessary to the government, and they could be dismissed without any inconvenience. Their salaries are ten times greater than those paid to Japanese officials. The best thing to be done is to send them away as soon as the terms of their agreements expire. Thus the sums paid to them will be saved.

A:—You are in the wrong there. If the foreigners hired by the government are faithful and discharge their duties skilfully, they are of much advantage to the public service. If they were unceremoniously dismissed they would turn their swords against our government and give some trouble. This might not matter materially; but on the other hand it might cause trouble to the ministers and involve them in disputes with other nations. Your idea of dismissing foreigners is not a good one, and if carried out would surely result in trouble to our government.

B:—Of course everybody knows that the foreigners in the employ of the government are of some service. But it is plain that they study more their own convenience than the good of this country. We need not fear trouble from them in the event of their dismissal. The government and our countrymen are not so weak as to be in dread for such a trifle. The government is but the reflection of the people. If the latter are weak the former will be feeble; and if the government is puny its shame is shared by the people. If our rulers and people are in so hopeless a condition as you would seem to infer, then we need not try to maintain the independence of the country. I admit again that there are some among the foreigners employed whose services are so valuable that the government could not dismiss them; but it would be an excellent thing to discharge all the others gradually as their engagements expire.

Such are the views which we heard expressed by these noblemen. For our own part we see that the government income has been greatly lessened by the reduction in the land tax; but we see no way to lessen the expenditure. So we cannot remain silent regarding the foreigners who are in the service of the government. Some of them understand our affairs much better than our own officials do, but they cannot have at heart the interests of our country to the same extent as natives would. In consequence of their intimate acquaintance with our national business they would surely cause trouble to the government, if they were dismissed from its service. The readers of *The Japan Mail* are informed by that journal that

if agreements are broken to-day trouble will commence tomorrow. But we need not fear their opposition as one of the interlocutors above mentioned does: if we did so, we should be ashamed of our countrymen.—*Katsisodan*.—*Tokio Times Translation*.

Continual confusion appears to exist, among the native newspapers, as well as foreign, between the two brothers who bear the name of Saigo. The movements of the younger are often attributed to the elder, and many of the recent reports that the Cincinnatus of Kagosima is near the capital, or on his way hither, appear to have arisen from the journeys upon which the returned Commissioner for the Exposition has been engaged. So far as can be learned, nothing has occurred to disturb the tranquil retirement of the senior Saigo, who, while still holding the nominal office of Marshal of the empire, prefers the seclusion of his provincial home to a busy participation in either military or political affairs. The junior, whose rank is that of Lieutenant General, chooses a more active life, and is constantly occupied in one branch or another of the government service.—*Tokio Times*.

Mr. Makimura, who has for many years honorably held the post of Vice Governor of Kioto Fu, has been promoted to the full rank of Governor. The advancement has been well won. Long an officer of distinction in his own province, Chosin, he has, since his transfer to the ancient seat of government, in 1871, ruled there with a combined energy and prudence that have gained for him a singularly enviable reputation. In noticing his promotion, we observe that some of the foreign newspapers speak of him as Mr. Uyenura. This is doubtless in consequence of the similarity between the first characters of each word. No one who has been fortunate enough to enjoy the friendship of Mr. Makimura would easily forget his real name.—*Idem*.

All persons who have visited the residence of Mr. Peyton Jaudon, in the enclosure of the Foreign Office, and—as a natural consequence of such visit—admired the tasteful and dainty array of Japanese works of art collected therein, will be pleased to know that they fortunately escaped all danger from the recent fire. It would have been a pity to see the results of so much care and labor as have been expended on their accumulation sacrificed in the spread of the greater destruction close at hand.—*Idem*.

Her Majesty the Empress Dowager has given proof of her interest in the cause of education by founding a school in this city (Tokio) especially for children of Kwazoku. She has contributed from her own fortune the sum of thirty thousand yen toward this object.—*Idem*.

The statement, in several Japanese newspapers, that Mr. Samesima had been chosen president of the new social club established in this city, was premature. It is possible that he will be elected, but up to this time, we believe, the association remains without any chief officer.—*Idem*.

THE PLAINS OF SHIMOSA AND KADSUSA.

HISTORY OF AN OLD AND NEW PASTURE.

I.—THE OLD.

Across the Bay of Yedo, from Tokio, is the peninsula of Boshu. Seaward, it is rugged and uneven, with steep hill sides and deep narrow ravines. Toward the mainland its surface gradually becomes more and more gently rolling, till it spreads out into a table-land, the surface of which is broken only by lines of rounded bluffs, encircling winding valleys, through which streams of clear spring waters run. This table-land rises by gentle undulations from either shore, to an elevation, above tide, of 400 feet. It extends from the middle of the peninsular arm to the foot of the Tsukuba range of mountains. Evergreen groves crown its higher points and border its streams. Luxu-

riant grasses cover its surface, and wild flowers, in their seasons of bloom, lend their varied colors to its beauty. Nature has produced here, in miniature, prairies such as enchanted the old French pioneers of the Mississippi valley, before the settler's plow had marred their charm. This table-land has a tradition as old and interesting as its surface is beautiful and picturesque. In an ancient history of the province of Shimosa, one may read that a Siogun of the Gen family, in the 12th century, ordered the plains of Shimosa and Kadsusa to be converted into pastures for his army's cavalry horses. An order was given to the daimios of the different provinces of the Empire to send laborers to construct pasture fences. One hundred and fifty villages were transported hither, and distributed over various portions of the plain. These villages contained twenty-two thousand five hundred people. The supply of labor was not, however, in excess of the demand, for never before or since, in the history of the equine species, have such structures been made for their accommodation. The Caliphs of Bagdad may have had incomparable stables for their priceless barbs, and snowy white Nedgid stallions, but they had no such princely pastures as these. The enclosures were earthen embankments 10 to 15 feet high, and 9 to 12 feet thick at their base. Two hundred and fifty miles (the native writer says 400) in their windings to exclude the irrigable valley land, of outer walls were built. The inner walls, sub-dividing the main enclosure into smaller ones, of from 200 to 1,000 acres, were 1,500 miles long. To these pastures the Imperial herds and herdsmen were brought. Here, for more than seven centuries, the horses, that were to carry the soldiers of the different Sioguns to victory or defeat, were raised. They lived a wild untamed life, summer and winter without shelter or food, other than the plain afforded. Annually they were driven into corrals, surrounded by high embankments, where, in presence of the Siogun's officers, they were caught, examined, and sent to the cavalry service, or sold to the highest bidder. These annual gatherings were occasions of great festivity for all the people of the surrounding country. Invitations to assist in the driving-in were sent out, and were gladly accepted by large numbers of young men, who came in rich dress, on horses covered with gay trappings. Thousands of men, women, and children, in holiday attire, lined the embankments to see the sport, as sport it was, and rare sport too. Hundreds of half wild horses running in fright and terror from a hundred well mounted horsemen, was a chase well worth the seeing. Many a rider came to grief, as his horse leaped some ditch, or stumbled into some grass-hidden hollow. Long lines of booths of saki merchants, wrestlers, and story-tellers filled the neighboring roads, where jovial groups gathered for unrestrained merriment. All this is gone, as the gatherings, although still annually made, are only faint representations of those of the past. The herds now number only hundreds, when in former times they were thousands. Little is left to testify to the truth of tradition except the embankments, which remain as perfect as when built, in spite of these centuries of washing and weathering. We may doubt the dates of tradition, but the gigantic trees, which have grown on these earthen walls and are now in the autumn of their lives, are unimpeachable witnesses of their antiquity. Such is the old story of a pasture, which, in some respects, has no recorded

rival. If the change which has come over it, is a loss to the art of war, it is a gain to the pursuit of peace.

II.—THE NEW.

In September of 1875, H. E. Okubo Tosi-michi, the Minister of the Naimusho, fixed the location of the Government Sheep Farm on this old pasture. For some years the large importations of woollens in this country had attracted the attention of the Japanese officials. Mr. Okubo in particular had become convinced that Japan could grow her own wool, and manufacture her own cloths therefrom. In 1874, Mr. Ap Jones, an extensive sheep grazer of California, who had visited several provinces in Japan, made a report to the Government, which induced them to establish a sheep farm of 7,500 acres and to buy 10,000 sheep by way of giving Japanese grasses, soils, and climate a thorough trial for sheep rearing. The land was bought and shops were opened for the manufacture of farming tools, as it was thought advisable to introduce the manufacture of implements with the necessity of their use. Plows, harrows, wagons, carts, hoes, shovels, spades, forks, cultivators, shovel plows, horse-rakes, and, in fact, all kinds of agricultural hardware were made by Japanese mechanics out of Japanese material. Mr. N. Iwayama, who had spent several years in America, England, Scotland, France, and Germany, and acquired a thorough knowledge of the science of farming, was made chief officer of the enterprise, which was given in charge of a Bureau of the Naimusho. Mr. Ap Jones was engaged as foreign superintendent. Farm stock was bought and laborers were engaged. The first furrow was turned in November of 1875, but real farming operations did not commence till May, 1876. Since then, 800 acres have been plowed and various crops have been raised, embracing wheat, rye, oats, barley, corn, and tame grasses. Fifteen miles of interior fences have been built and eight miles of wagon roads constructed. All the buildings for six sections into which the tract of land has been divided, have been erected, including offices, officers' quarters, farmers' houses, horse barns, sheep stables and yards, store and tool houses, and blacksmiths' shops. A large corps of laborers has been taught the use of all kinds of labor saving machinery. Two hundred horses have been broken from a wild state to the plow and wagon. Sixty students have been brought from the different kens and are acquiring the science and practice of agriculture. Twelve hundred sheep have been introduced, and grazed on the wild grasses, and are doing well. Men who, twelve months ago, knew only the native mattock and could dig up only one-sixteenth of an acre in a day, can now run a twenty-inch plow and turn over the sod, with its hazel and chestnut roots, at a rate of two and a half acres daily—or can run a mowing machine and cut ten acres of grass a day in place of the quarter of an acre which they formerly did with the Japanese knife. It is a long step in advance which they have taken and 150 men, including the students, illustrate the progress made. Thousands of the farmers of the surrounding country have witnessed the working of the farm machinery, and have gone away impressed with the importance to them of the use of the new modes of farming. The officers of several Kens have visited the place, and have been so struck with the superiority of labor saving implements that they have ordered them for introduction into their own districts. Large shops have been built here and in Tokio where all kinds of machinery are

manufactured cheaper than they can be purchased from foreign countries. All this has been accomplished in little more than twelve months. From the present outlook, no reason can be given why success is not certain. Nothing can be discerned that can prevent, in the near future, the occupation of the hill sides and valleys of the great mountain ranges with flocks and herds. Nothing can be foreseen why mills and factories shall not be built along the many swift mountain streams, converting the raw animal materials into articles of use and ornament, giving labor to the idle and comforts to the poor, and bringing an increased trade and commerce to the whole Empire.

This much has been proved:

First,—That the native grasses are well adapted to the summer support of Chinese, Merino, South Down, Lincoln, Cotswold, and Leicester sheep.

Second,—That the native grasses, cut and cured with the same care and skill as grasses are in foreign countries, will make good sheep hay.

Third,—That Japanese soil is well adapted to the production of all kinds of foreign food plants for stock.

Fourth,—That the climate of Japan is highly favorable to wool growing.

Fifth,—That Japanese mechanics, with Japanese material, can make first-class farm implements as cheap as can be made in any country.

Sixth,—That Japanese laborers, with native farm stock, can successfully and cheaply subdue and cultivate the wild lands of Japan with labor saving machinery.

The enterprise has been fortunate in having the active support of so able a Minister as Mr. Okubo of the Naimusho, and of Mr. Matsugata, Commissioner of Agriculture; and in the selection of Mr. Iwayama as its chief officer, and, finally, in having secured the services of so able a foreign superintendent as Mr. Ap Jones.

H. L.

January, 1877.

—Tokio Times.

COREA.

The following interesting description is from the pen of "Philo Coreanus," a correspondent of the *North China Daily News*, from whose columns we reprint it:—

It is not, I can assure you, a very easy task to obtain such news from Corea as will interest you sufficiently to allow for the cross-questioning, examinations and patience one has to go through. Such interlocutory proceedings form really the heavier part of the trial, but when our efforts are crowned by success the fee is equal to the labour.

Suppose we begin with a few words in re the Powers that be—some of whom you are already acquainted with, viz:—

1.—The King of Corea is now pretty well, but about the 8th moon he suffered from an attack of dysentery. What is generally known of him proves him to be guided by the best intentions. He is gentle in disposition, very intelligent, and not in favour of severe measures—certainly not warlike. Still, if it became a question of alliance with Europeans, what would he do, or rather what could he do? Were he inclined to act peacefully, he would be surrounded by difficulties. He is too weak to be opposed to the will of his Ministers and the other great dignitaries, and these are unfortunately inveterate enemies

to anything like alliance with European nations, as you may gather. Some think that he is not wicked in himself, but that he is too much under the dominion of his young wife, Queen Min, who appears to wear in ideas that garmenture of dual form, otherwise called the breeches.

2.—Min, the Queen (the old queens, or queens dowager, are no longer of importance, not excepting even Tjo Tai-pi, who adopted the King), is the wife of the reigning King. She is in splendid health, and is undoubtedly commander-in-chief. She is too the late Regent's bitter foe, because of having murdered her father, her mother and one of her nephews, in January, 1876, and the deeds were done actually in their own palace. It is owing to the young Queen's influence, aided by Heung-in-koun, that war with Japan was avoided, and that the two Japanese Embassies were received in February and July.

3.—The Prime Minister, Heung-in-koun, is eldest brother to the Regent, and therefore the King's uncle. Neither good nor harm is said of him, and he appears to be heart and soul with the King and Queen.

We come now to the principal character, the Hero as it were.

4.—Tai-ouen-koun, the late Regent, has not appeared at the palace since 1873. He has been put aside. When the Japanese came to treat in February, 1876, he did all he could to provoke war; but he failed, and one of his tools, Tchoi Ik-ieuni, as is known, was banished for his opposition. When the Japanese Embassy was in Corea, end of 6th moon, 1876, the Regent bestirred himself to prevent any concessions being made, and it was not his fault that all went well. It was said that he himself ordered the soldiers to blockade the strangers in the house assigned to them, and not to let them go out. In fact, the poor Japanese were kept as if in prison nearly all the time. The Regent, on a donkey, went in procession, accompanied by a mute and a poor cripple, with a hump before and behind, and thus addressed the crowds:—"I am," said he, "like this mute; but the King is like this cripple; on account of the Japanese he will lose face, and will become the laughingstock of his own people and others" &c. At one time it was considered possible that he would be recalled, for Pak-kion-sou told the King there were many difficult matters to get through, and it would be advisable to get the Regent's assistance and experience, and the King replied:—"Go and find him, if you like." A mutiny took place in one of the Governmental palaces. Before answering the invitation, however, the Regent laid down as conditions:—

1st.—That the guards should be drawn off.
2nd.—That Tchoi-Ik-ieuni, who was exiled in February for his opposition to the Japanese, should be recalled. These conditions being refused, the Regent returned to the country, more furious than ever. Now the harvest was a poor one this year, and the kingdom was threatened with famine, so the King and Prime Minister decided that after the 8th moon, the manufacture of wine, spirits and vinegar should be prohibited; and the sale of these was prohibited, on pain of death to the populace, and exile to the aristocracy. As a dutiful subject, however, the Regent commanded his servants to manufacture and to sell more than ever. Even when all fermented liquors were strictly forbidden, about the 8th month, this gentleman, according to history, amused himself by making some fellow drunk, and then putting him into the road. When taken to

the Magistrate by the police, the drunkard declared that it was the Regent who made him drink. Thereupon, he was released without anything being done to him. Of course he went at once to his patron and said, "The other day I was taken prisoner; but when I explained that 'His Excellency' had tempted me, they let me go and dared not say or do anything to me." "They were right," replied the Regent.—Everybody believes that the incident was got up to try strength with the authorities. It was about that time the King was laid up with dysentery, and the Regent went to see his son three or four times, although he had not been to the palace since 1873. As soon as the King got well the visits ceased. It is true that the ex-Regent is away from the seat of Government: but he is not the less powerful, for there is not a man in the kingdom who can hold his own against him, because as father to the King he is inviolable, and his friends are numerous and are composed of high and low, the number having been increased by malcontents who would not at any price make friends with the Japanese. He is powerful, from the fact that the dominant wish is opposition to the strangers.

So much for the character, habits and doings of the moving powers in Corea. Let us consider what we may allude to as the principal events of the current year. Please, however, to understand that I do not pretend to anything like a veracious history to be deduced from certain facts and arguments. Some of my interlocutors do not seem as if they had been admitted to the King's council chamber, nor are they all endowed with that diplomatic air which so imposes upon people. They have probably read the Court journal; for in this singular country everybody does read the news, and for that matter many construct news without much trouble. It does not cost much, and amuses people. So long as there is no slandering and backbiting, such as takes place in small communities, where the heads of society are weak and ready to listen to any tale that affects the reputation, a little newsmongering is pardonable. The greatest events are decidedly the two Embassies. Perhaps a few notes anent those Embassies may be interesting.

A Korean Embassy started for Japan towards the end of the 4th moon. When it got to Teong-nai, situated at the south end of Corea, and not far from Formosa (Fusan?) and opposite the Isle of Tsou-si-ma, the Ambassador asked for steamer passage to Japan, but the price did not suit his pocket. Fortunately a Japanese man-of-war helped him out of his trouble, and most courteously offered him a passage, which the Ambassador was very glad to avail himself of, and thus continued his mission. About the 2nd or 3rd day of 6th moon, the Korean Embassy returned safe and sound to Seoul, the capital of Corea. They were well received and kindly treated in Japan, and were astonished at the railways, lighting by gas, &c. The followers received so many presents that they have enough to live upon for the remainder of their lives. They were invited everywhere, were made much of, and everyone was delighted with their accounts of the voyage and the wonders they had witnessed.

As to the Japanese Embassy. A few days after the return of the Koreans, about 8th or 9th day of 6th moon, there arrived at Seoul five Japanese, with many carriages laden with large cases. The residence allotted to the Japanese Ambassador was a pleasure house, situated outside the wall, to the S. W.

of the capital, in the quarter named Mou-hoa-koan. It was a great event. All the world and his wife were eager for a look at the strangers. But the streets were full of soldiers, who prevented the crowds from getting near enough to see the Japanese. These gentlemen were dressed as Europeans, and mounted Korean ponies, which did not please them very much, for they asked whether there were not better mounts than such "sorry jades." Eight men-of-war had arrived at Kang-hoa, and more were expected.

Two days afterwards, the whole Embassy, composed of at least eighteen persons and followed by many carriages, appeared at the capital, and the very next day an interview took place with the Lord Chamberlain. There happened to be a Chinese Embassy on the spot also.

On 12th day of 6th moon the King granted a solemn audience. There were three Japanese in state chairs with four porters or bearers, and along the whole road where they had to pass, a kind of curtain had been spread, which prevented their seeing or being seen. The soldiers kept back the immense crowds of people that had collected with the object of witnessing the novel sight. When they got to the palace, the Japanese had to get out of their chairs and walk to the Reception Hall, whereas the Chinese Ambassador was allowed to go the whole distance in his chair with six bearers, and a black umbrella. The King appeared surrounded with all the nobles, ministers, generals and bodyguards. Then the Japanese Ambassador advanced, with his hat under his arm, and three times deeply bowed. The interview was soon over, in fact was rather short. After the audience a very mean collation was offered, consisting of melons and other common fruits—nothing very good.

Although the King had issued orders that the Ambassador should be allowed to examine the palace, this was not granted when a request to that effect was made.

When leaving, the Japanese Ambassador asked the Korean Ambassador to allow him to go over his house, according to promise; but fearing to compromise himself the latter declined, so that the stranger it is said was anything but well pleased.

Two or three days afterwards, the Japanese requested:—

1°.—That they be allowed to walk over the hills surrounding the town, without being escorted.

2°.—To visit the three chief ministers, and the six ministers of second grade.

3°.—Permission to have their gunboats anchored in the river opposite the capital, Kang-hoa being too far off.

4.—To build houses at foot of Nam-san Hill.

5° and lastly.—They desired to roam within a radius of thirty miles.

The King said "Yes" to all these wishes. Not so the Ministers, who answered "No," and would not grant anything.

It seems that the Japanese, receiving no answer, were fretting in their prison, and on 19th or 20th they attempted to go out, but were stopped by the soldiers. In front of their gate a high wall had been built, and curtains had been so arranged that they could neither see nor be seen. They were equal to the emergency, for they climbed to the roof of the house, and so were able to examine the country from afar.

Their presents were now forwarded. 1°.—To the Regent, who would not even look at them and disdainfully refused them. 2°.

—To the King, who accepted everything but the medical works and those of a military nature, and the map of Japan, because the map of Corea was expected in return.

The Japanese thereon felt offended, and complained that they had not been properly received and were being badly treated.

Five days afterwards, the Japanese forced their way past the sentry, and went for a walk some distance from their prison, heedless of the soldiers, who, as they could not stop them, accompanied them in large numbers. Five days after this, the King withdrew the order forbidding the people having sight of them. Three of the Japanese proceeded on foot to Nam-san, where, during the great war, their people obtained a splendid victory over the Korean army. There were many soldiers in front and behind, and the Governor's Intendant was with them on horseback. The crowds of people who flocked to see the strangers did not find them so very extraordinary, and kept saying, "They are nice, quiet-looking men." The Japanese Ambassador was thought to be about 50 years old, and was a fine gentlemanly fellow. Half the suite were said to be Europeans.

In order to pacify them, pigs and sheep were offered, but those were refused, and they only asked for water, ice, and fresh fish, declining everything else.

At the beginning of the 7th moon the Government allowed them to build houses, but no permission was granted as to the 30 miles radius.

Guards were kept, partly to prevent their being robbed.

During their stay at the capital, three or four of their number are reported to have died.

That the Japanese got weary from confinement may well be imagined; and as they got tired of waiting for answers to their several demands, they began to complain that their lodging and food were not comfortable, urging the necessity of something being done. They had been very patient and meek, and people really believed they must have been nearly tired out.

Only two ports are stated to have been added namely:—

Ma-sang-kai, Tchieng-onen district, in the southern part of Corea, and north of Ketjei Island. The place is beautifully situated, surrounded by mountains, with trees down to the sea—a fine deep bay.

Kang-kieungui, district of Ean-tjin, on the river Gaik-ma-kang, one of the most commercial ports; there being many trading houses, who ship thence the larger portions of rice required for the capital and the northern provinces.

At last the Embassy decided on leaving, and the Japanese departed from the place on 9th of 7th moon, accompanied by some Korean officials, who, with some hundreds of soldiers, saw them safely to Kang-hoa. It is not thought that they obtained much by coming; but one hardly knows, because communication was strictly prohibited. Still the opinion runs that they were rather baffled. Anyhow they were not enlivened with music either on arrival or departure, and as the Koreans did not look for quite such a failure, the Japanese have been well laughed at.

The Japanese themselves feel that they have made rather a mess of it, and they are reported to have left furious at their bad reception and worse treatment—breathing vengeance and threatening to return in the 1st or 2nd moon of next year. The threat

is not believed in, for the Koreans say jestingly, "If they meant to return, they would not say so."

All the men-of-war left at the same time, and Kang-hoa was deserted by the Foreigners.

The following despatches reached Corea:—

1. About the time when the Japanese Embassy arrived at the capital, the Korean Government received official intimation from Japan, to the effect that an European Power intended to proceed to Corea, for the purpose of war, or at least to obtain a Treaty.

2. A few days after that, the Governor of the S. W. Province writes, "Two large European vessels in passing near us, fired several times from sea to the mountains. When inquiries were made, the Europeans answered, "We do not require anything. We are on the way to Seoul, and know the road."

3. Ten days elapse, and then a despatch arrives from the Chinese Government, complaining that no information has been given

1°—As to the treaty concluded with Japan.

2°—The Embassy of Corea to Japan.

3°—In regard to the state of affairs, now that the Japanese are in Corea; and, finally the same despatch announced the early arrival in Corea of the French or other European nation. This news created a terrible sensation, and my friends were at their wits' ends.

4.—Again a despatch from China followed quickly on the heels of the previous one, to say that in case of war, China would not send any help, and the Koreans had better, therefore, treat with rather than fight the Europeans. Now, this advice is just what they would not follow. They are confident their soldiers, huntsmen, and the people generally, consider themselves quite able to keep off the Europeans, as they have done before—or to kick them out should a landing be effected.

It would be the easiest thing in the world to upset their confidence, for Seoul could be taken without much trouble. Some lesson is necessary to show the Koreans that neither the French, Germans nor Americans, whom they firmly believe they have conquered, and, therefore, look upon as very small fry, were ever seriously bent on conquest; or the performances of those nationalities against Corea will never be fully understood.

5.—Early in the 7th moon, another despatch from China says—"The French are leaving for Corea; you had better treat them well, and arrange about it with the Japanese—for in case of war you will have to pay dearly." Immediately on the receipt of this, the Privy Council met, and the Japanese Ambassador was invited to attend, which he did with his Secretary of Legation.

6.—The same day, a letter was received from the S. E. province, advising that the English (?) were on the way to the city; that there were three large men-of-war carrying several thousand men dressed in red, in black, and in white, with big noses, blue eyes, and red faces, just come from Japan. When they were asked where they were bound, the answer was, "Where we please, mind your own business."

The following rumors were current:—

When the Japanese arrived at Kanghoa, they found awaiting them a letter from their Emperor, requesting their immediate return, and ordering the English vessels which had accompanied them, to China, as war had broken out with this country (China) and England.

About a month after this, toward the middle of the 8th moon, most extraordinary

rumours ran wild. The war between China and England had become a most bloody one. Houses and warehouses were burnt, any number of English killed and wounded. The Japanese Ambassador and suite having gone to China and interfered, were said to have been killed to a man. Everyone was full of the war, and our small kingdom was the victim of the most outrageous canards. The repetition of them will do no harm, and if they do not amuse you, well—you have a large wastepaper basket at your feet.

A Korean can talk pretty boastfully about his feats of arms, when there is no danger of being put to the blush. Beyond that he has not much to say. So when you ask any follower of the Embassy to Peking, "Are there any Christians in Corea?" he seems frightened, and shakes his head as much as to say, no. "But there used to be many, what has become of them?" Then, he will look all ways, and will answer as if in secret, "There is not one now. Every soul has been killed."

From all accounts there is terrible suffering from famine. The Japanese merchants will probably send large supplies and save numberless lives. As a speculation it will pay, but what a chance in the principles of humanity to soften the hearts of a savage government and people!

Now, Sir, you have my budget, such as it is. One is forced to admit that Corea will not eagerly open its gates. If any European nation desires to make a Treaty, I fear it will be necessary to fire a few shots. The Koreans are peculiar, and perhaps a little fuss to convince them of their utter inability to cope with civilised countries in war, would be better than if they were led at once into a Treaty without being fully aware of the consequences which treachery would entail upon them. It would be almost necessary to use force for the sake of the King and his Government, seeing that the number of malcontents would but increase, unless it be clearly shewn to all that the King cannot prevent the Treaty. The Regent and his party must be taught first that Europeans are not so weak as former transactions may have led them to imagine, or they will remain opposed to any government that makes friends with foreigners. As with the Japanese, who have had considerable trouble to get next to nothing, and are the joke of the nation, so it will be with others, unless there be some force. Perhaps something is already brewing. The Koreans cannot long have it all their own way, and now the thin end of the wedge has been inserted, a hard tap or two will drive it home.

I trust my yarn has not tired you this time. Travelling in carts is not conducive to intellectual pleasures.

Great Wall, December, 1876.

P.S.—*Latest intelligence*.—Early in the 9th moon, the King's son, heir presumptive to the Throne, was attacked by some unaccountable sickness. Poor little fellow! He screamed night and day. The whole Court were most anxious about it, for no one could tell what was the matter. Sorcerers and sorceresses were quickly on the spot, and so were the blind, the bonzes (priests), &c. The sorcerers howled, sorceresses or witches mewed, the blind screamed, whilst bonzes sang. In fact, all did their best according to their lights, the noise being something indescribable. If it did not kill the baby, his chances were great. Anyhow, say it did no harm, it certainly could do him no good. The result is not yet known.

NARROW ESCAPE FROM SHIP- WRECK OF THE M. B. M. S. S. "TOKIO MARU."

Mr. J. Hingston, of Melbourne, a passenger by the *Tokio Maru*, which reached here yesterday from Yokohama and Nagasaki, has shewn us a sketch of the perilous position of that vessel for between three and four hours on some rocks off the Island of Otata, about 30 miles distant from Nagasaki. He says:—

"I joined the ship at Kobe and went down the inland sea in her. The captain (F. Dunn) was so careful during the two days of this intricate passage that he took his meals on deck. On the evening of the second, the 14th, the weather got very foul and wintry. Only four of the passengers (we had over two hundred) came to the saloon table. I was unable to do so, and felt so qualmish that I retired at 7 p.m. I was lying awake at 5 a.m., thinking only of whether I could eat breakfast, when a thump, followed by a scrunching sound, turned the current of my thoughts. I heard a noise in the next cabin, and the door closed. 'Is that you, Allen?' I said. He replied, 'Yes, I'm going on deck to see 'what's the matter?' It was pitch dark and very cold. The ship now began to bump about in a manner that made it not easy to dress in the dark. Allen soon returned and disquieted one's nerves by saying 'Dress as quickly as you can' and 'secure about you any light valuables,' and 'get on deck; we have gone on the rocks many miles from any land!' I dressed somehow and stumbled on deck, which was slippery with sleet and frost. The fore part of the ship had gone up on the rocks and the stern lay thumping in the water. We had got somehow between two sugar-loaf-shaped rocks, and ran on the ledge that joined them beneath the water. It looked a most dismal state of affairs, and was an hour and a half yet to daylight. It was bitterly cold too, and the ship's bumping gave to landsmen, like to myself and others, a sickening sensation. The best order was preserved, and the Captain's orders were promptly acted on. The disaster had occurred in the second mate's watch and the blame lies between him and the pilot, who are left behind at Nagasaki to be forwarded back to Yokohama, there to answer for themselves to the M. B. Company and others. It was difficult to understand how the ship could have gone into such a narrow passage, with rocks only a hundred feet off on each side, when there was so much sea room outside.

"The Captain's orders, that the forward cargo and coals should be thrown over-board to lighten the ship, were promptly acted upon. Crates, cases, and barrels were pitched over and gulped down by the tossing waters. Coals were thrown out in bags and shovelful at both sides. The tide was providentially rising, and on that and in lightening the ship forward, lay our hopes of safety. She canted slightly to one side. Those who recalled the narrative of the wreck of the *Strathmore* off the Crozet Islands, in 1875, saw a similar accident to the *Tokio*, and feared like results. Boxes and bags were wrenched open, and light valuables secured on the person. Rolls of Mexican dollars had to be left behind, as being too much dead weight on those who expected to have to jump into boats or be thrown into the water before their troubles were over. Life preservers were looked up everywhere. And some strange peculiarities shewed themselves among the

passengers. Some took to spirits to keep up their courage, and one shewed me a small bottle labelled "poison," that he had taken out of his portmanteau. He had carried it, he said, for years that it might some day prevent the sufferings of a lingering death. The time had now come, he thought, in which he might have to use it. It was a gruesome idea, and made one shudder. The Chinese and Japanese who were forward passengers, tried to come aft, but were restricted to their cabins, and strict discipline was preserved by captain, officers, and steward.

"Every five minutes or so the third officer came into the saloon and measured, from a hole through its floor, the depth of water in the hold. It was satisfactory to find that it did not rise more than an inch at each report he made. 'Twenty-six inches!' was the last one that I heard him make.

"Some ten or twelve cases of treasure that the ship carried, were got out and placed ready for landing. As daylight, so long wished for, dawned, a boat was got ready, and with eight men and a coxswain despatched for Nagasaki. The voyage would take them, it was expected, six or seven hours. It was hoped that the assistance of a tug might be procured. As they provisioned this boat with baskets and bottles of water, the passengers looked on with a personal interest, as the same might be their case in a short time. Meantime the lightening of the ship continued and the tide was still rising. The ship bumped less with these results. I could now see the captain, and found him as cool and self-possessed as if nothing had happened. It was quite reassuring to hear him say that he hoped to get off at full tide and that there was no likely danger to life. It was his intention, when the time came, to rush all the forward passengers suddenly aft, and make an effort, with full steam up, to drag the *Tokio* backwards into deep water. His ideas were quite right, as a little after eight o'clock it was seen that the rocks that had been visible above water round about had disappeared. Soon after there was heard the now delightful sound of a 'scrunch'—then another, and then a third. The paddles, that had been impotently revolving for hours, now dragged the *Tokio* off the rocks, and a new lease of life seemed given to those of us who had been unused to such sea troubles. We really seemed to breathe a different atmosphere. Boxes were repacked, life-belts put away, and we washed and dressed for a breakfast that three hours ago we had little thought of getting so comfortably.

"The passengers united afterwards in a well-deserved testimonial to Capt. Dunn."—*N.-C. Daily News*.

HIOGO.

Naturally the event of the week has been the arrival of H. M. the Mikado, which took place on Sunday morning (28th Jan.) though as he only remained in Kobe a few hours, during most of which time he was resting at the apartments which had been prepared for him at the Post Office, he really occupied for a very small space of time the public attention in comparison with what had been bestowed upon plans for lighting up the settlement in his honor.

As we noticed in our last, the preparations for a general illumination had proceeded apace, some of the Japanese having lighted their lanterns so long ago as Thursday night,

and the display on the native bund on Friday evening was general. All day on Saturday, however, there were no signs whatever of His Majesty's arrival, and it seemed quite impossible to discover the existence of any information about him, official or otherwise, but as the weather remained fine, every hour increased the probability of his coming. Foreigners generally completed the arrangement of their lamps and transparencies, and as evening approached it appears to have been decided upon—how, when or by whom we know not—to "light up," partly it appears to us on the chance of the Mikado's arrival and partly because everything was ready and the evening a favorable one. The native bund was lighted as on the previous evening, the most conspicuous feature being the festoons of lamps from the many flagstaffs which stand there. On the foreign bund each house illuminated independently, the general effect being very good, as was also that of a continuous double row of white and coloured lamps all along the top of the wall, except where it was interrupted to introduce the *chef-d'œuvre* of the Municipal Council, of an order of architecture of which it is the only known existing type; we cannot praise the general decorations more highly than by saying that as an ornamental illumination this was the only failure of the evening, though as a design for promoting the general hilarity it was a success to which our experience scarcely affords any parallel—it was probably owing to some little pardonable pride in the result that the gas inside it was kept burning till seven or eight o'clock the next morning. The Municipal Hall and several private houses not on the bund were also lighted up, with a very pretty effect, and the experience gained in the two or three hours of Saturday night will enable a few small defects to be remedied, (the mistake of using Japanese candles inside the lanterns, as some people did, instead of foreign ones, which do not flicker, being one of them,) so that we expect the next occasion, which will probably be the evening of the 5th proximo, will show a still better result than this last. We would also bestow a word of praise upon the way in which the Main Street of Hiogo was lighted by a continuous row of large lanterns all of a size, with merely a small variation of the devices on them, apparently to distinguish the different wards.

The Mikado himself did not see the display which was made in his honor. There were no signs of ships in the offing on Saturday night, and the first intimation the residents had of his arrival was some guns from the *Riojokwan* about 7 a.m. on Sunday. This salute caused a general turn out, when three steamers were seen approaching out of the haze to the Southward, the *Tukao-maru*, on board which was the Mikado, being preceded and followed by the *Seikikwan* and *Kasugakwan* respectively. The long time occupied on the passage is accounted for by the fleet having put into Toba Bay from stress of weather at 9 a.m. on Thursday, the 25th instant, and remaining there a little over forty-eight hours; fine weather was experienced after leaving Toba, and the fleet slowed down during Saturday night, so as not to reach here before daylight on Sunday. All the vessels in the harbor dressed ship, and the *Tukao-maru* was duly saluted as she came in by the *Riojokwan* and the French men-of-war *Atalante* and *Lochecheterie*. The anchor was dropped about 8 a.m. close to the *Saikio-maru* (late *Nevada*), which had not long previously come in and was

lying at the Mitsubishi buoy. A great crowd at once began to assemble at the Western Custom House, and the *Hakusui-maru* went off alongside the *Takao-maru* to tow ashore the barges containing His Majesty and suite, which was duly accomplished at 9 a.m. His Majesty, who appeared to be in some sort of undress uniform, at once mounted his horse, and acknowledged the salutations of the crowd, the *cortège* which accompanied him consisting of the Daijodaijin, Daikakukomon, a Sangi, Kunaikio, Kaiguntayu, Jijusho, Shikibu-nokami, the Gon-rei and Gon-sanji with other Ken and Police officials and Imperial Guards, all on horseback, followed by other officials on foot and the Imperial carriage. The procession then moved off to the Post Office in Sakai machi, where His Majesty took some refreshment and rested till he started for Kioto, previous to which the excellent band of the *Atalante* attended before the Post Office and played the following selection:

AIR NATIONAL JAPONAISCretella
HAYDEE—*Mosaïque*Auber
LE BEAU DANUBE BLEU—*Valse*.....Strauss
LA TRAVIATA—*Mosaïque*.....Verdi
LA JOYEUSE MERE—*Polka*.....Siffert.

His Majesty was graciously pleased to accept the dedication and a copy of the music of the National Air composed by M. Cretella, Bandmaster of the *Atalante*—an effective piece of music.

At a few minutes past 2 o'clock, the procession re-formed and departed for the Kobe Station, where a number of the foreign officials were presented to His Majesty. A first class carriage with additional silk hangings had been provided for him,—(the new Royal carriage is not to be used until the official opening of the line)—and he was accompanied, in addition to his suite, by Enouye Masaru, Chief Commissioner of Railways. A start was made at 2.20, the train being in charge of the Traffic Manager and accompanied by the District Engineers, the Engineer in Chief and the Locomotive Superintendent riding on the engine. The only stoppage was for a few minutes at Osaka, and the train arrived at Kioto at 5.12, where the foreign staff were again presented to His Majesty, who, through the mouth of Enouye Masaru, Chief Commissioner, thanked them for their services that day and then left the station, in a carriage, for the Imperial Palace.

The weather was fine, and previous to the departure of the Royal party for Kioto many thousands of Japanese had collected in the streets in the neighborhood of the Post Office and along the sides of the line in the neighborhood of the station; the Aiocho bridge was apparently a very favorite spot with the many headed, being covered with a densely packed crowd. We were rather curious to note the demeanour of the Japanese on this occasion, and though a few old people did assume a humble attitude of prayer, there was in the crowd little or no outward manifestation of that religious awe for the person of the Mikado which the Japanese have been credited with being the possessors of. It must be remembered, however, that Kobe, as it exists at present, is to a great extent the result of foreign trade and intercourse, and that the people have necessarily imbibed many ideas about men and things which must be altogether incompatible with the old notions about their sovereign, and we have been told that even on His Majesty's arrival in Kioto there was the same unimpressed demeanour on the part of the younger generation, though it was

remarked that a far larger proportion of the elderly people assumed an attitude of humble devotion.

With regard to the future some uncertainty seems to prevail, the only thing which appears to be definite being the official opening of the railway on the 5th proximo. We believe that as at present arranged His Majesty will not sleep in Kobe at all, but will arrive from Kioto on the morning of the 5th and return there again the same day.

—*Hiogo News*

The great event of the week has of course been the opening of this section of the Imperial Government Railways by the Mikado, in person. We had hoped to have included in our to-day's issue a full and particular account of all proceedings of Monday last, but we find that owing to certain circumstances of the case, such as the fact of most of the speeches having been delivered in Japanese and necessitating an amount of care in the translation which we cannot give them in twenty-four hours, we must defer our regular account of the proceedings till Saturday. We do not know, however, that any of our Kobe friends will suffer much by the delay, for all the incidents will soon be on record for those who may chide hereafter to refer to them, and in the mean time we have this official opening of the Line before us as a fact. And how much this means it is not easy to estimate. It is not every foreigner even now who lives in Kobe who has read Mr. Oliphant's account of Lord Elgin's mission in 1860, or even the chatty personal experiences of Sir Rutherford Alcock; and yet without a close study of the history of Japan as it has been presented to foreigners during the last eighteen years one can hardly appreciate what the ceremony of last Monday meant. Eighteen or twenty years ago a wave of Western energy reached these shores, and it found a community of some thirty-three millions of people, who had had but a very limited intercourse with the outside world for somewhere about two hundred and fifty years, and who were therefore in a state of great ignorance as to some of the methods science had discovered of utilising physical forces. They had also been governed under a system which was only possible under their peculiar circumstances—a system consisting of an Emperor at Kioto who was really and truly little better than a myth, with the whole executive power centred in a military despotism. But they do not appear during all that period to have degenerated much in latent energy or the power of appreciating the lessons of science, for we find to-day that an advantage has been taken of the teachings of the West which has produced a result nothing less than absolutely marvellous. Remembering what Japan was, as one may say, only the day before yesterday, it seems almost unbelievable that we should have seen what we did on Monday—the Emperor himself going through the form and ceremony of opening a railway. And the ceremony was all the more impressive to us, knowing as we do what a large share of the work has been borne by the Japanese themselves. They have, as might have been expected, made great mistakes. They have, we believe, purchased their experience not perhaps in the cheapest market; they have been frequently parsimonious when a well considered expenditure would have been the truest economy, and on the other hand they have not infrequently been lavish of expenditure when the circumstances of the case did not

require it; but much of this was under the circumstances inevitable, and they have through everything both known what they wanted and contrived to get it. Even the most conservative opponent of hasty progress will, we presume, admit that His Majesty travelled on Monday over fifty miles of railway line as well made, take it throughout, as any ordinary fifty miles of line in Europe, and we do not know that any "fine writing" which we might be tempted to indulge in on an occasion of this nature would add anything to the significance of that fact. It speaks for itself with a grave and solid eloquence which is far superior to anything at the command of our poor pen.

We have not pretended in these few words to do any kind of adequate justice to the subject, for we must needs write them under some great disadvantages of circumstances; but we regret that matter the less to-day because we have bestowed unremitting attention upon Railway construction here and have at various times stated our views. These views are well known, and notwithstanding the "crowning of the edifice," so to speak, which has taken place, we shall never rest satisfied till we can run through in the same carriage from Kobe to Otsu. We attended with a heartfelt pleasure almost without alloy at the ceremonies of Monday—we sincerely hope and trust that before our sojourn in this country shall have drawn to a final conclusion, we may stand behind the Mikado again on the shores of Lake Biwa.—*Hiogo News*.

Considering that Kobe enjoys a prescriptive right to the finest climate in the world—or at least to the reputation of having it, which in mundane affairs comes to nearly the same thing—residents have reasonable grounds for grumbling at the way they were served on Sunday and Monday. Soon after dawn on Sunday morning a nasty fog bank began to creep up from the west, and opinions were divided as to whether snow or rain was going to be the result. Snow it turned out to be, and the prospects of fine doings on Monday were overshadowed. But things turned out not quite so bad as they threatened to be, for although the snow was sure to melt and make the roads in a fearful mess, there was little elemental violence to interfere with the success of the decorations which Kobe folks had evidently made up their minds to indulge in. But the air was cold, and indeed towards the evening bitterly cold, and there was a very marked difference in the number of sight-seers in comparison with last Saturday week. On the Foreign Concession the bund was illuminated almost exactly as on the last occasion, but with some very effective improvements suggested by previous experience. The native bund looked also much the same, the long strings of lanterns from the flagstaffs being as effective as ever. But it was of course down in the neighborhood of the Station that the main difference was to be observed. The decorations of the Kobe Station and Station Yard had a very pleasing effect by day, owing in a great measure to the very abundant use made of evergreens, which surrounded every door and window and were wreathed round every column, while small flags of various colors were pendent all over the building. A temporary pavilion of some considerable size had been erected in the spare ground of the Station Yard for the purposes of the opening ceremony, and in the decorations of this and the long covered

ways leading from the Station to it and from it to the offices, where tiffin had been spread, evergreens were used with the same excellent effect. An ample space was set aside for foreign residents, especially foreign ladies, and in respect of the pains taken to furnish sufficient accommodation to everybody interested, too much praise cannot be given to those who had charge of the arrangements. The day was observed as a holiday in Kobe generally, and appeared to be thoroughly enjoyed by Foreigners and Natives alike.—*Idem.*

OPENING OF THE KIOTO-OSAKA RAILWAY.

(From our Special Correspondent.)

6th February, 1877.

The fourth of February, the day on which, nine years ago, the Bizen men fired upon the Kobeites, has hitherto been about the most memorable date in our local annals, but the fifth, now, bids fair to eclipse it. The fourth however, is hardly a day of pleasant recollections, but the fifth should hereafter be the reddest of the red-lettered of our calendar.

The look-out at day-break yesterday was a most miserable one. I cannot well call it a black look-out, seeing that everything was as white as the driven snow could make it. This would not be a sight calling for comment in the inclement region of Yokohama, where at this season it is far from unfamiliar, but here the case is very different. Such a day greets us on an average once in three years—I am sure the snow has not lain for twelve hours on the ground more than three or four times during the past nine years. To make matters worse, the top-dressing of the clay, gravel and lime, which, in view of the occasion, had been too hastily laid upon the principal roadways of Osaka, had become churned up with thawing snow into a deeply dirty state, the like of which the memory of the oldest inhabitant fails to recall. However, by driving tandem, I contrived to reach the station by 7.23, the hour at which the special train, which was to leave Kobe at 6.15, was due. The journey to Kioto was quickly made and by nine o'clock or thereabouts we were at the new station, a vast improvement on the miserable unwallied shed which had hitherto done duty for it. Presently the braying bugles proclaimed "The Coming Man," and Mutsu Hito, the Emperor of Japan, clad in fine raiment and gold bullion, drove up in an open carriage drawn by a pair of big, ill-curried, foreign horses. (I refer to these sorry steeds now so as to have done with fault-finding once for all); the rest of the appointments I saw nothing to criticise adversely, but on the contrary much to admire.

As at Osaka and at Kobe a temporary structure, open on three sides, had been erected in front of the Kioto Railway Station, and the description of one will in the main serve for all three. At the extremity furthest from the street was a low dais upon which was placed a handsomely carved and gilt chair to serve as a throne.

The Emperor, who looked very well indeed, walked to the dais with slow and measured steps and as is his wont neither looking to the right nor left. I had never had a good look at him before by daylight and was very curious to see whether his photographers by sun and pen had belied him. The result was that I concluded that they had mostly done so. I found him tall, taller than most of the Japanese who surrounded him, and even taller than some of the scanty group of foreign on-lookers.

He was stouter and much fairer complexioned than I had expected—I don't wonder now that the sale of his photograph is discouraged, the resemblance in one and all being the very reverse of flattering. Among those who were present, were the Chiji of Kioto and several of his subordinates, the Minister of Public Works Mr. Ito Hirobume, (much better known to some of us nine years ago as Ito Shunkei) The Chief Commissioner of Railways, Mr. Enouye Masaru, Messrs. Boyle, England, Page, Larking, etc., etc. There was very little said and the ceremony was soon over. The Mikado was then escorted to the Imperial carriage, a right dainty vehicle, all pale blue silk, silver and rosewood, which the curious in such matters may find amply described in a recent number of the *Hiogo News*.

Pretty punctually at 9.30 the whistle sounded, and the Imperial Band which had commenced by playing the Japanese National Anthem, broke out afresh in the carriages with a quick march to the lively, but not over elegant air of "Shoo Fly!" I found later on that, provided they played the National Anthem once at each of the three Main Stations, the rest was left to the discretion of the native band master. I had heard that they played the "Lincolnshire Poachers," the old march of the 20th Regiment, whose Bandmaster, Fenton, was their instructor, best of all, so I quietly suggested that, "It was my delight on a moonlight night" would sound quite as well as the Schottische "A New Flower" which they had intended to play on arriving at Kobe. The polite musician readily consented, and, I must say, that, in my humble opinion, they played nothing better all the day.

But to return to our *hitsuji*, the train moved away amidst the firing of cannon and the clang of martial music: there were no cheers, but your Japanese is not much given to that exertion. Our handsome new engine sped away, heavily laden with earthly dignitaries though it was, to Osaka without stopping, as gaily and carelessly as if it freight were the most ordinary of so many common work-a-day mortals. All the wayside stations were prettily bedecked with evergreens, interspersed with crimson berries, yellow chrysanthemums, flags and lanterns. Crowds of curious sightseers stood at each crossing, a few of them, and but very few, crouching as if they had heard the *staniero*! cry of olden days once more. At 10.30 we had reached Osaka and the sun was out in all his glory. The scene here was really a brilliant one, the decorations both in drapery and evergreens being very handsome and in good taste withal. Here His Excellency Governor Watanabe, Gon Chiji of Osaka, presented an address and a number of his subordinates at the same time, the Mikado as usual replying in his brief impassive way. Ho is, if I may be so bold as to say it, rather too cold in his manner in public, but I believe can unbend when he regains the privacy of his palace. There were immense crowds of spectators assembled, but all save a group of foreigners kept as still as mice.

I did not note at what hour we left Osaka, but we could not have been there many minutes. Little noteworthy on the Kobe line. At Kobe another prettily draped and decorated platform in front of the Railway offices. Here several presentations took place, Sir Harry Parkes presenting amongst others, Mr. Annesley, H. B. M.'s Acting Consul, Mr. J. C. Klein, H. B. M.'s Consul, and Mr. Thos. Brassey, M.P. Amongst those present there were two members of the Imperial family in foreign uniform, and two kuges, probably more distant relatives,

richly dressed in the national costume, the Ministers of England, Russia, America, Austria, Spain, Germany, and Italy. The Band of the French ironclad *Atalante* played some beautiful pieces alternately with the equally vigorous, if hardly so refined, band of the Emperor. In the meantime a cold tiffin which did credit to the caterer, Jentei of Osaka, was partaken of by His Majesty and the more distinguished of his guests in one of the rooms of the Railway offices, The lesser fry undergoing "a struggle for existence" in sundry other rooms. It was a humorous scene to see those much bedecked magnates good temperedly hunting up cold chicken and kindred dainties: there was plenty for all of everything but seats.

At 2 p. m. the state train commenced its return journey and before 3.45 had performed the whole distance to Kioto—48 miles, not even stopping at Osaka.

A brief parting ceremony took place in front of the dais on the Kioto platform, and the main business of the day was at an end.

The Foreign Ministers remained at Kioto; but the remainder of the foreign guests and, most of the Japanese dignitaries, except the local ones, returned in the state train to Osaka.

At the City Hall of Osaka a dinner was given by the Public Works Department, at which about sixty foreign and native guests were present. This was also a credit to Jentei, and a very pleasant evening was passed.

After dinner Mr. Ito Hirobumi, Minister of Public Works, presided at one table, and Mr. Enouye Masaru at the other. Among the toasts were "the Ku," and "Success to the Railway," by Mr. Ito: "The Engineers," by Mr. Enouye, which elicited some remarks from Mr. Cargill, and was replied to at length by Mr. Boyle: "The Governor of Osaka," by Mr. Cargill, drunk with a hearty enthusiasm which showed the high estimation in which the Governor is held. His Excellency replied in Japanese and his speech was interpreted. He said that many thanks were due to the foreign engineers, and remarked that Osaka would derive most benefit from their labors. Mr. Ness proposed the healths of "Messrs. Ito and Enouye," the latter gentlemen responding in a speech which was loudly applauded. Mr. Ito proposed "Mr. Cargill," which toast was drunk with enthusiasm, and the subject of it replied suitably. The health of "Mr. Page, the traffic manager, and the foreign staff" was proposed by Mr. Enouye, and at the suggestion of a guest the name of Mr. Yegawa, native traffic manager, was coupled with this toast to which Mr. Page replied. About this time Mr. Ito left, and Mr. Enouye proposed "the Press," which was answered by Mr. W. G. Howell on the part of the foreign, and a gentleman from the office of the *Choya Shinbun* for the native newspapers. The last toasts were that of "Mr. Takeda and the subordinate officials of the line," and "Mr. Ota," both proposed by Mr. Enouye and drunk with musical honors, after which the guests dispersed at 11 o'clock, some returning to Kobe by the last train, and others remaining in Osaka for the night.

Mr. Nathan J. Newwitter, U. S. Consul at Hiogo and President of the Hiogo Municipal Council, delivered the following address to His Majesty the Mikado in the course of the day:—

"The pleasant and honored duty of welcoming Your Majesty to this section of Your Empire, and to greet Your Majesty on behalf of the Hiogo Municipality and its residents, representing all Nations, has devolved upon me. In offering Your Majesty sincere congratulations on Your safe arrival from the

pleasant visit and sojourn at the Western Capital, the historical cities and beautiful homes of Your brave, honored and heroic ancestors, I but interpret the feelings of the Foreign Community of Hiogo when, in their name, I tender You a cordial welcome.

"I have reason to know that Your Majesty's visit to Kioto, Osaka, Nara and Hiogo, and the days You have sojourned in the midst of Your people, has added joy and inspired Your people with patriotic impulses, and the demonstrations with which You have been received is but a proof of a people's love, fidelity and loyalty. The history of all ages have from time to time recorded the glory of their Rulers, but none will appear brighter on the pages of the World's history than that of Your Majesty's Empire, powerful and majestic now as well as centuries ago, and progressive to a degree which must redound in continued National honor and glory. It is a source of pleasure to those who from foreign shores, have made Your Majesty's land their home, who have watched the prosperity of Your people and that progress and glory amongst the Nations of the World which Your Majesty's Government has achieved in so brief a time, aided by Your Majesty's personal efforts to promote the welfare of Your people. Wishing Your Majesty continued good health, and that Your Majesty's Reign may be happy and long continued, as well as marked by constant advancement in everything that will benefit Your land and people, that peace and plenty essential to greatness and glory may ever surround Your Majesty's Government and People."

Law Reports.

In H. B. M. Vice-Consular Court at Yedo,
in Chambers.

Before H. S. WILKINSON, Esq., Acting-
Law Secretary.

Monday, January 29th, 1877.

TOKIO FU vs. BLOCKLEY & BLOCKLEY.

In the matter of a Petition and Counter-claim between

KUSUMOTO MASATAKA, } Plaintiff
GONCHII, TOKIO FU, }

And

ARTHUR BLOCKLEY and } Defendants.
BRIDGET BLOCKLEY, his wife }

ARTHUR BLOCKLEY and } Plaintiffs
BRIDGET BLOCKLEY, his wife }

And

KUSUMOTO MASATAKA, } Defendant.
GON CHII, TOKIO-FU. }

The plaintiff, through the medium of his counsel, John Frederick Lowder, Esq., moved that the petition and counterclaim of the above-named defendants be dismissed without any answer being required from the plaintiff on the ground that the facts alleged therein do not show any cause of action or any claim to which effect can be given by the Court as claimed by the defendants, and on other grounds sufficient in law to sustain this action.

Mr. Montague Kirkwood, who appeared on behalf of the defendants, objected to the Court entertaining the motion, and quoted articles in law to sustain his objection. He contended that the demurrer was bad in substance: and that the other side should have particularised in the motion the ground

upon which it based its present action, as it was impossible for him to know what point the plaintiff's counsel intended to argue. That this should be stated accurately appeared by Section 43 of the Rules of the Court. This, he contended, was the practice by the Common Law Procedure, Art Chitty, P. 925, 926.

Mr. Lowder thought he had done all that was required by Rule 1, of the 28th order in Council of 1865.

He also referred to Bullen & Leake, Prec. Pl. 3rd edition, page 822; and argued that Section 1, of Order 28 made a point of law which is a cause of demurrer.

The Court ruled that the words of the Order 29, Rule 1, specified the general ground of demurrer and did not create any new ground of law. That there was consequently no ground of law stated in the motion such as was required by the Rule 43 of the Order in Council.

After some further discussion it was agreed that the motion be amended by the insertion of the grounds of demurrer.

The question of costs in the case then cropped up, in which Mr. Lowder expressed his opinion, though he had received no instructions on the subject, that it would be incompatible with the dignity of the Japanese Government to claim costs.

It was ultimately agreed between the Counsel that no costs should be given on either side.

The motion having been amended as follows:—

1.—Mis-joinder of parties.

2.—Non-joinder of parties. Relief consequently not properly claimed.

3.—The relief sought is such a relief as could not be granted if proceedings were originally instituted by the defendants.

4.—Want of jurisdiction.

Mr. Lowder said that the first ground of objection to the defendants' counterclaim was a technical one, inasmuch as the parties were both mis-joined and non-joined as would be seen by reference to Sec. 23 and Sub-Sec. 3 of the Judicature Act of 1873, which quotations he read to the Court. He contended that the mis-joinder of parties in the contract of which a breach was alleged was that his client was not a party to the contract. It was not asserted anywhere that the Tokio Fu was a party to the proceedings, and therefore there was a non-joinder.

The granting of relief was subject to these two conditions:—

1.—That the relief sought is properly claimed.

2.—That the relief could have been given if the defendants had been originally plaintiffs.

Secondly, the contract set up by his learned friend, of which it was alleged there had been a breach, was that the Government had authorized foreigners to reside within certain limits. What is the alleged breach? It is this: that foreigners have been allowed to reside outside of those limits with the knowledge of and the sanction of the Government.

The learned Counsel now came to his third point, and argued that, on the face of the petition, the contract was said to have been entered into between two parties, the Japanese Government and the Foreign Ministers. Therefore the Blockleys had no *locus standi* in this Court, because they are not parties to the contract. His client could not sue, neither could the Blockleys, because the names of neither one party nor the other had their names affixed to the contract of

which a breach was alleged. On those grounds the learned gentleman said he claimed that his motion be granted.

His next objection was as to jurisdiction. He objected to the jurisdiction of this Court on the ground that the act complained of in the counter claim was an act of State and an act committed by a Foreign Government; and the English Courts would not entertain suits against Foreign Governments in Acts of State. Furthermore, that the act complained of was an act of State was clearly pointed out by the answer originally filed by the defendants and also by the counter claim they had set up. If there was a breach of contract it was committed by a Foreign Government and therefore was an act of State over which the Court had no jurisdiction. To substantiate this view, the learned gentleman quoted the case of the Duke of Brunswick against the King of Hanover as reported in Smith's Leading Cases, vol. 1, sixth edition, page 663, where it was set down that a government was not liable to be sued on matters of State. On the same page there was another case in which the Chancellor refused to entertain a complaint against Foreign Powers, although the plaintiffs were British subjects. He also drew the attention of His Honour to the dictum of the Judge in a case reported in the 30th Law Journal of Chancery, page 711. The next case the plaintiff's Counsel drew the attention of the Court to, was that of Gladstone vs. Ottoman Bank, which, as the incidents it contained were parallel with the present case, in the estimation of the learned gentleman, he read the full report as contained in the 32nd Law Journal of Chancery, page 228, and afterwards argued that it distinctly stated that the Court in which it was brought on had no jurisdiction over a Foreign Government. And if there was a breach of contract as alleged in the present case, it was a government act over which the Court had no jurisdiction; and the matter was one which ought to be taken up by the foreign representatives. In support of this contention the learned gentleman drew the attention of the Court to the 8th vol. of Law Reports on Equity, page 198, which proved that the British Courts had no right to interfere with the action of a Foreign Government. He claimed that no relief could be granted to the Blockleys, as it was outside the jurisdiction of the Court, and if taken up at all it should be by the foreign Ministers.

After quoting another case, recently decided in England, the learned Counsel informed the Court that he had nothing further to trouble it with.

The case was then adjourned till Saturday next at 10 a.m.

In H.B.M.'s Provincial Court at Kanagawa.

Before H. S. WILKINSON, Esq., Acting Law
Secretary.

Tuesday, January, 30th, 1877.

W. HOWLES
vs.

E. C. KIRBY, W. H. TALBOT and others.

Mr. M. Kirkwood for plaintiff, and Mr. F. V. Dickins for defendants.

The following is a judgment on a motion, brought before the court by the Solicitor for the defendants in this case, that the plaintiff should be compelled to answer cer-

tain interrogatories. The main trial is still pending and judgment itself fully explains this intermediate action.

JUDGMENT.

In this case Mr. Dickens moved on behalf of the defendants that the plaintiff should be ordered to answer certain interrogatories. Mr. Kirkwood asked that the motion should be dismissed with costs on the ground that there was an agreement which rendered the motion unnecessary, and which he on his part had always been ready to carry out. The facts as to the agreement are not disputed. It appears that on the 30th of October last Mr. Dickens wrote to Mr. Kirkwood asking him if his client objected to answer certain interrogatories, or else he would have to make a motion. Mr. Kirkwood replied on the 1st of November saying he had no objection to his client answering fair interrogatories, but that the costs connected therewith would have to be borne by the defendants. On the 6th Mr. Dickens wrote to Mr. Kirkwood saying that the costs would have to be costs in the cause, and on the 10th Mr. Kirkwood replied agreeing to this. On the same day Mr. Kirkwood requested that the delivery of the interrogatories might be delayed, to which Mr. Dickens replied saying that he would not send the interrogatories till Mr. Kirkwood was ready. After a lapse of eleven days,—on the 21st of November,—Mr. Kirkwood wrote to Mr. Dickens requesting him to send to him the interrogatories. This letter Mr. Dickens returned, together with a memorandum stating that he declined to receive any communication from Mr. Kirkwood on any subject whatever, that all business communications must come through the principals, and from Mr. Dickens' side all such should be so sent. Mr. Dickens follows this up by writing direct to the plaintiff, Mr. Kirkwood's client, on the 22nd November, intimating that the interrogatories to be answered by him would be sent to him on the following day; the interrogatories were accordingly sent to the plaintiff with a letter from Mr. Dickens stating that he addressed himself direct to him because he was unable to hold communication with Mr. Kirkwood. Mr. Howles returned the interrogatories stating that as he had put his case in Mr. Kirkwood's hands all communications must come through him. Mr. Dickens then wrote again to Mr. Howles stating that he declined all communication with Mr. Kirkwood, and as it was perfectly easy for Mr. Howles to hand over any communication to him, he would apply to the Court and he, Mr. Howles, would have to stand the costs.

At the hearing of the motion when these facts and the arguments of counsel had been placed before me, I considered that as it had been agreed that interrogatories should be delivered the granting of an order to that effect would of itself do no injustice to either side, and I accordingly granted the order but without prejudice to the question of costs, which was reserved.

The question appeared to me to be a very clear one, but as the position taken by Mr. Dickens was similar in many respects to the position which he had taken in a case which had come before me a short time previously and in which I had expressed a strong opinion against Mr. Dickens, I wished before giving a decision to have an opportunity of consulting the authorities, and therefore refrained from giving any expression to my views upon the point. Mr. Dickens to justify the course he has taken relies upon section 255 of the Rules of Court requiring that

service of documents should be personal.

It is true that he did not lay great stress upon this contention, but it is necessary to consider it. The rule referred to requires that the person ordered by the Court to be served shall (except in special cases) be served personally, but it does not, it appears to me, prevent the application of the rule which prevails in England, under which the person to be served is the solicitor engaged in the case, and, indeed, it has been the practice in this Court to serve the solicitors and not their clients. But it is unnecessary now to decide this point, for as I interpret the agreement which was come to between Mr. Dickens and Mr. Kirkwood, as embodied in the correspondence, it was an agreement that the English practice should be observed, and that the rules of Court should be waived as far as they might be inconsistent with that practice. The negotiations up to the 10th of November had been carried on between Mr. Dickens and Mr. Kirkwood, not through their clients, but in the ordinary way, and so far from there being any indication that that course should be departed from, Mr. Dickens writes on that day to Mr. Kirkwood: "I shall not send you the interrogatories until you tell me you are ready," showing, it appears to me, that the usual course of sending the interrogatories to Mr. Kirkwood himself was distinctly contemplated. Now where a solicitor is to be served, it is not sufficient to serve the client. This is clearly laid down in the case of Stevens and Underwood, and I am of opinion that Mr. Dickens in sending the interrogatories to Mr. Kirkwood's client did not carry out the agreement entered into with Mr. Kirkwood, and that, if he had carried out the agreement, the application to the Court would have been unnecessary.

I am therefore of opinion that the costs of the motion have been incurred through Mr. Dickens' own fault, and that they ought therefore not to be borne by the plaintiff, and that the only question is whether they ought to be borne by the defendants, or by Mr. Dickens himself.

It is clearly laid down that a solicitor cannot recover the costs of proceedings taken by him unnecessarily, and I consider these proceedings to have been taken by Mr. Dickens unnecessarily; it is also clearly laid down that a court may order a solicitor to pay out of his own pocket the costs which either his own client or the opposite side may have incurred through his fault, and I consider that the costs incurred by the plaintiff were incurred by Mr. Dickens' fault. Not only has Mr. Dickens failed to carry out his agreement with Mr. Kirkwood, as I interpret it, but in communicating directly with Mr. Kirkwood's client he did what, it appears to me, he ought carefully to have avoided. The authorities show that such direct communication with the opposite party, when he has a professional adviser, is strongly discouraged by all the superior Courts at home, and Mr. Dickens' attention had but a short time before been called to this point by this Court, and Mr. Dickens is not, in the exercise of his profession, entitled to mark out a course for himself different from that which the practice of the profession as recognised by the Courts has marked out for him, simply because the latter course is personally disagreeable to him. But on the other hand, Mr. Dickens in this case has been more careful to guard himself against the unfavorable construction to which he laid himself open in the case referred to, and the order to a solicitor to pay

costs out of his own pocket is always considered a strong measure, and if such an order were now made in this case, it might convey a greater degree of censure on Mr. Dickens' action in the matter than is intended. While I consider it right therefore not to pass the matter over entirely, I shall confine myself at present to the usual order that the costs of the motion be paid by the defendants, and leave it to the defendants to take such action on the taxation of costs and otherwise as they may think right.

Thursday, February 8th, 1877.

Peter Gerhard Hansen was charged on the information of Mr. Hazelwood, Acting Accountant of the Yokohama branch of the Hongkong and Shanghai Banking Corporation, with feloniously forging a certain bank note of the value of five hundred dollars, and attempting to utter the same with the intention of defrauding the said Hongkong and Shanghai Bank; and also with unlawfully and wickedly combining and conspiring [with certain other persons, to forge and utter the said bank note with intent to cheat and defraud the said Banking Corporation.

The prisoner being a Dane by birth was arrested the day before yesterday on a warrant from the Danish Consul, but pleading that he was a naturalized British subject, was handed over to the British authorities.

Mr. F. V. Dickens, who appeared on behalf of the Bank, asked that the charges against the prisoner might be slightly altered.

His Worship intimated that as the prisoner had been arrested on a warrant issued on certain charges, those charges could not now very well be altered. But Mr. Dickens might bring forward any additional charges.

It was ultimately agreed between His Worship and the Counsel for the prosecutor, that the prisoner should be verbally informed that he was also charged with forging, uttering, aiding and abetting, with intent to defraud, a bank note of the Hongkong and Shanghai Banking Corporation for \$500; and with conspiring with other persons to forge and utter such bank note and thereby to defraud.

His Worship read over the charges to the prisoner.

The Prisoner asked the Court how many distinct charges there were against him.

His worship informed him that he was charged on four distinct counts, the last one being "with aiding and abetting," which had been added at Mr. Dickens' request.

Mr. Dickens then briefly commented on the circumstance of the case so far as was known and called.

Alfred Henry Charles Hazelwood, who deposed:—I am Acting Accountant of the Hongkong and Shanghai Banking Corporation of Yokohama. That note (produced and shown the witness by Mr. Dickens) is not a note of the Hongkong and Shanghai Bank, but a forgery. The first I knew of the attempt to pass this note was on Tuesday evening when Mr. Walter—

The prisoner interrupted the proceedings by asking if the case had commenced.

His Worship replied that it had.

The prisoner then applied for an adjournment in order to allow him the opportunity of procuring legal assistance. He did not know with what he was charged until that moment, and was consequently totally unprepared to defend himself.

The Court granted the application, and the case was adjourned till Monday next, at 10 o'clock a. m.

NOTICE.

THE interest and responsibility of MR. CHARLES DAVIS MOSS in the co-partnership business of the "JAPAN GAZETTE" ceased by consent on the 31st December, 1876.

C. D. MOSS.

J. R. ANGLIN.

Yokohama, Feb. 7th, 1877.

1m.

NOTICE.

THE undersigned beg to thank their numerous customers for past favors and the liberal support they have afforded; and desire to announce that they have transferred their business in this port to

Messrs. KELLY & Co.,

on whose sole account and responsibility the same will be carried on from the first day of the ensuing month of February.

All outstanding accounts must be paid immediately to, and all liabilities of the undersigned settled by, F. R. WETMORE.

F. R. WETMORE & Co.

Yokohama, Jan. 31st, 1877.

1m.

NOTICE.

THE undersigned beg to notify that they have taken over the business, hitherto carried on at No. 28, by Messrs. F. R. WETMORE & Co., and will conduct the same from the first of the ensuing month of February

PASSENGERS.

Per Am. str. *City of Tokio* for San Francisco:—Messrs. John Roche, D'Iffanger, John Burke, Mr. J. R. Wasson, Mrs. J. R. Wasson, O. Sambook, Mrs. Campbell, George Westphal and Frank Burris.

Per Brit. str. *Malacca* for Hongkong:—Messrs. Pengelley, Cox, Smith, Fook Ching, wife and child, Chau Yok Chee, and two children; 14 Chinese in the steerage.

Per Am. str. *City of Peking* from San Francisco:—Messrs. Joseph Taylor, N. Yoshikawa, G. Ishigo, H. Kubo, H. Shubata, Mrs. G. E. Baughman, M. Mamhaka, M. Chovero, Miss L. B. Ross, K. Nakashima, G. Nagaoka, Miss A. Windsor, C. A. Herbert, J. B. Hail and wife, Col. de Carteret, E. Curwen, Quong Se Chan, Wing Wong Hein, H. Mayeda, F. Knapel, F. F. Jewett, A. L. Case, U.S.N., C. W. Deering, U.S.N., Jno. Brady, and twenty-one Europeans in the Steerage.

FOR HONGKONG.

Dr. F. de Hass, Mr. A. G. Carey, Mrs. Spaulding, Mr. A. O. Happer, Jr., Mrs. G. Curtis, and Mrs. E. French.

Per Royal yacht Squadron yacht *Sunbeam* from Honolulu:—Mr. and Mrs. Brassey and family, The Hon. A. Y. Bingham, F. H. Freer, and Dr. Potter.

Per Brit. str. *Gaelic* from Hongkong:—Messrs. J. B. Macpherson, A. H. Jones, A. M. Assaphoy, Captain W. M. Redmond, wife and child, and 95 Chinese in the steerage.

REPORTS.

The American steamer *City of Peking* reports:—Left San Francisco January 3rd, at 1.10 p.m. To January 15th, had moderate breezes from S. W. to N. N. E. with fine weather: thence to January 18th, fresh gales from S. S. W. to W. N. W. with heavy squalls: thence to January 20th, moderate gales from N. E. with smooth sea: thence to January 22nd, heavy gales from South to N. W. by N. with tremendous sea; and thence to Yokohama fresh gales from N. W. to N. N. E. Arrived January 24th, at 9.20 a.m.

Lat. 36° 26.30 N. Long. 160° 17.00 boarded the Japanese Schooner *Hosayoshima-Maru*, dismasted, and took off four of the crew, the other three refusing to leave the schooner.

The British steamer *Dragon* reports:—Passed a large full rigged ship off Vries Island, supposed to be the British ship *Coulmakyle*.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

In this market quietness has continued to prevail. As during the preceding fortnight the only demand for yarns was in the lower sorts, from medium inclusive, of 16/24, and that so trifling as to be hardly worth notice. Such low prices are offered for shirtings that holders refuse to accept them, and a condition of almost complete stagnation is the result. Some sales have been made in Indigo Shirtings and Velvets, but at lower rates, and the market for all other kinds of cottons is inactive. In Woollens, Blankets only are fairly saleable, all other Staples being stagnant.

The steamer *Egeria* and the ship *Coudnakyle* have arrived from London. Transhipped cargo ex steamers *Gange*, *Bokhara*, *Indus* and *Hydaspes* from London, *Menelaus* and *Achilles* from Liverpool, *Ava* and *Amazone* from Marseilles, and *Cassandra* from Hamburg is also to hand.

METALS:—Depression still continues, with accumulating stocks, in spite of which holders will not take the low prices offering.

SUGAR:—A slight revival. 9,200 bags of new sugar have arrived from Formosa, and 4,200 of these have been sold at \$3.95 to \$4.07. Sales of old Formosa about 9,000 bags at \$3.70 to \$3.80. Holders firm and demanding an advance.

KEROSINE:—Prices have fallen somewhat, and the demand is quiet. 4,000 cases have been sold at \$4.50 to \$4.65.

ARTICLES.	PRICES.	REMARKS.	
COTTON PIECE GOODS.			
G. E. Gray Shirtings—

Raw Cotton (China) "	4.40 to 4.50		
Kerosine Oil, 10 galls. per case.	4.40 to 4.50		

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Advices from Europe have again acted most unfavorably upon our market, and prices have fallen from \$50 to \$100 since the date of our last market report. Holders have been unwilling to take the low prices offering, and buyers on their part have shown no eagerness, so that business has been very restricted. The only exception to the great general decline has been in Filatures which have been but slightly affected. Of best Hanks there are hardly any. Stocks, consisting of about 2,000 bales, are nearly half composed of Oshius. Settlements since our last have been 300 bales of which 170 are of Hank Sorts. Total Settlements to date 19,250 bales.

TEA.—Business has been rather quiet during the period since our last issue; though on the close of the month prices slightly hardened in consequence of a reported improvement on the New York Tea Market, but the said appearing only very partial buyers again withdraw and dullness is the prevailing tone. Settlements for the period amount to piculs 1,800, mostly low grade Teas, and arrivals are not more than piculs 1,200.

Prices close as last quoted with a slightly downward tendency, and in absence of sailing freight available there is little inducement to purchase.

The stock of Tea still in first hands is very difficult to compute, and, should prices rule much lower, will no doubt be carried over into next season for mixing purposes, to the great detriment of the buyer here and also the consumer in America.

DESCRIPTION.		PRICES PER PICUL.	REMARKS.
SILK :—

The Japan Gazette

MAIL SUMMARY, SHIPPING AND MARKET REPORT.

PUBLISHED TWICE A MONTH.

Per P. M. Str. "City of Peking."

YOKOHAMA, TUESDAY, FEBRUARY 27TH, 1877.

Single Copy, 25 cents.

THE "Japan Gazette" MAIL SUMMARY.

FROM 11TH TO 26TH FEBRUARY, 1877.

BIRTH.

On the 23rd February, at No. 61, Main Street, the wife of A. T. WATSON, of a daughter.

DEATH.

Suddenly, at No. 11, Kobe, on the evening of the 7th instant, WILLIAM SMEATON, a native of Eifeshire, for many years a faithful servant of the Oriental Bank Corporation.

OUR last Mail Summary was despatched per O. & O. Steamer *Gaelic*, which left this port at daylight on the 11th instant. Since that date we are in receipt of the following mails:—

	DUR.	ARRIVED.
American Mail	...	Feb. 12.
French "	...	Feb. 18.
English "	...	Feb. 24.

The *Alaska*, with the now due American mail from San Francisco, is hourly expected.

Latest dates are:

London.....	Letters	...	Jan. 5.
"	Telegrams	...	Feb. 26.
New York	Letters	...	Jan. 7.
"	Telegrams	...	Feb. 22.
San Francisco	Letters	...	Jan. 16.

Summary.

At the time of the departure of the last mail for San Francisco, there were already rumours of disaffection prevailing in the province of Satsuma. Since then, the discontent has turned into open revolt. During the past fortnight, the air has been full of rumours of risings and warlike demonstrations on the part of the clansmen. Under the heading of "the Satsuma insurrection," will be found further on a detailed account

of such information, since the 12th instant inclusive, as we have been able to gather from the native papers, and such facts in the way of warlike preparations and movements of troops, vessels, and stores, on the part of the government, as has come to our knowledge. No doubt exists now that the crisis is a serious one, although the leaders of the insurrectionary movement, be they who they may, keep themselves so far in the back-ground. Naturally enough the name of Saigo, the elder, titular Commander-in-Chief of the Mikado's army, has been connected with the rising from the first. For many days it was reported that he had refused to have anything to do with the insurgents: that he had even implored them to forego their projects; and that, finding them immovable in their designs, he had withdrawn himself with his family from his home, and sought seclusion in some district of his province unknown even to his nearest friends. Now, however, it is reported that he has not only lent the weight of his name and influence to the cause of the samurai, but that he has even taken command of them, and is now at the head of ten thousand armed men marching towards Kioto, where he wishes to present a memorial to the Mikado in person, and has despatched by sea a contingent, equal in number to his own army, to land at Kobe and thence to march towards the old capital, there to effect a junction with him. Of course, this is mere rumor so far, the Government having interdicted the publication of what they designate idle rumors, and having virtually closed the telegraph to the transmission of all but their own messages. Still, the announcement, made yesterday in the native papers, that Saigo had been deposed from his rank, lends it a strong coloring of at least partial probability. His deposition must have a great effect upon subsequent events; as the fidelity of the army, to say nothing of the unemployed samurai, is held to depend largely upon what he will say and do. Meanwhile the Government have been massing troops upon the Satsuma frontier, and placing ships of war at all possible points of the coast of that province. The Emperor remains at Kioto, whence all movements will be directed: Prince Arisugawa-no-miya leads the Imperial army against the rebels: some engagements, mere preliminary skirmishes

probably, have been fought with varying success; and natives and foreigners alike are looking anxiously forward to the developments expected next few days.

THE U. S. S. *Albatross* left on the 12th instant for Nagasaki, *Albatross*. There are now only two foreign ships of-war in Yokohama harbor, H.B.M. *Albatross* and the U. S. Sloop of War *Alert*.

THE Japanese Government have made another step forward in the improvement of their system of jurisprudence. Regulations have been formulated and issued for the admittance of certain classes of accused persons to hail, and for greater expedition in the administration of justice; the latter measure being for the present confined to the Courts of Tokio.

SOME agrarian disturbances have been reported from the provinces; but any interest which might have been felt in them at other times has been lost in the feelings awakened by the outbreak in Satsuma.

THE case of the four men implicated in counterfeiting \$500 notes of the Hongkong and Shanghai Banking Corporation has been investigated before the Consuls of the various courts to whom they are severally amenable.

MR. NATHAN J. NEWWITTER, U. S. Consul for Kobe and Osaka, has been requested to resign the chair of the Municipal Council at the former place.

DESTRUCTIVE fires are still common in Tokio and the provinces; and will probably continue so till the arrival of mild weather. A fire on Lot No. 81 in the Foreign Settlement, Yokohama, occurred at 2 p. m. on the 21st inst. It was confined to the hotel and restaurant in which it originated. It is the latest instance of fires suddenly breaking out through the ignition of woodwork in close connection with grates and chimneys.

Court Fé d'Ostiani, the Italian Minister, is to be transferred to Rio-de-Janeiro. Mr. Carl Rhode, a merchant, has received the appointment of Consul for Peru in this port.

H. E. Mr. Sanjo Saneyoshi, Prime Minister, is reported to be very unwell at Kioto.

MESSRS Shibusawa and Masuda, of the First National and Mitsui Banks respectively, have returned from Shanghai on the completion of the loan by this country of the equivalent of 300,000 koku of rice to China.

FORMOSAN PROSPECTS.

FORMOSAN matters must always have an interest for Japan, and an interest more real and more durable than that arising out of any military expedition, attended no matter by what successful results. Japan is to a great extent dependant upon Formosa for supplies of sugar, and that trade is susceptible of large extension. But sugar producing is not the largest of the resources of "the beautiful island," which may have large development under good management in the future. Its coal measures are of vast but unknown extent; its mountain ranges are rich in iron and other ores; and its plains are fertile with the generous and useful fertility of countries situated in the more temperate portion of the tropics. Writing on the subject of the coal mines at Keelung, a correspondent of the *China Mail* says that they "are getting on famously;" and on the authority of the same paper we learn that the development of trade generally in Formosa seems to be proceeding at a very satisfactory pace. There is no reason why the Chinese should not make excellent colonists, even in countries whose colonization may be undertaken under the auspices of their own Government. Chinese immigrants into Australia have been found almost invariably frugal and industrious, and economy and toil are eminently the virtues required from a colonist. In the British settlements of the Straits some of the wealthiest merchants are Chinese settlers. And, whatever comparisons may have been drawn between the Japanese and the Chinese to the disparagement of the latter, in the matter of Formosan occupation, there can be little doubt that, as a colony aiming at success through commerce, agriculture, and mines, and not as a mere military establishment, the island will have a better chance under Chinese than Japanese management. After the withdrawal of the Japanese army of occupation, and the determination arrived at by China to found a colony in the island, the Chinese authorities decided upon throwing open the east coast to settlers from their own country. Following the example of those countries who have been most successful in colonization, they offered special inducements to immigrants, such as free selection of free grants of land, loans of capital and seed, and armed protection against the aborigines. In giving an account of subsequent proceedings the *China Mail* says:—"A semi-military force was also employed in clearing and opening up the country from Suao, southwards along the coast, and attempts were made by force of arms and in other ways to bring the aborigines to a proper state of subjection, not, however, without some disastrous results to the Chinese forces employed; the whole system of government was re-organized, and, what was the chief event of the year 1875, the government announced its intention to open and work a coal mine with foreign machinery near Keelung, no doubt the main intention in taking the step being to supply with coal its own vessels and arsenals." * * * * "Foreign miners and machinery have been brought out from Home, and operations in coal mining have been commenced in Keelung." Nor did the authorities confine their energy to the mere development of the mines. They endeavored strenuously to find or create markets for the coal produced. Some time since "the energetic reformer Ting-jih-chang left Foochow for Formosa for the purpose of making a searching enquiry into

the administration of the Island, and the state of affairs there generally." * * * *

"Since his arrival Ting has been bestirring himself very actively to promote the trade of the place. The mines have been inspected, this part and that part of the Island have been visited, the system of administration has been enquired into, and various reforms have been ordered. The late Director at the Foochow Arsenal, who was in the Island superintending the working of the mines, has returned to Foochow with instructions from Ting to proceed to Shanghai and Hongkong and establish at each place a depot for coal from the Formosan mines."

With a view to facilitate communication, and so to advance the prospects of trade between the mines and the coast, Ting proposes to erect a telegraph line between Keelung and Taiwanfoo, and has empowered his commissioner to enter into negotiations with Mr. Henningsen, of the Great Northern Telegraph Company, on the subject. He has also taken measures for the reinforcement of the military, who are still required to protect the settlers from the aborigines. The only difficulty in the way of complete success of the colonization project appears to arise out of the dread felt by the Chinese of the natives on the one hand, and by the evil reputation which Formosa has, without sufficient cause, attained for being eminently unhealthy. To garrison the island efficiently will remove the first objection, and the clearing and draining which will accompany settlement will do much to take away what validity there may be in the second.

Decidedly Formosa appears to have a prosperous future. "The net value of the foreign trade at Tamsui and Keelung in 1875 was, according to the returns furnished by Her Majesty's Consul at the place, taels 1,834,080, and that for 1874, taels 1,519,063, showing an increase in the former year of taels 315,017. The trade at the port has, in fact, rapidly increased, year after year, since 1863. The Consul mentions in his report for the year that Keelung coal had recently to compete in Shanghai against that extracted from the new mines in Japan, and the export had consequently been comparatively small one considering the ease with which the coal was produced." It is to be hoped that the competition referred to will become active, to the encouragement and development of the coal trade of either country. Such rivalry, in inciting Japan to activity in the working of her industries, will do her more good than any scheme of government protection.

Formosa appears to be successful in the culture and export of tea. The Consul adds the following remarks to the report from which we have above quoted:—"I was stationed here in 1872. When I left the port in June of that year, the trade was carried on by three permanently established British firms, but others were establishing themselves. On my return at the end of last year, I found that there were not only five British firms doing business at Tamsui and Keelung, but that a number of Amoy teamen had erected hong and godowns at Twatutia (where the foreigners also have warehouses), and had been firing and packing teas for the foreign market at Amoy. Trade had so far progressed as to tempt these men to come over from the mainland and take their share of it, and the fact that more tea-packing warehouses are at the present moment being erected for other Amoy teamen is a proof that the tea trade has achieved a name for itself."

In conclusion we need only state that the prosperity of Formosa is to be ardently desired; for, with countries even more than with individuals, the welfare of one should tend to the success of its neighbors.

THE *Tokio Times* has made its seventh appearance. Its summary of the week's news is condensed into little space; two paragraphs are devoted to the internal troubles of Japan now threatening to become of grave national importance; three to matter which recently appeared in the *Japan Mail*, and one to the *Japan Herald*. An article entitled "National Economy" advances the protectionist theory in an uncertain and doubtful tone, and insinuates that the *Japan Mail* in a recent able article on this very important subject was "inspired by a feeling of direct animosity towards those nations which fix their faith upon an opposite system." The impartial reader will be able to estimate the truth and significance of a charge of this nature. The article continues:—"But in a country like Japan, there seems to us less occasion than elsewhere for the semblance of positive strife. Certainly there is little occasion for it on the side of Americans. They have no vital interests that can be at present affected by the adoption, here, of one or the other conviction. It is, for them, simply a question of honest judgment as to what this empire truly and profoundly needs. With Englishmen the case is somewhat different, since the extension of English trade in Japan, is a lasting necessity for their own land." Will this doctrine secure the approval of the important American community of Japan? Is it not a fair inference, deducible from the extract given, that England is a commercial nation active in the pursuit and extension of that trade with this country, to which America, the other great commercial nation of the world, having no interest—or rather no "vital" interest—to serve, is wholly indifferent? Is it seriously advanced as worthy of credence that American merchants in this country are animated solely by a desire to do for this country what it "truly and profoundly needs," having no interests of their own to serve? Is the reader also to understand that the extension of English trade in Japan is a lasting necessity for the continuation of Great Britain as a commercial nation? These questions we cannot answer except in the negative.

The article concludes with three sentences written, to say the least, with bad taste. The *Tokio Times* has been honorably challenged by the *Japan Mail*—has receded from its position in point of argument—and has declined to answer upon the merits of the discussion itself had raised.

"What is honesty?" is the somewhat startling heading of another paragraph. Is it not possible that an answer to this question was given by anticipation in the *Japan Mail* of 12th instant, which quoted in full the extract from the *Economist* that the *Tokio Times* only quoted in part.

"Personal intelligence" refers in an apologetic manner to the "escapades" of the Consul in Kobe who has so recently distinguished himself, and hints that the deserved strictures of the local press would not have been penned if the gentleman in question had not been an American. Reference is also made to a quotation from a Kobe paper with the addition of words tending to confirm the substance of the paragraph: the gentleman whose name has been so freely mentioned of late in connection with press

movements in Yokohama, has not, so far, joined the proprietary of the *Japan Mail*. Should he ever do so his return will be warmly welcomed.

There are a few words to be said upon the tone adopted by the *Tokio Times*, in reference to a distinction between Englishmen and Americans, in the discussion of abstract questions of an importance common to both. A community such as this recognizes no classification of nationality in matters of public interest; and the local press has invariably considered this a rule not only of courtesy, but of right. The *Tokio Times* has not missed its chance to earn a questionable reputation by being the first to deviate from this salutary regulation.

THE SATSUMA INSURRECTION.

From the *Japan Gazette*, Feb. 12th.

THE *Hochi Shinbun* yesterday published an extra giving intelligence of the trouble among the Satsuma men in Kagoshima. We translate it, the rising to which it refers being serious though probably in no way dangerous. What can a band of hot-headed youths without leaders or organisation do against the disciplined troops and police of a government, which two months since suppressed with ease a really formidable insurrection:—

Shibuya Hikoshichi, a Kagoshima-Kencho official of the rank of *Itto-sakan*, left his home in the steamer *Mikuni-maru* on the 3rd inst., and embarked on board the *Tokio-maru* in Kobe. On the 9th inst. he arrived at Tokio, where he furnished a detailed account of the movements of the rioters to the government. The insurgent party consists of young men without any recognised leader but there seems no doubt that their designs are to try to overthrow the existing government. When they were informed that large quantities of gunpowder from the arsenal in the island of Sakuragi were to be shipped to Osaka, they became very excited and fearful lest the government should send troops against them; and so resolved to rise previous to the arrival of the forces. They requested Mr. Saigo to assume command over them, but he urged them to be peaceable, and to consider the results of the Saga and Yamaguchi insurrections. But when he saw that their excitement could not be restrained within bounds he left his home and has gone to some place unknown. Mr. Oyama, *Ken-ri*, seems to have determined to work for the government at the risk of his life, and to disperse the malcontents without using arms. The rioters are mostly students of the private school, which was established sometime since by Mr. Saigo. They have taken an oath to hold together under any circumstances. At the close of last year, when the price of rice was low, they purchased 40,000 *oku*. The *Yomi-uri Shinbun* states that about two hundred shizoku attacked the Kencho, where a number of officials were killed, or wounded more or less severely, and that the assailants took possession of the place. This seems to be false. Mr. Kuwamura, Vice-Minister of the Naval Department, will stop at Nagasaki, whither various men-of-war will shortly follow him and preparations will be rapidly made against all contingencies. Mr. Hayashi, Vice-Minister of the Home Department, and his suite are reported to have met with shizoku near the Satsuma boundary; and a telegram from the south is said to have been received, which states that they were not allowed to enter that province. Mr. Kirino of the Kagoshima-ken, late General, is rumored

to have put himself at the head of the insurgents, who possess about 30,000 muskets, but very little ammunition. No Satsuma junks have entered the Osaka harbour this year.

Many telegrams are said to have been received by the government.

The *Nichi-nichi Shinbun* states that rumors are current of a shizoku rising in the Kochi-ken, and that a letter from some of the leaders to those of Kagoshima has fallen into the hands of the Government.

February 14th.

All conversation in the capital has relation to this subject which commences to wear a more serious aspect. All sorts of exaggerated rumors are afloat, and are no sooner heard than contradicted. Yesterday the editors of *Nichi-Nichi*, *Hochi*, *Choya*, *Akebono* and other papers were summoned before the Tokio Saibansho, where they were examined concerning what news they may have received relative to the insurgents. At about 8 o'clock a.m. yesterday, the telegraph between Tokio and Kumamoto was closed to private persons; and other than official communications restricted for transmission to the Mitsu Bishi Company's Steamers. Mr. Iwakura, acting for the Prime Minister, has issued a notification forbidding the sale, purchase, or transport of fire-arms except under permit from the War or Navy Department. Mr. Okubo, Home Minister, arrived in Yokohama by the train leaving Tokio at 3.45 p.m. yesterday, and embarked immediately on board the *Kaitakushi's* steamer *Genbu-Maru*, en route to Kioto. Messrs. Nakajima and Yanagisawa of the Gen-ro-in accompany him as far as Kobe, whence they will proceed to the Kochi-ken, where disturbances are expected to break out. At about 2 p.m. on the 10th instant, Mr. Yamagata, War Minister, left Kobe for Shimonoseki. For the past three days the powder magazines at Hiza Kane Daimachi, Tokio, have been strictly guarded, and the number of sentries has been considerably augmented. To-day Messrs. Sasaki and Saito, *Gikuwan* of the Gen-ro-in, left en route for the Kochi-ken in the *Tokio-maru*. A special session of the Gen-ro-in was held on the 12th instant, when the departure of the above mentioned and other officials was probably decided on. The *Choya Shinbun* says that Mr. Hayashi, Vice-Minister of the Home Department, went to Kagoshima accompanied by Mr. Kawamura, Vice-Minister of the Navy Department, in the *Takawa-maru*. On the arrival of that vessel at her destination the insurgents threatened to fire upon her. Messrs. Hayashi and Kawamura left the harbor immediately and proceeded to Onomichi in the province of Bingo, whence they sent a telegram to Kioto. They arrived in Kobe on the 12th instant. It is also said that the Governor of the Kagoshima-ken embarked on board the *Takawa-maru* at Kagoshima; but only succeeded in doing so with the greatest difficulty, about thirty insurgents endeavoring to prevent his embarkation. He also is reported to have landed in Kobe. The *Nichi-Nichi Shinbun* gives the following intelligence of the progress of the insurrection, and the measures taken to suppress it. Since the insurgents took possession of the Kencho, their numbers have considerably increased. A body of troops from Nagasaki has been despatched against them. It is rumored that a telegram has arrived stating that about eighty or ninety shizoku of Kuma-moto assembled at Amaki-machi and rebelled against the local authorities. A number of prefectures of police have been taken by a party of the insurgents; and spies have been arrested by them. The shizoku of Miyazaki, in the pro-

vince of Hiuga, have risen in concert with the Kagoshima men, to whom they have sent large quantities of ammunition and fire-arms. About one hundred shizoku of Kagoshima have already entered Kurume, spreading disaffection among the people. The shizoku of Kurume, Yanagawa, Kuma-moto and Saga seem to expect an engagement between the Government troops and insurgents, when they will be in readiness to support the latter. The motives or pretence for the rising are not stated; but it is said that the shizoku have forwarded a memorial to the Government, explaining their views upon public matters.

The *Hochi Shinbun*, has it that Mr. Hayashi, Vice Minister of the Home Department, is said to have been obliged to leave Kagoshima, where he was ill-treated by the insurgents. He is also reported to have taken refuge in the castle of Kagoshima, where in concert with the Konrei, Oyama, he is endeavoring to restore order. Letters can be sent by post as far as the province of Higo, but there is no postal communication within the disaffected province, where the rioters are reported to be ready to attack the Kuma-moto garrison. A telegram says that Mr. Kawamura, Vice Minister of the Navy department, has withdrawn as far as Onomichi in Bingo. Messrs. Goto, Itagaki, Oye, and Takeuchi will leave for Nagasaki in the *Tokio-maru*. Large numbers of the Kuma-moto shizoku have left their homes and joined the insurgents at Kagoshima.

The *Hochi Shinbun* also takes upon itself to assert that the Mikado will remain at Kioto to take the field in person against his revolted subjects. It informs us further that general Torio, Vice Minister of the War Department, left for Kagoshima yesterday. A telegram from Kumamoto says that about two thousand shizoku have gone to Minada in Satsuma. Some delegates from the insurgents were lately arrested at Nagasaki, where they were endeavouring to purchase fire-arms and gunpowder. The *Taihei-maru* of the M. B. M. Co., which vessel trades between Kagoshima and Loo Choo, is rumored to have been seized by rebels. All the shizoku in the country west of Kokura are much excited, and it is expected that they will unite with the Kagoshima men and others. They have assembled at Kokura and in its neighborhood. All the Kagoshima Kencho officials, who happened not to be born in Satsuma, have been arrested by the rebels and imprisoned. General Oyama will soon leave Tokio at the head of three battalions of infantry for Nagasaki and Kuma-moto. A detachment from the Osaka garrison, which was despatched for Nagasaki on the 10th inst., landed at Fukuoka. Mr. Saigo, the elder, is said to have secluded himself in the mountains of Hinatazan.

Among other disturbing rumors is one to the effect that the Takashima coal mines are threatened by the insurgents; and another that excitement is rife in the province of Ugo. We read in the *Choya-shinbun* that, on the 10th inst., the branch barracks at Kuma-moto, occupied by troops from Nagasaki, were attacked by the insurgents, and that thirty-two of the troops were killed or wounded more or less severely. The troops retreated to head-quarters, leaving the barracks in the possession of the assailants, who followed them up on the 11th, when a severe engagement took place. Great activity prevails in the arsenal at Koishikawa, Tokio; and we are informed that every one in the capital is very anxious awaiting future events.

February 15th.

As with their customary reticence, the Government have furnished no information, we

continue to be indebted to the native journals for what information we can give upon the insurrection in the south. The excitement in the capital, however, appears to have diminished since yesterday. No more troops have been moved thence; and the authorities are no doubt acting upon the intelligence they have received by telegraph, and the fuller details which came to them by steamer yesterday. We read that the number of the insurgents is daily increasing, and that some of them have already entered the province of Higo. Col. Hasegawa is said to be under orders to proceed to Kiushu at the head of two battalions of infantry and one battery of artillery. The imperial guards now at Osaka are to remain there till further orders.

The *Choya-shinbun* says that Mr. Hayashi, Naimu-shoyu, is in Yamaguchi, whence he has sent telegrams to the government. The same paper states that all private telegraphic correspondence has been temporarily suspended. The insurgents are said to have stormed and taken the arsenals in Kagoshima on the night of the 31st ult.—1st instant. The Osaka troops are all ready to enter into campaign. The *Horai* and *Shario-maru* of the Mitsu Bishi Co. have been ordered to be held at the disposal of the War Department, as transports. To-day the *Kanko-maru* of the Naval Department left for Nagasaki, taking fire-arms and military stores. Messrs. Kusuda and Yamaguchi, *Gikuwan* of the Genro-in, will soon leave for the province of Hizen. Mr. Iwakura, attended by Mr. Tanimori, his Secretary, went to the Sei-in at about 8 p.m. on the 13th inst., where a meeting was held lasting many hours into the night. At about 4 o'clock next morning only Mr. Iwakura returned to his residence.

The Gakkoto (students) of Kagoshima, who are reported to have initiated the rising, number about 7,000, of whom 3,000 live in the city of Kagoshima and the rest in adjacent villages. It is said that the shizoku of Kagoshima are divided into three companies, namely the Kinko-tai of Shimadzu, the Sogeki-tai of Kirino, and the Gengiu-tai of Saigo. Each of the first two bands consists of about 3,000, and the third of about 15,000 shizoku, all of them young and able-bodied.

The steam ship *Taiyu-maru*, which was presented to the King of Loo Choo by the Mikado last year, is said to have been seized by the insurgents, who have been joined by about three hundred shizoku of Sadowara in Hiuga.

This morning's *Hochi shinbun* says:—All the roads to Kagoshima-ken are precipitous and mountainous, so that one man can guard a pass against an army. The Akune road, between Kagoshima and Nagasaki, is somewhat level, but is not passable for vehicles. Besides the defences of nature, the harbour of Kagoshima is protected by strong forts, in which are twenty cannon and eight Krupp guns, as well as large quantities of gunpowder and shot. There are two arsenals in Kagoshima, one belonging to the War and the other to the Navy Department. The insurgents have thrown up strong entrenchments in twenty-four or twenty-five places, consisting of bags filled with earth.

Since the above was in type we learn that more troops have arrived by rail from the capital this afternoon, and that bodies of 1,500 men in all have embarked on board the *Shario* and *Horai-maru*. Both vessels are expected to sail this evening.

It is rumoured in town this afternoon that a telegram has been received stating that Nagasaki has been taken by the Satsuma people: further that the troops which left Yokohama yesterday are not intended for

Satsuma, but for Kioto, where they will be stationed as a special guard over the Imperial palace, it being the present intention of the Government that the Emperor shall remain there.

February 16th.

The *Hochi Shinbun* says that yesterday the editors of the *Nichi Nichi*, *Choya*, *Hochi*, *Akebono*, and many other newspapers were again summoned before the Tokio Saibansho, where they were questioned as to where they received information they had published respecting the movements of the Kagoshima insurgents. The *Tokio-maru* of the M. B. M. Co. took a battalion of cavalry and quantities of ammunition and hay for Nagasaki. To-day the *Shario-maru*, which takes 700 artillery, and the *Horai-maru*, which takes 300 artillery and 120 horses, will leave for Nagasaki. About thirty policemen in Yokohama, dressed in private clothing, are to be seen in the native hotels or on the hatobas by day and night, eager to find out what people are stopping or landing here. A number of police have been detailed for duty on board the native steam ships, where they will examine passengers arriving at or leaving all the ports. Yesterday at about 1 p.m. three battalions, namely, one of cavalry, one of artillery and one of infantry, were ordered to be despatched to the south. On the arrival of H. E. Mr. Okubo, Home Minister, at Tokio, orders for the destruction of the southern insurgents will immediately be issued; and Prince Arisugawa-no-miya will proceed to the island of Kiushu at the head of the army. A telegram is said to have been received by the Government yesterday stating that large numbers of Kagoshima shizoku have left their homes for other provinces; and that Saigo, Kirino, Shinohara, and many others, hold meetings at the private school in Kagoshima. Strict watch is kept in the bay of Shinagawa day and night, and all vessels, inward or outward, are examined by police. Mr. Yebihara, proprietor of the *Shishusha*, a Kagoshima-man, has been arrested and taken to the Tokio-Saibansho. At about 11 o'clock on the night of the 14th inst., two telegrams, containing most important information, are said to have been received by the Government from the Awomori-Kencho.

The *Mainichi-shinbun* says that telegrams have been received at the Head Office of the Mitsu-Bishi Company in Tokio from its branch office at Nagasaki stating that the *Taihai-maru* has been taken by the Kagoshima insurgents. It is reported in the same paper that the Government officials are divided into two or three parties, each holding different opinions as to the Kagoshima disturbances. Some advocate sending troops against them, while others want to put them down without using force. The *Tokai-maru* and *Tsuruga-maru* of the M. B. Co., have been ordered to be held at the disposal of the Government, as transports.

The same paper writes of the fortifications in Kagoshima, as follows:—One of the forts at the summit of the mountain of Tempozan was built by Mr. Orida during the disturbances between the Tokugawa and Shimadzu. In peaceful times it is used for shooting matches. Of the three forts at the entrance of the harbour of Kagoshima, one is situated at the bar of Gi-on, over which waves roll at high tide. It is about 1,800 feet square in extent. It is there where the English men-of-war experienced a staunch resistance in the time of the war with the Shimadzu clan. This is the first stronghold and its strength is aided by nature. Another one is situated at the highest point on the sea shore, and is almost surrounded by a thick forest. The third is opposite to

the arsenal of Shusei-kuwan. In addition, there are two fortresses in the island of Sakurajima, off the coast of which there is another fort rising from the sea. The harbour of Kagoshima is naturally the strongest place throughout the island of Kiushu. The form of the harbour somewhat resembles that of a ladle. At the extremity of the handle, at a distance of about twenty five Japanese miles from the bowl, is Kagoshima. The widest part of the channel is about seven or eight Japanese miles, and the narrowest about five or six miles. The entrance is about thirteen miles across. On the eastern side is the province of Osumi, and on the western Satsuma. The island of Sakurajima is situated in the centre of the harbour and is about seven miles in circumference. Its form is like that of the mountain of Ashitaka in Suruga. Every fort in Kagoshima is mounted with about twenty cannon carrying shot from twenty-four to sixty pounds weight. Besides these guns, there are a certain number of cannon, called "kiwaki," after the name of the discoverer, one of Shimadzu's retainers. It is said that the range of these guns extends to two Japanese miles; and that one may be cast for fifteen yen in the arsenal of Shusei-kuwan.

The *Choya-shinbun* publishes the following items:—To-day Colonels Setoyuchi and Ishu-in left for Nagasaki at the head of a battalion of infantry and a body of cavalry. On the 13th inst. the Hiroshima garrison troops left their barracks for Kuma-moto, where they will join the Kuma-moto troops. The document which is reported to have been sent to the government by the insurgents, contains various complaints. Among other grievances are the prohibition to wear swords, the capitalization of pensions, and the exchange of Sakhalin against the Kurile Islands. All the students in the Shi-Gakko in Kagoshima, belonging to any other ken, have been arrested by the insurgents and lodged in prison. About six or seven hundred insurgents have left their homes for some place unknown. All the members of Shimadzu's family in Kagoshima deserted their homes in the city, and are now sojourning at a distance thence of about twenty ri, in order to be able to escape, in case of need, from the insurgents, with whom none of them have any intercourse.

February 17th.

This morning's *Hochi-shinbun* has the following intelligence:—We have again heard of Messrs. Kawamura and Hayashi. When they arrived at the harbour of Kagoshima on the 10th instant, a number of insurgents, in small boats, surrounded their vessel, the *Tokuwo-maru*, and endeavored to board her. When they were refused permission by the sailors, they threaten to fire upon them; and many of the boats, each of which was filled with armed men, closed in upon the *Tokuwo-maru*. Her cable was cut and even then she hardly managed to clear the harbour. However she did so and arrived safely at the small port of I-so, distant about twenty ri from Kagoshima. There Messrs. Kawamura and Hayashi were met by Mr. Oyama, Ken-rei of Kagoshima, who advised them to return. On the 13th inst. they returned to Kobe, and the *Riujo-kuwan* left immediately for Nagasaki.

About ten insurgent spies have been arrested in Kiushu by policemen from Tokio. No engagement has yet taken place in Kagoshima. Head-quarters will be established at Osaka. All the boundaries of Satsuma are strictly guarded by the insurgents, and no person is allowed to go in or out of the province. On the 15th inst. a telegram received from Kumamoto

stated that about 20,000 of the insurgents are prepared for a campaign. The War Department has received from the Finance department 100,000 yen and the Sei-in 1,000 yen. Yesterday about sixty-seven men were received into the police force in Tokio. H. E. Mr. Iwakura, *U-daijin*, has issued a notice to the effect that any men wearing swords who may attempt to land at Yokohama, Kobe, Hiogo or other parts, must be arrested, and if they resist may be taken by force.

The *Mai-nichi-shinbun* writes in continuation on the subject of the Kagoshima fortifications:—The arsenal of Shusei-kuwan is situated at Isonohata at a distance of about ten cho north-east from the castle of Kagoshima. All the machinery is in good order, and, besides arms, glass, chairs, and other furniture are manufactured there. Next to the Arsenal is a large water mill. These are under the jurisdiction of the Naval Department. It is there that on the 31st ultimo, the men of the *Seiki-rio-maru* in the act of carrying out gunpowder were stopped by a number of shizoku. There is another mill on the banks of the river I-nari, Kagoshima, which is under the jurisdiction of the War Department. It is said that about 30,000 pounds of gunpowder can be manufactured in the two arsenals in a day. It is made in the Persian method and when rubbed on white paper leaves no stain, while it can be held with safety in the palm of the hand with fire applied to it. A place very strongly defended by nature in the city of Kagoshima is the monastery of Chikei-In, where a medical college now stands.

The *Choya-shinbun* says:—Large quantities of gunpowder from Sendagaya, Tokio, were sent to Kioto on the 15th inst. General Ito left Kobe for Kagoshima in the *Kasuga-Kuwan* a few days ago, and was followed by the *Seiki-kuwan*. Owing to the disturbances in the south the Navy and War departments have no holiday to-morrow. Half a battalion from the Hiroshima garrison has been despatched for Shimonoseki. Shizoku in the province of Bizen are much excited.

The *Mai-nichi-shinbun* states:—Two battalions of the Imperial guards and four battalions of the Tokio garrison will shortly be despatched for Kobe. On the 14th inst., gunpowder from the military storehouses in Tsukiji was brought to the War Department in twenty carriages. On the following day, the same quantity of gunpowder was brought from Sendagaya and the village of Idzumimura under escort of a body of troops and policemen.

This is about all the intelligence, having reference to the insurrection, which can be gleaned from the native papers, who are themselves, owing to the interruption of private telegraphic correspondence and the jealousy with which officials keep all information to themselves, only at best but badly informed. It is evident, however, that the government mean to adopt the most active measures possible in suppressing the revolt. In addition to the forces and supplies already sent, the *Tokai-maru*, late *Acantha*, leaves this evening for Kobe with 319 troops, two field-pieces 27 horses, and 60 tons of ammunition, and all that is requisite to enable the troops to enter on an immediate campaign. Although the present destination of the vessel is Kobe, the probability is that she will be despatched thence to the most suitable point for disembarking the soldiery. At present the government have no more vessels at their command, but in the course of a few days three or four are expected to arrive, and they will be immediately availed of to act as transports if necessary. The re-

port that the *Taikei-maru* was captured by the insurgents turns out to be untrue, as despatches have been received from her. It appears that she was only driven away.

February 19th.

BUT LITTLE intelligence appears to have been received direct from the site of the rising or its neighbourhood. All that the native newspapers contain with reference to the matter we give below. If what the *Akebono-shinbun* says is true this source of information even is likely to be stopped or interfered with. According to that paper the editors of all newspapers in Tokio were summoned before the Keishi Kioku (Police Station) yesterday, and were informed that the publication of every newspaper, which inserted rumors from Kagoshima, tending to excite people and to disturb the peace of the country would be prohibited.

The *Hochi-shinbun* says:—A telegram from the Post Office at Yonetsu, a town on the confines of Satsuma and Higo, says that the Post Office in Kagoshima is closed, and that letters have to be sent from the Post Office at Midzumata in the Kuma-moto-ken, which is next to the Kagoshima-ken. The *Tokai-maru* of the M. B. M. Co., chartered by the War Department, arrived at Yokohama yesterday morning, where one battalion of infantry and some cavalry and artillery officers and 2907 packages of military stores were embarked for Kobe. Twenty-seven telegrams are said to have been received from the south, during yesterday. H. E. Mr. Kawamura, Vice Minister of the Navy Department, has sent a telegram demanding that about seven hundred cannon balls shall be sent at once to the Kunaisho at Kioto. The *Seiki-kuwan* and *Kasuga-kuwan*, which left Kobe on the 13th inst., are now anchored at Nagasaki. The *Tokuba* and *Nishin-kuwan*, which are now at Yokoska have been ordered to complete their repairs during next month. The number of workmen employed there has been increased and all hands in the dockyard are very busy day and night. The vessels are expected to be ready for sea about the 24th or 26th instant. H. E. Mr. Okubo, Minister of the Home Department, and Col. Jinrei arrived at Kobe on the 16th. It is said that Mr. Uchida Masakaze, ex-retainer of Shimadzu, is one of the ring-leaders of the insurgents. Since the 13th inst., the city of Kioto has been strictly guarded by troops and firemen. Yesterday Col. Onuma was ordered to leave instantly for Sendai. During the night of the 14th inst., about three men, each of them carrying an umbrella, in which a sword was concealed, were observed at Ura Kasuigaseki, close to the Russian Legation, in Tokio. When they were asked who they are, they made no reply and ran away quickly.

The *Mai-nichi-shinbun* has the startling and probably less than groundless rumor that all the English residents in Nagasaki are said to be about to go on board the *Modeste*. Messrs. Yamagata, War Minister, Ito, Public Works Minister, and Akidzuki, a noble, having received a telegram from Shimonoseki at about 1 p.m. on the 12th inst. of unknown purport, left Kioto and proceeded in haste to Osaka, where they passed the following day. Mr. Morioka, governor of the Hiogo-ken, a Kagoshima-man, is said to have requested to be allowed to resign his post. A disturbance is said to have broken out in the island of Tsushima.

The *Choya-shinbun* says:—It is rumored that Messrs. Shimadzu and Saigo the elder in

Kagoshima have been ordered to repair to Kioto, where an order for the suppression of the insurgents will be issued after these two gentlemen have been interrogated. The troops of Hiroshima, Osaka and Nagoya will be commanded by Messrs. Okubo, Yamagata, and Kawamura, respectively. On the 18th inst. the two former, at the head of certain troops, left Kobe for Kiushu. On the 17th inst. a battalion stationed at Sakura, Shimosa, was ordered in to Tokio. A few days ago the first battalion of the second regiment of the Imperial body guards and a body of engineers were ordered to prepare for service. Mr. Yamagata, War Minister, is at Shimonoseki, where he is very busy preparing for the campaign.

The *Nichi-nichi-shinbun* says:—We know nothing about the Kagoshima disturbances. Judging by the movements of troops and men-of-war, we think that the government has completed its preparations for war. Mr. Okubo, who left Yokohama in the *Genbu Maru* on the 13th inst., was delayed in his journey by bad weather. He arrived at Kobe at about 2 p.m. on the 16th, and, by train, in Kioto at about 8 p.m. All the post-offices in Kagoshima having been closed, there is no means of immediate communication with that district. But two men-of-war are anchored in the strait between Kagoshima and the island of Sakurajima in the harbor. No vessels sufficiently powerful to cope with them are in the possession of the insurgents, who consequently will not dare to attack them. So the harbor is in a state of blockade. Besides, all the strong places inland are strictly guarded by the troops from Kuma-moto. The Gakko-to seem unable to make head against them at all, and are shut up in Kagoshima.

The *Tsuruga-maru* left here late on Saturday night with 300 troops under the command of General Kuroda: there is also a large quantity of arms and ammunition on board. She is to go to Hiogo for orders. A number of field-pieces have been brought to the Navy compound at Benten. The *Thabor* will await further orders at Nagasaki.

The *Saikio-maru* (*Nevada*) which leaves to-morrow morning for Shanghai and ports, instead of on Wednesday afternoon, takes 1,100 troops, who, it is said, will be disembarked at some spot in the Bungo channel.

The *Galley of Lorne*, leaving on Wednesday next, the 21st instant, is expected to convey troops to Kobe for the Japanese Government.

Troops, arms, and ammunition are being rapidly moved from Kobe towards Kagoshima.

February 20th.

IN view of present disturbances it has been definitely decided by the Government that H. M. the Mikado shall remain in Kioto for the present, and an official notification has been issued to that effect. Under date of the 19th instant, Mr. Iwakura issued the following proclamation, which shows that the Government does not underrate the extent of the troubles; and is prepared to cope with them:—

“To Kuwan In, Sho, Shi and Tokio-fu.

“As rioters from the Kagoshima-ken have committed violence in the Kuma-moto-ken, armed with fire-arms, and as they are evidently in a state of revolt, their suppression has been ordered by H. M. the Mikado, and Prince Arisugawa, *Nihon-Shin-no*, has been appointed General in Chief of the forces to be employed against them. This has been

communicated to us by telegram from the Mikado's residence in Kioto. It is hereby made public.

"It has been already notified from Kioto to Shi, Fu, and Ken, that as the insurgents may happen to take refuge in other provinces great watchfulness is required on the part of all the officials."

Another notification from the same source says that, as the complete extinction of the insurrection has been decided upon, idle rumors in reference to the matter will not be allowed to be published in the papers. Yet another, providing for the defence of the coasts, and addressed to the Home, War and Naval departments, the Kaitaku-shi, and the Fu and Ken on the sea-coast of Japan, runs as follows:—

It is hereby notified that measures for the protection of the coast in case of sudden disturbances must be taken as below directed till further notice.

IWAKURA-TOMOMI,

U-Daijin.

Art. 1.—Any person, not an army or naval officer or an inspector of police, observed carrying fire-arms or side arms and landing at any port on the coast will be stopped and examined. If he can give a satisfactory account of himself he will be allowed to land. If not, his landing will be prevented by force.

Art. 2.—Even those persons, who may arrive at any port, bearing neither fire-arms nor sword, may be examined. If any suspicious circumstances are observed in their actions their landing will be prevented. If they resist orders, force may be used against them.

Art. 3.—Merchant vessels suspected of carrying fire-arms or ammunition, not belonging to the War, Navy or Police departments, may be searched. If goods contraband of war are found upon them, the cargo and vessels may be seized, and force to effect seizure may be used if necessary.

The *Hochi-shinbun* writes as follows.—Col. Hayashi of the Navy Department leaves to-day for Kobe with a staff of about fourteen officers. The *Asama-kwan*, and *Seiki-kwan* will sail for the south in a few days. Gens. Nodzu and Miyoshi, now in Osaka, will soon start from thence at the head of an army composed of the Osaka and Tokio garrison troops. The troops from Kokura barracks have arrived at Kuma-moto, where preparations for war have been completed. The Imperial body guards in Tokio leave for Kioto to-morrow. To-day five hundred policemen under the command of Mr. Mima, *Gon-shokeishi*, will leave Kobe for Tsurusami, Bungo, in the *Tokai-maru*, and five hundred more under Mr. Egaki of the same office sail for Nagasaki in the *Shurio-maru*. The *Kiushiu-maru* of the M. B. M. Co. has been ordered to be held at the disposal of the War Department, and to-morrow (the 21st) the *Sumida-maru*, belonging to the same company, will take about eight hundred soldiers to the Island of Kiushiu. A letter from Osaka, dated the 15th inst., says that, on the 13th inst., at about 5 p.m., one battalion of the tenth regiment of the Osaka garrison troops left for Kobe, and many battalions, composed of various troops, followed on the 15th inst. At about 1 p.m. yesterday a fire broke out at Kuma-moto barrack, but it is not yet known whether the fire was caused by accident or in a battle said to have taken place between the troops and insurgents. In Kioto it had been determined that Prince Arisugawa-no-miya and Mr. Yanagiwara, should be sent to the insurgents, in order to

warn them to disperse peaceably. H. M., the Mikado had ordered the former to leave in the *Meiji-maru*, which was to be escorted by war-ships. But on the 18th inst. a telegram from Kumamoto was received which stated that a large number of insurgents had forced their way into Higo by the Midzumata and Hitoyoshi roads; and the Prince's departure was countermanded and the order for the destruction of the rebels was issued.

The *Osaka Nippon* says:—About two thousand shizoku of the Kagoshima insurgents have already advanced as far as Idzumi, as the advance column of their army; and they threaten to invade the province of Higo. About thirty officials of the Home Department, who entered Kagoshima as spies, have been arrested by the insurgents. All the shizoku in the province of Satsuma, except those of a few counties, have assembled round the castle of Kagoshima.

The *Akibono-shinbun* says:—All those military officers who are Kagoshima-men have been ordered to repair to Osaka. About one thousand shizoku from Kagoshima have penetrated as far as Miyachi, in the Kuma-moto-ken. It is rumored that the town of Kumamoto was set on fire by the troops. A telegram from the Yamagata-ken states that large numbers of shizoku hold meetings at the residence of Matsudaira, late ex-Daimio Sakai. Some of them are reported to be Kagoshima-men. The steam vessel *Kantsu-maru* will shortly take supplies of ammunition to the Sendai barracks.

Nothing is yet known of the whereabouts of Mr. Saigo the elder.

The *Choya-shinbun* says that many shizoku of Kochi have left their homes.

The *Nichi-nichi-shinbun* has received a copy of the *Kumamoto-shinbun*, dated the 9th inst. It states that the Kagoshima-kencho was set on fire by the insurgents and that the whole building was burned down.

No holidays will be kept at present in the War, Navy, or Police departments.

Yesterday the ironclad *Adzuma-kwan*, left for Nagasaki.

H. E. Mr. Kawaji, Minister of Police, was to leave for Kioto.

The *Sakiko-maru* did not get away till this afternoon. She took munitions of war, nineteen police officials of rank, twenty-five military officers, and 1,200 policemen, whose place of debarkation will be Kobe.

February 21st.

The *Hochi-shinbun* of to-day writes as follows:—No money orders are sent to the Kuma-moto-ken at present. Three parties, of about 2,000 insurgents each, from the Kagoshima-ken have penetrated into other provinces by the following roads, viz., the Bungo-road, from Amakusa by the Hizen road, and the Miyaji road. Yesterday twenty-two cartloads of gunpowder, made at the Awoyama Arsenal in Tokio, were forwarded to Kobe. Some days ago a strong body of Kagoshima-men entered the Kuma-moto-ken bearing fire-arms and various military stores, and informed the local authorities that they desired to pass through the jurisdiction of the Kuma-moto-ken. When the authorities advised them to withdraw peaceably, they replied that they were proceeding under the orders of Mr. Saigo, Commander-in-chief, and that they would not allow themselves to be interrupted by any man. During the night of the 16th inst., a force of artillery, then stationed in Osaka, left for Kiushiu with eight cannon. At about 12 o'clock last night, the *Fuso-maru* of the M. B. M. Co. left for Kobe, taking one hundred and fifty boxes of

gun-powder belonging to the Navy Department. Since the 17th inst. the city of Kioto has been strictly guarded, and bodies of troops are stationed at Yawata and Yamazaki, which are close to Kioto. Yesterday Gen. Miyoshi left Kobe for Kiushu at the head of five regiments; and Gen. Nodzu followed him in command of three regiments. The fire in Kuma-moto, which was mentioned in the last issue of our paper, broke out accidentally in the inner part of the castle at about 11.30 a.m. on the 19th inst. It was not extinguished till 2 o'clock. A terrible fire occurred simultaneously in the town, and was not got under till about 5 o'clock. Many houses were destroyed, but fortunately no barracks nor military stores were lost. The notifications concerning the Kagoshima expedition and H. M. the Mikado's stay at Kioto, were immediately transmitted by telegraph to six ken, viz., Chiba, Tochigi, Gunba, Ebaragi, Niigata and Sakitama.

The *Choya-shinbun* states:—Yesterday many telegrams were received at the Daijo-kuwan from the South. One battalion of the second regiment of the Imperial Guards, under the command of Colonel Kokushi and Lieut. Tsuno, left for Kobe in the *Genkai-maru*. They will remain in Kioto. This morning at nine o'clock the men of the second battalion of the Imperial Guards were ordered to assemble at their barracks at Takebashi in Tokio. They will be despatched to Kobe in the *Sumida-maru* to-day. The first regiment of the Tokio garrison troops will shortly be sent to Kiushu. Out of seven shizoku of Akidzuki, who left their houses to join the Kagoshima insurgents, one, named Muta, has been arrested by policemen from Tokio.

The *Nichi-nichi-shinbun* writes as follows:—According to a telegram from the south, said to have been received on the afternoon of the 19th inst., the insurgents have taken the field in three parties: the first in Kuma-moto from the direction of Midzumata, the second in the island of Amakusa whither they went in ships, and the third in Tsurusawa from Bungo. On the 20th an engagement was expected to take place between the troops and the insurgents. If this is correct a battle was probably fought yesterday.

The *Akibono-shinbun* says:—Yesterday Prince Arisugawa-no-Miya, Commander-in-Chief of the Satsuma expedition forces, left Osaka for Kiushu. Gens. Nodzu and Miyoshi accompanied him; and he was escorted by two men-of-war. At about 4 p.m. half a battalion of the Kokura troops, and five hundred policemen arrived at Kuma-moto and joined the troops there. The insurgents are reported to have constructed a fort at the summit of the mountain of Santaro. Mr. Watanabe of the Gaimusho has left for Nagasaki to see to the protection of the interests of foreign residents. The *Sumida-maru* left this afternoon with 1,400 troops for Kobe.

February 22nd.

STILL not a single official communication has been made on the subject of the condition of affairs in Satsuma. As, however, large bodies of troops and police have been massed on the frontier of the rebellious province, and eight or nine men-of-war are watching its coasts, we may soon expect to hear something decisive. Meanwhile we are still dependant upon the native newspapers for such information as we can give to our readers; and that, at best, is but uncertain, filtering as it does through third and fourth hand sources, and is curtailed and garbled in view of the notification prohibiting the publication of careless rumors. The *Hochi-shinbun* writes:—The

Kumamoto castle is situated at the most important strategic position on the way of the insurgents. All the preparations are completed there to receive them. Gen. Nodzu, at the head of three battalions, will march to Kagoshima, by the Bungo road, and Gen. Miyoshi, at the head of five battalions, by the Hiuga road. The *Kasuga-kuwan* and *Moshun-kuwan* are anchored at Yamagawa, situated at a distance of about ten Japanese miles from the island of Sakura, in Kagoshima harbour. They are watching the movements of the *Taiyu-maru* and other steamers belonging to the insurgents. Eight men-of-war are waiting orders to attack Kagoshima. A telegram from Fukuoka, despatched at 11.30 p.m. on the 19th instant, states that the insurgents at Midzumata had penetrated about one *ri* into the confines of the Kumamoto-ken, and that a night attack took place at about 9 o'clock. About 2,000 insurgents are said to be about to assault Nagasaki. Another telegram, sent at seven o'clock a.m. on the 21st., states that yesterday, the 20th, a severe battle was fought on the borders of the Kagoshima and Kumamoto ken. A telegram from Nagasaki at 11.55 a.m. the same day says that the previous night a certain number of the insurgents, armed with swords and guns, landed at Mogiura, Nagasaki, and that fourteen of them were arrested by the police. A despatch from Gen. Tani, who is in command of the Kumamoto garrison, at 1 p.m. the same day, says that an engagement had just commenced and that special accounts would soon follow. Three men-of-war will immediately leave for Fukuoka, whence disturbances were also reported to the government by telegraph yesterday. Cannon and muskets from the arsenal at Dosanbashi, Tokio, have been sent to the Kumamoto and Fukuoka-ken. Yesterday the Finance Department sent to the War Department, thirteen money-boxes which will soon be sent to the south. The policemen, who were sent to Kiushu, have joined the troops. About 1,000 insurgents forced their way as far as Kawabata, which is situated within a distance of three *ri* from the Kuma-moto-kencho. The Mikado's palace at Kioto has been connected by wire with the telegraph office at Sanjo.

The *Mai-nichi-shinbun* says:—During the night of the 16th inst., eight or nine men, armed with swords, entered by stealth the Mikado's palace at Kioto. They were discovered by policemen, but none of them were arrested. Great confusion ensued throughout Kioto, and troops from four branch barracks at Otsu were despatched at once to the palace.

The *Choya-shinbun* says:—To-day Lieutenant-Colonel Takenouchi, at the head of one battalion of the Tokio garrison, will leave for Kobe in the *Shinagawa-maru*. Agrarian mobs are reported to have risen in the province of Echigo.

The *Akebono-shinbun* says:—Prince Arisugawa-no-Miya will establish his head-quarters at Fukuoka. The troops under the command of Gens. Nodzu and Miyoshi consist of seven battalions of infantry, artillery, and cavalry. They are expected to arrive at Fukuoka to-day. It is said that about 1000 insurgents who have penetrated into the Kuma-moto ken are commanded by Messrs. Kirino, Shinohara, Fuchibe, and others. But this must be false, for those officers have not yet been deprived of their rank by the Government. The *Tsukuba-kuwan* has completed her repairs and will sail for Kobe in a few days. The Finance and Home departments are each constantly guarded by twenty-five soldiers; and other measures have been taken for the protection of Tokio against any emergency.

The officials of the Railway Section have been instructed to have trains ready at any moment, in case of the necessity arising for the prompt despatch of troops for Kioto or Kiushiu.

A telegram dated 11.15 p.m. yesterday and received this afternoon states, "War now commenced. Further details to follow."

The *Meiji-maru* has been for three days, up to last evening, lying in Kobe under steam awaiting orders.

The *Thabor* after leaving Kobe, as we stated the other day under secret orders, proceeded to Kagoshima. She had a number of marine officers on board, who wished to land at the latter port; but found that the place was so strictly guarded that debarkation was impossible; and so they had to land at Fukugata.

A rumor has been current this afternoon to the effect that the Imperial troops sustained a severe check at the hands of the Satsuma men within five miles of Kagoshima, whither they had penetrated without resistance. The action is said to have lasted from noon on the 20th instant till one or two o'clock yesterday morning.

Another report is to the effect that the *Kanagawa-maru* with 600 troops on board has been captured by the Satsuma insurgents.

February 23rd.

Matters have now evidently reached a climax; and the Imperial forces are definitely pitted against the insurgents in the field. A sort of romantic sympathy is often felt by foreigners for the bold clansmen who have watched innovation seize upon and relegate to the lumber room of antiquity, one by one, those institutions which feudal Japan held most dear. From their province they have watched with dismay the march of reform in the Government, in the Army, the Navy, the Judicature, the Treasury, and even in social life. They alone, favored, probably feared, by the parvenu Government, have been exceptionally privileged. In their territory alone things were allowed to remain very much as they were before the restoration. But, at length, seeing that the Government increased in strength daily—that reform was radical and marched steadily onward, instead of, as they probably hoped and thought it would, falling into contempt with the people from its eagerness to embrace everything foreign—they have turned from a condition of sullen or contemptuous disapproval into one of armed opposition. They have waited too long. The revolution effected in the hearts and minds of the people of all classes of the empire by western civilisation in the course of the last twenty years has been too thorough and complete for any partial reaction, instigated by a numerically small class influenced by old time prejudices, to affect it seriously. The southern Samurai have against them more formidable foes than even the well trained troops and well manned men-of-war of the Government. They have to combat the newly awakened intelligence of the nation, which has seen the practical advantages of freedom over servitude, of learning over ignorance, of enlightenment over bigotry, of light over darkness. They need not imagine that, even should they succeed in overturning the present Government, they could plunge Japan again into the condition from which it was commenced to be rescued a quarter of a century ago. Reactionary revolutions are only successful when they are arrayed against the abuses of reform, never against its benefits.

The campaign has commenced in earnest. Even if the Imperial troops sustain a check or two at the commencement of operations

their ultimate success need not be doubted of. The insurrection may be as serious as it has been long brewing; but its imminence has been foreseen by the Government, who, there is every evidence, has been fully prepared. It now remains to be seen, whether, as we sincerely hope, they are strong enough to cope with it as successfully as they did with the lesser troubles of Saga and Kuma-moto.

An action has certainly, as we reported yesterday, taken place. The *Hochi Shinbun* says that it resulted in a complete victory for the Imperial troops. In the same paper we read:—According to information received from Kioto, the Daijo-kuwan will temporarily meet there. The Ministers of the Home and Public Works Departments, and Messrs. Kono, Yanagiwara, and Nakajima, members of the Gen-ro-in, have arrived at the Mikado's palace in Kioto, where they had an interview with His Majesty on the following day. All orders in relation to the Kagoshima expedition will issue from the Mikado's court. A few days ago Mr. Shibuya, a Kagoshima Kencho official, who came up to Tokio to report on the insurrection, was arrested on suspicion and placed in custody. A letter from Osaka says:—"Since the night of the 19th inst., the principal police station in Osaka is strictly guarded by a large body of police. The Mameda railway station is watched by twenty-four soldiers and six policemen, and the Kobe station by about two hundred soldiers. The mouths of all the rivers are watched by police." On the 18th instant, the Mitsui-Bank sent about 700,000 yen to Osaka for the use of the War Department. A telegram from Kurume sent at 2.40 a.m. yesterday says that the Imperial troops were victorious on the 21st. But, as many places have been set on fire, telegraph wires have been cut, and a temporary office had to be opened at Sikanoshita. Yesterday a battle should have been fought between the troops and insurgents, the latter having advanced as far as the village of Mogi near Nagasaki. Of three bands of the rebels, that which marched towards Kuma-moto was commanded by Kirino, that against Tsurusaki, Bungo, by Shinohara, and the third, which made for Amakusa, by Murata. Yesterday at 10.20 p.m. the *Taihei-maru*, which was obliged to stop a long way off the Kagoshima coast, arrived at Kobe having all the officials of the Kagoshima dock-yard on board. The War Minister is stopping at Osaka. The Finance Department has already spent about one million yen, in preparations for the campaign. Troops from Takasaki arrived in Tokio yesterday. Gun-powder was despatched from Awoyama in large quantities.

The *Choya-shinbun* says:—A telegram sent from Nagasaki at 4.55 p.m. on the 21st, states that the battle commenced at 1.15 p.m. It is rumored that a notice was circulated from the Kagoshima Kencho through every ken in Kiushu, that Saigo Takamori purposes making his way to Tokio, where he wishes to present a memorial to the government, at the head of an army. If that be true, the manifesto must have emanated from insurgents. All the Imperial body guards in Tokio had left for Kioto by the 21st inst. To-day the *Tsukuba-kuwan* will leave for Fukuoka. Col. Matsumura will take passage in her. The Nagoya garrison has received orders to despatch detachments to the branch barracks of Osaka at Otsu. On the 19th instant, Cols. Sakuma and Shinto and four others left Nagoya at the head of two battalions. A detachment of the Hiroshima garrison left on the 14th inst. for Yamaguchi, where, however, no signs of disturbance have appeared. The Kuma-moto garrison troops consist of six battalions of

infantry and one battalion of artillery. They have been joined by two battalions from Kokura, thus making nine battalions in all. Out of the Kagoshima Kencho officials, three, viz., Nakamura, Takeseki, and Oto, and ten others, who happened to be in Tokio, were lately summoned to the Police Station, and ordered to stop there. The *Saikio-maru* has left Kobe for Saga. In Kagoshima, about twenty-men, who had conspired to assassinate Saigo and Kirino, were discovered and arrested. They are now under examination at the Kencho. Since yesterday we have heard various rumors of battles, but we do not publish them, as we cannot distinguish whether they are true or false.

The *Mai-Nichi-shinbun* says:—The *Seiki* and *Kasuga-kuwan* are anchored at Yamagawa, at the mouth of the harbour of Kagoshima. The river Kamono in Osaka has lately been closed to sailing ships; and all vessels of Japanese form of construction are prohibited to leave the harbour of Osaka for the South West. The same paper states that, should any outbreak occur in Yokohama, the bell on the hill of Ise will be struck five times.

The *Akebono-shinbun* says that the insurgents have been obliged to retreat as far as U-to before the Imperial forces.

February 24th.

We are still without authentic information. The report that Mr. Narahara, the *Karei* of the House of Shimadzu, who lately accompanied Mr. Okubo to Kyoto, and Mr. Shibuya, who was sent from Satsuma to Kyoto to vouch for the loyalty of Oyama, the *Kenrei*, have both been arrested on suspicion, which has been published in all the native papers, is probably without foundation.

The *Hochi-shinbun* gives a copy of the commission issued by His Majesty to Prince Arisugawa-no-Miya, *Nihon-Shino*, through Sanjo-Saneyoshi, *Daijo-Daijin*, on the 19th February. "I appoint you Commander-in-chief of the army against the Kagoshima insurgents, and commit to your care both the conduct of the campaign by land and sea, and the power to mete out rewards and punishments to the officers who are subordinate to you. Be intelligent in your deeds, and bring the rebels into prompt subjection." Their Excellencies Messrs. Sanjo, *Daijo-Daijin*, Kido, *Naikaku-komon*, Okubo, *Naimu-kio*, Yamagata, *Rikugun-kio*, Ito, *Kobu-kio*, Kawamura, *Kaigun-Daiyu*, Gen. Torio, *Rikugun-Daiyu*, and the members of the Gen-ro-in and secretaries of the *Daijo-kuwan* meet daily at the palace in Kyoto. It was reported a few days ago that the shizoku of Shonai in the northern province had held meetings at the residence of Mr. Sakai, late lord of Shonai. Yesterday a telegram, stating that they had risen against the authorities, was received by the Government. The *Taihei-maru* of the Mitsui Bishi Company anchored in the harbour of Kagoshima on the 8th instant. Immediately many shizoku seized her and prevented her leaving the harbour. Mr. Kinashi, *Naimu-shojo*, who was lately in the Loo Choo islands, was on board. He attempted to negotiate with Mr. Oyama, Governor of the Kagoshima-ken, but no answers were at first returned to him: meanwhile the *Taihei-maru* was detained. On the 16th instant the Governor requested him to take charge of a document addressed to the Government, which, it is stated, contains the demands of the insurgents. On the 19th inst. the steamer left the harbour. The following meagre information was gathered by people on board of her during her stay, and has

been communicated:—The post office was closed and the officials and messengers had been distributed by order of the Governor among the other Kenchos and various barracks. During the 15th, 16th and 17th inst., about 14,000 insurgents were despatched for the province of Higo. It was owing to the importance of the negotiations between Governor Oyama and Kinashi, *Naimu Shoji*, that the *Taihei-maru* was allowed to leave Kagoshima. Messrs. Saigo, Kirino, Shinohara and others are said to be about to leave shortly at the head of the rear guard of the insurgent army. This was telegraphed to the government yesterday by the captain of the *Taihei-maru*. It is also currently reported that Messrs. Saigo, Kirino, Shinohara, Ikegami, Nagayama, Murata, Beffu and other celebrated men, are in command of the insurgents, Saigo being at the head of a large army on the Hinga road. The shizoku of Nookoka, Takato, Sadahara, and Takashima are said to be commanded by Machida-Keijiro, third son of the ex-lord of Sadohara, a cadet branch of the house of Shimadzu. He is a young man. His camp is at Miyasaki. A telegram from Nagasaki, sent at 4.50 a.m. yesterday, says that at about 2.20 a.m. a number of insurgents attacked the barrack occupied by the Hiroshima garrison. The members of the Jijosha society in Awa are much excited. A telegram which left Nagasaki at 6.25 p.m. on the 22nd, says that the insurgents had separated into two parties on the boundary of Higo, one proceeding by the main road and the other through by-ways; and that they united again at Yashiro, and thence proceeded directly to Kumamoto, where a battle commenced at 11 o'clock a.m. on the 21st, concerning the result of which nothing is yet known. At noon yesterday Colonels Matsumura and Fukuhara left for Kobe in the *Tsukuba-kuwan* at the head of 320 marines.

The *Choya Shinbun* says:—A telegram despatched from Kurume at 3.30 p.m. on the 23rd, states that the insurgents had advanced quite close to Kumamoto, where the Imperial forces were in waiting to receive them before the castle. In the engagement which ensued the seventh part of the town was destroyed. A telegram sent from Kobe at 11.35 p.m. on the 22nd, reports that, according to despatches received from Kurume at 6.40 p.m., the insurgents had stopped their advance, and that a tremendous cannonading was heard apparently proceeding from a place distant about two *ri* from Kumamoto. The governor and a few of his subordinates had returned to the late Kencho. (When was it destroyed? By the fire of the 19th instant?) A number of the insurgents were encamped at Kosaye. No battle is reported to have taken place yesterday. Since the insurgents left the Kagoshima-ken, the entire province of Satsuma is more peaceful than before. To-day a body of troops from Takasaki arrived at Bizen Yashiki in Tokio. Yesterday about twenty workmen were sent from Tokio to Kinshiu to repair the damage done to the telegraph wires there.

February 26th.

Rumors of the most conflicting kinds have been current yesterday and to-day. We extract the following intelligence from the native papers:—

A notification from the Acting Prime Minister asserts that a telegram received from the Court at Kyoto states that Prince Arisugawa-no-Miya left for Kiushu on the 24th

instant. A despatch, dated 3.30 p.m. on the 23rd instant, says that the town of Fukuoka was set on fire by the Imperial troops, who advanced victorious. The insurgents were completely routed; and many of them were killed, or wounded more or less severely, while the troops suffered no loss. Gen. Oyama left for Kobe, with one battalion of infantry, in the *Hiroshima-maru*, yesterday. A telegram, received on the 23rd, states that large bodies of troops were massed at Kumamoto at 5 o'clock a.m., but that, before they commenced an attack, the insurgents fled and the town was vacated. The shizoku of Aidzu, who were defeated by the Kagoshima men during the troubles between the Tokugawa and Saimeadzu clans, hold secret meetings, it is said for the purpose of organising and offering their services to the Government for the overthrow of the Kagoshima insurgents, against whom they have an ancient enmity. A telegram from Kurume says that at about 8 o'clock a.m. on the 22nd inst., a severe battle was fought between the troops and insurgents at Hongo, which is situated south-west from the castle of Kumamoto. The latter were routed and left twenty men dead on the battle field. The insurgents at Kiomachi were also dispersed, leaving three or four men dead at their posts. The engagement ceased at about 3 p.m. But at 5 o'clock about thirty or forty insurgents penetrated to the village of U-yeki, where the outposts of troops encamped at Fukuoka, being part of the imperial army at Kinohamachi, were halted. Here a skirmish was fought. The insurgents were reinforced and at last numbered about 300. The result of the battle was not decided when the despatch was sent. Despatches received from Saga add that the village of U-yeki was set on fire by the Imperial forces. Another telegram, dated 9 a.m. on the 22nd, says that a body of insurgents under the command of Shinohara had advanced against Kumamoto from Ansei-bashi. The garrison of the castle opened fire upon them, while a body of troops encamped on the hill of Kuna-oka took them in the rear to their complete discomfiture. All the shizoku of Kishiwada, Idzumi, between fifteen and forty-five years of age, have asked to be allowed to volunteer for service against the insurgents. Mr. Ikeda, ex-Lord of Bizen, Shisamatsu, ex-Lord of Iyo, and three or four more *kuwa-zoku* in Tokio, have left for what were formerly their respective dominions in order to preserve peace among their ex-retainers. A special meeting of the *Daijo-kuwan* was held yesterday (Sunday). During the night of the 23rd inst. Mr. Yamagata, War Minister, left for Shimonoseki in the *Meiji-maru*.

The *Mai-nichi-shinbun* reports that about 200 Kagoshima insurgents have already entered the Hiogo-ken, where a strict search is being made for them. The coast of Hiogo and Kobe is protected by the soldiers from Osaka and Tokio, and Akashi in Bizen is strictly watched by the troops from Nagoya.

The *Nichi-nichi-shinbun* says:—A telegram from the Anzaisho (Imperial Palace) at Kyoto, states that Saigo, Kirino, Shinohara and others have been deposed from their respective ranks. General Nodzu, at the head of four battalions, left Fukuoka on the 21st instant, and was expected to arrive on the 24th instant, at Minami-no-seki, which is situated about ten Japanese miles from Kumamoto. Thence he will proceed to Takase, where he expects to meet the insurgents. Two battalions of artillery in Tokio have been ordered to leave for Nagasaki.

HOMOKU TANNERY.

This enterprise is deserving of special notice, as being a successful attempt to introduce a European system into an industry which, however useful, has until quite recently been held in supreme contempt in this country, and against persons employed in which more than a little of the ancient prejudice still remains.

In the early part of 1871, Mr. Mutzu Yanoski, a Kishu samurai, now a member of the Gen-ro-in, and at that time travelling in Europe with a view to the establishment of European industries in the province of which he was an influential resident, having determined upon founding a tannery there to be conducted in European style, engaged Mr. Lubowski to come out to Japan for twelve months and to aid him in his undertaking. A German shoemaker was engaged by him at the same time, and the two arrived in Kishu in May 1871. Mr. Lubowski soon erected a tannery and taught the Japanese how to tan. The concern once started was taken over by a Japanese Company which failed to make it a success, and Mr. Lubowski, whose original contract, previous to its expiration, had been renewed for six months, was, in consequence of the failure, compelled to leave Kishu thirteen months after he had arrived there. He came to Yokohama, where he found a prominent German firm willing to support him in a project he had formed for founding a tannery in the neighborhood of that town. Homoku at once suggested itself as an appropriate site, on account of the butcheries there already established, and from which hides could be obtained for the contemplated business. The inception of the tannery was a small affair. The first works were established in the butchery then worked by Messrs. Stentz, Harvey & Co.; and at first only two men, natives, were employed in addition to the manager. But the elements of success were already there, and the staff was gradually increased. In 1873 from twenty-five to thirty men were constantly employed. To-day the average of workmen is thirty-five. One man, who was one of the first taken in hand by Mr. Lubowski at Wakayama in Kishu, accompanied him to Yokohama, and has been in his employ ever since.

The Homoku Tannery is situated just above the butcheries at the foot of the Eastern Bluff, whence runs a stream constantly, except in the greatest summer heats, supplied with clear good water. This rivulet meanders through the Homoku plain and skirts one side of the Tannery compound, furnishing the water which is so copiously used in the works. A portable hand pump communicating with the stream is used for drawing it, and suitably arranged conduits conduct it as required to any part of the establishment.

One day recently, in the course of a morning walk, we took the opportunity of inspecting the whole premises; and, although probably one tannery is much like another, a short description of a local one demands no further excuse for its insertion here than that with which this paper was commenced. For an establishment which turns out six thousand tanned and dressed hides in one year; and could with ease put into the market one thousand per month is not devoid of importance.

The quality of the leather produced is very good—so good, in fact, that it is nearly all taken up by the Government for the

upper leathers of shoes for the troops and the navy. It is a fact worth mentioning that the hides taken from animals in this country are not generally thick enough for sole leather, which has to be imported from America, where it is manufactured of better quality and at a cheaper rate than could be made here. On the other hand, it appears that the leather tanned at Homoku is at least as suitable as, if not better for the purpose to which it is applied than, imported leather would be. Several foreigners are so pleased with the excellence of the Homoku article that they purchase and have it made up into boots, in preference to buying imported ones, or running the risk of having others made of inferior material. The industry here has been established in the face of a very considerable native opposition; but it has asserted its preëminence. Sometimes excellent leather, of quality as good probably as can be made, is turned out from native tanneries; but the result is not always certain. Probably out of one hundred hides from their workshops forty per cent are very inferior; and it is due to the good quality throughout of the Homoku leather that it is now able, in spite of competition, to command a market.

As we have said above, many of the hides used in the Tannery are supplied by the neighboring butcheries, which, however, cannot furnish the entire quantity demanded. Others are brought from Kobe, whence they come, salted, in barrels, and from Tokio, also salted, but folded up separately in the form of cushions. Some time since some numbers used to be imported from China, dry; but this practice has been discontinued as the out-turn of these hides when dressed was not very satisfactory.

The tan used in the manufacture is made from oak bark brought from the interior in baskets on pack-horses. Owing probably to the difficulty of transport and the long distances from which it has to be brought, it is to the full as expensive as similar material used in Europe. Its cost, before it is thrown into the mill, is also increased by the method in which it is manipulated. It is at present cut by hand into the small pieces necessary; but this state of things will soon be altered, as a cutting machine has been ordered from Europe, and is expected to arrive shortly. The mill in which the bark, after being cut, is ground into tan is worked by horse power, the same horses being used for the work as are employed in the carts and traps belonging to the establishment.

Before the hides are tanned they are softened by water. The room in which this process is carried on contains three large tanks, each five feet deep and seven feet across, with a capacity equal to contain forty-five or fifty hides each. For dry hides two days' immersion, in the course of which the water is once changed, is found sufficient to give the necessary suppleness. For salt hides a longer soaking is generally required, in order to the liberation from the pores of the skin, of all mineral matter; but the length of the time they are kept in water depends much upon the state of the atmosphere. Two days suffice in very warm weather, while in winter the hides must be kept soaking for from eight to ten days. Each skin is removed from the tanks when work commences at daylight every morning, and the water is then baled out. Then the hides are replaced one by one and fresh water is pumped into the tanks. When the soaking process is completed the hides are submitted to a lime treatment to which is

devoted another room containing ten tanks. Here the hides are kept, in winter, from fourteen to seventeen days, in summer ten or eleven. The contents of three bags of lime each weighing about twenty-two pounds are emptied into each tank of water, and as the strength of the solution is weakened and more hides are put in soak more lime is added. Every six months the solution is entirely renewed. On issue from these tanks the hair is easily removed by scraping. The hides are scraped on both sides with blunt and sharp knives and are then cut in halves down the back, and trimmed. None of the skin is lost, the cuttings being sold to be boiled down into glue. Before being subjected to the next process the half hides are passed through a machine which compresses them, and at the same time cuts off with a knife fitted into it any fleshy matter or uneven surfaces which may have escaped in the former merely manual processes. They are further thinned by hand with knives, specially prepared with rounded edges, and then scraped with blunt double-handed knives to squeeze out the lime.

The third room to which the hides are taken is the tanning room, in which are thirty-eight tanks, wherein the hides are kept for some twenty days, the tanning solution being composed of about one hundred weight of tan to each tank, and being renewed every eighth day. Hence they are transported to a fourth room, where they are kept immersed for from five to eight days, according to the state of the weather, in water impregnated with caoutchouc. When they are removed from the tanks in this room they are taken to others, of which there are four in number, each six and a half feet deep and about seven feet in diameter, in the yard. Here they are carefully laid one side on top of another, with an intervening layer of tan, until the tanks are filled, when strong wooden covers are laid on and heavily weighted. In this position the hides remain for about six weeks, in the course of which, while they become thoroughly impregnated with tan, the moisture is in great part squeezed out. When relieved from this pressure the hides are taken to drying rooms where they are submitted to free ventilation and artificial heat until they are partially dried, when they are smoothed out, well greased with a mixture of tallow and fish-oil rendered down together, after which they are again hung up and thoroughly dried before passing into the hands of the currier.

Thenceforward their progress in their conversion into leather is very rapid. They are softened by pressure and friction applied with a lever, rubbed and grained, all by hand, and blacked, if necessary. The Japanese use the contrary side to Europeans for the outside, so that the sides have in the final processes to be treated according to the market for which they are intended.

So far the tannery has, for obvious reasons, principally confined its operations to the preparation of such leather as is used for boot and shoe uppers only, but its appliances are equal to any kind of work in its genre, and are capable of large extension. In concluding our notice we have only to express our wishes for such extension, and the accretment to the undertaking of such rewards as industry and enterprise rightly directed always deserve to secure.

Among the harmless amusements which foreign musicians visiting this country allow themselves to indulge in, that of composing national airs for Japan seems to be the most

popular. Like the investigation of perpetual motion or the problem of circle-squaring, with mathematicians, it doubtless has its advantages, for artists, notwithstanding the obvious probability that it can never lead to anything practical. There is no reason why a composer should not write Japanese national airs at the rate of a hundred a month, if it suits his humor to do so. But there are two reasons why we see no immediate likelihood of their serving any purpose beyond that of affording play for the surcharged imagination of their inventors. One is, that these tuneful contributions are always modeled more or less strictly upon European forms, and consequently are unintelligible to Japanese hearers. To produce a melody that should touch the Japanese mind, it would be necessary to examine somewhat closely into the character of the native music, which is not always so contemptible as it is commonly assumed to be. It possesses airs that not only stir the popular fancy here, but have a distinct claim to the attention of foreigners. The well known *Hilotsu to ya*, which the present writer had the opportunity of publishing in England sixteen years ago, is one of these. There are others, now in vogue, which might very properly take their place as representing a good quality of national song, and, by judicious treatment,—not alterations, but effective harmonizations, to which they lend themselves readily—be made impressive and dignified to any listeners. Whoever seriously aspires to the creation of a “national air” must make himself thoroughly acquainted with the favorite refrains of the people, discover their relative places in the fondness of those who practise and enjoy them, learn which of them are looked upon as vulgar and which are held to be refined, and in all respects accustom himself to view them in precisely the same light as that in which the Japanese themselves esteem them. Then he will have taken one good and essential step toward the accomplishment of his work. He will at least have found that the employment of major themes, with complicated underlying harmonies, will not bring him anywhere within range of Japanese sympathies; and we take it that the first object of writing a national song is to get it adopted by the particular nation for which it is produced. Even under the best conditions, the preparation of an anthem for the people, with premeditated intent and artifice aforethought, is not likely to be a successful experiment. Publics themselves have something to say on this head. The authors of “God Save the King” and “La Marseillaise” never knew that they were putting passionate eloquence into the mouths of future millions. But setting this aside, the only chance for the coming lyricist is to cling to his minor key and woo simplicity. At present the Japanese endure the “major,” perhaps pity, and in time may possibly embrace—but not yet. It was one of our desires, some years ago, to follow the gradual influence of the introduction of military trumpet-calls in Tokio, all of which are, of course, strongly marked with the “major third.” But the influence was never perceptible. The trumpets, being incapable of modulation, preserved the full tone between the second and the third of the scale (super-tonic and mediant.) The populace took kindly to the “calls,” and made the thoroughfares merry with them day and night;—but with this difference—they always sang or whistled them in minor. This, undoubtedly, is a natural result of what Lord Lytton would call inherited instinct

transmitted through centuries. It is useless to contend with it just now. Another lesson the student would need to learn, would be to avoid using the fourth and seventh of the gamut. Their exclusion would of course restrict his resources, but it is quite possible to make good melodies without them, as the old Scotch ditties prove. The second reason against the acceptance of a “national air” is still more formidable. The masses here have no consciousness of the need of such a luxury, and would not know what to do with it if they had it. Occasions for the enkindling or the utterance of such feelings as usually find expression in the fervor of united song are unknown, and must have been unknown for two centuries and a half, if not for a longer period. It is doubtful whether, even in battle-times, the disposition of the Japanese ever led them to those demonstrations of vocal union which seem so natural and irresistible an outflow of patriotic ardor among Western nations. They had, as we know, their songs of valor and military devotion, which were encouraged, to some extent, by the founder of the Tokugawas; but we do not find that these took any deep root in the memory of the nation as a whole. During the long peace, and until the restoration, the tendency of the government was to discountenance homogeneity in every particular, and to keep the several clans as distinctly separate as was possible. There was nothing to encourage the united recollection of any cherished anthem, supposing such to have once existed. It would be interesting, however, to know if any traditional war chant could be traced in the old provinces—in Satsuma, for example, where the temper of physical contest has been better preserved, apparently, than elsewhere. There is certainly none that is broadly recognized throughout the land, nor, we imagine, will there be one until the country itself feels that it is needed, and then it will be found. We doubt the possibility of its being made to order. Enthusiasm cannot be fitted with its artistic surroundings, like a lay-figure with apparel, nor the sacred fire of an empire's aspirations be reflected by manufactured mirrors, like the glare of a theatrical transformation scene. It is still possible that some stranger might touch the true chord of sympathy, and produce the song that, in time of need, would fix itself in the nation's heart; but that is the merest chance. It certainly could never be enshrined there by Imperial decree. On that point, the decision rests with the people, and there, if anywhere, the will of the people is more powerful than that of princes. For these several and sufficient reasons, the ultimate “national air” of Japan will probably not be written in time to be criticized in our next issue; and the persistent iteration of new offerings will remain, as it has been, an innocuous diversion, hastening in no way the expected end, and if we may say so, not expanding in any striking degree, the world's store of lyric art.—*Tokio Times*.

In THE TOKIO TIMES *Extra*, published January 27th, for the purpose of laying before our readers, as speedily as possible, the Financial Statement and Estimates, two errors in figures occurred—in each case, the omission of a “0.” One was corrected in our regular issue of the 3rd instant, and need not be further referred to. The other was not discovered until later, and we take the first opportunity of pointing it out. The sum reserved for contingencies in the govern-

ment provincial offices is 720,775 yen, instead of the amount heretofore given. An uncorrected verbal misprint, in the final paragraph, caused it to appear that the sum of 9,382,485 yen, in the Contingent Fund, was for “possible” loans. The statement should have been that this amount was included in the reserve on account of “payable” loans, i.e. loans already granted, the payment of which is expected. To the explanatory observations of the Minister of Finance, the following should be added:—

“The ‘Disposition Fund,’ (for credits to be granted by the government) in Section IX of the last Estimates of Expenditures (1875-1876) contained provisions for temporary advances, but these are not included in the Disposition Fund of this Budget, it having been lately determined to reform this, and to provide for these advances from the Reserve Fund. The fourth and fifth items of Section XIV, in the Revenue Estimates, and the sixth, seventh and eighth items of Section IX in the Expenditure Estimates, of the same year, are dealt with in a similar manner.”—*Tokio Times*.

The death of Mr. Sato, the officer of the Kioto Fu who was despatched to the Philadelphia Exposition, but who only reached San Francisco to yield to a fatal illness there, will have, for a time, a retarding effect upon the industries of the city which he represented. He was active, to an extent which it is impossible to overrate, in all the great manufacturing enterprises in which the place abounds, and was an energetic leader in the introduction of appliances, on a large scale, for simplifying the labor, and increasing the amount of production. The chief houses interested in silks, teas, potteries, etc., all recognized his influence and acknowledged the value of his prudent and vigorous cooperation. In the humanitarian movements of the region, such as the establishment of the sewing and embroidery school for women, he was equally prominent. A better citizen, a more capable officer and a warmer friend to the people whose welfare it was his constant aim to further, is not often to be found in Japan, or in any country. We observe that a costly memorial stone is to be raised in the cemetery of San Francisco in which he was buried; but his true monument will be in the memory of his associates in good works and of the multitudes for whom his hand was always ready in devoted service. Those who knew him will say that these are colder words than his fame deserves, but they are at least as sincere as it is in our power to make them.

The Japanese commission appointed to collect contributions toward the erection of a monument to Doctor Alexander von Siebold has already secured an amount equal to five thousand francs for this purpose.—*Idem*.

GOFUKU MISE.

A DRY GOODS' STORE.

(From the new *Yedo Hanjoki*.)

In a dry goods' store in Yedo may be seen piled up one on the other rows of red silk, crape, black satin, striped cotton cloth, and a variety of other goods. For the accommodation of customers seats are arranged; and two banto or clerks sit down, with their writing materials and *abaci* in close proximity to their persons waiting for customers to make their appearance.

At length a guest enters the shop. The banto bows low, and the stranger says:—

“Have you such an article in your shop as yechi-go-tsu-mugi?”

“Oh, yes; indeed we not only have that article but also shok-kono-nishiki, yokokuaya and a number of other articles too numerous to mention.”

The banto then makes a signal to one of the shop boys to bring ten different kinds of the

cloth asked for by the customer. The latter pulls the pieces about, rolls them over, examines them very minutely, condemns this as very common, that as exceedingly coarse in its pattern, and winds up by asking the banto if he has not some "very thick cloth of as many colours as the rainbow," to which interrogatories the banto replies the specimens he has exhibited are the very best in the shop; and suggests that "scarlet is much better than white;" that "this is a much superior kind of cloth to that." But the customer is not to be thus coaxed into making a purchase, and intimates that he must seek elsewhere what he cannot find in that shop. And so he goes away to another shop to repeat the programme he performed in the first. The banto casts a look of indignation after the retreating figure, and then busies himself to replace the articles he has taken from their customary places for the inspection of the stranger. Such a person is known among the shopping fraternity as "hiyakashi," or one who amuses himself by visiting the shops and inspecting the goods without any intention of making a purchase.

An old rustic, clad in a rude kind of garment and carrying a bundle of straw, enters the shop. This time the banto is not so obsequious in his manner, because the customer is evidently very poor.

"Have you any Sanjo-koji-no-hitoyemono?" (very rude kind of cloth used by country people for summer clothing)?

"Yes, we have."

"What is the price?"

"One yen and twenty-five sen."

"That is very dear," exclaims the old man: "the price is far too much for the quality of the article; I think you had better come down fifty per cent."

"Don't joke," says the banto. "Look at that tablet and you will find it says, 'No credit and only one price.' Buy that article: it is much cheaper than you can get it in other shops."

"I do not agree with you on that point. And if I were to buy that article and take it back to my old wife she would scold me severely. Therefore I cannot buy unless you come down in your price."

"Very well; if you cannot give the price I ask for it, I am not able to sell it for less. Don't you know that ours is one of the four celebrated shops in Tokio and not a second-hand store. Although we sell an article for 1,000 yen we never come down a cent, which is a practice we have observed from ancient times, and if you don't believe this, you had better go and enquire elsewhere as to the truth of it."

For a moment the old man bows his head as if in deep meditation, and then agrees to purchase the article; and putting his hand into a dirty little money bag which he carries with him, extracts one *bu* one *shu* and some *osh*, from which is emitted a very strong and not pleasant smell, as if they had been in the bag a very long time. Such an old fellow as this is known as "yamadashi,"—a rustic who visits the capital for the first time in his life.

A clownish fellow with a towel over his shoulder enters the shop and inquires for a certain article; and on its being produced by the banto, gives an order for four dresses to be made up by noon on the following day, and gives explicit instructions that the garments must not be behind time. The banto having taken the measure of his customer, the latter is about to take his departure, when the former arrests his steps by catching hold of the sleeve of his kimono and demands some "bargain money." The customer opens his

eyes, elevates his shoulders, turns up his sleeves, and indignantly replies:—

"Don't you know that I belong to the celebrated company whose name is thundered all over the city, and we would not tell a lie to save our lives. You ought to be ashamed of yourself to make such an impertinent demand. But if you are in want of a little money, follow me to my house and you can have five or ten dollars."

The banto apologetically remarks:—"I did not wish to offend you and should not have made the request had it not been an ordinary custom. However, never mind: come to-morrow at noon and your clothes shall be ready for you without fail."

Before noon the following day the clothes are ready and the shopman awaits the arrival of his customer. Twelve o'clock comes, but no customer; every hour in the afternoon passes away, but still no customer. The next day and the day after pass by with a similar result, and, in fact, the banto never claps his eyes on him again. Such a character as this is known under the appellation of "sho-ben-butsu."

THE FOUNDER OF THE TEMPLE TENDAISHU.

(Translated from the Japanese)

In the province of Shiganokori, Oumi, lived a very respectable old couple about the middle of the seventh century. The old man's name was Shaku Saisho. He appears to have been of Chinese descent, as it is related that his ancestors escaped from China to Japan in the troublous times of Gi Sohi, about the year 259 A. D., when Tenno Ojin occupied the Japanese throne. The Tenno sympathised with the exile and presented him with an estate, which has been inherited by his descendants ever since.

Shaku Saisho was a very learned man. The doctrines of Confucius and Buddha were quite familiar to him: therefore he was regarded as a very sensible person. But there was one circumstance which caused him much unhappiness, and this was that he had no son and heir to his property, and he was upwards of fifty years of age.

Now, it is related that both he and his wife visited a certain celebrated temple and prayed most earnestly for seven days and seven nights that a son might be given them. On the last night the wife received a divine revelation in a dream, and afterwards she gave birth to the famous priest Shaku Saisho.

When the child was only seven years of age, he understood perfectly all the books relating to the religions of Confucius and Buddha. But he evinced a preference for the latter, and at the age of twelve he shaved his head and placed himself under the tuition of a celebrated priest. He however was not quite satisfied with the result of the teaching of this priest or his own researches.

When 38 years old Shaku Saisho petitioned His Majesty, the Tenno, for permission to go to China in order to gather information relating to the sacred religion of Buddha. The Tenno, as it happened, was about to send an ambassador to China, and Shaku Saisho, as well as the famous priest Kukai or Kobodaishi, received permission to go with him, an opportunity they both gladly availed themselves of.

They had a pleasant and a safe journey across the ocean; and on reaching China at once proceeded with their investigations.

They visited the Buddhist priests in the different cities and in country places, and collected a vast amount of valuable information. They stayed about one year, at the end of which the Japanese ambassador decided to return home, which put a limit to the stay of Shaku Saisho, though Kobodaishi determined to remain behind. At length the time came when the Ambassador must leave the shores of China, and Shaku Saisho took on board nearly 1000 volumes of Buddhist books.

Now about the time of Shaku's return to his native country, which was in the year 697 A.D., and in the reign of Kamo Tenno XXX, the capital of Japan was transferred to Yamashiro. In the neighbourhood of the city, and to the north-east of the Tenno's palace, is a celebrated and very lovely mountain called Hiyeizan. The priest who had recently returned from the Celestial Empire, conceived a great desire to build a temple in this mountain for the purpose of guarding the Tenno's new palace. With the characteristic promptitude of the man, he despatched a petition to His Majesty requesting permission to construct the contemplated edifice, a request that was readily granted.

Shaku soon set to work on the temple which he christened Tendaishu; and the people who worshipped in that temple were known by that name. The priest became popular and the believers increased in number daily until they became a very influential sect. In 865 A.D., in the reign of Tenno Seiwa, this famous priest, who had reached 100 years of age, died and was buried. But in memory he and his meritorious actions still live; and the temple he built is still to be seen at Hiyeizan, Kioto, in this year of Meiji.

Nippon Notes.

On the 7th inst. at 10 o'clock a.m. His Majesty the Mikado left Kioto for the mountain of Aibi-yama, Yamato, where the tomb of Jimmu Tenno is situated. He will not return to Kioto until the 17th instant.

LARGE quantities of dark *kokura*, a coarse cotton cloth, are manufactured in Kioto. This stuff is much used for the clothing of troops and policemen.

THE *Mainichi-shinbun* says that the man-of-war *Mikuni-maru*, belonging to Shimadzu, left Kagoshima harbour en route for Yokohama on the 6th instant.

THE same paper states that Mr. Shimadzu, late *Salaijin*, left his home at the end of last month for Tokio. But being informed that the Mikado had left for Kioto, Mr. Shimadzu proceeded to the latter place where he had an interview with His Majesty. He is reported to have sent word to his relations in Tokio that he will arrive in the capital before the Mikado.

In the province of Mimasaka are some very high mountains, on the summits of which may be found a number of enormous eagles. These birds often afford amusement for the native sportsmen, but, as they are excessively shy, stratagem has to be resorted to in order to get close enough for a shot. In the same province are also numerous monkeys, and when a sportsman prepares for eagle shooting his first care is to procure one of these creatures, with which he wends his way to the mountains. On climbing in the neighbourhood of eyries, he cuts a pole, and, planting it in a conspicuous position, chains the monkey to it as a decoy. He then secretes himself in the cavity of a

rock or in a hole in the ground, and awaits the result near by. The monkey climbs up and down the pole, and is soon observed by the eagles, who in trying to seize their prey fall to gun of the marksman. Eagle-shooting was a favorite amusement in the feudal times, when the feathers of the bird were much prized by the daimio and samurai.

RECENTLY at the Tokio-Saibansho, the following ten shizoku and one heimin, who were confederates of the late Mayebara, and were arrested at the bridge Shi-anbashi, Tokio, in November last year, were condemned as follows:— Iguchi of Iwate, Takemura, and Nakahara of Awomori, to decapitation; Shitotsuyanagi of Tokio-fu, to hard labour for life; Kimura of Fukushima, to hard labour for ten years; Matsumoto of Shimane, to seven years' hard labour; Takagu of Shizuoka and Miki of Kagoshima to five years' hard labour, Nami, a heimin, to five years' hard labour; and Kurokawachi and Hori-uchi of Awomori to one year's hard labour.

THE *Nichi-nichi Shinbun* states that a rumor is current that, at the end of the last month, the *Sekirio-maru* of the M. B. M. Co. arrived in Kagoshima harbour, having a few military officers from the Osaka garrison troops on board. On the 31st ultimo, while some gunpowder, manufactured at the arsenal in the island of Sakura, was being taken on board, a large number of shizoku opposed the shipment, and the *Sekirio-maru* was obliged to return to Osaka with very little of the powder she expected to take. The same paper stated that the man-of-war *Kasuga-kawan* was about to leave Shinagawa for Kagoshima, in order to investigate the facts of the outrage.

(From the *Nichi-nichi-shinbun* of 1st and 2nd Feb.)

As we have already published the estimates for one year, namely from July, 9th year Meiji, to June of this year, we feel confident that our readers must have read them attentively. And what did they think of them? Our own opinion is, that the estimates will gradually improve year by year until they arrive at a state of perfection. For the current year the estimates have been prepared so carefully that, in saying that they will cause little or no inconvenience we only say that which is just. The comparative table of receipts and expenditures show clearly where they have increased and decreased. Such a table as this is very important in business and of great assistance to accountants, and we trust the Minister of the Finance Department will prepare and issue such a table annually.

Notwithstanding the undoubted reliability of the estimates, some distrust is manifested towards them on account of their not being issued at the commencement of the year. Are not the estimates published in order to show the revenue and expenditure of the Government for the coming year? If this is so then the estimates for the 9th year of Meiji (1876) should have been prepared at the end of the 8th year of Meiji, June, 1876; and those for the 10th year should be prepared at the end of the ninth year (June, 1877). To prevent inconvenience they should at least be prepared in July. But for the past two years they have been prepared in December, and of course half of the year has by that time elapsed. If there is any reason why these estimates cannot be prepared at the commencement of the year, then it is only right that they should be called the "estimates for the second half year," but not for the whole

year. This is what causes distrust in the minds of our countrymen. But it is probably inconvenient to the Finance Department to prepare them at the commencement of the year. As we do not understand why this should be so, we cannot remove the distrust of our readers by giving an explanation.

We will leave this question of the preparation of the estimates for a time and ask why it is that no accounts of the actual expenditure has been given for many years? How is it possible for us to know the correct amount of the revenue and expenditure without being furnished with an actual account. A comparative table is not so beneficial to us as an actual account would be, without which we and our countrymen cannot believe the estimates. Who of the authorities is not aware of the importance of this?

According to the estimates the harbour dues are calculated to increase only 17,000 yen above the receipts of last year. This year, or from June 1876, trade has been prosperous and large quantities of merchandise have been imported and exported. Now we suppose that five per cent will be paid to the Custom House on the amount of goods exported or imported, in which case it will take goods to the value of 340,000 yen to cause the increase in the receipts of 17,000 yen; or, supposing the duty is only three per cent, the increase of goods exported and imported will amount to 540,000 yen.

This year the income from the land tax has been reduced 4,949,000 yen, which reduction is said to have been caused by the alteration in that tax. For what reason has the tax on the officials' salaries been reduced this year by 14,000 yen? Did the Minister of Finance anticipate the recent reform of the Government or did he intend to reduce the salaries of the officials? The reduction of the 68,000 yen of the tax imposed on the pensions of the shizoku is well known. As the Minister said last year, it was caused by the return of pensions to the Government.

According to the estimates for the current year, the tax on the productions of the Hokkaido has been reduced 66,000 yen; and the revenue from the Loo Choo Islands has been reduced 15,000 yen. There must be some reason for making these reductions in the estimates; but as it has not been mentioned we cannot say what it is. And it is a matter of no great consequence whether there has been an increase or decrease. In the revenue derived from the taxation of spirits and tobacco, there is an anticipated increase of 1,200,000 yen, the result of the heavy tax which has been imposed on those articles. The estimate of the stamp duties on legal documents and other things is slightly lower this year. The income to be derived from railways is estimated to be increased by only 2,000 yen. But as the railway lines between Osaka and Kobe and Osaka and Kioto are completed, and since July last the traffic has greatly increased over the traffic before that month, so we think the income to be derived from this source will greatly exceed the sum placed on the estimates. The increase in postage stamps and telegrams is something wonderful. It was not until last spring that even the residents of the city become aware of the advantages of the telegraph. Latterly most nations have come to recognise the convenience of the telegraph and postal systems. The income from mining sources is estimated to be over that of last year, because the system of mining has greatly improved, both in the working of public and private mines. The income from the mint is also set down at a considerable increase, namely 95,000 yen. This increase

is arrived at from the fact that, during the last half year, a much larger quantity of gold and silver passed through the mint than during the first half year. Besides what we have referred to, we observe nothing of importance to discuss in the estimates of revenues.

In the estimated expenditures, it is proposed to reduce the National Debt by the sum of 1,250,000. In regard to this we compile the following comparative table:

HOME LOANS:		1876	1875	
Bearing interest				Decrease
4 per cent per annum		11,801,750	12,041,564	239,814
Bearing interest				
6 per cent per annum		2,238,550	2,238,550
Bearing interest				Increase
8 per cent per annum		16,641,850	8,686,950	7,954,900
Bearing no interest		10,032,720	10,037,784	5,064
Principal paid		1,833,152	621,942	1,211,210
Interest paid		1,903,667	1,804,240	9,427
FOREIGN LOANS:				
Bearing interest				Decrease
7 per cent per annum		2,928,000	3,003,152	75,152
Bearing interest				Decrease
9 per cent per annum		11,227,123	11,477,760	250,637
Principal paid off		756,180	738,637	17,543
Interest paid		1,049,420	1,031,588	17,832
Commission		9,028	9,248	220
Total of home and foreign debts		54,869,993	47,435,780	7,384,213
Total principal and interest paid back		5,551,447	4,345,655	1,205,792

The expenditure of every government department is estimated to be much increased, for as the minister of the Finance department has said, the exigencies of the times render several establishments necessary. The expenditure of Kaigi-in, or 30,000 yen, is still provided for, as no meeting was held during last year. The amount set apart for incidental purposes, is 3,670,000 yen, which is a decrease on last year. As the reason of this reduction is not given we cannot discuss it. We are very glad that this year 149,000 yen of paper money is withdrawn; although we are unacquainted as to whether it is exchanged for cash or not. But, in a few words, the estimates for this year are compiled very well; and we are happy to have such good accountants in the government.

(From the *Osaka Nippo* of the 2nd February.)

The reduction of one-half per cent. of the land-tax has effected at once a great reformation in the Central Government, which will soon be followed in the Provincial Governments. The Chiji of each Fu has already been reduced in rank to that of Ken-rei, and the Gon Chiji has been correspondingly lowered. The official titles of Sanji and Gon Sanji have been changed to those of first and under secretaries; and we are told that a number of officials have already been dismissed from the Provincial Governments. But we cannot know beforehand the full extent of the reforms proposed to be effected.

We are sure that, as the Provincial Governments cannot be compared with the Central Government in power, expenditures, and numbers of officers, so great an alteration will not take place in the former as in the latter. The Provincial Governments are branches of the Central Government; and their action directly affects the people. So they are regarded as of

much more importance than the Central Government; and their officials are more laborious and officious. Therefore, if the number of officers and the expenses of their departments, are much reduced, public business will suffer, and the Provincial Authorities will be accused of neglecting their responsibility, and become amenable to the 2nd art. of the regulations providing for the punishment of negligent officials. Even at the present time we find that the transactions of the government business is very slow. How will it be then when the three fu and thirty-five ken, into which the entire country is divided, are abolished or amalgamated? Although such a measure might be of no inconvenience to the government, it would give trouble and inconvenience to the people, and at last we may be driven to wish that promptness may be brought into the conduct of affairs even by the payment of a heavy tax.

Now, we have heard that the Japanese Government intend transforming the three fu and thirty-five ken into three fu and twenty-three ken. If this should unfortunately turn out to be true we shall not escape from the inconvenience to which we have referred above. The Provincial Governments have been often changed; and in the spring and autumn of the 9th year of Meiji (1876) the three fu and sixty ken were altered to their present form of three fu and thirty-five ken; and some persons hold that the decay or decline of provincial villages is hastened by the abolition of small local governments while we have often noticed that the public business in towns and villages is much neglected to the great inconvenience of their inhabitants. How can a small number of officials, under whose jurisdiction are many counties, administer their government properly and protect the people in their industries? But as every Provincial Government is conducted by industrious and worthy officials and their jurisdiction does not always extend over many hundred miles and three or four provinces, some persons will take exception to our opinion, and say that the majority of public affairs are well transacted and cause no inconvenience to the people; and this may be true perhaps under the present system of the Provincial Governments. But if the recent reformation of the Central Government extends to them we fear that a system which was established for the convenience of the people, will turn to their inconvenience, and cause delay in public business. We desire that, if the Provincial Governments be abolished and their business transferred to the Central Government, at least Keurei will be allowed such powers as will prevent the accumulation of trouble to the people.

THE *Nichi-nichi-shinbun* extracts the following from a letter sent from the branch temple of Higashi Honganji. Buddhist monastery, in Shanghai, dated the 26th January 1877:—

H. E. Mr. Soyeshima, late minister of Foreign Affairs, is now sojourning at Mr. Tashiro's house, at Shanghai. He is not well and spends his time in composing verses in company with Mr. Ogurudzu, who is the chief priest of the temple. Mr. Fukushima, Vice-Consul for Japan in Amoy, arrived in the *Tokio-Maru* from Japan on the 17th of January. Thermometer registers between thirty-one and fifty-six degrees, in Shanghai and its vicinity. We find many jinrikisha, which the natives called *tonyanso*. A native gentlemen seldom rides in a carriage, but generally in jinrikisha. The amount of taxes collected in the Custom House in Shanghai during one year is 3,250,871

taels; and the annual revenue of the city is 11,497,272 taels or 6.1 per cent. The merchandise exported to Japan during the 8th year of Meiji (1875) is valued at 761,431 taels. We wonder much that the Chinese are so very fond of opium, for which 20,000,000 taels are annually sent to foreign countries. But the government can do nothing in the way of interference with this traffic except by imposing a heavy tax upon it. The people pay no regard to the heavy duty and continue to smoke until they are reduced to bankruptcy. There are many shops in every street where opium can be smoked. Newspaper writers go so far as to say that it would be much better to grow and manufacture opium in the country, rather than permit such large sums of money to pour out of the country to England.

THE ceremonial opening of the line of railway between Kobe and Kioto was completely successful. H. M. the Mikado returned to the palace at 4 p. m. after the close of the ceremony.

THE *Hochi-shinbun* mentions, as a proof that the rumors current as to the condition of affairs in the Kagoshima Ken are false, that Mr. Shimadzu and Mr. Mori have each subscribed a large sum toward the establishment of a Kuwazoku Bank in that district.

ON the afternoon of the 5th inst. the barracks at Sakurada machi, Tokio, were entirely destroyed by fire.

HALF a battalion of the Kumamoto garrison troops are to be stationed at Nagasaki.

From the *Osaka Nippo*:—

ON the 26th ultimo, from Tonda, Ibaraki and Takatsuki to Omiya, the people were in expectation of the Mikado, and when they heard of the postponement of his arrival they were greatly disappointed.

AS there are now Tokio policemen in Osaka, the force is numerous and robberies and thefts are few.

THREE men from the neighborhood of Akashi have been staying in Kobe, waiting for the arrival of the Mikado, since the 25th instant. On the 27th their money was finished and they had to go home. How did they feel? The editor regrets the hotel keeper did not keep them another day.

AT Kioto beautiful ornaments have been made in the streets on account of the Mikado's visit; the expense is said to be 3 yen per house.

ALL the teachers of the Kaisei-gakko and a school for English have been dismissed and again appointed by examination.

THE following Notification (No. 18) has been issued by the Kioto Fu:—

H. I. M. the Empress has been staying in Kioto for some time, and now H. I. M. the Emperor and Empress Dowager have arrived. The people of Kioto generally have been longing for their presence. In the meantime the people receive perpetual happiness by the completion of the Railway. Being filled with great happiness they are anxious to acknowledge the Sacred blessings and to offer up, in each district, their congratulations when the ceremony of opening the Railway is held. However, H. I. M. the Emperor fears that the people will be putting themselves to too great an expenditure, which may cause them distress. By Imperial edict, he has reduced the land tax and ordered the reduction of local taxes, and a reduction is to be made in the offices of each Sho, Fu and Ken. In this Fu it has been ordered that some officials have their salaries reduced and that others be dismissed. This is all in accordance with

the expression of the benovolent feeling to save the people from distress. It is not good, therefore, that they offer their congratulations in an extravagant manner; but only that their congratulations be in accordance with the importance of the ceremony. Expense on internal decorations is to be avoided, the lighting of lanterns on the outside of the houses being sufficient. Those who do not consider the occasion a fit one for congratulation are not required to hang up a lantern even on the eaves of their houses.

THE people have petitioned that the celebration may last for three days from the opening of the Railway, but their petition is not allowed, for the reasons above given, and the celebration is to be confined to one day only.

THE above is notified to all the districts under the jurisdiction of the Fu.

ON the 28th ultimo, all but 21 of the officials of the Fucho were dismissed, some of them being afterwards re-instated.

H. I. M. the Mikado visited the Higashi-yama-Misaki, Gotsukiwa, on the 31st ultimo. He started at 9.30 a.m.

SLEET fell on this day, but His Majesty's carriage was not covered, and the people were much gratified in beholding the Sacred person. H. E. Sanjo was indisposed and did not attend.

AT 9.30 a.m. on the 31st His Majesty visited the Fucho and Saibansho. After returning to the Palace, he went out again, when he visited the Museum.

A change has been made in the Osaka Saibansho, and the rank of the officials has been lowered one grade or more.

A school for Females was opened on the 1st instant in Horiye, Osaka.

ON the 30th ultimo it was rumoured, that the shizoku of the Western Provinces had landed at Kawaguchi, and that they were fighting against the soldiers from the Castle; that they had arrived at Kobe on board seven vessels and were preparing to attack Osaka; that troops had been sent out in several directions. These rumours were caused by the occasional practice of the Castle troops, who have been called up as early as 4 a.m.

OSAKA Fu notified on the 31st ultimo that on the 23rd Watanabe (Gon-Chiji) was appointed Chiji; Uchimi, Daishokikwan; and Matsumoto, Shoshokikwan.

THE editor previously doubted that the pupils of Fukuzawa had received the sole privilege of escaping being drafted as soldiers; he has now received full particulars and understands that the pupils of every private school have been placed on the same footing in this particular as the pupils of Government schools. Mr. Fukuzawa petitioned that his pupils above the 3rd class should be free from military service, after having proved themselves by examination to be farther advanced than pupils of the 3rd class in Government schools. This has been allowed by the Government, and pupils of private schools who have distinguished themselves are to be placed on the same footing as the students of Government schools, and will be exempted from military service.

PREVIOUS to H.I.M. the Empress passing through Gion-machi the road was sprinkled with water. This froze, and caused the horse of one of her attendants to fall. The Kucho has therefore notified the people of Gion-machi that they must not pour water on the street on such occasions. The editor says that many gentlemen tumble and fall

down in this ward, even though water be not poured on the streets.

It is said that Konoike and five others (his relations) have petitioned the Oknasho to be allowed to establish a National Bank, with a capital of 250,000 yen, in the second ward of Imabashi-dori, Osaka, and that they have duly reported to the Fuchō.

The rumour concerning the abolition of certain Ken was extracted from *Hochi-shinbun*, but as that paper has since given a contradiction of the rumour, the *Osaka Nippo* does likewise.—*Hiogo News*.

At 4.40 p. m. on the 16th, a fire broke out in Mr. Nakanosū's house, at No. 12, Nichome, Okachimachi, Tokio, and was not extinguished till forty-four houses were burned, and twelve more were entirely destroyed by fire-men in their efforts to arrest the spread of the flames.

H. E. Mr. Sanjo Saneyoshi, *Daijō-Daijin*, is still unwell.

On the 3rd instant, according to the *Mai-nichi Shinbun*, a steam ship, called the *Wago-maru*, was wrecked off the island of Adzuki-jima in the Inland Sea. The *Wago-maru* used to ply between Osaka and Shikoku. At about 8 o'clock on the 3rd, she dashed upon a rock on her way from Kameyama to Osaka and at the same moment the boiler burst. The vessel was engulfed in a few minutes. But fortunately out of thirty-five persons on board thirty-two were saved by fishing boats happening to be in the neighbourhood, and the other two only were lost. Their bodies have not been found.

The *Hochi-shinbun* extracts the following item concerning the *Naniwa-maru*, one of the M. B. M. Co.'s steamers plying between Osaka and Corea, from a letter sent from the island of Tsushima. About 8 o'clock p.m. on the 22nd ultimo, the *Naniwa-maru* left Osaka for Corea, taking Mr. Okawa, *Rokuto-Hanji*, and his suite, and about fifty Coreans, who were drifted on to the coast of Satsuma during last year, and others numbering in all about three hundred. The weather was stormy, and at about 8 a.m. on the following day the vessel arrived at port Fukue, which is in the island of Goto: Mr. Okawa disembarked and visited the Saibansho at this place. Heavy rain fell and a strong wind blew from the north east so that the vessel was prevented from leaving port. But during the night the storm increased so much that it became imperative for her to put to sea to avoid being blown on the shore. At about 6 a.m. on the 14th ult., she arrived at Taino-ura in the same island having passed through innumerable difficulties and dangers. She stopped till the morning of the 26th; and the following day she put to sea and arrived at Iwahara of Tsushima, which port she left immediately for Corea.

(From the *Nichi-nichi-shinbun*.)

Will our disputants please wash their eyes and look at the friendly relations which exist between our own and foreign countries, and observe the manner and behaviour, of foreign Governments towards us. Shall we call it an intimacy based on moral associations or otherwise? If we should by no means scorn those who oppose us, but on the contrary favour them according to their behaviour we cannot arrive at an equality with foreign powers, because they maintain their conduct not by reason or on moral principles but depend upon force. We know very well that this is a fact applicable to every western power.

Our disputants! Consider what will be the general condition of Europe during the next

twenty years or about the close of the nineteenth century! The friendship between western powers is not governed by reason nor by morality. One nation will take advantage of the troubles of another and desire to benefit itself by seeking a quarrel with the one that is in trouble. Equitable principles have been discarded on the European continent, and each nation has to preserve its peace by being well prepared for war. In fact Europe is in much the same condition as our country was at the end of the reign of the Ashikaga Shogun. For what reason did Prussia encroach on the territory of Denmark, destroy Hanover, annex the northern part of Germany and fight against France. Russia took advantage of the war between France and Prussia and broke the Treaty of Paris by again stationing a fleet in the Black Sea. And for what purpose did she break the treaty? Italy took advantage of the disturbances between Austria and a foreign power to unjustly extend her dominions. Emperors, Kings and Prime Ministers, are apparently on the most intimate and friendly terms, but the desire of each is to thrust down the other at every opportunity offered. Such is the political condition of Europe. How can we hope to preserve friendly relations with foreigners by relying on their integrity if we are not prepared to use force.

Again, consider the regulations which were discussed at the meeting of representatives held at Brussels two years ago. The strong sought to acquire some advantage while the anxiety of the weak was to preserve what they already possessed. What we mean by the diplomacy of Europe is that one nation seeks to advance its own interests regardless of all reason, and acts as selfishly as its power will permit. Look at the way in which all the powerful nations of Europe are acting towards Turkey. By what right do they interfere with the administration of Turkish affairs? What is their object in acting so? Who will consider that Russia's pretensions and interference on the behalf of Christians are justifiable? And who will consider that the British Government is working for Turkey? Is the advice given by Prussia, Italy, and Austria for the benefit of Turkey? All these powers are working for their own advantage in case the negotiations should be broken off. In Europe neither reason nor morality is needed to preserve the independence of the nations. If a person desires to cover his bad actions he can do so on various pretexts. An ancient sage says that, when a weak man happens to tread on the toes of a strong man, the latter becomes angry and inflicts punishment upon him. But when the strong man happens to tread on the toes of the weak man, he also becomes angry and punishes him for putting his feet in the way. Such will be the diplomatic action of Europe. This is not the golden age in which morality controls force; but it is an age when every man in the world strives for his own advantage, regardless of the injuries inflicted upon others or the trouble they may be in.

Even in Europe diplomacy is governed by the strength of each country. And how can we hope that foreigners who regard eastern nations as half civilized will behave with reason and morality towards us! Consider the behaviour of foreigners towards us! It is not right at all! The face of our independent country was stained, as our countrymen know, by the convention which was signed by the Tokugawa government. It is now useless to talk of it; but foreigners have taken advantage of various disturbances which occurred at the decline of the Shogun's power. They forced their

way into the heart of our country for the promotion of their own benefit and convenience. It our readers will read the convention and documents which passed between the foreign ministers and the Shogun Government since the opening of the ports, they can easily understand how badly the foreigners have acted.

Since the foundation of the present government, considerable progress has been made in friendly intercourse with foreign countries. The various representatives are treated politely by us and the people are highly favoured, preserving their national rights and studying their own convenience; and everything they want is given to them; or permission granted them to have it. Thus our government treats foreigners with respect, wishing to hasten the time of the alteration of the convention, by which we shall hold the taxation and judicial powers in our hands. But we fear that the western governments, where no morality nor reason is preserved, will not accede to our desire in this respect.

The fort of Kanagawa will shortly be connected with the barracks at Honmoku by a telegraph cable to be laid in the harbour of Yokohama.

On the 17th inst. the police station in Hakodate was destroyed by fire.

On the 18th the editor of the *Mai-nichi-shinbun* was ordered to appear before the Saibansho.

GEN. YAMADA, Vice Minister of the judicial department, and Col. Hayashi have left for Kioto.

ABOUT six hundred plans of the Saikai-do and Nankai-do have been lately published by the War Department.

It is said that large numbers of shizoku in the Shidzuoka-ken are holding meetings at the village of Kanaya.

FOUR Tokio newspapers viz., *Hochi*, *Nichi-nichi*, *Choya*, and *Akebono-shinbun*, will be sent to the Bonin Islands by the Home department.

MR. SHIBUSAWA of the First National Bank, and Mr. Masuda of the Mitsui Bank, who were recently in Shanghai, have completed the transaction of lending to the Chinese Government 300,000 koku of rice, and have returned to Nagasaki.

At about 2 p.m., on the 14th inst., a fire broke out at a *sake* manufactory, the property of one Miwa in the large town of Oaki, Mino. A very strong wind was blowing and the fire spread rapidly and was not extinguished till about two hundred houses, two junks, and seven godowns were burned.

(From the *Nichi-nichi-shinbun* of the 10th Jan.)

NOTIFICATION No. 17.

Notice is hereby given that the regulations for allowing bail to accused persons will be henceforward as follows.

IWAKURA-TOMOMI,

U-Daijin.

9th Feb. 1877.

Art. 1.—Bail means the release from custody of a person under a criminal charge on his furnishing sureties who will be security in certain sums of money for his appearance for trial.

Art. 2.—Should a judge deem that there is no danger of the accused attempting to escape trial he may liberate him without security.

This does not apply to those who, if convicted, would be sentenced to hard labor for life or severer punishment, or who have before been under sentence.

Art. 3.—Accused persons or their sureties can make application for bail to be received at any time; and the judges must promptly accept the security. In no case must they allow five days to elapse from the date of the application, without attending to it unless there is special reason for the contrary.

Art. 4.—Bail must generally be taken from more than two sureties; but if the judges deem that one surety is sufficient they may accept him as security.

Art. 5.—The amount of bail necessary will be decided by the judges in accordance with the degree of the crime committed, and the wealth of the accused and his friends.

Art. 6.—Sureties are responsible for the appearance of the accused before the Saibansho, at any time when his presence may be required.

Art. 7.—An accused person, released on bail, must dwell in some place consented to by the judge; and he must not absent himself therefrom on any frivolous pretext.

Art. 8.—Should the sureties have reason to believe that the accused will endeavor to escape or take measures to conceal his crime, they must immediately report the matter. In cases of emergency, they may even arrest the accused themselves. In each case when the sureties withdraw their bail their money will be returned and the accused may then, if he can, find other sureties.

Art. 9.—Should the accused fail to appear before the Saibansho on receiving a summons, he will be immediately arrested and no bail will be taken for him again; while the money lodged as security will be confiscated to the Government. Exception may be made in cases of illness or other important matters.

Art. 10.—Should the accused escape during the time he is at liberty on bail, he will be considered in the same light as those who escape by breaking prison. The moneys lodged as security by his sureties, even though they know nothing of his escape, will be confiscated to the Government.

Sureties conniving at the escape of an accused person, will be punished in the same manner as are prisoners in jail who assist others to escape; and their security will also be confiscated to the Government.

Art. 11.—The following persons will not be admitted as sureties for accused.

- 1.—Those who have aided and abetted in the crime of the accused.
- 2.—Those who have been sentenced to hard labour for terms of more than five years.
- 3.—Extremely aged and young persons and women, and others who have no position.

Arts. 12.—Should one of the sureties happen to resume his bail or to die, another must be procured in his place.

Art. 13.—When the accused's case has been decided, the money lodged as security will be immediate by returned.

Art. 14.—Any judge refusing to accept bail, in order to gratify a private enmity against the accused, will be treated as one punishing an innocent person.

Art. 15.—Those who appeal to the Daishin-in against their sentences can be released on bail in conformity with these regulations.

Rebels against the Government, and those who are placed in charge of their relations or of the officials of their ward, cannot be admitted to bail.

MR. CHIBA, Secretary of the Home department, left for the Shizuoka-ken, on the 13th, in order to report on the condition of the Tokaido.

DURING the night of the 11th inst. a barrack at Kasumiga-seki, Tokio, was entirely destroyed by fire.

AGRARIAN riots are reported from Yecchu, where about one thousand farmers have risen against the local authorities. Half a battalion of troops, stationed at Ishikawa, were despatched against them on the 8th instant.

THE *Nichi-nichi-shinbun* says that the three men of war, which were ordered in England by the Navy Department, will be launched about the middle of next month.

DURING the absence of Mr. Okubo, Home Minister, Mr. Mayeshima, *Naimu-shoyu* and Postmaster-general, will act for him.

EVERY fortified place within the boundary of Satsuma is strictly guarded by large numbers of men, who are said to be insurgents.

THE *Mikuni-maru* from Kagoshima-ken, which arrived at Kobe on the 6th instant, was ordered to remain in the latter port till further orders.

GENERAL Nodzu left for Kobe in the *Korio-maru* on the 10th instant.

MR. Mayesima, Postmaster General, will shortly leave for Kiushu on business of his Department.

DURING two days, viz: the 8th and 9th inst., thirty six telegrams were received by the government from the south.

IN the Gifu-ken, a large number of farmers have assembled to express their discontent at the alterations in the land tax. On the 6th inst., a body of police was sent to disperse them.

AT about 4 p.m. on the 11th, a fire broke out at Ichhome, Bakuracho, Tokio, which was not extinguished till five houses were destroyed.

THE Government has instructed the Kanagawa Kencho that, owing to the disturbances in the south, a strict watch is to be kept on all vessels entering this port.

SEVEN hundred and fifty policemen were despatched in the *Kanagawa Maru* to Nagasaki.

A LETTER from Osaka states that Mr. Yamagata, War Minister, who was to accompany the Mikado to the tomb of Jimmu Tenno, has remained at Osaka.

THE man-of-war *Riujo-kuwan*, which escorted the Mikado to Kobe, was intended to return to Yokohama on or about the 24th instant. But she was despatched instead to Nagasaki harbour there to join the *Moshun-kuwan* and *Mo-u-kuwan*, which left Yokohama on the 9th instant.

DURING last year, 13,540 law suits were heard before the Osaka Saibansho.

THE Acting Minister of the Public Works Department has issued a notification to the effect that, Nagoya in Aichi and Tsu in Mie having been connected by telegraph, communication will be opened on the 15th instant.

H. M. the Mikado has distributed 50,000 yen amongst the citizens of his former capital, as *miyage* (presents) and has given 300 yen to Princess Katsura-no-miya. At the conclusion of the ceremony of opening the line of railway between Kobe and Osaka and Kyoto, a banquet was given to the foreign representatives at the Buddhist monastery of Kennenji.

THE harbour of Takeura in the Island of Tsushima has been placed under the jurisdiction of the Navy Department, and will hereafter be called Kaigun harbour.

THE *Hochi-shinbun* states that, on the 3rd inst., a number of the Kagoshima Kencho officials left for Tokio in order to report upon the recent disturbance of shizoku to the government. They arrived in the *Tokio-maru*. On the 10th about ten police officers at the head of about six hundred policemen were despatched for the island of Kiushu in the *Toyoshima-maru*. Out of these two hundred will be stationed at Nagasaki, two hundred at Kumamoto, one hundred at Saga and the rest at Fukushima. Mr. Shinagawa, Secretary of the Home Department, will also be sent to Kagoshima. There are three steam vessels in that port of which only one is serviceable, the two others being a little damaged. Guns and ammunition are not plentiful in Kagoshima.

MR. YAMAZAKI, of the *Akebono-shinbun* has been summoned to appear before the Tokio-Saibansho.

THE *Nichi Nichi Shinbun* repeats the rumor that in consequence of the Kagoshima disturbances, H. M. the Mikado will return to Tokio earlier than was at first intended. The same paper says that on the 9th several telegrams were received by the government from the south; but their purport is not known. One of them is however said to be to the effect that a detachment of the Kumamoto garrison troops has been despatched to the boundary of the Satsuma province.

THE *Choya Shinbun* publishes the following so-called official intelligence:—It is true that the Kagoshima shizoku have risen. They have endeavored to persuade Mr. Saigo the elder to take command of them; and his arguments having no effect in keeping them in order, he left his home; and it is not known where he has gone, Mr. Shimadzu is not a party to the rising.

ACCORDING to the *Hochi-shinbun* a famine still prevails in Corea, and is so serious that parents try to sell their children to the Japanese merchants there for from five to ten cents each.

ON the 14th at about 6.30 p.m. a fire at Nichome, I-idamachi, Tokio, was not extinguished till forty houses were burned to the ground.

TWO forts are to be built in the county of Miura, Soshu, one at the village of Kamoi, and the other at Towomidzu.

ON the 23rd ultimo, about twenty seven shizoku of Hakata, Chikuzen, were arrested and imprisoned for having conspired to rise against the Government, and many others of their associates deserted their homes.

THE telegraph wire between Tokio and Sendai has been repaired and communication is now restored.

ON the 31st ultimo, when H. M. the Mikado visited the Kioto-Saibancho opened in the 10th month of the 5th year of Meiji (1872) the following record of the civil and criminal cases was shown to him:—

year	law-suits	criminal case.
1872	270	670
1873	1,642	1,229
1874	5,288	1,068
1875	14,875	4,508
1876	17,753	7,163

An enormous increase of business, truly.

MR. KANDA-KONEI, late *Gikuwan* of the Genro-in, was appointed *Shoyu* of the Monbusho on the 6th inst.

The commanders of Provincial Garrisons have been ordered to repair to Tokio to receive instructions from the Minister at War.

On the morning of the 6th inst., says the *Nichi-Nichi-shinbun*, a rumor was current in the streets of Tokio, that the shizoku of the Kagoshima-ken rose against the government on the 21st ultimo; and a press message from the south to the government stated that the arsenal in the island of Sakurashima, in the harbour of Kagoshima, was attacked and taken by the insurgents. Some persons say that a telegram was received from Kumamoto. Various unfounded rumors are afloat. But the price of rice has become very high. On the 5th inst. it rose thirteen sen per one koku. On the 26th ultimo, all the Kencho officials under the Governor were dismissed owing to the late reformation in the Central Government. When the Vice Governor was ordered to reassume his duties he refused, and retired to private life with many others.

The *Nichi-Nichi-shinbun* says that a notification has been issued to every Saibansho, to the effect that, this year being the thirteenth since the death of Komei-Tenno, criminals throughout the empire will receive mitigation of their punishments.

During the night of the 11th ult. a number of robbers, armed with swords, forced their way, into the branch office of the mining department in the island of Sado. They killed Mr. Yoshiwara, superintendent of the office, and two officials, and took away 5,000 yen. The robbers are not known.

Out of one hundred and twenty-four criminals in the Yokohama Saibansho, about sixty are ill.

The Yokohama Saibansho will be removed to the old French Legation at Gochome, Honcho, which was bought for yen 800, (?) about the end of next month. The Saibansho at Chojamachi will be sold.

At the Osaka Fu-cho, a banquet was given to the foreign consuls and employés on the night of the 5th inst.

The *Saikai-shinbun* has the following, purporting to come from a man from Kagoshima:—Of about 20,000 students, followers of Mr. Saigo the elder, about 3,000 hold occasional assemblies at the principal school in Kagoshima; and the others at the branch schools in the villages. Though the places where they meet are called schools, they learn neither science nor art there, but merely discuss various subjects. In some few cases books are read. The "scholars" are called the Gakko-to but they are better known by the name of Seikan-to. Most of them are young; and none of them of more than fifteen years of age are allowed to live or travel beyond a distance of twenty five *ri* from their homes. No person belonging to another ken is allowed to keep company with them or to enter their school. The school itself, which was established by Mr. Shimadzu, is called the Shimadzu Gakko. It is much frequented by aged men, whose opinions undergo no change from those in vogue in the time of feudalism, and they constantly talk of the honor of dying for their lord. They dress their hair in the old style, and wear hakama and a short sword. They are called the Aikokuto. Kawabata, one of their number is seventy years of age, but still stout and strong.

At about 2.15 a.m. on the 15th a fire arose at the residence of Mr. Nishi, a kuwazoku at No. 2, Nichome, Yumicho, Hongo, and burned five houses. Another fire which happened

at about 5.20 a.m. on the same day in the town of Shiga, Aichi, was not extinguished till about twelve houses were burned down. At about 6.30 a.m. a fire also broke out at Shikunachi, Asakusa, which destroyed about one hundred and twenty houses.

Since the recent reformation in the government, the members of the "Jushusha" (Independant Society) in Tokushima, Kochi-ken, have been reinforced by about five hundred shizoku.

A coal-mine has been lately discovered near the hot springs of Arima-Kori, in the jurisdiction of Hiogo.

MR. FUWA, shizoku of the Ishikawa-ken, has petitioned for leave to establish a seventh National Bank in Osaka. If he receives a favorable answer he will open it with a capital of 300,000 yen on or about the 1st proximo.

THE "Kioritsusha" Association in Tottori, Shimane-ken, consists of about three thousand shizoku. Lately about one hundred of them deserted the Society and are known as the "Gunko-to" (obstinates?). They are reported to be much excited at the proceedings of the southern insurgents.

The leader of the agrarian rioters in the Ishikawa-ken was arrested on the 9th inst., and the farmers have dispersed quite peacefully.

USELESS EXPENDITURES.

The readers of our last issue have doubtless read the Emperor's advice to his Ministers, and we are sure they were struck with feelings of admiration of his deep solicitude for the interests of the people. On his starting for Kioto he called his Ministers into his presence and said: "As I notified on the 4th instant, I trust you will use every possible means to secure the peace and tranquillity of my people, as that is my wish."

It is very difficult to make everything satisfactory to the people and keep them from uneasiness. In order to ensure quiet and comfort among them there is nothing better than the reduction of the land tax, and this our honored Emperor has already decided upon for the promotion of the people's tranquillity and peace. Now we learn that there is the great difference of 4,920,000 yen between the revenues of the government in the 8th and 9th years of Meiji as shown in the tables prepared by the Minister of Finance and laid before the government. This considerable reduction is caused by the taxation being decreased by one-eighth. It is well known that the government has brought about the reduction of the annual expenditures, by dismissing a number of officials and amalgamating or altering the departments and various sections in order to carry out the Emperor's wishes. The people, even those who are living in remote parts of the country, should be elated. Still they manifest anxiety concerning another matter which it is rumored is about to take place. In the present age, when people argue upon the subject of the comfort of the people, there is one point that should be particularly remembered, and this we propose to illustrate. We should cease building useless buildings. The building mania pervades the country, and from year to year much money is wasted in the erection of stone houses and two or three storied edifices. If we count upon our fingers the number of buildings which have been constructed by the government, the total will be considerable. In examining this subject we see that half the revenues of the government are spent in the construction of these elegant structures. But if they did not have such fine offices, and only constructed less costly ones, the business of the country could be carried on just as well, while a great saving would be effected. If there were no houses it would then be necessary to build some. As an instance of what we mean. If any new branch of a public department were opened, offices would necessarily have to be provided for it. Whenever any new department is talked of, the people say:—"Well, now there will have to be another government office put up," and about seven or eight times out of ten this proves to be correct; and before many months have past the location is fixed upon: stone, wood, and bricks are gathered together: men are

at work day and night; and suddenly a great building rises to view, lighted with glass windows, furnished with Brussels carpets, high tables, grand chairs, stoves, and chandeliers. The gate keepers' and servants' houses are better than the average of the dwellings of the people, and everything else must be completed in proportionate grandeur. If we enquire into the business that is performed in these palaces we shall find it is just the same as was carried on in the former offices. And a still more extraordinary fact, in connection with this subject, is that there is no established system, no fixed regulations for the conduct of business. And, again, if Department A has a great establishment, then Department B must have an equally grand one or there will be dissatisfaction; and, if Department C and D have to occupy the old daimio's yasakis of former times, they will be dissatisfied, and there will be a continual contention on their part to get good buildings for themselves. Within the enclosure of the old Yedo castle, all the edifices except the Emperor's palace and the Daijo Kuan have been built in the modern luxurious style. Confucius says in his *Rongo* that "the superior class of people desire good things, but the lower class go to greater extremes in this respect." Thus, if the government build such palaces what will be the result of their example among the common people? If the local offices in the different parts of the country are pulled down and rebuilt, the officers insist that they must not be re-erected on the old plan, but each must have his separate division. They bestow a great deal of anxiety on the style of the furniture, which must be foreign. When the local schools are to be constructed so much is not thought of what is to be taught as of the style of the buildings and the furniture to be put in them; and the promoters of these objects, when talking about raising money say that their neighbors have such and such buildings and they must not fare worse. So the government gives them great praise for the energy they have manifested. In short this grand display of building amounts to just this,—squandering of the wealth of the people, which is truly a matter to be deplored. Therefore it is better for the government to stop this extravagance at once, and set a better example to the subjects. In doing so they would remove expensive habits and the community would be able to save money once more. These are not our own words only, but the common talk. This waste of money should be stopped. Hearing of His Imperial Majesty's kind commands we have been encouraged to write, after this manner, in regard to the welfare of the people, and to represent their opinions.—*Nichi Nichi Shinbun*, Jan. 31st.—*Tokio Times* Translation.

SUGGESTIONS FOR THE ESTABLISHMENT OF FOREIGN LANGUAGE SCHOOLS IN THE PROVINCES.

There is an incalculable number of students in the capital, who have left their native provinces in order to avail themselves of the opportunities which the metropolis affords for education; and most of them manifest great anxiety to study foreign languages and literature. Indeed their anxiety to acquire knowledge is like that of a person who is very thirsty and cannot get water, or who is very hungry and cannot find anything to satisfy his appetite, while their ambition is most praiseworthy. It is a singular fact that they should choose the capital rather than the provinces to carry out their wishes, for the latter offer advantages which are not to be obtained in the former, and so we cannot commend their choice. It may, however, be urged by some that the facilities for learning to be found in the provinces are not equal to those in the capital; and that even where there are schools established for the teaching of foreign literature in remote parts of the country, the students feel that they could learn more during six months in Tokio than they could in one year in those places. But this is a mistake. At the same time it seems that the manner in which these schools are conducted is unsatisfactory, and this accounts for the students leaving them and coming to Tokio.

The number of people living in such a large city as the capital, especially as they are crowded closely together, causes the atmosphere to become impure, which is very injurious to the health of the students, who fall sick before they have half accomplished their education and are compelled to return home to the provinces to recruit their health. Then their ambition, their studies, and their pecuniary allowances come to an end together and vanish like bubbles in water. Not only their bodies but their minds become diseased. Moreover

some of them acquire such habits of extravagance in the capital, that the allowances, made by their parents for the advancement of their education, are often spent in riotous living. Extravagance and dissipation prevent the students from studying as they ought; and their parents, seeing that they do not improve, frequently have to insist on their return home. Others study hard for a time, but they soon get tired of work and seek for any paltry situation that may be found. If they hear of any such they will go to any length of servility and fawning to procure it. Ultimately those young men become absolutely useless to society. If we look at the country we find there none of the destructive elements which prevail in Tokio. Fresh air and pleasant views invigorate the body and keep it in health; and it is impossible to acquire the dissipated habits which characterise the people of Tokio; and students at home, moreover, are watched over by their parents, who with the aid of their friends entirely control them. The result of all this is that they conduct themselves with greater propriety than they would do if sent to the capital to be educated. There is also a very great difference in the comparative cost of education in the country and in Tokio, the expense of learning and living being twice as great in the latter place as it is in the provinces. Indeed there are many persons who would go to Tokio to complete their education were it not for the expense attached to it. And if good schools were established in the country it would be unnecessary for them to think of doing so. The necessity of establishing such schools is very apparent. People say they are unable to found them at the present time, on account of the scarcity of money, but this is an unsatisfactory reason. If any person will only devote his attention to this subject diligently, he will be serving the interest of his country in a most praiseworthy manner. And if foreign language schools cannot be established, it is much better for the students to attend the seminaries they have than to come to Tokio in search of education.—*Katsiodan, Feb. 1.—Tokio Times Translation.*

(Extract from the *Mainichi-shinbun*.)

No idle rumors in relation to the matter of Kagoshima will be allowed to be published in our papers. So we will turn our pen to a merely local discussion and say that Mr. Saigo Takamori has not as yet declared himself whether he be a rebel or a loyalist. We and all our contributors are sure that he is the most loyal and meritorious man throughout Japan. He supports our national honor and founded the government. No one else has given us so good an example of loyalty. But now we cannot know whether he is about to declare himself a rebel or loyalist in the present troublesome times in Kagoshima. Mr. Saigo never can desire to disseminate a terrible poison through the country by exciting young men to rise against the government; but on the contrary would be most anxious to do good service. Would it be part of the conduct of a loyal man to pay no attention to the present state of affairs in Satsuma? We shall be much disappointed in the confidence we have reposed in him if he gives no sign. But if he does not care to do so we must say that his dwelling in Kagoshima produces a bad effect. He must remember that when he resigned his post and retired to Kagoshima, a large number of officials and troops in Tokio followed him, having resigned their places. In Kagoshima he established schools for them, where they have formed a large society named the Gakko-to. These men have risen against the government authorities. But Mr. Saigo shows no desire to put them down. We and our Countrymen much fear that he will no longer retain his honorable reputation as a loyalist.

(From the *Hochi-shinbun*.)

NOTIFICATION No. 1.

It is hereby noticed that the Female Normal School in Tokio, the Normal and English language School in Aichi, the Normal and English language Schools in Hiroshima, the Eng-

lish language School in Nagasaki, the Normal and English language Schools in Niigata, and the English language School in Miyagi, were closed on the 14th instant.

TANAKA-FUJIMARO,

Monbu-Daiyu.

18th Feb. 1877.

Another notification has been issued by the *Monbu-Daiyu* to the effect that 50,000 yen will be distributed among the Normal Schools of Japan, annually, to support their expenses.

The Finance Department in Tokio is strictly guarded by troops.

On the 20th inst., a fire in Osaka destroyed about twenty houses.

HIOGO.

We take from the *Hiogo News* the following addresses, presented to H. M. Mikado on the occasion of the state opening of the Kioto, Osaka, and Kobe railway:—

From the Governor of Osaka.

I venture to suggest, with respect, bending down, that Osaka has communication with the sea on its South-West side, and that it has many natural advantages. Therefore Osaka has been estimated from ancient times as the most important city in the Middle Provinces. The prosperous and brilliant reign has now come. The works of the people are great. The Railway has been built by the North and East, by which goods can be carried to distant places, and this town has now conveniences of carriage to the North, South, East and West. I, your subject, live in it, and receive the eternal blessing and get the Sacred perpetual grace. I cannot express a ten-thousandth part of my thanks for the Sacred grace I now receive, but I will show my thanks by doing my utmost to promote the national welfare. Having chosen the auspicious day, the ceremony is now held by the Sacred Majesty in person. I, on behalf of all the people of this Fu, offer their congratulations, and hope that the smoke of the engine will ascend with the smoke of furnaces and the sound of the train will be accompanied by the sound of joyful voices. I express the above with great respect.

WATANABE NOBORU.

Chihi of Osaka Fu.

5th of 2nd month, 20th year of Meiji.

From Sir Harry S. Parkes as Doyen of the Foreign Representatives.

On the part of the Corps Diplomatique, I beg to express to Your Majesty the sincere pleasure which it affords us to participate in the interesting ceremony of the opening of a new line of railway to the ancient capital of Your Majesty's realm.

The invitation to be present on this occasion with which Your Majesty has graciously honored us, furnishes an unmistakable sign of the friendship which marks Your Majesty's relations with the Sovereigns and Presidents whom we have the honor to represent. But this is not the only meaning which that invitation conveys. It shows that Your Majesty is sensible that a great industrial enterprise, which so nearly affects the welfare of many of Your Majesty's subjects, affects also the interests of those foreigners who are resident in this land, and who will always gladly join with Your Majesty's people in promoting those works of industry and peace which contribute to the brotherhood of nations and to their mutual profit and prosperity.

In the case of the useful work now inaugurated by Your Majesty, both native and foreign interests are so closely allied together that it is evident that our wishes for its success can scarcely be second to those which are entertained by Your Majesty, Your Government and Your people. Great difficulties attend the earlier construction of railway works in any country, and the way in which these difficulties have been overcome in the present instance reflects high credit upon all concerned. But we may be permitted to add that the event of to-day marks an epoch in the history of Japan, for it furnishes a durable record of those new relations which she has established with the world,—it is a proof both of her desire to advance as other nations have advanced and also of the

intelligence and practical capacity of her people, and it shows how closely Your Majesty identifies yourself with the interests of your people and how willingly Your Majesty and Your Government labour to promote the material progress of Your nation.

These, may it please Your Majesty, are the sentiments which animate my colleagues and myself in uniting with Your loyal subjects in offering our congratulations on this occasion. Most cordially do we join with Your Majesty in wishing success to the Hiogo, Osaka and Kioto Railway, and to all the efforts that may be made by Your Majesty's Government to provide Your country with such means of communication and transport, whether by Rail or Road, as may be best suited to its advancing requirements.

From the Governor of Hiogo.

On the 5th of the 2nd month, in the 10th year of Meiji, Your Majesty the Tenno holds in person the ceremony of opening the Railway between Saikio and Kobe. I, Morioka Masazumi, Juroku, Gon-Bei of Hiogo Ken, desire to state for the respectful consideration that the national welfare is promoted by the convenience of transport. Some time ago the Railway was made between Tokio and Yokohama, and now the Railway between this port, Saikio and Osaka has been completed, and to-day the celebration is held. This is the best way the Sacred ruler leads the nation to wealth and benefits his people. The old proverb says there is nothing without a beginning, and few things which have no ending. I pray that His Sacred Majesty's deeds may be renowned for ever, that these lines may long continue, to the East and the West, and that the Japanese people will obtain the Sacred blessing. Masazumi and the people of this Ken desire this. Therefore they offer their congratulations.

At the dinner given to the foreign members of the Railway Staff and the guests, Mr. Boyle, in response to the toast of "the Engineers," spoke as follows:—

Your Excellency, Mr. Inouye Masaru, and Gentlemen.—I feel deeply and appreciate highly the terms in which my friend Mr. Cargill has proposed the Foreign Engineering Staff and also the manner in which you have been pleased to receive the toast. The office which I have had the honour to hold since 1872 is now drawing to a close, and but few of the Foreign Staff of Engineers who have laboured among you for years past will now remain in this country. Those of us who are leaving will feel proud if we may think that we have earned your regard and approbation, while those who remain still in the service of your Government will, I doubt not, continue their endeavours to merit your esteem.

The nearly 50 miles of Railway that we have passed over to-day, comprising as they do several short tunnels, many river bridges, flood openings and other works of some magnitude, are such as cannot but prove interesting and instructive to all who may have the opportunity of studying them. The 27 miles from Osaka to Kioto especially, executed in little more than two years, show that after a certain period of experience by the officers and operatives of this country, public works of durability and importance can be carried on here as well as in any other country in the world, and I cannot, therefore, but share the general regret that there should seem at present so little prospect of future extension of the Railway system and of the continued employment of a trained staff which has acquired that knowledge and aptitude for such works which experience alone can give. We must hope, however, that the cloud which seems to rest just now on a further development of the iron ways will ere long clear away, and that a bright and not far distant day may herald in a future of progress and success.

I cannot allow this opportunity to pass without expressing my best and hearty acknowledgments for the cordial support I have ever received from the officers of His Majesty's service. I beg to thank the Chief Commissioner particularly, for all his kindness, consideration and unfailing support. Among the members of my own Staff (without whose valuable co-operation I should have but little now to speak of) I wish specially to mention Mr. England, who, during a long period of valuable service, has borne the burden and heat of the day; Mr. Holtham, whose duties latterly have been connected with the Kioto end of the line, where the Katsura river bridge and the terminal station, now complete, speak for themselves; Mr. Sherinton; and also Mr. Smith, your energetic Locomotive Superintendent, evidences of whose skill you have

examples of in connexion with the highly finished State Carriage and powerful Locomotive which has enabled so large a number of distinguished visitors to be carried this day with the Imperial train.

On behalf of the Staff which I have the honor to represent I desire again to thank you for the compliment now paid to us, and further to add that I shall always remember with pleasure the years spent among you, and ever desire the material prosperity of this country and the increasing happiness of its Sovereign and of its people.

REPORT of an EXTRAORDINARY MEETING of the HIOGO MUNICIPAL COUNCIL held at the Municipal Hall, on Wednesday, February 14th, 1877.

Present: Messrs. N. J. NEWWITTER (Chairman), A. A. ANNESLEY, H. MACKENZIE, A. H. GROOM, C. RASCH, R. G. WALSH, J. C. KLEIN and G. DUPLAQUET.

The Secretary having read the circular calling the Meeting, the Chairman handed in the following letters, which were also read:—

Hiogo, February 14th, 1877.

NATHAN J. NEWWITTER, Esq.

President Hiogo Municipal Council

DEAR SIR,—Although among those Members who have asked you to convene this Meeting, I beg to apologise for not attending the same, as I have another appointment which I cannot well give up. Moreover, I have nothing to state with regard to the purpose of the Meeting but that I fully accept your apology offered to me in our interview of Saturday last, for your having tendered an Address to the Mikado in the name of the Municipal Council without having previously submitted the same to the Members.

I would ask you kindly to explain this to the Meeting.

I am, dear Sir, yours faithfully,

J. H. FOCKE.

Member of H. M. C.

Hiogo, February 14th, 1877.

NATHAN J. NEWWITTER, Esq.

President Hiogo Municipal Council.

DEAR SIR,—Not approving the tone of manner of calling the Extraordinary Meeting of the Council, I have objected to join in the call.

Having heard your explanation of the matter, I am fully satisfied, and beg you will excuse my attendance, as other matters claim my attention.

Yours faithfully,

C. R. SIMPSON,

Act. Consul for Portugal.

The Chairman said:—"Gentlemen,—This Meeting was duly called at the request of a number of representatives of this Body for the purpose of receiving an explanation in reference to the Address presented by me to His Majesty the Emperor of Japan on the 5th instant. Some weeks ago this Body made an appropriation to illuminate this Hall and the Concession, in anticipation of the arrival of His Majesty the Emperor of Japan. You know that the illuminations took place before and after the Emperor's arrival, in the manner suggested by your Committee. No further effort or suggestion that I am aware of was made by any member or members, either to call a Meeting of this Council or to take any further action worthy the Emperor's visit. The Address referred to was pre-

pared by me late on Saturday, the 3rd instant, and presented by the Governor of Hiogo, through the proper channel, to His Majesty on the 5th. In preparing the Address I had no intention of overstepping my responsibilities to this Council or doing more than what I considered an honorable and a pleasing duty, neither had I any intention of shewing in the slightest degree any disrespect or want of courtesy to the Municipal Council or any member thereof. In writing the Address I but uttered the sentiments of congratulation and welcome which I believed to be the feeling entertained by the Municipal Council and the community towards His Imperial Majesty the Emperor of Japan."

Mr. Rasch said Mr. Newwitter had presented an Address to H.I.M. the Mikado in the name of the Municipal Council and the Foreign Community, and he (Mr. Rasch) thought it his duty, as representing the land-owners and foreign community, to ask for an explanation as to by whose authority he (Mr. Newwitter) had presented it. If Mr. Newwitter considered it his duty to express the feelings of the community and the Municipal Council to His Majesty the Emperor, he felt sorry to say that Mr. Newwitter had misunderstood his position as Chairman of the Council. The Council represented an International community, and if an address to His Majesty the Mikado had been called for, it could not have been done without asking the opinion of the public generally. In the name of those not satisfied with the explanation, to avoid such things occurring again and to avoid a vote of want of confidence, he begged to propose:—

That Mr. Newwitter be requested to resign the Chair.

This was seconded by Mr. Duplaquet.

The Chairman asked if he was to understand that the words of congratulation and welcome expressed by him in the Address delivered to the Emperor of Japan were not the feelings entertained by the members of the Municipality in behalf of the foreign community?

Mr. Rasch said as far as he was personally concerned the wording did not meet with his approval. If Mr. Newwitter, in his position of Chairman, had taken the proper way, the expressions would have represented the feelings of the community. He considered the Address quite out of order. He had not heard that the Japanese Authorities expected such an Address; besides that, the foreign community was well enough represented by the Ministers of Treaty Powers, who offered their congratulations.

The Chairman said that as late as Saturday last he had information from the Governor that an Address on behalf of the foreign community would be acceptable, and so late as that he had no opportunity, nor did the rules of the Council give him an opportunity to convene a Meeting.

Mr. Annesley said he endorsed the remarks made by Mr. Rasch, and he was in a position to make a statement quite opposite to that made by Mr. Newwitter. He was authorised by the Governor of Hiogo to state that Mr. Newwitter had requested him to make arrangements for presenting the Address; that he (the Governor) refused to do so, as a programme had been made by the Japanese Ministers at Tokio, and therefore no Address could be presented here. Mr. Newwitter a second time wished it presented, and was again told it could not be done. On the 5th Mr. Newwitter, whilst waiting in a passage at the Railway Station after the opening

ceremony had taken place, again requested that the Governor should present the Address to the Mikado. The Governor refused, but took the roll and passed it to a Japanese Secretary. What finally became of it the Governor could not say. With regard to Mr. Newwitter's statement that he could not call a Meeting, the members would have asked for one to be held if they thought it necessary. On the 19th January a Meeting was held for voting money for an illumination, and not a word was said by Mr. Newwitter that he had any intention of presenting an Address to the Mikado. On the 22nd another Meeting was held; Mr. Newwitter was present, but again not a word was said by him of any intention of presenting an Address, although he was then Chairman. If Mr. Newwitter had mentioned the matter it could have been discussed. What does Mr. Newwitter do? He goes, without consulting his colleagues or the Municipal Council or the foreign community, and presents an address they have not concurred in or have any knowledge of, and makes use of the Municipal Council to endorse the words. Every member was doubtless willing to shew the deepest respect to His Majesty the Emperor, but it was not necessary to present an Address on this occasion. The proceedings had been agreed upon at Yedo and the British Minister had presented an Address. As to Mr. Newwitter's explanation of his having had no time to call a Meeting, this could not be accepted.

Mr. Newwitter said he placed his word on the same footing as that of Mr. Annesley or the Governor of Hiogo. The Governor had sent him word through his interpreter that an Address of Welcome would be presented through him. One was handed in by him (the speaker) on Saturday night and translated. That translation and the original he had handed to the Governor. He wished it to be understood that he had used no effort to present it or force it on the Governor. As far as regarded the assertion of Mr. Annesley in regard to having time to call a Meeting, he would ask him to look at the Rules and Regulations. There was not a single word giving him the right to call a Meeting without a request from two or more members.

Mr. Annesley said the statement he had made was simply quoting the words of the Governor, and it should be accepted as coming from the Governor, not from himself.

Mr. Newwitter desired his report to be placed on the same base or footing as Mr. Annesley's or the Governor's.

Mr. Klein said Mr. Newwitter had expressed himself strongly on the words he had heard quoted from the Governor. This was a Meeting called by many members. If time had been short for calling a Meeting, it was only a question of a few hours.

Mr. Newwitter hoped the explanations he had given were sufficiently explicit to be understood.

Mr. Mackenzie said he felt it due to himself as having signed the letter to the President asking for this Meeting, to say a few words. Although the President had informed them that there was no Rule obliging him to call a Meeting of the Council to discuss the Address presented by him to the Mikado, there certainly is no Rule which authorised him to present the Address in the name of the Council without having called a Meeting and obtained its consent. If ever an occasion occurred—he could recall no other of such importance—where it was urgently necessary to hold an Extraordinary Meeting, this certainly was the time. And

now that individual opinion on the Address had been challenged, he could only say that had such a Meeting been called the tone of the Address was certainly not exactly the sort of thing he should have voted for.

Might he ask that, to prevent any further unpleasant discussion, the Resolution before the Meeting be now put to the vote.

Mr. Newwitter said he would not take one word back. If it was considered out of place, he had made due apology for it. He had no personal ambition in the matter. At the same time, as this was a Meeting called for hearing his explanation, and a Resolution had been brought forward, he would say that he should be prepared to reply to that Resolution at the next Regular Meeting on Saturday next.

Mr. Rasch said the resolution had been moved by him and seconded by Mr. Duplaquet. Was it not accepted?

Mr. Newwitter said when the Meeting was called nothing was said about a Resolution. He should decline to put it, and he trusted the gentlemen present would consider him as standing upon his rights as Chairman. The Meeting had been called for his explanation and not for passing a Resolution.

Mr. Rasch said he was not satisfied and would propose his Resolution at the next Meeting. To cut the unpleasant discussion short, he would propose an adjournment.

The Meeting then adjourned.

After the closing of the Meeting reported above, a number of residents present formed a Meeting and elected Mr. Byrne as Chairman.

Mr. Byrne said they had met to express their indignation at the manner in which Mr. Newwitter had represented them to the Mikado, and the best way of doing that would be to write a letter to the Municipal Council, expressing their dissatisfaction.

Mr. Kempermann then proposed and Mr. De San seconded the Resolution contained in the letter below.

The Chairman put the Resolution to the Meeting and declared it carried by a nearly unanimous vote. As they had honored him by making him Chairman he would take charge of the proposition and with their assistance he would send a letter as proposed.

The Meeting then adjourned.

The following letter has been forwarded to the Elected Members of the Council.—

Hiogo, February 14th, 1877.

To Messrs. RASCH, MACKENZIE and GROOM,
Elected Members of the Municipal Council.

GENTLEMEN.—We, the undersigned, Land-Benters and Residents of Kobe, having been present at the Meeting of the Council held this afternoon, beg to express our unanimous dissatisfaction at the manner in which Mr. Newwitter, as Chairman, conducted the proceedings. The want of courtesy in his manner and speech towards his colleagues show him to be inexperienced and unaccustomed to preside at such Meetings. We therefore beg that you will follow up and support the proposition of Messrs. Rasch and Duplaquet to the effect that Mr. Newwitter give up the Chairmanship of the Council.

We also beg to lay before you the result of a Meeting which we held this afternoon in the Municipal Hall, and request you to lay this letter and the Resolution passed before the Council at the next General Meeting.

RESOLUTION.

Proposed by Mr. Kempermann, and seconded by Mr. De San. "That this meeting expresses its greatest indignation at Mr. Newwitter's presumption in addressing the Mikado as representing us, he, Mr. Newwitter, having no authority whatever to address His Majesty on our behalf."

Carried unanimously by the undersigned, as per signatures attached:—

Edward Byrne, Chairman; Edw. de San, T. Kempermann, O. A. Kleinwort, Ferd. Plato, R. Hughes, H. Broeschen, H. Baehr, J. J. Cann, A. C. Sim, John J. Quin, A. Oestmann, Walter M. Smith, A. Stein, H. Hagge, J. L. Ruyter, A. M. Townsend, O. Voigt, A. Grote, Chs. Braess, J. H. Gubbins, C. Iversen, A. De Ath, Carl G. F. Birt, Walter F. Page.

From the Osaka Nippo:—

At 9.30 on the 9th the Empress and Empress Dowager left the palace and visited the female schools, the working ground of the Industrial Office and the Chemical Office. On the 13th they were to see the fishing in the Uji river. On the 14th the Empress Dowager will visit the temples of Kamo and Yoshida, the Buddhist temple of Chionin and the mineral spring in Maruyama.

Nitta Yoshisada, formerly Shoshii, who acted on behalf of Godaigo Tenno along with Kusunoki Masashige, has been now given the posthumous title of Shosammi.

The Kocho and school teachers have established another free assembly next door to the Funnkwan, and the first meeting was held on the night of the 8th. Firstly, Takiyama explained the ways of curing the license of freedom; secondly, Yano expressed himself strongly against the spirit which is always wanting assistance from others; lastly, Katayama maintained that the different degrees of happiness accord with the different degrees of knowledge obtained.

A man who visited the island of Shodo has written that he went there dressed in foreign fashion, and that when he met a crowd of children on the road they ran away in fear and peeped at him over the fences or through holes in doors. Persons over middle age shrunk up their bodies when they met him, as if they were going through thick thorns. The island is off Sanuki, is only a few ri distant, and has good communication by vessel; yet the state of the people remains thus.

We learn from native sources that H. M. the Mikado, accompanied by the Empress and suite, will embark at Kobe on board the *Meiji-maru*, at 10 a. m. on the 21st instant, and leave for the capital.—*Nippon Standard*.

On Tuesday (13) H. I. M. the Mikado slept at Sakai and arrived in Osaka on Wednesday morning, in a carriage, accompanied by H. I. H. Arisugawa-no-miya. His Majesty dined at the Castle, inspected the Arsenal, and reviewed a portion of the garrison, after which he visited the Ei-go-gakko and examined the pupils. On Wednesday night he slept at the Mint, and on Thursday inspected it, sleeping there again, and returning to Kyoto yesterday.

Recent news from Satsuma having called H.E. Sanjo from Kyoto to Osaka he was in attendance on the Mikado during this visit, as was also H.E. Kido.—*Hiogo News*.

We find it almost impossible to get any news from the South. The *Takao-maru*, which went down to Kagoshima the other day, has returned, and, it is said, had to slip her cable to get away. The *Tokio-maru*, which arrived from Yokohama yesterday, brought over 500 troops, whose ultimate destination we yet know not. The *Genkai-maru*, which had been detained here, has been ordered back to Yokohama, as too large for the purpose she was wanted for, and among many rumors current is one that the *Taihei-maru* has been detained by the rebels. In Kobe the feeling of uneasiness seems to increase, for during Wednesday and Thursday nights the Concession was patrolled by Japanese soldiers. It seems on enquiry that an order had come down from Osaka that Hiogo and Kobe should be regularly patrolled. We believe that the Governor has been asked in future to let the Consuls know when such measures are instituted, in order to prevent any misunderstanding. Some persons seemed inclined to look upon this patrol round the Concession as somewhat of an intrusion, so it may be just as well to mention that the Japanese have not only a right, but that it is their actual duty to protect foreigners and their property.

There was another rumor last night that some 450 policemen who had been sent to Kagoshima were seized and disarmed immediately on landing.—*Idem*.

We learn that Mr. R. Vickers Boyle's term of office as Engineer-in-Chief to the Imperial Government Railway has expired, and Mr. Boyle will soon take his leave; and we understand that Mr. T. R. Sherrington, District Engineer in Osaka, will come down to Kobe and take the office as Resident Engineer; the office of Engineer-in-Chief has ceased to exist.—*Nippon Standard*.

Law Reports.

In H.B.M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON Esq., Acting
Law-Secretary.

Monday, February 12th, 1877.

Continued from last Mail Summary of 10th inst

Peter Gerhard Hansen was charged on the information of Mr. Hazelwood, Acting Accountant of the Yokohama branch of the Hongkong and Shanghai Banking Corporation, with feloniously forging a certain bank-note of the value of five hundred dollars, and attempting to utter the same with the intention of defrauding the said Hongkong and Shanghai Bank; and also with unlawfully and wickedly combining and conspiring with certain other persons, to forge and utter the said bank-note with intent to cheat and defraud the said Banking Corporation. At the request of the Counsel for the prosecutor the prisoner was also charged with forging, uttering, aiding and abetting, with intent to defraud, a bank-note of the Hongkong and Shanghai Banking Corporation for \$500; and with conspiring with other persons to forge and utter such bank-note and thereby to defraud.

This case, which was adjourned on Friday last to give the prisoner the opportunity of procuring legal assistance, was resumed this morning.

The Court asked if any one appeared for the prisoner.

The prisoner replied that he had engaged the assistance of Mr. Ness; but that gentleman would not appear to-day.

My. Dickins intimated that, owing to it being mail day, Mr. Hazelwood was not able to be present, and he therefore proposed putting Mr. Walter in the witness box.

Mr. John Walter, sworn:—I am Acting Manager of the Hongkong and Shanghai Bank. I remember the sixth of February. I also remember seeing our comprador on the evening of that day. He brought a message to me.

The witness was about to state the purport of the message, but the Court would not permit it. He then continued:

I went to the Bank in consequence of that message and there found a Chinaman who requested me to go to an Exchange Shop, where I found the man who, it was said, had tendered the note. I told Williams that the note was a forgery. He did not deny attempting to utter it. That is the note (produced). I should judge the forgery was done by photography. From the exchange shop I went to the Police station in company with Mr. Hazelwood and some Japanese police, and there laid a charge against Williams. On the way to the Station Williams said that he wished to see the American Consul, as he thought immediate action should be taken in order to prevent the man who gave him the cheque from leaving Yokohama. After making the charge I went to the American Consul who sent for Williams. At first the prisoner refused to give the name of the person who had given him the note, but on being pressed said it was Bennett. We afterwards went to Mr. Bavier and then a warrant was issued for the arrest of Bennett. We found him at No. 93. The premises were searched by Mr. Elmer and Mr. Loxton, in my presence. There was nothing found calculated to criminate Bennett. I left Bennett in charge of Mr. Loxton and returned home. No further search of 93 was made in my presence. No other premises were searched in my presence. Besides the fictitious note put in I have seen two others at the Swedish Consul's. There was no difference at all between any of the notes—they have the same numbers. It is not a custom of the bank to issue notes bearing the same number. To the best of my belief those notes are the same as I saw. The paper is far thicker than the paper used for the bank's notes. That is a genuine note. (A bank note produced.)

The prisoner had no questions to ask.

The witness, at the request of Mr. Dickins, pointed out Williams and Bennett who were in Court. The witness also asked permission to alter a part of his statement as taken by His Honour, to the effect that the two notes instead of being shown him by Mr. Van Oordt, had been sent to him by that gentleman through Mr. Cook.

Abusa Iisaburo, a Japanese, deposed:—I reside in Yokohama and am a banto in No. 62. I remember the 6th day of this month. About 5 o'clock on the evening the money changer Okomoto brought a note for \$500 on the Bank No. 62. The money changer said he wanted to know if it was a good note. I was not certain about it and gave it back to the money changer Seikiya who took it away with him. Akomoto and Seikiya were together at the time I returned the note. The note I saw was like those notes in appearance (notes shown). I did

not see any foreigner in connection with those notes.

The prisoner said he had no questions to ask the witness; but would like to know if he the witness was sworn.

His Honour replied that he had been cautioned.

Seikiyakitchi, a Japanese money changer residing in Tokio, deposed: I remember the evening of the sixth of February. I remember a foreigner coming to my house about 5 o'clock that evening. He was accompanied by a man from a watchmaker's shop, who asked if a certain note was good or not. The watchmaker's messenger said that the man had tendered the note in payment of a watch, but they refused to change it until they knew that it was genuine. The amount of the note was \$500. The foreigner asked that the note might be changed. He did not say that it was a \$500 note but I knew it was by looking at it. It was taken to Okomoto's. Okomoto was not sure as to whether the note was good or bad, and it was returned to the man. I did not go to Okomoto's house myself; the note was taken there. I remained in my master's shop and so did the foreigner while the note was being sent to the money changer. I saw the note given back to the foreigner, who put it into his vest pocket and went away. The note that was presented for change was very like those (notes shown the witness). The man who presented the note is now in court. (The witness pointed to George Hansen.)

The prisoner said he wished His Honour to note that there were two men of the same name.

The Court adjourned till two o'clock.

On the Court resuming, the U. S. Consul, General T. B. Van Buren, took a seat to the Bench with Mr. Wilkinson.

Yun Pow Kin, a Chinaman, cautioned, deposed. I live at 136 and also keep the house 190 and am a money changer. I recollect the evening of the sixth instant. [Considerable difficulty was experienced in eliciting evidence from this witness as he neither understood Japanese nor English sufficiently to be comprehended, so he was ordered to stand down.]

Mow Ah Fai, cautioned, deposed: I am comprador of the Hongkong and Shanghai Bank. On the evening of sixth instant I sent a message to Mr. Walter asking him to come to the Bank. He came about 7 o'clock. The Exchange man Pow Kin brought a note to me, and I saw it was a bad one, so I sent to Mr. Walter and we went together to the Exchange Shop. That is the note given to me by the Exchange Shop-keeper; it is not a genuine one.

F. Beato sworn:—I reside at No. 57. I have had much experience in photography and for many years have carried on the business of a photographer. Those notes have been photographed: the numbers and backs were photographed first and coloured afterwards. They were produced in the ordinary way.

Antoine Bennett, sworn:—I am a seaman by profession and was on the *Tennessee* last. I left that vessel in July or August last year. I was not on the *Nevada* afterwards. I had about \$50 in my pocket when I left the *Tennessee*. I have been dealing in skins, doing some account work, collecting postage stamps, and working at photography since leaving the vessel. First I worked with a Chinaman named Hung Chang, not specially as a photographer but doing outside business.

The prisoner asked if the witness was a prisoner of the crown. The Court informed him that the witness was not under British authority.

Witness continued:—I just made enough to live on at my various trades. Since I left the *Tennessee* I have near been the owner of \$500. I never carried on photography on my own account. My father taught me photography. I know the prisoner. I became acquainted with him about November last year, at Peter Claussen's. The prisoner never asked me to do anything in photography. He promised to help me to get a photographic business at the commencement of our acquaintance. I don't know why he made that promise. He was going to help me by the aid of money. He gave me some money, with which I bought instruments, chemicals and paper in Tokio. The name of the place where I procured them I forget, but it is the first house from the railway station in the Main Street on the left hand side after crossing the bridge. I believe George Hansen went with me. The prisoner paid the money. I brought this apparatus to Hansen's (prisoner's) residence in Yokohama, No. 107. I have taken the negative of a \$500 note. I got the note to copy from the prisoner. I do not recollect the date, but believe it was about the end of December. I took about a dozen negatives. The first I took were not good enough to print from. The prisoner assisted me in taking those photographs. The last negatives were not very good, but the best I could produce. They were used to obtain copies from. Those notes are copies from the negatives which I took. I printed those notes with the assistance of the prisoner. We made, perhaps, twenty prints. They were all taken from the same bank note. The paper was bought by me in a Japanese shop. Those notes are two different pieces of paper. I pasted them together with the help of the prisoner. I coloured the notes with water colours which I purchased in Tokio. I had no assistance in colouring them. I submitted the printed notes to the prisoner to see if they would do. He was not satisfied with them and said they were too dark. I don't know what became of the eight notes which were not burnt, the last I knew of them was that they were given to George Hansen to change. George Hansen asked me for these notes. I do not know that the prisoner was aware of the notes being given to George Hansen. He knew before that they were to be given to him. Hansen got them about 14 days after they were printed. During that period they were lying in a drawer in a house belonging to the prisoner. The photographic operations were carried on in the prisoner's house. We used to fasten the doors mostly. The note was given by Hansen to me to photograph to see if I was a photographer. I did not try to photograph anything else. I did not know at the time that there were any other reasons. I knew afterwards that they were photographed for exchange. I knew that when the notes were ready, as the prisoner then told me. He asked me to exchange the notes, but I did not do so as I did not want to have anything to do with them, knowing that they were no good. I did not know that the notes were intended for use until after they were printed. When the prisoner asked me to exchange them I told him I would not have anything to do with them. I never took any steps to prevent their circulation, though I protested against their being circulated. The prisoner said that if I would not change them he would give

me up to the Bank. I told him then that I would try to get them changed, but as a matter of fact I did not. The \$500 note from which the negatives were taken was a good note. No one else helped me to make the notes except the prisoner. He assisted me in various ways. He was present when I took the negatives and when I prepared them and took the prints. I was paid some money now and then by the prisoner for taking the photographs. I did not live at No. 107 with him. I concealed two of the notes between the top of the table and the frame in No. 93. George Hansen occupied this room. George Hansen never told me what he did with the notes I gave him and the prisoner never informed me. The prisoner did not offer any special reward for making these notes. When I was asked to exchange them I was to give the money up to the prisoner: they were to be exchanged for his benefit. I do not know where the photographic instruments are now. The last I saw of them was when George Hansen went to Tokio to exchange five notes on Monday last. I know that he went to change them because he told me himself. Hansen took the lens to Tokio to sell it. The rest are remaining in No. 93. They were taken from 107 to 93 some days previous. Hansen did not sell the lens. He brought it back but I don't know what he did with it. I know a man named Williams. He attempted to change a note. He got the note from me. That is the note. Williams asked me for the note. He was aware of my making the photographic copies. I told him about it. The prisoner was aware that Williams knew about the notes and objected to it, as he did not want Williams to know that he (Prisoner) had anything to do with them. I knew Williams on the *Tennessee* as we were both on that vessel together. We were discharged on the same day. It was not eight notes but five notes which I gave to George Hansen. I do not know what became of those notes. When he returned from Tokio I was nearly asleep and at 12 o'clock that night was arrested. I do not know whether any of the notes were torn up.

The prisoner had no questions to ask.

Anton Williams, sworn.—I was formerly in the *Tennessee* as a seaman. I was discharged on the same day as Bennett. I was for 14 days in Peter Claussen's, after which I served as quartermaster on the *Nevada* from which I was discharged on the 25th of last month. I recollect taking an apparent \$500 Bank note to a Chinese exchange shop on the 6th instant. Bennett gave me that note. I was to give the money to Bennett. He had to pay me some money, and when I asked him for it he gave me that note to go and get changed, saying he would pay me. I did not know that the note was not good, or that it had been photographed. Bennett told me he had to make some money, but I thought he meant to earn it with his hands. I know very little about the prisoner. The first time I saw him was about two months before Christmas. I know a man named George Hansen. He was a shipmate on the *Tennessee* and was discharged some three months after me. Bennett told me that George Hansen intended to go to Tokio, but did not tell me for what purpose. I did not know at the time that he went to change notes. I knew the next morning when Bennett told me. I have had conversations with the prisoner but he never talked about the notes. The note was given to me about half past four o'clock in the afternoon. I

cannot tell whether that was the note or not, but it was one like that for \$500. Bennett said he had no time to go himself to change the note. I do not know the number of the Exchange shop I took the note to, but it is close to Peter Claussen's.

George Hansen, sworn.—I am a Swede. I was formerly in the *Tennessee*, and left about two months and a half ago. Since then I have been doing nothing, when I was on board the *Tennessee* I was acquainted with Bennett and Williams. When I came on shore I lived for a few days at 82, but afterwards removed to 133. I knew that Bennett was a photographer, though I have never seen him operate. He took likenesses in Yokohama at a Chinese house. I know the prisoner and became acquainted with him when I first came on shore. I knew for the first time where the prisoner lived on the night Bennett was arrested. I remember having a conversation with Williams at Claussen's. He talked of making a thousand dollars in a few days. He was a little drunk. This was after Christmas, about a fortnight after he left the *Nevada*. Mr. Claussen was present at the time and must have heard the conversation. I don't know if Bennett was there or not but the prisoner was. Williams did not say how he was going to make this. I went to Tokio with Bennett, but did not know what he purchased there. I went to an ironmonger's to try and get employment, I came down with him to Yokohama. I don't know what he did with the parcel he brought from Yedo. He did not tell me what that parcel contained. I was on friendly terms with Bennett. He did not mention to me that he intended to set up a photograph shop of his own. Bennett never gave me any notes. I got one note from the prisoner but I believe it was good. I went to Tokio last Monday to change a \$500 note for the prisoner. I took the note to Yedo because the prisoner said I would get more for it. I went all around to find a place to change the note, but could find none, so went to the watchmaker's to see if he could tell me. I went to Yedo in the 12 o'clock train. I only went to one place to try and change the note. I did not ask to buy a watch when I went to the watchmaker. The watchmaker showed me a gold watch and said he wanted ninety dollars for it, but I did not offer to purchase it. The watch-maker said he had not sufficient money to change the note. I gave him the note to look at, and then he returned it to me, and I came back to Yokohama. When I came back I returned the note to the prisoner, who asked me if I could not change it and I told him that the money changer had no money. I am quite sure that Antoine Bennett did not give me the five notes. On the night that Williams was arrested, Bennett sent me to Claussen's to see if Williams was there, as he, Bennett, wanted to see him. Williams was not there, so I returned to Bennett who was lying on the bed. I saw Bennett tear up some papers in the afternoon, some of which were painted and some were white. He went out and took the torn pieces of paper with him. I did not tell Williams that I had taken five notes to Yedo. I changed one \$500 note for the prisoner on Saturday week in Yokohama in Japanese town. They gave me \$507.50 in paper money in exchange. I do not know the name of the shop but I could find it. It is the second street down from the Main Street. The prisoner did not tell me to go to that particular shop. I simply went to change the

note because the prisoner asked me to. He gave me one dollar for my trouble. I have said on one occasion that Bennett never gave me a note to change in Tokio, which I still stick to.

The Court then adjourned till ten o'clock to-morrow.

Tuesday, February 13th 1877.

(Continued from Monday.)

The case of Peter Gerhard Hansen charged with counterfeiting Hongkong and Shanghai Bank-notes was resumed this morning, when Mr. Dickins called

Sekimoto Tatsui, a Japanese woman, who deposed:—I live at No. 107. I know a man named Bennett who was in the habit of coming to No. 107 and shutting himself up with my master (the prisoner) but I never was admitted into that room. I never even ventured to peep into the room because my master's prohibitions were so strict. I have not the least idea what they used to do in that room, neither have I observed any particular smell emanating from it. I went to live at No. 107 about the 20th of November. Bennett very frequently came to the house to see my master.

Walter Loxton, sergeant of police, sworn, deposed:—I remember the sixth of this month. On the evening of that day I arrested Anton Bennett, having previously taken charge of Williams. About 8 o'clock Mr. Walter and Mr. Hazelwood, of the Hongkong and Shanghai Bank, came to the station accompanied by Williams. Mr. Walter showed me a bank-note on the Hongkong and Shanghai Bank for \$500, and told me that it was a counterfeit, and that Williams had tried to pass it in a Chinese Exchange Shop. I asked Williams where he got it, and he said he would not tell any one except his Consul. Mr. Walter asked me to take charge of Williams while he went to see General van Buren. Shortly after Mr. Elmer came to the station and asked for Williams, and took him away to the American Consulate. Williams was questioned by General van Buren as to where he had got the note. After that we went to Mr. Bavier's and procured a warrant for the arrest of Bennett and then went to Bennett's house, No. 93. I showed Bennett the warrant, read the charge to him, and then arrested him. He got out of bed and dressed himself. We then searched the premises, but did not find anything of importance, so I took him to the station and locked him up. I did not arrest the prisoner: he was arrested by Constable Toms. I searched the prisoner's house in company with Mr. Elmer. I found several articles and 403 yen. There was an old cash-box containing some paints, a thick piece of glass, a small piece of paper which was like a bank note but had been soaked in oil and daubed with green paint. In a portmanteau were some clothes and letters. The clothes looked as if they had been used in doing dirty work. There were also three bottles, one of which contained a colourless solution like water. In the grate there was a lot of burnt paper. I did not find any photographic instruments. There was a very strong smell which reminded me of a photographer's studio. The clothes were stained and very dirty, and they belonged to the prisoner, who recognised them in the gaol. (Clothes, portmanteau and cash-box were exhibited.)

Mr. Dickins asked that the case might be adjourned until Saturday or Monday, as, in

consequence of the Chinese new year, he was unable to produce his witnesses.

His Honour asked the prisoner if he had anything to say to this, to which he replied that he should be glad to have the affair settled as soon as possible, but if it could not be settled before the time mentioned by Mr. Dickins he supposed he would have to wait.

The case was then adjourned till Tuesday the 20th.

NIEL MORRISON was charged by Sergeant Loxton with being drunk and incapable.

The prisoner pleaded guilty and was fined \$1 and costs; with the alternative of imprisonment for forty-eight hours.

Before **H. S. WILKINSON, Esq., Acting Law Secretary,**

Messrs. A. JAFFRAY, W. CURTIS, JOHN RICKETT,

F. BEATO and CHAS. WIRGHAM, Jurors.

Wednesday, Feb. 14th, 1877.

NOMI DAISUKE vs. J. W. SUTHERLAND.

The plaintiff in 1875, claimed the sum of 262 yen 67 sen 8 rin 2 mo, balance of an account for fodder supplied to the defendant; and judgment was given against him by H. B. M.'s Acting Consul on the 6th of December of that year. Recently he applied for a new trial by jury.

The plaintiff did not appear personally, but had a friend to represent him.

Before commencing the case, His Honour informed the gentlemen of the jury that it would save time if the points in dispute were definitely settled before the merits of the case were gone into.

From the questions put to the plaintiff and defendant, it appeared that the former supplied the latter with fodder from January 1874 till April 1875, which, by his account, came to 2,069 yen, and for which he had only received 1,806 yen and some cents, leaving a balance due of 262 yen 67 sen 8 rin 2 mo. The defendant denied being indebted in the amount claimed by the plaintiff, but on the contrary alleged that he had paid \$59.98 in advance for fodder which had never been supplied. He stated that the total sum paid to the plaintiff was not 1,806 yen but 1,802 yen 12 sen.

One of the points in dispute was the allowance of tare which the defendant claimed and which the plaintiff would not admit.

Considerable difficulty was experienced by the Court in ascertaining exactly what points were in dispute, and His Honour ultimately decided that it would be to the interests of all parties, including the jury, to adjourn the case until ten o'clock to-morrow morning, in order to allow the litigants the opportunity in the meantime of becoming acquainted with the points on which they differed. Both parties were then directed to come to the Court to-morrow fully prepared; and the plaintiff was also notified that if he was not present punctually at the hour mentioned the case would be dismissed.

Thursday, Feb. 15th, 1877.

Rehearing with a Jury. The claim of the plaintiff is for 262 yen 67 sen 8 rin 2 mo, balance of account for goods sold. After the case was tried in December 1875, it was referred for account to Mr. J. C. Hall. The referee filed his report on the 20th December 1875.

This case commenced yesterday and was remanded until this morning when it was continued.

His Honour asked the defendant if he admitted that 548 bags of barley were delivered up to July 1874.

The defendant was not prepared to say the exact number of bags which were delivered to that date.

His Honour then enquired whether the following quantities of barley had been delivered at the times mentioned: July 31, 548 bags; August, 119; Sept., Oct., and Nov. 272; Dec. to April 10, 300.

The defendant admitted the total as correct but was not certain as to the dates, though he finally agreed to admit them as correct.

The question of the weight of the various quantities of the barley was next gone into. The plaintiff claimed having delivered 73,552 catties, but the defendant was not prepared to say whether that was the correct amount, as he had not gone into calculations by the catty, but he admitted receiving 991½ piculs.

The next point at issue was as to whether the barley had been purchased by gross or net weight: the plaintiff claimed the former and the defendant the latter.

The price of barley at the various times it had been purchased was then gone into, and the plaintiff's statements in regard to it were admitted on some items and disputed on others by the defendant.

The plaintiff claimed that rice, beans, and hay had been delivered to the value of 31 yen, but the defendant only admitted 29.69 yen. It was ultimately agreed that the price should be thirty dollars.

The plaintiff claimed 12.36 coolie and carriage hire, which the defendant disputed.

In the matter of tare the defendant stated that he had weighed six bags and found they averaged over nine pounds per bag but was willing to take the usual tare of eight pounds per bag. The plaintiff refused to admit more than seven pounds per bag, which he stated was the weight of the bags in which he sent the fodder.

The only points which the parties could not agree upon were the weight of the barley, its price and tare.

His Honour addressed the gentlemen of the Jury and asked them whether they preferred the case to proceed or whether it should be adjourned to allow the defendant the opportunity of going through his books and producing item by item. The Jury elected to go on with the case.

The actual difference in the weight of the barley, not including the tare, was 65 piculs. This point having been definitely settled the case was adjourned till two o'clock.

On the Court resuming at 2 o'clock His Honour asked the defendant if he had looked over his books, to which he replied that he had, and found the amount he had already acknowledged correct.

The plaintiff then read a statement of the various amounts of barley supplied to defendant up to the end of July, with their respective weights.

His Honour asked the defendant how many piculs he alleged were allowed to the plaintiff at the last hearing, to which he replied about fifteen.

His Honour said that the actual difference then was 45 piculs; and he informed the gentlemen of the Jury that he would take advantage of the power vested in him and

forcibly refer the point at issue to Mr. Hall and take it entirely out of their hands.

The following evidence was then taken.

Fumi, wife of the plaintiff, deposed:—Sutherland came to me and asked if I would undertake to buy fodder for him. This was in January 1874. I declined, but he came a ain, and sympathising with the distress he was in in not being able to procure fodder I agreed to do what I could. I made enquiries and reported to him that I could get barley for \$1.25 per bag of five *to*. This was agreed to. With regard to bran I intimated that it could be procured for \$1.50 per picul net. This also was agreed to. Settlements were regularly made for two months, after which so much used to be paid on account every month. About the fourth month, Smith told me that I had already received too much money on account. This was about the 11th of April, 1875. After that I declared I would not supply any fodder to Sutherland's horses even to prevent them from starving. The barley was supplied according to the market rates. At the time of the original contract there was no mention of tare, but it was simply stated that it was to be five bus per bag of five *to*. From first to last no tare was agreed upon; and no change was made with regard to the weight as it was all gross weight throughout the transaction. I was very much annoyed in settling up accounts to find that the defendant deducted tare when nothing had been said in regard to it. The bran was sold on a net basis, at six bus for two bags weighing 16 *monme*. When bran became cheaper I sold it cheaper to Sutherland.

To defendant:—In April the March account and up to the 10th of April was due, I don't recollect the amount, but it was over 200 *rios*. I was in the habit of coming sometimes and comparing my book with Smith's. There was no written contract because I looked upon you (Mr. Sutherland) in the light of a brother. It is not customary at Kanagawa to allow tare.

To the Jury:—I made the agreement myself. At first defendant sent for the fodder, but afterwards it was sometimes sent by boat. I claim altogether 252 *rios*.

Funibashi Senzaburo deposed:—At the time of the contract for the fodder I was the employer of the plaintiff. An application was made by Sutherland for fodder, he stating that he had 60 or 70 horses and nothing to give them to eat. The plaintiff was ill, so the request was declined. He came a second time accompanied by Iyo, and said that he trusted to our assistance as he could get help from no other quarter. At his earnest solicitation and as we sympathized with Sutherland in his distress, we agreed to make enquiries and see if fodder was procurable. I made enquiries and ascertained the cheapest rate at which the best barley could be obtained for was \$1.25 per bag of five *masu* gross weight. In the presence of Fumi and plaintiff, I interpreted this to Sutherland who assented, and the business was commenced and left entirely to the banto as the plaintiff knew nothing about the business. At the same time arrangements were made about the bran, which was to be sold at \$1.50 per picul. The accounts for the second and third month were settled satisfactorily on the contract basis. In April 1874, some of Sutherland's people made a demand for a deduction of tare. In the same month the defendant's clerk was changed, and it was on the advent of another clerk that the demand was made for tare. At this time Sutherland owed 88 yen. The conversation took place

about the tare in March. There were four persons present on that occasion. In consequence of my firmly refusing to allow the deduction of tare, it was agreed that the fodder should still be supplied on the original basis. On the 22nd of March I received 20 *rios*; on the 20th of March 17 *yen*; and on the 30th 45 *yen*; making a total of 82 *rios*. On the 6th of April I received 50 *yen*. The dispute about tare was settled on the understanding that no tare was to be allowed; and on this understanding the business was carried on till June.

The Court adjourned until Thursday the 22nd at 10 a.m.

**In H. B. M. Court at Yedo,
in Chambers.**

Secretary.**

Friday, February 16th, 1877.

(Continued from January 29th.)

TOKIO FU vs. BLOCKLEY & BLOCKLEY.

In the matter of a petition and counter-claim between.

KUSUMOTO MASATAKA, } Plaintiff
GONCHIIJI, TOKIO FU, }

And

ARTHUR BLOCKLEY and } Defendants.
BRIDGET BLOCKLEY, his wife }

ARTHUR BLOCKLEY and } Plaintiffs
BRIDGET BLOCKLEY, his wife }

And

KUSUMOTO MASATAKA, } Defendant.
GON CHIIJI, TOKIO-FU. }

On the 29th ult. The Tokio-Fu moved through their counsel, Mr. Lowder, that the petition and counter-claim of the defendants in this case be dismissed.

The learned gentleman argued his case, and the court adjourned the hearing of the motion until this morning, when Mr. Kirkwood, the defendant's counsel, replied. He contended that Mr. Lowder's argument in reference to the misjoinder of the parties instead of being in the plaintiff's favor was decidedly in favour of the defendants. With regard to the jurisdiction of the court, he argued that any foreigner suing in a foreign court submits himself to its jurisdiction, and quoted authorities to substantiate the views he held on this point. As to the contract before the court, it was entirely between the Japanese government and the Blockleys; and the only admission the learned gentleman could make was that the defendants were the assignees of the original lessee. He contended that in the whole of the pleadings the right of the original plaintiff to make any claim at all is denied, it being averred that the contract was not made with him but with other parties; and that the counter-claim only set up a denial of the right to sue, but if there was such a right then a counter-claim was perfectly legitimate.

His Honour suggested that a compromise might be effected by inserting on the pleadings that Kusumoto Masataka, Gon-Chiiji, Tokio-Fu, should appear on behalf of the government.

This arrangement did not appear to suit the views of the counsel for the defence, who claimed that the Mikado's name should appear on the pleadings; and he was not prepared to forego his right to interrogate the Mikado personally.

Mr. Lowder signified his willingness to agree to Masataka appearing on behalf of

the government, providing it was agreed there should be no demurrer; but on no conditions would he agree to the insertion of the Mikado's name on the pleadings, and the Court was with him in respect to this.

Relating to Mr. Lowder's contention that the action was an "Act of State," Mr. Kirkwood argued that it could not be an "Act of State" if it embodied the contract with the defendants.

At this stage proceedings were adjourned till 2 p.m.

On the Court resuming this afternoon Mr. Lowder replied to his learned friend's arguments of this morning.

Mr. Kirkwood informed His Honour that both he and Mr. Lowder had agreed to as many facts as it was possible, but they could not agree to all.

Mr. Lowder mentioned that the chief point on which he and his learned friend differed, was the insertion of the Mikado's name in the pleadings, which it was utterly impossible for him to agree to.

Mr. Kirkwood said there were also facts in connection with the case which would necessarily have to be proved, such as the deterioration in the value of property in Ts'kidji; and maintained that, if he was entitled to damages at all, the sum he claimed was most reasonable. Another fact was also denied which would have to be proved, and that was that foreigners carried on trade outside of the foreign settlement with the knowledge and consent of the Government.

Mr. Lowder replied that he had been asked to admit that foreigners hired houses outside the settlement. This he was not prepared to do. But he stated his willingness to present to his learned friend a list of all foreigners who resided both outside and inside the settlement from 1856. He admitted that the Japanese Government was conscious of a number of persons residing outside the settlement, but that it was not cognisant of what business they carried on.

The question of the insertion of the Mikado's name in the pleadings was once more brought before the notice of the Court, but it was ultimately abandoned by Mr. Kirkwood on some concession being made by the other side; and it was agreed that the plaintiff in the case should be acknowledged as the representative of the Government.

On the suggestion of His Honour it was resolved to adjourn the proceedings for a week, in order to allow Counsel the opportunity of settling the issues, or of the demurrer being withdrawn.

Adjourned till Friday, 23rd instant.

In H. B. M's. Court at Kanagawa.

**Before H. S. WILKINSON, Esq., Acting Law
Secretary.**

Monday, February 19th, 1877.

JOSEPH RODERICK vs. R. A FRANCIS.

Judgment summons.

The defendant admitted that the Court had ordered him to pay \$9.50 on the first of this month, and that he had only paid \$3. He was unable to pay the remainder, notwithstanding that he had received his wages, amounting to \$40, on the 24th of January. He accounted for the disposal of his wages by saying that he had paid \$10 for his brothers and sisters schooling, remitted two \$5 notes to Singapore, paid Mr. Brooke \$5 on account of \$20 which he owed him, \$5 for rent,

\$2 for washing, \$3 for servants wages, and \$12 for sundries, besides \$3 he had paid into Court, which, he said, made in all \$40. There were 19 days wages due to him now by his employer, Mr. Brooke. The defendant stated that he would not pay even if the judgment summons were postponed, so His Honour ordered him to be imprisoned for thirty days and to pay \$1 a day cost of imprisonment and \$4 costs of court.

In the course of the day the amount due on the judgment was paid into Court, and the debtor was released.

Tuesday, February, 20th, 1877.

(Continued from Tuesday, 13th inst.)

Peter Gerhard Hansen was brought up this morning on the remanded charge of forging and uttering a \$500 Bank note on the Hongkong and Shanghai Bank. The following additional evidence was taken.

George Elmer, sworn, deposed:—I am the U. S. Deputy Marshal. I was with the Sergeant at the time the prisoner was arrested. I got a letter from the U. S. Consul to Mr. Bavie asking for his arrest for complicity in the forgery. We received a warrant and went to Peter Claussen's and found him there. I told him we had come to arrest him, and the Sergeant produced the warrant. He said he was a Dane by birth but was a naturalised British Subject. I told him he would have to come to the British Consulate. He protested against being arrested on a warrant from the Danish Court. He said nothing about the charge. Sergeant Loxton and myself searched the prisoner's house and found a leather bag containing a pair of slippers and 403 *rios*. This bag was found in a little room that was locked. We also found some dirty clothes from which emanated a strong smell such as would be found in a photographer's shop. We also found a thick pane of glass about a quarter of an inch thick and a foot long. On the glass was a sticky substance. We also found some paper. That is the paper. It was found with this letter (produced). We observed in the grate a quantity of burnt paper, also some paper in a tin box on the floor too filthy to be handled. We found two or three pieces of paint but did not bring them away.

The prisoner asked to see the letter which had been put in. His Honor granted the request.

Yang Pow King, cautioned, deposed: I am a money-changer residing at No. 136. On the evening of the sixth of this month I remember Ching Mow coming to my shop with a bank note. When I first saw it the marks did not seem so plain as on other notes and when I turned it over I saw it was very different. The note was for \$500 and on the Hongkong and Shanghai Bank. I could not say whether the note was genuine or not. That is the note. The man was asked how he would take change and he said in Japanese money. I was preparing to give him the money, but, not being sure whether the note was good or not, I ran round to the compradore of the Hongkong and Shanghai Bank to ask if it was good. The compradore took the note to the foreign clerk. The clerk sent word to detain me; and the shroff was sending for a policeman when I told him he need not send for a policeman as the note was given me by a foreigner. A foreigner from the Hongkong and Shanghai Bank went round to my place with me, and the man who had given the note was found at No. 190. I told my friend to detain that for-

signer. Before I took the note to the Hongkong and Shanghai Bank I took the note into Japanese town, but could not pass it. After telling my friend to keep the man I went back to the Hongkong and Shanghai Bank, and told them to make haste, and then a compradore and clerk of the bank went with me to No. 190. I sent my friend for three Japanese policemen, and when I got back to No. 190 I found the policemen there. The foreigner who came with the note was taken away by the clerk of the Hongkong and Shanghai Bank and I accompanied them. (The witness on being asked to identify the man who brought the note pointed out Williams.)

So much difficulty was experienced in eliciting from this witness an intelligible account of the affair, and he contradicted his assertions so much, that His Honour remarked that he thought it was necessary to strike out his evidence altogether, as there was evidently a defect somewhere, either in the interpretation or in the evidence of the witness himself.

Mr. Dickins asked that His Honour would allow the evidence to stand as it was with all its defects, to which he remarked that he would endeavour to correct the statements and make something intelligible out of it, and after the witness had been subjected to a severe cross-examination his testimony was allowed to stand.

Wong Chung Chow, cautioned, deposed through an interpreter:—I am money changer at No. 190. On the sixth of this month a foreigner came to my house to change a note for \$500 on the Hongkong and Shanghai Bank. Not knowing whether the note was good or not I went to 136 with it. That note is very like the note brought to me by the foreigner. The Manager of the Hongkong and Shanghai Bank, and another foreigner came to my house, and afterwards Pow Ching and the compradore came also. I detained the foreigner at No. 190 and afterwards sent for three Japanese policemen. The Manager of the Bank took the foreigner away. (The witness identified the foreigner who brought note.) The foreigner brought the note for change. I did not change it as I was not quite sure as to whether it was good or not. I had not the note with me when I went to No. 136. I asked Pow Ching to come to my house.

Anton Williams, recalled:—My father's name is Hackenson. Bennett told me that he had several of those notes. He told me that, several days before he gave me the note to change. I did not know the note was forged, but suspected it was. He told me how the paper was made from which the notes were manufactured. He told me not to tell any of the men in Claussen's house. He did not tell me who assisted him, but merely said that he made them himself. He told me that he got the money to buy the machinery with from Hansen, (the prisoner.) The witness stated that the Chinese witness who said that the note had been left in his (Williams') hands when he went to his friend's had not spoken correctly. The Chinaman took the note away and witness did not know but what the note he gave him may have been good, and he may have had a bad note and changed it for the good note without witness knowing it.

George Hansen, recalled:—Antoine Bennett gave me five notes of \$500 each to change. They were similar to those notes. This was on the 5th of February. He did not tell me where he got the notes from but said

they belonged to Gerhard Hansen. I looked at one of the notes and saw that it was for \$500. I was in Gerhard Hansen's house on the night Bennett was arrested. I went there to inform him that Bennett and Williams were arrested. I went to tell him, because I knew that Bennett and he were good friends. The note I changed in Yokohama was not one of the five notes that Bennett gave me. It was a note that Gerhard Hansen gave me; and the amount was for \$500, but I do not recollect the number. It was between two and three o'clock in the afternoon that I took the note to get changed at a shop in Yedo. I was not surprised at the amount of money given to me by Bennett as he said it was not his own.

To the Prisoner: Bennett's girl sent me up to your place about eleven o'clock in the evening. It was on a Monday when I tried to change the note in Yedo. That was not the note you gave me, that was the note Bennett gave me.

The Court adjourned till half-past two o'clock.

On the Court resuming, Mr. Dickins recalled

Antoine Bennett, who said:—Harkon-Kirchoff is my real name. That is my handwriting: and that also is some of the paper from which the notes were made. George Hansen asked me for the notes, which he took to Tokio for the purpose of cashing.

Mr. Dickins said that he had no more witnesses to call, and he would ask that the prisoner be committed on all the charges.

His Honour then read the charges and depositions to the prisoner, who said that he reserved his defence.

The prisoner was then committed for trial.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Wednesday, February 21st, 1877.

KONDO HIKOYEMON AND HAKII SEIJIRO vs.
J. E. CARTER.

The plaintiffs claimed the sum of 360 yen, being an amount of money lent to the defendant.

Kondo Hikoyemon deposed:—I live in Tokio. On the 28th of October last year, Kawamura Hideyero and Kobayashi Hidetaro came to my place accompanied by another man named Murata Seizo. They came and offered to lend money on freehold security. They said that Carter would furnish the money, the loan could be made in the names of Kawamura and Kobayashi. These men represented themselves as being the banto and interpreter of the defendant. At this time also another Japanese was in want of money. On learning that funds were available witness conducted the three parties to Hakii's house, and it was there agreed that Hakii and witness together should accept a loan of \$4,000. The agreement on that day was a verbal one, but after repeated visits to Yokohama the contract was reduced to writing (the written contract in Japanese and English was here produced.) That contract was signed by Carter on the 2nd of November. The arrangement made on the 28th was that the plaintiffs were to bring to Yokohama 360 yen to show to Carter in order that he (Carter) might be satisfied they were the proper parties to lend such

a large sum of money to, as \$4,000. On coming to Yokohama on the 30th of October we went to the defendants house, No. 12. We did not go direct, but went first to Odawaraya, in Ishikawa-machi. While we were there Kobayashi came to meet us, saying that he had been sent by Carter to tell them to come to his house. Accordingly we all went to Carter's house, where we saw the defendant, who said that he was prepared to lend them \$4,000 on their property as he had previously proposed. Carter at the same time also proposed that to satisfy himself they should show \$360 yen. He also said that \$300 in ready money would do and he would take a promissory note for the remaining 60 yen. To this we agreed and offered to bring the money in a couple of days, and on the second of November we brought the amount required to Yokohama and handed it over to Carter in his own house, five persons altogether being present and witnessing the transaction. Carter received the 300 yen and promissory note for 60 yen and put the money in a bag. Carter gave two documents, one being the contract and the other a receipt for the money. At the same time I received a receipt for the deposited money from Kobayashi, which contained a promise to return the 300 yen on our proceeding to Tokio, when the 4,000 yen was also to be handed over as a loan. The document also contained a notice that Kobayashi would deduct 20 yen for expenses in the event of anything occurring to break off the transaction. I received the documents written in English from Carter's own hands. It was Kobayashi who drew up the document in Japanese. As I did not understand English, I asked Kobayashi to translate the document into Japanese. On Carter receiving the money and myself the documents, it was agreed that the whole transaction should be completed that day. Carter said, "You go to the station. I will go straight to Bank, No. 62, and draw \$4,000, join you at the station, and we will go to Tokio together." This was about four o'clock in the afternoon. Three of us accordingly proceeded to the station, and Carter and Kobayashi took leave of us and said they were going to the Bank for the money and would join us at the station. We waited at the station some time—about half an hour—when Carter and Kobayashi came in jinrikishas, saying they had been to the Bank and found it shut, and they could not get the money that day, and suggested that we should go home and they would bring the money to-morrow. I said "very well, give us the 'show' money and we will go, but we cannot go without it." Carter said that as we were in a public place, we had better return to his house and talk over the matter. We accordingly went. Carter urged us to permit him to keep the money for one night and he would certainly complete his contract the following morning. We asked for security, and Carter drew up a document, which was translated by Kobayashi into Japanese. It ran to the effect that the defendant agreed to conclude the contract the following day, but in the event of the Japanese holiday interfering with it, he would conclude the business the next day or forfeit the 300 yen. Carter also agreed to bring the 4,000 to Tokio the following day at eight o'clock; and also return the 360 yen, which promises were put in writing. Kobayashi affixed his seal to all the documents in the presence of Carter.

Adjourned till two p.m.

On the Court resuming the witness examined in the forenoon continued his evidence as follows:—

I returned to Tokio, having been assured that Carter would bring the money the following morning. On the 3rd of November, I waited till ten o'clock, and, as nothing was heard about the transaction, I came to Yokohama. On going to Carter's house, the monban informed me that his master was out, having gone to the races. There being no alternative I went to a hotel and remained there till evening, and then went again, and Carter was out then also. I returned to my hotel. After that Hakii came from Tokio. Seijiro also went to Carter's house and he was out then also. We did not see Carter that day at all, but about 8 o'clock the following morning we again went to Carter's house. The monban said that his master was out. About noon we went again and took with us an interpreter named Shimidzu and we met Carter just going home. He stopped, and we asked him to restore the money which we had deposited with him, seeing that he had broken his contract. Carter replied that he could not have any dealings with us. Kobayashi and Murata were present. He could neither restore the money he had received in trust from us, neither could he take the money to Tokio. To this we objected, and told Carter that Kobayashi was his own interpreter, and that he was transacting this business for him and his seal was affixed to the documents. Carter replied that Kobayashi was not his interpreter, and went inside and shut the door in our face; so we had our errand for nothing. By this time it was evening. On that evening we requested the interpreter Shimidzu to write down the circumstances of the case and leave the document at the police station. From first to last there was no breach of contract on our part, but on Carter's part there were repeated breaches of contract, so we deemed it necessary to report the matter at once. The following day we lodged a complaint against the defendant. Carter has not returned either the money or the promissory note.

To the defendant:—You did not offer to fulfil the contract through Mr. Shimidzu. On the contrary you broke off the conversation and went in and shut the door. To fulfil your contract you should have taken the money to Tokio.

To the Court:—Of Kobayashi I know nothing, except that he is interpreter at No. 12. Kawamura represented himself to me as Carter's banto. Noticing that he was not present when the money was handed over, I asked where he was and was told that he was the shop banto and could not be present. I have not seen anything of the two men. About six or seven *cho* from my house lives a friend, a druggist, to whom I mentioned that I would like to borrow money, and I believe this friend mentioned the fact to Murata and that was how Kobayashi knew I wanted money. The 28th of October was the first time that I had seen any one of the three men. I have not met Murata and Kobayashi since the day I handed over the money at Carter's house. I have only met Kawamura once and that was in Tokio. Murata came frequently and urged the completion of the business, saying that Carter wanted it done promptly. Kobayashi came twice and said that his master was waiting to complete the business: that was between the 28th of October and the 2nd of November. I have heard that Murata lived in Tokio: also that he had been a boy in some place in Yokohama. I did not employ any interpreter until the 4th, as I had no suspi-

cion that I was going to be taken in. Ikada, the druggist, said that he did not know anything about Murata. I gave the names of the three Japanese implicated on the side of the defendant to the police at No. 3 Station. The matter was investigated by the police Bureau, and I was there informed that Carter was the principal and was bound to refund the money. The police were to try and find out the whereabouts of the three Japanese.

Hakii Seijiro, deposed:—I reside in Tokio. I endorse the statements made by the last witness. The first I knew of this business was on the 28th of October last. On that day the previous witness came to my house accompanied by Kobayashi and another Japanese. I have frequently mentioned that I would like the loan of some money. As Kondo and I were on very good terms I agreed to join him and borrow some money on the land, and left the carrying out of the details to Kondo. I never met Murata, Kobayashi, or Kawamura before the 28th of October. I only saw Kawamura once; neither have I seen Murata or Kobayashi since the 2nd of November. I have made enquiries as to where these men live, but hitherto without success.

J. E. Carter, sworn:—I reside at No. 12 Bluff. The first I knew of this business was when four men came to my house towards the end of October and asked me to lend them \$4,000 on this land, they stating it was worth \$8,000 or \$10,000. They came two or three times before any contract was entered upon. When the contract was made they agreed to my stipulations. After the contract was made, two of the men came back with a different interpreter and I told them through him that I was ready to keep my contract, and desired them to bring their papers with them to my house. The interpreter's name was Shimidzu. From that moment I have never seen either of them and knew nothing more about them until I received information from Mr. Robertson that they had lodged a complaint. I have not seen anything of the other men since. I knew nothing of the parties before. I went to the railway station intending to go to Tokio to see some other people when the interpreter said that it was too late and we would go next day. That was the same day the contract was made. They went back to my house. The same night I gave them those papers. That is the contract and receipt. I am ready to lend the plaintiffs \$4,000 according to those documents. The translations were made in my presence but were not read over to me. The agreement written in English embodies fairly what passed between me and the Japanese.

His Honour said it would be advisable to get the three men and he would adjourn the case until Wednesday the 28th in order to procure if possible the three Japanese through whom the negotiations were carried on.

Before H. S. WILKINSON, Esq., Acting Law Secretary,
Messrs. W. CURTIS, A. JAFFRAY, C. WIRGMAN,
J. RICKETT and F. BEATO, Jurors.

Thursday, February 22nd, 1877.

(Continued from the 14th instant.)

NOMI DAISUKI v. J. W. SUTHERLAND.

Rehearing with a jury. Claim of yen 262.67, 8 *rin*, 2 *mon*, balance of account for goods sold. This case was heard on the 6th December, 1875, and was referred for ac-

counts to Mr. J. C. Hall. The referee filed his report on the 20th December, 1875. The plaintiff applied for a rehearing, which was granted.

His Honour read over to the Jury a translation of the delivery notes of plaintiff.

Funabashi Zensaburo was recalled and asked to continue his evidence.

Mr. Sutherland interrupted, asking his Honour to see if plaintiff had brought his original books. Those the plaintiff was now referring to appeared quite clean.

Witness said he had extracted all the items in connection with this affair, and had brought that compilation.

Mr. Sutherland said it was very important that the original books should be shown. The book from which witness read at last hearing had no weights; he had written out all the weights expecting to be examined upon them to-day.

His Honour said witness could not give evidence from the new book, but must confine himself to the original.

Funabashi Zensaburo continued:—From first to last whilst I was concerned in the business, the rate at which barley was sold was at \$1.25 per bag of 15 *monme*: bran at 3 *bus* per bag of 9 *monme*. Subsequent to the interview at which Mr. Wills interpreted defendants made no trouble whatever whilst I had anything to do with it. I left plaintiffs' employment about the middle of June. As I stated before, with the exception of this slight misunderstanding, defendants never made any complaints. During the month of February I myself kept five horses for Sutherland, and, after they were in good condition, returned them to him. I never was paid a cent for it. I merely mention this as a proof of Sutherland's way of doing business. In this book are the weights of the goods as I brought them in. I have not the weights of the stuff as delivered to Sutherland and other parties at first; from the end of April the weights are down to each entry. The perfect understanding between the parties kept me from writing down the weights so exactly. I do not remember why I put down the weight of the 12 bags delivered May 24th, and not before that. It is a long time ago. I made up the weight-notes I brought to-day from calculations of the number of bags and from the money. At first I was only acting out of compassion for Sutherland; and the business at first was of a friendly character and not carried on in the manner usual between merchant and customer. The quantities were put down in the house book when they were sent. They were entered in this other book, which was sent to Sutherland's and compared with the book kept by him. The stuff was weighed in the presence of both parties and the quantities taken delivery of were noted by Sutherland's servant, and by me when I saw there was none in dispute. When I did not go I sent some one else who followed my example. Sometimes I made the entries in the house book, sometimes my master, Daisuki, did. To the best of my knowledge the entries I made were correct. I think the book was always correct. Had any mistake been discovered it would have been corrected. I made the entries in Sutherland's pass-book. At first there was no such pass-book. There is a recapitulation of the transactions monthly. After the goods had been weighed at Sutherland's, sometimes Sutherland was present and the quantities delivered were told him and then written down. When he was not present I acted for him, took notice of quantities written down, and when she saw they were all right

said she would mention it to Sutherland, her master. Then afterwards I wrote it down in my own book. Sometimes when I did not go with the goods I went the following or the next day, and after inquiry wrote down the entries in my book. O-Iyo, the woman, gave me the information. The entries were kept on the same basis up till June, during the time I kept the business. All these entries were made upon weighing. Had it been a regular business transaction the entries would have been more minute. The bags were not always of a regular size. They were all weighed and fifteen *monme* was called one bag. In every case the quantities were weighed. I could not buy them without weighing them. In no case was the barley or bran put into a measure. Five *to*, including the bag, make fifteen *monme*. That is a fact perfectly understood by everybody. The bag was sometimes over or under five *to*. In every case the quantity is weighed, and fifteen *monme* is called a bag of five *to*. At the request of the *betto* of Sutherland's coach, I began to supply stuff to other people in May. I did business with the *betto* at No. 119, and afterwards with the Light-house. This business was transacted on exactly the same basis as with Sutherland, i.e. 15 *monme* one bag, 1 *rio* 1 *bu*. A proof of that is to be seen in the book.

To defendant:—After three years I can hardly say when each particular entry was made. O-Iyo saw me make them; she did not weigh the stuff. Either Mr. Sutherland or one of his *betto*s weighed it. I can't speak accurately as to the date of the conversation in which Mr. Wills took part. It was some time after Mr. Sutherland's clerk was changed.

The jury requested defendants to produce their books showing the entries of settlement as given in the pass-book; and the Court adjourned till 1.30 P.M.

The Court sat again in the afternoon and defendants produced their books as requested. Last witness, having been sent for his books, was not present. The evidence next taken was that of O-Iyo, a Japanese girl, who was cautioned:—

In January, 1874, Sutherland came to me saying he could get no fodder for his horses in Yokohama; would I persuade my master to buy fodder for him? At this time I was in Sutherland's house. I had been there from 1871. I went to Nomi Daisuke as a servant first. Sutherland was in Yedo then, and came saying he wanted my services very much. I said I could not go very well without my master's permission. I went over to Kanagawa to try to get fodder. Nomi Daisuke at first refused saying it was not in his line; he afterwards consented to get the fodder, commiserating Mr. Sutherland's distress. A bag of 15 *monme* was to be obtained for 1 *rio*, 1 *bu*; that was barley. I explained the result of Nomi Daisuke's inquiries to Sutherland, and, he consenting to the terms, business was at once commenced. They said they could not afford to send it over to Yokohama every day, and Sutherland consented to send over the trap for it. When the carriage could not be sent, the fodder was conveyed by boat or cart. Accounts were twice fully settled. Smith then became Sutherland's clerk and he said it was dear buying in this way and that there should be a deduction of tare. There was still some balance due to Nomi Daisuke, and this was not to be paid, he said, until this question of tare was decided. Nomi Daisuke was very dis-

pleased and threatened to stop supplies. He also said I should have to come back to service with them. I also expostulated with Sutherland. So they got Mr. Wills, and Sutherland. [Farmer and he went to Nomi Daisuke's in a carriage, and it was arranged then that things would go on as before; that supplies were to be continued on the old basis, and I was to remain with Sutherland. So bran and barley were supplied as before. I did not go with these then to Nomi Daisuke's; the latter told me of the arrangement. I was not inclined to hear only the statement of one party, so I asked Sutherland about it, and he said that fodder was to be supplied in the usual way. When the barley and bran were brought to No. 61, it was always weighed, sometimes by Sutherland, or Farmer, or Smith. I was the intermediary between the parties and had to keep a strict account of the transactions between them. For this purpose a pass book was always kept in my room, and before any entries were made in it I was always particular to enquire if both parties agreed as to the quantities, asking Nomi Daisuke's people first how much they brought, then asking Sutherland how much he had received. After that first book was finished the other was begun. The payments made by Sutherland to account were also entered in my book. They were made in my room, and an account to date always written and receipts exchanged. On every occasion I acted as interpreter except at the time mentioned, and Sutherland's and Fumi's statements with regard to that interview agree. Sometimes the price fluctuated. At the first interview at which the settlement was arranged Sutherland said, "please don't try to make a profit off this, try to get it as cheap as possible, and I will give you a quarter *bu* per bag commission." They answered they were pleased with his offer, but would only ask him to pay coolie expenses and carriage on the stuff. Nomi Daisuke did not want any commission. That was agreed to. The accounts were twice clean settled, but after that no settlement whatever was made. Daisuke's people came frequently to receive money, but they never got a clean settlement of accounts. At last, in February, 1875, a very large sum of money was owing, 195 *rio*, 3 *bu* and a half. After that they received 140 *yen*, some time in March, leaving a balance of 55 *rio*, 3 *bu* and a half. Bran was supplied after that up till the 10th April; but subsequent to the 24th March no payments were made. At the end of term (April 10th) the total amount owing was 262 *rio*, 2 *bu*, and some odd cents.

To Mr. Sutherland:—I can write a little I did not write these entries myself; I caused them to be written.

Honobashi Zensaburo, recalled:—This is the original book mentioned. There is no entry in it previous to February, 1874. After that all the entries have the weight duly appended. The number of bags and the weights are all there.

Iseda Kihei, cautioned:—I live at Shibomura. I do a miscellaneous business. About the end of June, 1874, I was requested by Nomi Daisuke to continue the business with No. 61 and other places which had hitherto been attended to by last witness. The quantity to be got at Shibomura was very small and I had often to go as far as Kanagawa and Tokei to get the requisite supplies. I continued the supply of fodder upon the basis agreed upon between Sutherland and Nomi Daisuke. It is customary to settle accounts twice a year, on July 15th and

at the New year. On the 15th July, I proceeded to Sutherland's place to square up accounts, and, getting this pass-book which was kept in Iyo's room, I compared accounts in Sutherland's room, but with whom I cannot remember. I think Sutherland was present. A Chinaman interpreted. After comparing accounts it was found there remained a balance of 116 *rio*, 1 *bu* and 19 *mon*. To this amount Sutherland fully assented, and, paid 50 *yen* on account. I well remember counting over the money and finding one *yen* too many, and returning it to Sutherland. The balance he promised to pay in two or three days. I accordingly went on the 22nd July and on that occasion I received 30 *rio*. Sutherland sent for a further supply before paying any more, and on the 8th August I received a further instalment of 50 *yen*. Goods continued to be forwarded and payments were made to account from time to time. My statement is made up from the books kept at Nomi Daisuke's and Sutherland's. To the best of my knowledge there is no mistake in my statement.

To Mr. Sutherland:—According to my book, 13 bags barley were delivered on the 4th March. The book from which last witness read was that of purchases and sales. I have sometimes met Mr. Farmer in your office but he only said you were not in. On one occasion Smith gave me some money in the office. Previous to the trial last year I received this statement which showed that you had paid 164 *yen* too much: you gave it me. I tried to have this affair settled before it came into court, through the good offices of Mr. Wills. Of course under these circumstances no settlement could be arranged, so I filed my petition. The amount you allege in the answer to have paid too much is 59 *yen*. I do not know on what principle your books are kept. If it were a matter of a few *yen*, it might be put down as a difference of account.

To the Jury:—I believe that Sutherland and Wills were on very friendly terms. My reason for asking Mr Wills to come was because on a previous occasion, when a difficulty had arisen between the parties, a settlement had arisen through his friendly medium.

Funabashi Zensaburo, recalled:—The eighteen bags mentioned in the entry of the 4th March were bought on that day, and sent to Sutherland. Thirty bags were sent on the 7th March.

Plaintiff had no other witness to call.

William Alexander Smith sworn, stated:—I live at No. 122. I am a reporter in the *Japan Daily Herald* at present. In the month of April, 1874, I succeeded Mr Francis as book-keeper in the firm of Cobb & Co. I then first saw the woman Fumi and the *banto* who came on different occasions to the premises of Cobb & Co. On making inquiries into the accounts of these people I asked them into the office about the end of April. I understood from them and my employers that there was to be a certain standard for the barley and bran. The accounts were duly examined into at the end of every month and the amounts of bags supplied and received corresponded. I often superintended the weighing of this stuff, and in May required the Japanese to show an account of what had been delivered in April. They could not bring an account after repeated inquiries. As far as I am able to say now an amount of 8 lbs. tare was to be deducted. In fact I myself had brought it before their notice in the month of May. On my inquiring why the plaintiffs were paid over the value of the fodder supplied, I was told

that the woman, being a middle woman as it were, had to deposit a certain sum. There was no disturbance between the parties, everything went smoothly. Once about the middle of the year, the woman Fumi made some remarks about the price and conceded to make a reduction because grain was cheap. Also at that time witness Isoda took the place of the older man. From him I also required an exact account. He brought his books, and upon the subject of price and number of bags we both agreed. But upon my telling the weights of these amounts, and requiring him to show his weights, although I asked him on several occasions I could not get him to bring them. Neither did he seem anxious about the matter. In fact, all he seemed anxious for was a sum of 50 *yen* in advance. From that time till the end of the year accounts were regularly examined monthly. About February, 1875, the old woman, Fumi, said that, although not an accountant herself she believed that Cobb and Company owed her a large balance. I called on Isoda and explained to him that all the receipts agreeing, they were, I thought, about 40 or 50 *yen* overpaid. Shortly afterwards the old man came—that must have been in March—and stated that the firm owed him 60 *yen* for fodder. I explained it could not be possible, and read over to him our accounts. Also he compared his accounts with ours. During March plaintiffs constantly required a large amount of money which they claimed as due, and in April the late Mr. Wills came first to Mr. Sutherland and afterwards to Mr. Farmer, representing to them that the woman or her party had come to him requesting him to act in the matter to settle it amicably. He did not know their claim exactly, but thought that if Cobb & Co. caused me to write out a statement of our account and confide it to him, he might then be able to satisfactorily settle the matter. To this Mr. Farmer in my presence demurred, not liking to trust the matter to Mr. Wills. I heard him say so. Afterwards both the partners instructed me to give Mr. Wills an account. This was some days afterwards. At that time my time was fully occupied and I drew up an account in a rough form, which I thought would give Mr. Wills an idea of how matters stood. After it reached his possession the case was not amicably settled. Mr. Ness informed me that Mr. Wills had given him that document to use it against the firm. After the plaintiffs had sued in Court I then drew-up a correct account of Cobb & Co's dealings with the plaintiffs. I may mention the amount of bags always tallied on both sides; that I never could obtain the weights from plaintiffs; that up to February 1875, there had been no dispute or request for money in arrear.

To Mr. Sutherland:—After going through the books with Mr. Hall at the former hearing, whenever there was a point in dispute, concessions were always made in favour of the Japanese. In this way some 43 *yen* were reduced from the accounts. At that time it was seen no weights were produced for the first six months, and an average was taken. I joined the firm of Cobb & Co. in January 1871. I have also bought bran in the firm of Kirby & Co. in 1869, and always a deduction of 7 or 8 pounds was made for tare, not only with regard to bran and barley but other fodder—potatoes, for instance.

Witness here whispered something to Mr. Sutherland. His Honour ordered him to desist, saying that he, witness, had been so often in Court before he ought know better.

After the foregoing evidence had been translated, plaintiff said no fodder had been supplied by Nomi Daisuki in 1871. Mr. Smith said that was very true, because the woman kept a sweet-potato shop then. Sutherland had noticed the girl in passing the house in the coach.

R. C. Brodhurst, sworn:—I was employed by James & Wilson. I bought bran in 1874 from 4 *bu* per picul to 2 *bu* and a half: barley from 3 *bu* and a half to 4 *bu*, and sometimes 5 *bu*. I was manager of the Dray Company, and bought large quantities. I always bought by the picul with an allowance of from 7 to 8 pounds per picul.

Plaintiff here requested to re-examine Mr. Smith. His Honour asked the interpreter to say that the jury did not believe Mr. Smith.

Thomas Ah Hing.—I live at No. 61. I am carriage driver. I was present when the woman came and claimed her account. She claimed 60 *yen*. I interpreted.

Mr. Sutherland said he had concluded his case and would leave it to his Honour and the Jury. The Jury thereupon retired and returned to give the following:—

VERDICT.

We find for the plaintiff in the sum claimed, \$262.57.

Wednesday, 21st Feb., 1877.

Two seamen belonging to the *Coulmakyle* were charged by the Captain of that vessel with refusal of duty.

Captain Gordon gave evidence of the men's refusal to go to sea, and stated that his ship was ready to sail.

The men gave as a reason for their refusal of duty, that the vessel was not in a fit state to proceed to sea, and that the fore-castle was rendered very uncomfortable in consequence of the water breaking over and through the bulkheads.

The carpenter stated that, he thought repairs could be effected so as to make the quarters for the men more comfortable, as only a little caulking was required.

His Honour remarked that from the Captain's own admission and from the evidence before him, there was sufficient to show that it was necessary to have something done, and he had power to order a survey to be made, but as that would take time it would be better for the Captain to get the necessary repairs done at once.

Captain Gordon expressed his willingness to have a survey made, but wanted to know who was going to pay for the detention of the vessel and the survey.

His Honour informed him that, if the Surveyor found that the men's objections were justifiable, then he, the Captain, would have to pay the costs and also indemnify the men for the time they would have to lie in prison. But, on the other hand, if the Surveyor pronounced that the complaints of the men were groundless, then the Captain could deduct the expenses of the survey from their wages.

It was finally arranged that the Captain should get the needful repairs done.

His Honour asked the men if, as the Captain had agreed to repair the parts complained of, they were willing to go on board. Some of the men assented, but one refused on the ground that there would never be any comfort in the ship after this affair. Another then objected to return to duty on the same ground.

His Honour attempted to persuade the refractory men to return on board, as otherwise

he would have to send them to prison, and finally ordered them to return to the vessel. They went outside the Court and then one and all refused to go; so they were brought before His Honour again and remanded to prison until a survey of the vessel could take place.

In the Danish Consular General Court.

Before ERNEST DE BAVIER Esq., Acting Consul-General.

Messrs. E. KRAETZER and FREDERICK KREBS, (Assessors.)

Wednesday, February, 21st, 1877.

Harkon Kirchhoff, alias Antoine Bennett, was charged with forging and uttering notes of the Hongkong and Shanghai Banking Corporation.

Prisoner pleaded not guilty.

Mr. F. V. Dickens appeared to watch the case for the prosecution. Mr. Montague Kirkwood was assigned by the Court as Counsel for the accused. Mr. W. G. Van Oordt, occupied a seat on the bench. Mr. A. Rosenstand acted as Clerk of the Court.

Sekiha Hekishi's depositions taken yesterday were read and confirmed. They established that deponent was a Japanese money changer resident at Tokio: that he did not know the accused; and that on the 6th instant a foreigner presented a note purporting to be one of the Hongkong and Shanghai Bank for \$500, which deponent could not change.

The depositions of Sukimoto Tayu, female servant of Gerhard Hansen, taken yesterday by the Consul, were read and confirmed. Her evidence was to the effect that Bennett and Hansen were often together in the house of the former; that Bennett was occasionally engaged in operations with locked doors; and that the result was that his hands were dirty: that the room in which he worked was pervaded by a peculiar smell; and other facts tending to establish that he was engaged in photography.

To Mr. Kirkwood:—I last saw Bennett on the 3rd or 4th of February.

The depositions of Seitoshima, a Japanese woman, servant to Bennett, were next read. They were confirmatory of an intimacy between Bennett and Hansen, and established that the two had been frequently closeted together, and that they were occupied in some experiments or work which stained their hands with spots which would not wash out.

Mr. Home Cook's (Clerk in the Hongkong and Shanghai Bank) depositions were next read. They are to the same effect as the evidence already adduced by the Bank in the British Consular Court.

Williams' statement, taken on the 3rd instant, was read to and confirmed by him. He was then cross-examined through the Court by Mr. Kirkwood:—

I have been with George Hansen and Bennett in the latter's house. I went for no purpose: just went and came away again. (At Mr. Dickens' request he was asked what he saw in the room he went to and where that room was. He replied that it was on the upper floor: there was only a writing desk in it.) I was not in that house the day before I was arrested. I do not remember if I was there the Sunday evening before. I have known Gerhard Hansen from seeing him in Claussen's house. I do not know where he lived and never asked. I had a long con-

vervation with Bennett (alluded to in witness' depositions) on the subject of making money, about two months before the 6th instant. It took place in a boat between the French and English hatobas. Bennett told me that he had not the means to establish a photographic business; but Hansen had promised to find the money and so on, at the same time. I said in my statement that I only knew of the forgery two or three days before the notes were tried to be put into circulation. I meant that that was the first I heard of the project after the notes were made. This was in his house. Bennett always bore a good character on board ship. I was surprised when he told me that he contemplated forging notes, and said I did not believe it. When he asked me to change a note I did not object. I was to be rewarded for changing it; but no sum was agreed upon. I do not think I have ever been in George Hansen's room. I know him from the *Tennessee*. He lived with Bennett. I never talked about these notes with him. I never saw Gerard Hansen in George's room or Bennett's, nor have I seen the two Hansens walking together. I have been with Bennett and George Hansen walking in Japanese town; but we said nothing then of the notes. Bennett told me to try and change the notes at a Japanese and not a Chinese House. I was discharged from the *Nevada* on the 25th of last month, on the change of flag. I could not get a passage away because I had not been long enough in the service of the company.

Mr. Kirkwood requested that the Prisoner should be asked if he pleaded not guilty to all the charges brought against him. This was done, and the prisoner answered in the affirmative.

Mr. Dickins pointed out that if the prisoner had, in the course of his examination in the instruction, admitted his guilt, his confession must stand, unless it appeared that he had fallen into error, or the admission had been forced from him in duress. This position was admitted by the Court, which said it would decide what part of the evidence given by the accused himself was to stand, and what should be discarded.

At this stage of the proceedings the Court adjourned till 2 p.m.

On the resumption of proceedings the depositions of George Hansen were read to and confirmed by him. They gave in detail his connection with Bennett, and contained his admission of having received the notes from the prisoner, and his tearing up those which were in his possession when he heard of the prisoner's arrest.

To the Court:—I never had any conversation with Gerard Hansen about the notes. I did not ask Bennett where he got them: he told me he made them himself. I was not promised any reward for passing notes. I told Gerard Hansen about the arrest of Bennett and Williams, because he was a friend of the prisoners. He asked me why they were arrested? and I said, "for passing a \$500 forged note." I remained there about a quarter of an hour. I had never been in Gerard Hansen's house before. I first met Gerard Hansen in Peter Claussen's. I bought distilled water for Bennett who supplied me with the money and bottles. I never did any service for Gerard Hansen. I went to Tokio to change the notes because Bennett told me to go, as he said I should get more money there. He told me that the Bank was closed after one o'clock. I did not know the notes were

forged till my return from Tokio. I changed a \$500 note for Gerard Hansen on Saturday, the 3rd February, in Japanese town, near the Police Station. Gerard Hansen was with me and told me to go into the shop and change it. I do not know whether it was good or not. I do not know why he should have asked me to change it. He stopped outside. I did not ask him why he did not go himself, nor did it strike me as strange. I had no suspicions of him. He gave me a dollar for changing the note. He told me to get Japanese paper money. I did so. He gave me the note outside the money-changer's. He called at my house and took me to the shop. I heard that he had money in the bank from Bennett, who told me that he (Hansen) had been long working in the gold mines and had plenty of money. I did not want to be paid for changing the note, and I did not know the notes were forged until Bennett told me so on my return from Tokio. When I heard that, I tore up those which remained in my possession. I told him that he had no business to do such a thing, and that he would get himself and others into trouble. I did not threaten to denounce him to the police.

To Mr. Kirkwood (through the Court):—When I told Gerard Hansen that Bennett and Williams had been arrested, he made no reply. In the interview, which lasted a quarter of an hour, I told him about the conversation I had with Bennett. I do not remember that he said anything except that it was very curious. Bennett's servant told me the way to Hansen's house. I had not been there before; but I had seen Bennett going in there.

Yong Pow Chin, a money changer at No. 136, was examined and repeated part of the evidence he had given before the British Consul.

Peter Gerard Hansen's depositions, taken at his first examination when he claimed British protection, were read over to him, as was a letter dated the 29th instant sent by him to the Danish Consul expressing his willingness to give any information in his power, and the depositions made by him on his subsequent examination. They state that he had money: that he lent some to Bennett for the purchase of photographic apparatus: that the latter at length borrowed one \$500 note from him, and after many trials succeeded in getting photographic copies. They also detail his connection with Bennett, and, while admitting knowledge of and complicity in the counterfeiting, insist that he withdrew from the association when Bennett announced his determination to try to change the eight notes manufactured. He admitted giving the note to George Hansen which the latter changed; but this was, he said, a good note, being the original from which the counterfeits were copied.

The witness was asked whether he would endorse his statement as read. He replied that he could not give any answer before he had consulted his legal adviser.

Mr. Dickins pointed out that any consultation with his lawyer could only concern any future evidence he would have to give, and could not affect depositions already given.

The witness still declining to endorse his depositions at present, the case was adjourned until to-morrow, the 22nd inst. at 10 a.m. in order to give the witness an opportunity to consult his lawyer in the interim.

Thursday, February 22nd, 1877.

Harkon Kirchhoff, alias Antoine Bennett,

was charged with forging and uttering notes of the Hongkong and Shanghai Banking Corporation.

Mr. F. V. Dickins appeared on behalf of prosecution and Mr. Kirkwood was assigned by the Court as counsel for the prisoner.

The proceedings were adjourned yesterday to allow Peter Gerhard Hansen, who is committed for trial at H. B. M.'s Court, the opportunity of consulting his legal adviser, as he persistently declined to endorse his depositions until he had done so.

On the Court resuming this morning Mr. Bavier asked Peter Gerhard Hansen if he was ready to confirm the statements he had already made.

The witness said he wished to make a statement, and permission being granted he made some remarks to the effect that he had entered on the business of photography innocently; and that he was not prepared to endorse the depositions.

His Honour asked the witness if he had not said what was written down in the depositions which he had signed. He said he had made his statement: that he had nothing further to say; and positively declined to endorse his depositions.

In consequence of this refusal on the part of the witness, the U. S. Consul-General, Gen. T. B. van Buren, was requested to give evidence, and he stated that he was present in the Court when the confession of Peter Gerhard Hansen was made. He heard His Honour read the letter purporting to be signed by the prisoner, asking permission to make this confession. He also heard Hansen asked whether he had written that letter. He stated that he had. He was then asked if he was ready to make his statement and replied that he was. In order to have his statement taken down rapidly and correctly he, General van Buren, volunteered to do it himself, and did take it down word for word as made by Hansen; and after it was finished he read it to him distinctly and slowly. He, Hansen, made one or two corrections and then signed it. His statements were made with very great deliberation and coolness. Before commencing to make them he stated that his only hesitation in making them was that he feared that the English Consul might be offended at his not making them first in the English Court.

His Honour asked the witness if he was ready to answer any questions, to which he replied that he declined to say anything further or to answer any questions.

The evidence of Peter Claussen was then taken and he deposed:—I know Bennett and Gerard Hansen and Williams. They used to come to my house and take their meals. Bennett came to my place after he left the *Tennessee* and asked if he could stay there, and I told him "yes" if he paid for his board. He was always very steady, and never drank to excess. All these men usually came together to take their meals. Several times I asked Gerard Hansen what he was doing in Yokohama, and he at last got angry and told me to mind my own business. After Bennett had finished his meals he usually went away alone, but sometimes went with Gerard Hansen. Hansen has never paid for Bennett's board; and they all owe me money yet. It is about two months ago since Bennett came to me to board. He did not pay me when he came, but about a fortnight before he was arrested he gave me \$15, and that is all I have received from him. I did not know what he was doing, but he said that he was a photographer; and he also mentioned his intention of start-

ing a photographic establishment, but I told him that I did not think it would pay as there were so many Japanese engaged in the business. I knew nothing whatever of the transactions between Bennett and Hansen; but when he lived at No. 83 I went once or twice to his house. I only knew that Bennett was working for a Chinaman from his own statements.

The depositions of the prisoner, which had been taken at three previous examinations, were then read to him. They were of a similar character to his statements made in the British Court, though the circumstances in connection with the forgery and with the prisoner's previous life were more lengthily particularised. He acknowledged that he was not a good photographer, and that was the reason why he took so long to perform the operation, his experience in photography ending when he was fifteen years of age as he then went to sea.

The Court asked the prisoner why it was that he had painted the back of the \$500 note if he was only experimenting in photography. He replied that he was poor and had to do something for a living. Hansen, he said, gave him the \$15 which he paid to Peter Claussen. He also stated that the \$60 he had received from Hansen were for his own private use.

Mr. Dickins wanted to suggest a couple of questions, but Mr. Kirkwood objected, and remarked that the prisoner's case was hard enough against him without any suggestions being made by Mr. Dickins.

The Court informed Mr. Dickins that if he wanted to ask any questions he would have to conform to the rules of the Court and put them in writing.

The prisoner was asked if he had anything further to say, and replied that he had not, except that the notes he gave to Williams and George Hansen they had asked him for. He acknowledged that he used photographic paper at first, but Hansen objected to it as it was shiny, and so he got some ordinary writing paper; and the reason he made the notes the same size as the original \$500 note, was because Gerard Hansen told him to; and he also stated that he never photographed anything except the bank notes in that house.

The prisoner's counsel put in a piece of a newspaper on the margin of which was some writing, which the prisoner stated had been written by Gerard Hansen and given to him. The purport of this document was, that if Bennett would say at his trial that Hansen knew nothing about the bank notes, he would give him 350 dollars. The prisoner said that this document was given to him last Sunday, by Hansen through the cell window. He heard a knocking at the wall and then saw Hansen's hand protruding through the window, when he presented that note. He Bennett then wrote on a slip of paper refusing to agree to the request of Hansen. Hansen then wrote back again and wanted him to return the first paper, which the prisoner refused to accede to. On His Honour asking where Hansen got the paper from to write on, the prisoner stated that it was part of a newspaper (*Police Gazette*) brought for the prisoners in the gaol to read on Sundays. Hansen's and the prisoner's cells were close together, and it was on account of their proximity that the two were able to carry on the correspondence with each other.

At this stage, the proceedings were adjourned till 2 P.M.

On the Court resuming this afternoon, the prisoner was further interrogated respecting the correspondence which took place between him and Gerhard Hansen on Sunday. He informed the Court that Hansen gave him the *Police Gazette* to read when they were sweeping their cells.

His Honour said that during the recess at 12 o'clock he had visited the gaol, and it was evident from the position of the two cells that a paper could be passed from one to the other. He also remarked, for the benefit of the reporters of the local press, that he had been assured by the gaoler that no such papers as the *Police Gazette* were permitted to be circulated among the prisoners in the gaol.

David Small, gaoler, stated that it was on Saturday or Sunday last that Gerhard Hansen had been removed to the cell next to Bennett's, and he thought that a paper might easily be passed from one to the other. He further stated that he had found the *Police Gazette* in Hansen's cell. It was in consequence of other cells not being ready that the two men had been put so close together. He had kept strict watch over both the prisoners and was certain they had had no conversations with each other during the time they were exercising. No Yokohama papers were allowed to the prisoners.

Mr. Kirkwood rose and thanked the Court for the very patient and impartial hearing that had been given to the prisoner. He then addressed the Court on behalf of the prisoner at some length. He maintained that the prisoner had not been proved guilty of committing the crime of forgery; and that he was evidently the tool of Gerard Hansen who had used him to execute his own designs, and there was no doubt but what the prisoner had acted as ninety-nine men out of a hundred would have done under similar circumstances. He came to this country with the full determination of earning a honest livelihood and had been drawn into the toils of Gerard Hansen's net. The learned gentleman reviewed the evidence for the prosecution, and argued that it was not sufficient to convict the prisoner upon. The witnesses were nearly all accomplices, and, according to English law, the evidence of an accomplice was worthless unless corroborated as to material facts; and such evidence, if found to be defective in one point only, was sufficient to render the whole of his testimony valueless. The Counsel quoted authorities on this point, and then pointed out discrepancies in the evidence of Williams and George Hansen. As for the testimony of Gerard Hansen, it was evident that it was only a trumped up story, one word of which was not worthy of credence. He compared it with that of Gerard Hansen in the Court. He, Mr. Kirkwood, believed that the prisoner's statement was the simple unvarnished truth, and was in reality the only evidence against him, and that was not sufficient to convict him of the crime of forgery. The learned gentleman concluded his remarks by asking the Court to acquit the prisoner; but if the Court could not do that he hoped that the punishment would be the lightest the Danish law would permit.

Mr. Dickins rose to address the Court for the prosecution, but His Honour ruled that according to Danish law it was not allowable.

The Court then retired to consider their verdict, and in about a quarter of an hour returned, when His Honour, addressing the prisoner, said: "We have come to the conclusion

to reserve our judgment. However you will be imprisoned and your imprisonment will date from to-day."

The Court then rose.

In the Netherlands' Consular Court.

Before W. C. VAN OORDT, Esq., *Consul*.

Friday, February 16th, 1877.

E. S. BENSON vs. DR. C. DE JUNG.

The plaintiff "in his capacity of Municipal Director" claimed the sum of \$91.18, amount of ground rent due to the Japanese government by the defendant for lot No. 179B from the first of December 1875 to the first of December 1877.

The defendant acknowledged the rent being due to the Japanese government, but disputed the plaintiff's right to collect it. He had refused to pay the rent because of no notice having been taken of his complaint against the bowling-alley of the German Club, the noise from which was a very great annoyance to him.

The Judgment of the Court was that the plaintiff is perfectly entitled to receive ground rent on behalf of the Japanese Government: also that the Court has no jurisdiction over the German Club. The defendant was therefore ordered to pay the amount claimed, with costs, within two days.

In the Judicial Court at Kanagawa.

Before MR. ASAINA KANSUI, *Vice President*.

Monday, Feb. 19th, 1877.

SCHINNE AND FRANCKE vs. OMIA ESUKI.

The plaintiff claimed that the defendant be compelled to take delivery of 300 doz. comforters, value \$1,500 for which he had contracted.

This case was set down for ten o'clock this morning, at which hour the plaintiff was in waiting; but, with the characteristic irregularity of the proceedings at the Saibansho, it was not brought on until nearly half-past eleven o'clock. Mr. O. Francke appeared on behalf of his firm.

The Judge asked the plaintiff if he had anything additional to add to his written complaint. He replied that he had not. He had considerably postponed proceedings for the compulsory fulfilment of the contract for several months at the request of the defendant, but he, defendant, had asked for a postponement for nine months, a proposal which plaintiff could not entertain.

The defendant said that business was very bad. He would lose a great deal on the goods, if compelled to take them now; and he would request through the court that the delay he had asked for previously might be granted to him. He was willing to pay interest to the end of the term.

The plaintiff could not agree to the request.

The Judge inquired of the plaintiff, if it was too long to grant the defendant to September to take the goods, was he willing to allow him a shorter delay.

The plaintiff replied that he was not, as he had already granted a delay of some time to the defendant, who had made so many promises and been so disagreeable throughout the transaction, that he was not prepared to grant him any further concession.

The Court informed the defendant that he must take delivery of the goods at once. He

replied that he was short of money; and if fifty days grace were permitted him he was willing to draw up a document and provide any security that might be required from him for the fulfilment of the contract at the end of that time.

The plaintiff refused to agree to this; but intimated that he would give defendant till the end of the month to take delivery.

The Judge informed the plaintiff that if he appeared at the Saibansho tomorrow morning at ten o'clock judgment would be given for the defendant to take delivery of the goods immediately.

Nippon Notes.

(Continued from page 17.)

(From the Hochi-shin bun.)

Our readers must have seen in our paper of yesterday that the insurgents of the Kagoshima-ken have forced their way into the Kuma-moto-ken, after taking up arms against the authorities, and that an expedition against them has been ordered by H. M. the Mikado. Previous to this we had desired much to see an order issued for their destruction in punishment of their treachery. But the Government's first desire was to put them down without using force; and Prince Arisugawa-no-Miya was on the point of leaving to warn them to disperse peaceably. But as their disturbance and treason became more serious and overt the Prince was appointed Commander-in-chief of an army to take the field against them. The Government has lost no opportunity of putting down the rebellion and promoting the welfare of the nation. How is it, then, that the Kagoshima insurgents have penetrated to the Kuma-moto-ken, taking fire-arms with them? What is the reason that they betray the Mikado's Government? We cannot understand it at all. But we are sure that they must have a leader who directs their advance or retreat. Who is he? Our countrymen have from the first distrusted Mr. Saigo the elder. We are told of him that, when the insurgents first rose against the authorities, he instructed them to disperse quietly but in vain; and that he left his home for somewhere refusing to take their leadership. If this is so really, he is not, of course, their leader. Oh, he is always honorably spoken of as the founder of the Government. How should he betray and injure the peace of the country by force of arms! Besides, he holds the onerous and responsible appointment of Commander-in-chief of His Imperial Majesty's army; so he is an officer of the Government, and he ought to be discharging his duty in directing the War Department. Disturbances having broken out, he should of course endeavour to put them down even at the risk of his life. If he cannot endure hardship, he should resign his post of Commander-in-chief. His duties are not vastly different from those of the Minister at War. Then, we are right to distrust Mr. Saigo, even granting that the report is false which says that he left his house refusing to take command of the insurgents. Oh, he is the foremost man in Japan for talent and ability, and has been conspicuous for meritorious and faithful conduct! and he fled before the insurgents fearing to place his life in danger! If he did not take refuge from them, he must have silently watched their treacherous conduct in penetrating into the other ken! We cannot explain his behaviour at the present time. We have heard that when

the Kagoshima insurgents first rose they wished Mr. Saigo to command them, and that he is reported to have said; "If you will not listen to me and desist from rebellion, cut off my head before you put your schemes into execution." We think that his honorable reputation of loyalist is not belied. But we do not know what reports to believe. There must be some reason why Mr. Saigo, holding the post of Commander-in-chief, was obliged to allow the insurgents to force their way into the Kuma-moto-ken. Has he truly left his home wishing to render good service in the future? He is not a man who does not reflect on what may be injurious to the country. It seems that the insurgents have no leader at their head and that they cannot face the flag of *Nishiki* (brocade). But dark clouds of discontent have appeared and disappeared in the south-west since many years ago, and none of us consider the Kagoshima insurgents to be of the same kidney with those of Hagi and Kuma-moto. We must work to the utmost of our power to ensure the welfare of the country. The Mikado's Government has been often insulted by the three powerful clans in the south-west; and an expedition against them has at length been resolved upon. H. M. the Mikado remains at Kioto to conduct the campaign in person. We are convinced that under the present Government no future civil disturbance can occur throughout Japan without overturning the balance of power, and we trust that the Mikado's troops will soon return victorious authority.

(From the Nichi-nichi-shinbun.)

Notification No. 22.

In the case of surgical examination of a body, where death has occurred from other than natural causes, if the examining medical officer finds that he cannot discover the cause of death without performing an autopsy, he will be allowed to do so on application made to the Coroner or other competent authority.

IWAKURA TOMOMI,

U-Daijin.

February 21st, 1877.

Nothing has yet been heard of the officials of the Chiso-kaisei-kio (land tax office) who were sent to Kagoshima a short time ago. It is probable that they have been imprisoned by the insurgents. A number of the telegraphic workmen, who were also in the Kagoshima-ken to repair the damage done to telegraph wires, encountered the rebels and suffered much trouble in consequence. Sometimes they got no food for one or two days, and had to pass the nights in the forests or on the mountains. They returned to Tokio on the 19th instant.

THEIR Majesties the Empress and Empress Dowager will remain at Kioto. This intelligence has been telegraphed from Kioto to the Kunaisho.

SOME of the Kumamoto shizoku are much excited by the Kagoshima disturbances and hold secret meetings. But on the arrival of Mr. Hosokawa, late lord of Kumamoto, from Tokio, who determined to preserve peace among his ex retainers, they dispersed quietly. The shizoku of Kochi are not at all agitated, contrary to what we expected.

On the 21st inst. the first number of the *Heian-shinbun* was published in Kioto.

On the 22nd, the editors of the *Akebono* and *Somo shinbun* were summoned to appear before the Tokio Saibansho. Mr. Ito, of the *Nichi-nichi-shinbun*, was fined 75 sen for some offence.

(From the Mai-nichi Shinbun.)

Yeno, a Chinese Emperor, once ordered his General, Rakki, to suppress the rebellion which had broken out in the province of Gi. The General replied that no order of a sovereign or lord should be disobeyed by a subject, but as the province of Gi was his native place, where his parents and friends resided, he could not bear to force his way into the province at the head of an army. And Coriolanus, a Roman, having found that his views were not accepted by the Senate, left his native country, and endeavoured to obtain the assistance of a neighbouring nation and return and conquer his own country. He succeeded, and when he appeared before Rome at the head of an army, the Senate sent a procession to meet him, consisting of his mother, wife, children, and other relations, in order to persuade him not to bring ruin and desolation upon the country of his birth. The angry spirit of the brave soldier was calmed by their entreaties, and he retired peaceably, leaving his own life to the mercy of the Volscian army. Now the treacherous conduct of the Kagoshima men is well known, and we propose to comment upon it. We have remarked that it is very difficult to punish the Kagoshima rebels by declaring war against them. The naval and land forces of Japan are mostly formed of Satsuma men; and most of the military officers also belong to Satsuma. To send these troops against the insurgents, is the same as asking them to destroy the land of their birth. So, even though they are brave soldiers, having to fight against their native country, where they see all around them familiar objects, it is not known but what they will change their mind and join the insurgents. But we do not think they will betray the government by assisting the traitors. Yet if their parents, wives, and children appear before their camp, they will not be like Minamoto-no-Hachiro, who sent an arrow through his brother for the sake of the Mikado. This is the reason why an expedition against Kagoshima is very difficult. We know that the Kagoshima disturbances cannot be compared with those of Saga and Yamaguchi, and we feel sure that the troops will not join the enemy. There must have been some reason for General Rakki refusing the order of his lord to exterminate the rebellion of Gi, and for Coriolanus retreating peaceably from before the city of Rome. But the troops, despatched by order of H. M. the Mikado, will proceed against their friends and relations, and they should not forget their duty to put down the rebellion. Yeno's order to his general was not to punish disobedient persons, but to put an end to a civil war. Coriolanus collected an army in anger regardless that he was leading it against his native country. If he had destroyed Rome, notwithstanding the entreaty of his relations, he would have been considered the enemy of his country and an unnatural son. Our government does not desire to exterminate Kagoshima without reason. Those who injure the peace of the country, should of course be destroyed. So we need not have any fears perhaps about sending troops against their native province.

(From the Nichi-nichi Shinbun.)

THE trial of accused persons in the Tokio Courts will hereafter be conducted according to the following regulations:—

Art. 1.—The judge, the prosecutor, and the prefect of police, will mutually agree upon the days for the session of the court, on which they must discharge their duty from 7 a.m. to

9 p.m., rest days, with the exception of general holidays, included.

Art. 2.—The case of an accused person must be heard within twenty-four hours of his being first produced in Court. If his guilt cannot be proved, he must be released immediately. More than forty-eight hours must not elapse between the arrest and the examination of an accused person.

Art. 3.—Judge and prosecutor must attend at the 3rd office of the principal police station. After they have examined a prisoner, they will at once submit his case for judgment, to be given upon it by the judicial authorities.

Art. 4.—Police officers of rank between *Chukeishi* and *Keibu* will act as public prosecutors.

Art. 5.—The judicial authorities must decide upon cases submitted to them, as above, for minor offences within fifteen days; and for serious crimes within thirty days. Should they deem it necessary in any case to prolong these periods, they must report the matter and the cause of the delay to the Minister of Justice.

A notification to *Kucho* and *Kocho* signifies that all native owned steamers are to be subject to police inspection on their arrival in or departure from port, and that owners, captains, and officers are to afford what assistance is required by the examining officials.

On the 23rd inst. Mr. Kato, of the *Mai-nichi Shinbun*, appeared before the Yokohama Saibansho, where he was fined fifteen yen for having violated the 5th article of the law against slander.

The Supreme Court and the First Saibansho in Tokio are guarded by a force of police.

The Imperial palace at Akasaka will soon be lighted throughout with gas.

The *Hochi-shinbun* reports a rumor to the effect that Mr. Tanaka, Vice-Minister of the Educational Department, will be appointed Envoy Extraordinary and Minister Plenipotentiary to China, and that his present post will be filled by Mr. Kanda, late Kenrei of Hiogo.

At about 1 p.m. on the 20th inst., a fire broke out at the Primary School at Fukiage, on the Nakasen road, and was communicated to other houses. It was not extinguished till about 4 o'clock p.m.

Correspondence.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

To the Editor of the *Japan Gazette*.

SIR,—I see in last night's issue of the *Japan Gazette* that the Creek is being made deeper in order to facilitate the boat-traffic, and I think it may be the best time to call the Governor's attention, through the medium of your valuable paper, to the repairs at Mayeda-bashi.

This bridge is lower than the other two bridges, Yato-bashi and Nishino-hashi, being about 1½ feet lower than the latter; and the larger boats and junks have always great difficulty in passing under it, especially at high tide, even when they are not loaded. But I understand from the people working there that the bridge is not being raised, but is only being repaired.

I believe if the Governor were to order the bridge to be raised a little higher at a small additional cost, at this time when other repairs

are being made, it would be a great blessing to the Japanese boatmen who have at present always some trouble in passing under it, and will have more when the business of Yokohama is somewhat improved, and the Creek is more in use.

Yours truly,

IRANU SEWAYAKI.

Yokohama, 2nd February, 1877.

To the Editor of the *Japan Gazette*.

DEAR SIR,—Permit me, through your columns to enquire of H. L., whose letter of January to the *Tokio Times* appeared in your issue of the 3rd instant, where and when I may see some proof of the truth of his assertions, and the value of the proofs he sets forth in his letter—for instance:—

Where can I see the Japanese who has ploughed up 2½ acres of ground in a day? or has run a mowing machine and cut ten acres of grass in a day? and when may I see either done?

Where are the shops in Tokio written of; and, in connection with the stated proofs, why grow foreign grasses to feed the sheep if the native grasses are so "well adapted" to their support? Have any sheep been fed exclusively on native grasses since May, 1876? Will the "good" hay keep more than 2 or 3 months? and who has tried it?

What foreign food plants authorize the statement of "all kinds?"

How was the fourth proof (?) tested? and in seven months?

Will and do the Japanese make and use the farm implements? or do they still prefer their own?

Will or do the Japanese attempt to subdue and cultivate the wild lands of Japan? and is their experience under the able (?) foreign superintendence mentioned calculated to foster the desire?

But for the tone of authority and air of knowledge as of "behind the scenes" with which H. L. writes, I should not trespass on your valuable space; so trust you and your readers will pardon the inquisitiveness of one interested in Sheep matters, who is obliged to take a front view of experiments in this country, and subscribes himself a

SQUATTER.

Yokohama, 5th February, 1877.

To the Editor of the *Japan Gazette*.

SIR:—Having been absent from the neighborhood of Yokohama for a short time I did not see the newspapers in the interval, and so missed, until my return a few days since, the pleasure of reading that account of the "New Pasturage" of Japan signed "H. L.", which you reprinted from the *Tokio Times* into your issue of the 3rd instant. But since I read that wonderful account I have been tormented by anxiety to witness the wonderful works of Mr. Ap. Jones, there so graphically described; and I have made up my mind, when the fine weather sets in, to apply for a passport and visit the peninsula of Boshu at an early date. I may be excused the suggestion that sheep-farming may not be so profitable an undertaking in California as I had hitherto imagined it, if "an extensive sheep grazier" from that state should find it worth his while to spend much time in visiting various provinces in Japan, and drawing up a report of his observations, and eventually accept a small appointment from this Govern-

ment to teach the Japanese to use the plough. Such instruction does not require a gentleman of large scientific attainments to impart it. Indeed it is no heresy to say, and I mean no offence in saying, that any country ploughman would do at least as well as an "extensive grazier;" but probably to employ such a person as the latter as ploughing instructor is of a piece with that system which finds so much favor with Japanese of putting people to work which neither nature nor training ever fitted them for.

H. L. does not tell us—probably he passed it by as unworthy of notice—from what part of the world scab in sheep was introduced into Japan. For my part I am certain it was not from China; though, as there is an "M" in both Monmouth and Macedon, and rivers in both places, so there is a "C" in China and in the name of the other place, too. There may be particular advantages—to others than those who find the money—in purchasing stock as well as other things in the dearest markets of the world; but it is not a system I should care to adopt in buying for myself, and so I will not pursue this subject further.

But I have in my mind a very pertinent little article which you wrote some time ago on "Scab in Sheep," and to that I will just append the information that but few flocks of sheep in California are supposed to be free from that dreadful scourge; and I would counsel the Japanese who import sheep to lay your advice to heart and to be particularly careful in inspecting every mutton which comes to these shores before they allow it to land.

Trusting soon to have the pleasure of seeing those wonderful Japanese who plough their two and a half acres in one day, and promising to send you a faithful account of my observations,

I am, Sir,

Yours faithfully,

NO. 2 SQUATTER.

Yokohama, Feb. 19th, 1877.

HONGKONG AND SHANGHAI BANKING CORPORATION.

Twenty-third report of the Court of Directors to the ordinary yearly general meeting of shareholders held at the City Hall, Hongkong, on Thursday, the 15th February, 1877, at 3 p.m.

To the Proprietors of the Hongkong and Shanghai Banking Corporation.

GENTLEMEN:—The Directors have now to submit to you a general statement of the affairs of the Bank, and balance sheet for the half-year ending 30th December last.

The net profits for that period, including \$38,085.43 brought forward from last account, after paying all charges, deducting interest paid and due, making provision for bad and doubtful accounts, and for difference in Exchange between the rate at which the Dividend is declared and the current rate of the day, amount to \$502,802.72, of which, after taking out Rebate on Bills not yet due, and Remuneration to Directors, there remains for appropriation \$488,824.91.

From this sum, the Directors recommend the payment of a Dividend of One Pound Sterling per share, which will absorb \$177,777.78.

The Directors recommend placing \$300,000

to credit of Reserve Fund, which will then stand at half a million Dollars, and carrying forward the balance, viz., \$11,047.13, to credit of new Profit and Loss Account.

The Directors have to renew their congratulations on the prosperous condition of the Bank.

DIRECTORS.

Mr. J. F. Cordes resigned his seat at the Board on leaving the Colony, and Mr. Edward Tobin has been appointed in his stead: the Honourable William Keswick has also joined the Board.

In conformity with the provisions of the Deed of Settlement, two members of the Court, Messrs. H. Hoppius and F. D. Sassoon, retire from the Direction, but they are eligible for re-election, and offer themselves accordingly.

Mr. Heinrich Hoppius has been appointed Chairman of the Corporation for 1877, *vice* Mr. E. R. Belilios, whose term of Office now expires, and Mr. Frederick David Sassoon has been elected Deputy Chairman.

AUDITORS.

The Accounts have been audited by the Honourable Phineas Ryrie and Mr. H. B. Gibb, and the Directors have pleasure in recommending the election of these gentlemen as Auditors for the year 1877.

CHIEF MANAGEMENT.

Mr. James Greig has resigned the post of Chief Manager, and Mr. Thomas Jackson, who has been acting as Chief Manager during the year, has been appointed to that post.

E. R. BELILIOS,
Chairman.

ABSTRACT OF ASSETS AND LIABILITIES, HONGKONG AND SHANGHAI BANKING CORPORATION.

30th December, 1876.

ASSETS.

Cash and Bullion	\$4,447,118.26
Government Securities	931,408.14

E. R. BELILIOS, }
H. HOPPIUS, } *Directors.*
F. D. SASSOON, }

We have compared the above Statements with the Books, Vouchers and Securities at the Head Office, and with the Returns received from the various Branches and have found the same to be correct.

P. RYRIE, }
H. B. GIBB, } *Auditors.*

Hongkong, 10th Feb., 1877.

CHINA FIRE INSURANCE COMPANY LIMITED.

REPORT.

The directors have now the pleasure to submit a statement of the Company's accounts made up to the 31st December, 1876.

Net profit for the year 1875 is shown to be as follows:—

Balance at Credit of Working Account, as per last Report	\$79,371.89
Deduct losses and claims paid in 1876	11,662.52
			<u>Net profit..... \$67,709.27</u>

Of this amount the directors propose to apply \$22,394.77 to the payment of a bonus of 20 per cent. to the contributing shareholders of 1875, add the balance to the reserve fund, which will thus be increased to \$339,787.30.

The working account for 1876 shows the satisfactory balance of \$144,304.86 at its credit on the 31st December; but in comparing this with former results the fact must be borne in mind that interest to shareholders, hitherto paid half-yearly, was last year discontinued, and in the present statement does not appear. In lieu of interest, the directors now propose to appropriate the sum of \$48,000 out of anticipated profits to the payment of a dividend of \$12 per share, which it is hoped will meet with the approval of the shareholders.

The losses under policies issued in 1876 were exceptionally insignificant up to the close of the year, but on the 13th January last, a fire occurred at Yokohama destroying properties on which the Company's risks aggregated nearly \$45,000, involving an almost total loss.

DIRECTORS.

Messrs. Heaton and Ryrie retire from the Board in accordance with Article 86 of the Deed of Association, and both gentlemen offer themselves for re-election.

AUDITORS.

Mr. Edward George having resigned his appointment, the directors elected Mr. Robert Lyall to succeed him. This gentleman and Mr. C. Morland Kerr offer themselves for re-election.

HENRY LOWCOCK, Chairman.

The *China Mail* learns that the French gunboat *Aspic* was lost, about the 14th January, on the coast to the Southward of Haiphong. No lives were lost.

NAGASAKI.

The Satsuma wave of discontent again threatens to involve the entire southern province in the throes of civil warfare. For weeks past large quantities of fire-arms and ammunition have been smuggled into Kagoshima. The suspicions of the Government were aroused, and through different sources such information was obtained as to confirm their worst fears. One of the Mitsu Bishi steamers was dispatched to Kagoshima to bring away the large quantity of Government powder stored in the Magazine, but her errand was fruitless, as the Satsuma people would not allow it to be touched. The Government in the meantime had warned the respective Governors of the impending danger, and at once hurried off thousands of troops, which are now daily arriving at the supposed points of attack. No collision has as yet taken place, but it is pretty certain that more than 40,000 armed men are in readiness to raise the rebel flag at a given signal. What a day may bring forth, we know not. Nagasaki is now virtually under martial law, the military guards have been doubled, the mountain passes are being carefully guarded both night and day, and every possible precaution has been taken by the judicious and energetic Governor of Nagasaki Ken.—*R. S. and Nagasaki Express.*

The Japanese light-house steamer *Thabor* arrived in Nagasaki yesterday morning (16th instant). She reports having called at Kagoshima, but that she was immediately ordered off. No one was allowed to land.—*Idem.*

Miscellaneous.

The *Parthenio*, on the 20th instant, was at Shimoda weather-bound. She had a very rough passage down, experiencing a heavy gale which lasted for three days, and in which, according to a private letter received from the captain, "she carried away almost everything." She was expected to be able to leave Shimoda on the 21st instant for Kobe.

MR. CARL RHODE has been appointed Consul for Peru in this port, and has already taken charge of his office. In the absence of Mr. Grenet, Chevalier P. Castelli, Italian Consul, continues to act as Consul-General for Peru in Japan.

The French man-of-war *Talisman* is expected in Yokohama shortly. The *La Clocheterie*, which was to come here, will remain at Kobe. The *Atalante* has, as before stated, left for Nagasaki.—*Echo du Japon.*

Mr. R. F. Martins in "Manners and Customs of the Chinese at Macao" has the following on opium smoking, and the first introduction of the narcotic into China:—

The Chinese say that the best occasion for discussing important business, is over a pipe of opium.

Opium was first introduced into China as a medicine, in the time of the Ming dynasty, which commenced A. D. 1368. For some years the Chinese imported it from India solely for medicinal purposes. Its properties were first described by the botanist Li She-chen, who discovered that it could be smoked. The Chinese began to smoke it to such an extent, that it soon became the vice of their country; and its consumption became enormous throughout the empire, but particularly in the provinces of Kwang-tung and Kwang-see, where its use is excessive.

In the year 1796, during the reign of the emperor Kia-king, a Tartar named Ki-king, who was as yet unacquainted with the use of opium, was appointed viceroy of the two above-named provinces. Having taken up his charge, he first heard of the great consumption of the drug, then called 'a-pin-in.' Many persons were unable even to purchase food, through spending their all upon it. The viceroy, hearing of this, expressed a desire to see it; and, on some particles from a pipe being presented to him, after examining it he expressed his belief that it was some injurious mineral, with which foreigners were deceiving the Chinese; and he indignantly inveighed against the folly of the latter exchanging their good silver for a little earth, which not only emptied their pockets but ruined their health. From this remark of the viceroy the name by which the drug is now known among the Chinese—'in-t'u,' which means tobacco-earth, originated.

The viceroy did not stop here. His anger knew no bounds; and without delay he memorialized the Court of Peking against the admission of opium into the country. A decree was immediately issued prohibiting its importation, and making the smoking of it a capital offence.

But the vice was so inveterate, and its use had become so universal, that the decree was utterly inoperative. Other decrees therefore followed and officials were sent from Peking to Canton and other parts to enforce them. But it was useless. All the proclamations were of no effect; the smoking continued, and became more habitual year by year.

The history of the efforts made by the government of Peking, to extinguish this vice in the empire, and of the difficulties that have been encountered, is a very long one, and very unsatisfactory.

THERE is reason to believe that all the persons concerned in the forgery of Hongkong and Shanghai bank notes—for it is now said that eight notes each of \$500 have been counterfeited in the manner we described above—are in custody. Peter Gerhard Hansen, a Dane by birth, who was arrested on the 7th declaring that he was a naturalized British subject and amenable only to British jurisdiction, has been brought before the Acting Consul. A female servant of his was examined but it appears that little information was elicited from her beyond the fact that Hansen and Bennett frequently locked themselves up together in a room. A fourth man, also named Hansen, a Swede, is in prison, and was privately examined by Mr. Van Oordt, Consul for Sweden and Norway. We understand that some,

at least, of the accused have confessed their guilt. A more minute search by the Municipal Police of the premises occupied by Bens nett, resulted in two more \$500 counterfeits being discovered in a crack in a table in his room. If the admission that eight notes were fabricated is correct, there are still five unaccounted for, which there is reason to believe are in Tokio, where efforts are now being made to trace them.

THE Temperance Entertainment on the 8th inst. was of much the same character as usual. The weather was unfortunately unfavourable; nevertheless about sixty persons were present, mostly men-of-war's men from the vessels in harbour. The programme was a lively one and was got through most creditably.

A little past one P.M. on the 9th, a fire broke out in Kotobuki-cho, Shichome, opposite the Public Gardens, in the house of a Japanese match-maker. Ruin was falling and thanks to that fact and the strenuous efforts of the native firemen the flames were localised; and two or three small houses only were destroyed.

Mr. Yamamoto, who is held to be the best wood engraver in Kioto, is at present engaged in making twenty-five statuettes, representing the saints of Japan, which Mr. Emile Guimet, a French *savant*, ordered from him for the sum of \$2,500 when he visited that town. The *Mainichi Shinbun*, whence we learn this, states that the profit accruing to Mr. Yamamoto is very small; but this artist loves his country so much that he has undertaken the work, as much as anything to show foreigners that Japan is not behind them in skill in the fine arts.—*Echo du Japon*.

It appears that there is really some ground for apprehension of trouble in the Kagoshima-ken. The *Hochi-shinbun* states that all the gunpowder in the arsenal in the Island of Sakura has been seized by a band of about 2,500 shizoku, the same who menaced the *Seki-rio-maru*, in which vessel a quantity of gunpowder was to have been embarked for the use of the Osaka garrison troops. Mr. Haya-shi, Vice-Minister of the Home Department, who happened to be in the Owake-ken, went immediately to Kagoshima in order to investigate the matter. On the 7th inst., Mr. Shigekata of the Finance Department left hastily for Kioto, in order, it is said, to hasten the return of the Mikado to Tokio. A telegram received by the government from Kioto on the evening of the 7th inst., says that Mr. Kawamura, Vice-Minister of the Navy Department, who was in Kioto in the Mikado's suite, has embarked on board the *Taka-wo-maru*, which was despatched in haste for the island of Kiushu. This morning the men-of-war *Moshun* and *Hono-kuwan* left Shinagawa for Kobe with a number of marines on board. The *Mainichi-shinbun* says that about two hundred police are to be at once despatched to Nara in Yamato, and a strong force to the Island of Kiushu.

In a long and well considered article in the *Tokio Times* on "Silver and the use of the Mexican dollar in Japan occurs the following paragraph:—"Altogether, the outlook in favor of silver is a promising one, and anything like a great permanent decline is very improbable; but as long as the policy and legislation of the different states of Europe and America in regard to it is so contradictory, temporary fluctuations to a considerable extent may at any time be looked for; and why the foreign merchants in

Japan, a country which has a gold standard, should subject themselves to these influences, whose evil effects are here considerably heightened on account of silver being current only in the coin of a nation foreign to them and to Japan, i.e. the Mexican dollar, is more than can be readily understood. In some instances these fluctuations will of course be the source of considerable profit, and it has been stated in a London paper that a prominent banking firm in Yokohama has made as much as thirty per cent on a single exchange transaction. But the very possibility of such a profit is almost proof positive of an unhealthy condition, and cannot but exercise a most pernicious influence on legitimate trade."

The same article suggests the formation of a Japanese Chamber of Commerce, which should consider measures to be taken to do away with the inconvenience and often loss attendant upon the fluctuation in exchange due to the use of the Mexican dollar, and the proposed substitution of the "yen" as a commercial medium the writer concludes:—"But why should not the Foreign Chamber of Commerce deliberate upon the subject? Sooner or later, the yen must become the recognized medium of exchange even in the Treaty ports. The action of the government, late as it has come, is already productive of some result, and this would be greatly hastened by the co-operation of the Foreign Chamber of Commerce. In any case, a fair, unbiased and unprejudiced discussion by its members will throw more light upon the topic and upon the best way of accomplishing the needed end than we can possibly hope to."

THE 1st inst. being a national holiday in honor of Jimmu Tenno, the Japanese town was gaily decorated, and the ships in harbour were hung with flags. Salutes were fired at noon, and in the evening the Town Hall was brilliantly illuminated.

THE fire which we mentioned as having occurred on the morning of the 9th inst. at a match maker's near the Public Gardens, was on the premises where were made those well known so-called safety matches of "the pipe" brand, the label showing a pipe under a rising sun. Latterly for the pipe a pennant has been substituted. The proprietor estimates the extent of damages at \$2,500: probably half this amount would cover the loss. He cannot account for the origin of the fire, but says that the accident did not occur through match-making, as he had not been working for some time. Had work been going on the loss might have been as great as he represents. All the buildings, with the exception of part of the drying room, were burnt to the ground.

THE *Oceanic* has made for her a rather long passage from San Francisco last time, having had strong head winds during the passage. She brought a general mail, consequent upon the expiry of the P. M. S. S. Co.'s mail contract, and vessels of the O. & O. Co. will probably continue to do so.

THE S. S. *Meiji-maru* left on the 12th inst., for Kobe, taking private despatches for H. E. Mr. Ito.

THE S. S. *Thabor* left Kobe on the 11th inst., with troops on board, in the direction of Nagasaki; but for what port has not transpired.

THE U. S. S. *Palos* left on the 12th inst. via Hiogo for Nagasaki.

REGULATIONS for the admittance of accused persons to bail, while their trials are pending have been promulgated. This is another and an important step on the part of the government towards a complete reform of the criminal jurisprudence of the empire.

THE *Br. schr. Alerta*, Captain Talbot, arrived in Yokohama on the 12th inst. from Takao with a cargo of sugar consigned to Messrs. Walsh, Hall & Co. Before leaving Takao the master of the *Alerta* was unable to procure the services of a second officer and was therefore compelled to start on his voyage without one. When eight days out from port the first officer was taken ill; and the entire navigation of the vessel devolved upon the captain. During the last sixteen days of the voyage a succession of severe gales was experienced, which necessitated the presence on deck of Captain Talbot both day and night.

A SERIOUS personal fracas has occurred between one of the Kencho officials of this place and an officer of corresponding rank of Nagasaki. We are told that the Yokohama gentleman has judged it prudent to make himself scarce for the time, and is in hiding somewhere in Tokio.

TROOPS arrived from Tokio on the afternoon of the 14th by rail to the number of upwards of 2,500. The ordinary passenger traffic was considerably interfered with. By the train leaving Shinbashi at 1.15 p.m. 1,500 soldiers in 23 carriages arrived; and several Europeans were obliged to remain in Tokio, being refused tickets. Some managed to find seats in the carriages and came down without tickets. From five to six hundred troops came in each of the two following trains which, as well as the previous one, were twenty minutes late in arriving. One thousand were embarked in the *Tokio-maru*, and the *Sumida* and *Hiogo-maru* take the remaining men in about equal numbers. Nagasaki is the destination of these vessels; but it is said that they will land detachments of troops at various places, with the two fold object of approaching the disaffected province from various points at once, and of keeping the insurgents in ignorance of the numbers of the forces sent against them and of the directions in which they may be expected to arrive.

ON the night of the 13th fire broke out in an oilman's shop at Hachiman-yato, Ishikawa. The building being comparatively isolated the flames were confined to it alone. A number of native police and some fire-engines were on the spot.

THE Dane, Bennett, who is implicated in the forgery case which has been occupying the attention of the consular authorities during the last eight days, was again brought before his Consul, Mr. de Bavier, on the 13th inst. The examination was of a private character, but we are given to understand that the prisoner reiterated his version of the affair as given by him in the British Court. It is also stated that the Swede, George Hansen, who so persistently denied receiving five \$500 notes from Bennett for the purpose of cashing them in Tokio, has confessed that he did receive the notes for that purpose. So far it is very uncertain whether any of the forged notes have been successfully put in circulation.

HAKODATE, Feb. 9, 1877. The Steamer *Dragon* left for Shanghai via Nagasaki on the 3rd instant.

Range of Temperature for past week 20° to

40.° Weather mild and changeable. Easterly gale on 7th. On the night of the 4th-5th inst. a fire broke out in the Main Street and was not got under until it had consumed eight large stores. The Telegraph office on the opposite side of the street narrowly escaped.

THE office of Mr. R. V. Boyle, Engineer in chief of the Railway Department, is about to be closed, and Mr. Boyle will return to Europe.

A MOTION has been brought before H. S. Wilkinson, Esq., H. B. M.'s Acting Law Secretary, for permission to the litigants in the case of *Blockley vs. Blockley* to come to arrangements out of Court, which was granted.

A SHORT time ago we mentioned that the skulls of some four hundred or five hundred executed criminals were exposed to the public gaze at Tobé. Since then they have all been buried, and nothing remains to mark the site but a number of wooden tablets.

A NUMBER of strangers (natives) are reported to be in the capital; and several have been noticed walking about the streets of Yokohama during the past day or two.

ABOUT half-past eight p.m. on the 17th inst. a number of Japanese men-of-war's men proceeded from Benten to the rifle range for practice. They presented a very creditable and seamanlike appearance, being well clad, well armed with short snider rifles, and marching in capital order.

H. E. THE DUKE Decazes, French Minister of Foreign Affairs has begged Mr. de Saint Quentin, Chargé d'Affaires for France at Yokohama, to thank in his name the English Consul at Nagasaki, and the residents of that town who aided in the subscriptions raised in favor of the sufferers by the floods in the south of France. It is probable that a similar proceeding will be taken towards the Yokohama subscribers.—*Echo du Japon*.

WE hear that Count Fé d'Ostiani, Minister Resident for Italy in Japan, has been appointed to the same post at Riode Janeiro (Brazil) and that he will shortly leave for Europe. His Excellency will be replaced here by Count Barbolani, who was Minister Plenipotentiary to the Sublime Porte, and was recently one of the delegates at the Constantinople Conference.—*Idem*.

WE learn from reliable sources that Baron d'Anethan, who was Secretary of the Belgian Legation here, has been appointed First Secretary of Legation in London.—*Idem*.

AH FU TAI, a Chinaman employed as a clerk by the Chinese Guild, was assisting to put a crazy Chinaman into a jinrikisha near the compound No. 155, at about noon on the 19th inst., when he stumbled and fell to the ground. As he did not subsequently rise, his companion went to his assistance, and on examining him ascertained that he was dead. Sergeant Loxton came up at the time, and seeing what had happened reported the circumstance at the native police station, whence two officers were despatched to the spot. The dead man was lifted into a jinrikisha and conveyed to the police station. Two Japanese doctors were sent for, and on their arrival pronounced life totally extinct, but they were not prepared to say what was the cause of death. Dr. Simmons was then sent for, but that gentleman was absent from home. It is supposed that the deceased had

been suffering from heart disease, and that his exertions in forcing the other man into the vehicle accelerated his death.

THE fire-bells in Benten rang out the alarm at about half-past nine p.m. on the 18th. The cause turned out to be a large farm house between Kanagawa and Hodogaya, which, by some means or other, had caught fire. It was soon burnt to the ground, but the flames did not spread.

HAKODATE, Feb. 16th, 1877.—Range of temperature for the past week 16° to 40°. Weather mild and changeable with variable winds. On the 14th the telegraph between Awomori and Yedo ceased transmitting private messages, the government, it is reported, having interdicted all such communications on account of the trouble in the south.

THE meeting held by the Kobe Municipal Council, reported below, although called for the purpose of receiving Mr. Newwitter's explanation, resulted in a resolution being formulated, requesting that gentleman to resign the chair. This resolution Mr. Newwitter declined to put until the next general meeting; and there can be no question that he was in his right to do so. There is no doubt either that he acted in a worse than injudicious manner in the matter of the now notorious "address to the Mikado," and we cannot find anything to be surprised at in the consequent action of the members of the Council. If, now, that body should not choose to be satisfied with a complete and public apology from Mr. Newwitter, or if indeed that gentleman should decline to offer one, or, in his own words, "refuse to take one word back," it is to be hoped at least that he will be reasonable enough to meet the wishes of the great majority of the Council and vacate the chair. By so doing he will show that he is not altogether devoid of sense; and will take the best means possible to let his ill-advised proceedings fall gradually into that oblivion which he should be happy to court for them. At the same time, should he refuse, the Council have no means at their disposal to compel his compliance; and he would have as much right to continue to occupy his post during his remaining term, be it long or short, of office, as he had to decline to put the resolution, above referred to, to other than a general meeting or a special meeting convened for the purpose.

THE *Nichi-Nichi-shinbun* states that, owing to the cold weather which has prevailed at Hakodate, the Ice Company there has been able to store about 3,400 tons of ice.

IN the French Consular Court before E. Kraetzer, Esq., Acting Consul, and Messrs. Gerard and Chapsal, Assessors, a Mr. Brun sued Mr. Pequignot for \$150, money lent in two sums of \$125 each. The defendant brought a counter-claim amounting to \$170 for board and lodging and goods supplied. After hearing both sides the Court decided that the account should be considered as balanced, and that the plaintiff pay the costs of the action.

H. E. THE *Chargé d'Affaires* for France in Japan has asked the Acting Consul at Yokohama to convey to the persons who were kind enough to subscribe in favor of the sufferers by the inundations in France the thanks of the French Government. The sympathy displayed by this suscription in

Japan has been gratefully appreciated by the Minister of Foreign Affairs. Mr. Kraetzer is happy to express to the donors the gratitude of the Government. — *Echo du Japon*.

ABOUT two a. m. on the 21st inst. smokes was observed issuing from the French International Restaurant, on lot No. 81, occupied by Mr. Louis Beguex. The native police were the first to observe the smoke, and, hearing the crackling of flames, immediately gave the alarm, and then burst in the door. The fire had gained considerable headway before it was observed at all; and the inmates of the house were sleeping in ignorance of the danger which threatened them. The native police on forcing an entrance rushed upstairs, and assisted the bewildered occupants to throw on a little clothing, and then forced them into the street. The bells were set ringing, and with great promptitude the various fire brigades, both native and foreign, soon arrived on the spot. Their united efforts were for a time almost unavailing, but finally got the mastery of the flames. Before four o'clock all danger was over. Although the fire was subdued it was not until the building had been completely gutted by the flames or the attempts that were made to effect openings so as to allow more room for the fire-engines to play. This fire, like so many others of late, was caused through wood being in close proximity with the grates. It originated upstairs between two bedrooms. Across a corner of each of these rooms is a grate, so constructed that the two communicate in a common flue a few feet above the floor. The partition separating the two rooms is only one brick in thickness, with about half an inch of plaster on either side. At the end of the partition, and at the angle of the two fire-places, was fixed, in a perpendicular position, a balk of wood, some six inches in diameter, reaching from the floor to the ceiling, and entirely separating the brick partition from the chimney. The combined heat from the fires in the two rooms caused this piece of wood to ignite near the floor, when it smouldered upwards and finally broke out into flames near the ceiling, and the fire falling on to the floor set the place in a sheet of flame.

DURING rather foggy weather before daybreak on the 22nd, when the *Nagoya-maru* was off Saratoga Spit she came into collision with a fishing boat, carrying no light, which after being struck went astern apparently uninjured. One man of a crew of thirteen which she carried must have jumped for the wheel box at the moment of collision. He managed to ensconce himself in the box unknown to the people on board the steamer, and remained there till her arrival in port when he emerged, dripping, but none the worse for his trip with the exception of a slight cut over one of his eyes. Instead, however, of going on board he slipped into a sampan and went ashore, where he was stopped by the police who at once took him on board as a suspected person. They probably imagined from the plight he was in that he was an escaped insurgent. He was soon allowed to go away at liberty.

Latest despatches from Europe relative to the Silk Market are very discouraging. Business continues to be completely null, and prices are falling. "Hanks No. 1," which at the date of the last Chamber of Commerce telegram were quoted at Lyons 85 francs, are now worth only 78 francs. — *Echo du Japon*.

An earthquake of several distinct shocks, and

of about forty-five seconds duration, was felt on the 21st inst at 8.50 p.m.

IN THE early part of last week, the case of *F. Escombe & Co. vs. Ito Shimbei*, came before Mr. Yamamoto in the Tokio Saibansho. The claim of the plaintiffs was for \$6,025.37. The defendant admitted the claim, but alleged that, as he was lying in gaol at the instance of a foreign firm in Yokohama, and had no property of his own, it was a practical impossibility for him to pay. So far as the personal property of the defendant was concerned, the court mentioned that it had been examined into, and Ito Shimbei was virtually a bankrupt. The best thing for him to do was to propose some terms of future payment. The defendant then proposed that, in the event of all prosecution being withheld for a period of two years, he had no objection to enter into a bond for the payment of the full amount claimed after a further period of five years. That such a proposal was declined by the plaintiff is not at all surprising, more especially when the notoriety acquired by this same Ito Shimbei in commercial circles is taken into consideration. The questionable manner in which he has succeeded in obtaining immense quantities of merchandise from foreigners on credit, and evaded payment, is not calculated to inspire his creditors with confidence that his promises will be fulfilled, even at the remote period of seven years, and supposing that he then has sufficient property to meet the demands upon him. In the present instance the Judge recommended the plaintiff to accept the proposal of the defendant, but said nothing whatever about how the payment at the end of seven years was to be guaranteed. A bond of Ito Shimpei's might be worth the paper it was written on, but certainly not more, unless it were endorsed by one or two well known responsible firms.

THE *L. & C. Express*, commenting on the *C. O. Whitmore* case, says: "It is to be hoped that the short time the Treaty was suspended will not have allowed the escape of the perpetrators of one of the worst atrocities which has ever come to light." We fear that, through the suspension of the Treaty, Captain Peabody and his mate Snow have escaped from other punishment than may be inflicted upon them by their own consciences.

THE dead body of a Chinaman was observed on the evening of the 22nd floating in the Creek opposite the Railway Station. The police were informed of the matter and removed the body.

THE charge of the Captain of the *Coulmakyle* against some of his seamen for refusal of duty, was, on the report of the Surveyor appointed by H. B. M.'s Court to ascertain the correctness of the statement made by the men concerning the condition of the fore part of the vessel, dismissed, and the master was ordered to pay all costs in connection with the affair. The Surveyor considered that the complaints of the men were not unreasonable, though, if some canvass had been placed over the bulk-heads to prevent the water rushing in when the vessel dipped in a heavy sea, it would have been sufficient until she reached Kobe, when the necessary repairs could have been effected. The Court was of the opinion that the vessel had lain long enough in harbour for the Captain to have had the repairs that were required executed.

THE attendance at the Temperance entertainment on the evening of the 22nd was

about the average. The programme was of the ordinary character, consisting of addresses, songs, readings &c., by amateurs, some of whom deserve great praise for the way in which their particular parts were executed. A little more attention paid to the selection of readings would, perhaps, add somewhat to the attractiveness of the fortnightly gatherings at the Temperance Hall.

THE portion of Homura Creek dammed off between the Mayeda and Nishi bridges, has been thoroughly cleaned and deepened; and preparations are being made for cleansing another portion of the canal. Unfortunately the embankment, which had been constructed to allow the work to be done across the Creek seaward of the Mayeda bridge, has given way and will have to be repaired before the water can be pumped out.

THE U. S. S. *Tennessee*, flying the flag of Admiral Reynolds, in company with the *Ashuelot*, has been passing some time in Siamese waters. Great festivities were held in Bangkok on the occasion of the visit of the flag ship. The two vessels have left Siam for China.

HAKODATE, Feb. 19th, 1877. Range of temperature since the 16th, 27° to 37°. On the night of the 18th we had a gale from South and South-west, hauling to West. On the 19th, snow-squalls and rain. At midnight on the 16th and 17th, the Central Police Station and the "Honjin," or Government Hotel, were burned down. Telegraphic communication is still confined to Government messages.

MR. LOUIS BEGUEX, proprietor of the International Hotel and Café, No. 81, advertises the loss, during the recent fire on his premises, of a leather portmanteau containing jewellery and papers of value, and offers a reward for its recovery. We fear that there can be little doubt of its having been stolen. This morning's *Echo* says that the premises were thoroughly pillaged. Besides the above named objects "linen, books, and clothes have disappeared. Cooking utensils and articles of ordinary use in the restaurant were not passed over by the audacious robbers, who sacked the place, probably under the pretence of aiding the salvage. Some Chinese were seen carrying away in their sleeves tins of preserves of all kinds. It is matter of regret that the police did not arrive in time to put a stop to such depredations, which we cannot imagine could have taken place had they been on the spot." The police were on the spot, and were in fact the first to give the alarm of fire and to break into the house and awake the inmates who were sleeping unconscious of danger. Unfortunately, a great deal of pilfering takes place at every fire, at least at those occurring on the property of foreigners: and the police seem totally unable to prevent it or to bring, in ninety-nine cases out of one hundred, the perpetrators to justice. The true remedy must not be looked for from the police. It is to be found in the establishment of a salvage corps, working in connection with the fire-brigades.

THE bidding for the steamer *Suwonada* at auction was not very brisk. It commenced at \$1,500 and ended when it reached \$3,200, which was the Auctioneer's own bid.

THE evil influences of the civil war now raging are beginning to be manifest already, more especially among native merchants, who complain not only of the uncertainty attached to trading with the provinces, as the fortunes

of war may turn so as to being serious loss upon them, but that the inconvenience is increased through communication by telegraph being closed to private messages, preventing the daily fluctuations of prices being known, and hampering speculation.

THE measure for the admittance of certain classes of accused persons to bail, pending their trial, has been followed by another very important reform. A translation of an enactment to secure greater expedition in the administration of justice in the criminal courts of Tokio will be found below. The measure is, thus, tentative; and, if it is found to answer in the courts in which the experiment is made, will be probably extended throughout the empire.

THE dog-tax is likely to have the salutary effect of clearing the streets of the native town of a number of the mangy pariahs which prowl about there. The other day twenty-four dogs, wandering about apparently unowned, were clubbed by the native police.

THAT the Municipal Council of Kobe do not altogether approve of the action of their Chairman, Mr. Nathan J. Newwitter, U. S. Consul at that port, on the occasion of the recent visit of the Mikado, is evident from the following correspondence handed to the Editor of the *Hiogo News* for publication:—

Hiogo, February 7th, 1877.

To NATHAN J. NEWWITTER, Esq.,

United States Consul, Hiogo and Osaka, and
Chairman, of the Hiogo Municipal Council.

SIR,—We beg to give notice that it is our wish that an Extraordinary Meeting of this Council be called at an early date, for the purpose of hearing your explanation of the address to His Imperial Majesty the Mikado, prepared by you and published in the *Hiogo News* of the 7th instant, purporting to be on behalf of the Members of the Municipal Council.—We remain, Sir, Your obedient Servants, (Signed) Carl Rasch, R. G. Walsh, H. Mackenzie, Arthur H. Groom, G. Duplaquet, and H. W. Livingston.

NATHAN J. NEWWITTER, Esq.

U. S. Consul for Hiogo and Osaka, and
Chairman Hiogo Municipal Council.

SIR,—We, the undersigned, Members of the Hiogo Municipal Council, beg to state that we have perused with considerable surprise an Address which was published in the *Hiogo News* of the 7th instant, purporting to have been presented by you to His Imperial Majesty the Mikado of Japan, on his late visit to this Port. And we have to request that you will explain to us, at an Extraordinary General Meeting of the Council, to be called for the purpose at an early date, by whose authority you took upon yourself to prepare such a document, which appears to us to have been drawn up without the knowledge of any Members of the Council, and which shows a want of courtesy towards them.—We remain, Sir, Yours faithfully, (Signed) A. A. Annesley, Carl Rasch, J. C. Klein, R. G. Walsh, H. Mackenzie, Arthur H. Groom, G. Duplaquet, and H. W. Livingston.

If Mr. Newwitter is not as puffed up with vanity as was Malvolio, he will see that he has, of his own acts, made Japan a little too hot to hold him, and will gracefully retire into that private life which he might adorn. The *Hiogo News* somewhat unnecessarily disclaims all responsibility for any expressions contained

in Mr. Newwitter's address. In the same paper from which we take the above correspondence there are no fewer than three letters to the Editor on the subject of Mr. Newwitter, who has certainly achieved a degree of greatness, but of that quality attained to by the old woman who "saw the Duke of York; and he spoke to her!"

RECENT changes in the temperature have been very great and very trying. Friday and Saturday were as mild and balmy as May days, the dry bulb thermometer at the U. S. Naval Hospital registering 60° Fahr. on both those days. At the same hour on Sunday the same thermometer registered 39° Fahr, showing the startling difference of 21 degrees in two days. Throughout the day the weather was most wintry, light snow-flakes falling at intervals. The change came at about half past 8 p.m. on Saturday, when the wind shifted from S. W. to E. N. E. Just before and during sunset, the atmosphere, laden with dust, presented a peculiar phenomenon. To the eastward it had a dense appearance, which can only be described as one of solidity, of mixed purple and yellow tinges.

ON the 25th inst. at about two p.m. two Japanese policemen from the Bluff Police Station called upon Mr. Gustav Schmidt at his dwelling on the Hill, and informed him that a servant of his had fallen from the roof of the house on No. 95, fronting the Homura Road, which Mr. Schmidt is now finishing for his estate. The policemen added that the man had died, a few hours after the accident, in the house of a Japanese doctor to whose care he had been confided. Mr. Schmidt at once accompanied the two officers to that house, where he learnt that their statement was false, except in so far as the death of the man was concerned. The deceased, as appeared from evidence adduced at an official enquiry held subsequently, had been gambling in a Chinese House on lot No. 135, in an upstairs room, in company with several others: that the Police made a raid upon the premises; and that to escape them he leaped through the window to the ground, and, in the fall, injured himself so severely that he died a few hours afterwards.

FOR some time past gambling has been going on nightly on this lot in the Chinese theatre. We are assured that more than two hundred people have met there for play at one time. The nuisance became so great that complaint was made through the Consuls to the Governor of Kanagawa, and he referred the matter to the Police, who took their measures so effectually on Saturday night, that, having closed all the issues with their men, wearing kimono over their uniform and bareheaded, when the raid was made as many as twelve or fourteen Chinese and an equal number of Japanese were surprised in *flagranti delicto*, arrested and locked up. The gaming tables, money, and counters were seized and impounded, and the gamblers will have to seek some new locality for their trade at present. An eye-witness of the *saute qui pent* which followed the alarm, informs us that it and the chase were most exciting, some of the gamblers, hotly pursued by the police, fleeing over roofs, and dropping unexpectedly, like unwelcome windfalls, into the neighboring compounds. The captured Chinamen were linked together by their tails tightly knotted. Some of the Japanese who resisted arrest were somewhat roughly used; but, with the exception of the fatal accident to Mr. Schmidt's servant, no serious casualty occurred.

NOTICE.

THE interest and responsibility of MR. CHARLES DAVIS MOSS in the co-partnership business of the "JAPAN GAZETTE" ceased by consent on the 31st December, 1876.

C. D. MOSS.

J. R. ANGLIN.

Yokohama, Feb. 7th, 1877.

1m.

NOTICE.

FROM this date MR. WALTER BRENT will take charge of the *Japan Gazette* and is authorized to sign for the proprietor,

J. R. ANGLIN.

Yokohama, Feb. 15th, 1877.

1f.

NOTICE.

THE undersigned beg to thank their numerous customers for past favors and the liberal support they have afforded; and desire to announce that they have transferred their business in this port to

Messrs. KELLY & Co.,

on whose sole account and responsibility the same will be carried on from the first day of the ensuing month of February.

All outstanding accounts must be paid immediately to, and all liabilities of the undersigned settled by, F. R. WETMORE.

F. R. WETMORE & Co.

Yokohama, Jan. 31st, 1877.

1m.

NOTICE.

THE undersigned beg to notify that they have taken over the business, hitherto carried on at No. 28, by Messrs. F. R. WETMORE & Co., and will conduct the same from the first of the ensuing month of February

KELLY & Co.

Yokohama, Jan. 31st, 1877.

1m.

BRITANNIA Fire Association.

THE Agency of the BRITANNIA FIRE ASSOCIATION London, has been transferred by me to Messrs. VALMALE, SCHOENE & MILSOM who will henceforward entertain all applications for Insurance, or claims concerning the said Company.

RONALD C. JAQUEMOT.

ARRIVALS.

- Feb. 9, U. S. Sloop of war *Alert*, Comdr. Maroin, 540 tons, 4-guns, from Kobe.
- Feb. 11, Brit. str. *Benarty*, Potter, 1,120, from Hongkong, General, to Wilkin & Robison.
- Feb. 11, Brit. barq. *Harriet Armitage*, Mailer, 233, from Nagasaki, Rice and Coal, to Ed. Fischer & Co.
- Feb. 11, Brit. schr. *Alerta*, Talbot, 229, from Takow, Sugar, to Walsh, Hall & Co.
- Feb. 11, Jap. str. *Meiji-Maru*, Peters, 1,010, from Kobe.
- Feb. 12, Brit. str. *Oceanic*, Parsell, 3,700, from San Francisco, Mails and General, to O. & O. Co.
- Feb. 12, Jap. str. *Hiogo-Maru*, Christensen, 900, from Hakodate, Mail and General, to M. B. M. S. S. Co.
- Feb. 12, Am. barq. *Ann's W. Weston*, Winsor, 740, from Cardiff, Patent Fuel, to M. M. Co.
- Feb. 13, Brit. barq. *Serpent*, Abell, 300, from Nagasaki, Coals, to P. M. S. S. Co.
- Feb. 13, Ger. brig *Otto*, Adamson, 280, from Takao, Sugar, to Chinese.
- Feb. 13, Ger. brig. *Turtur*, Kainan, 256, from Hongkong, General, to Order.
- Feb. 13, Am. schr. *Mary Jane*, Brinkmeier, 159, from Kobe, Coal and General, to E. C. Kirby & Co.
- Feb. 14, Am. Barquentine *Almatia*, Blanchard, 387, from Nagasaki, Coals, to E. Fischer & Co.
- Feb. 14, Brit. str. *Galley of Lorne*, M'Donald, 1,389, from Hongkong, General, to Jardine, Matheson & Co.
- Feb. 15, Jap. str. *Saikio-Maru*, Vroom, 2,145, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
- Feb. 19, Jap. str. *Sumida-Maru*, Gorlach, 893, from Hakodate, Mails and General, to M. B. M. S. S. Co.
- Feb. 19, Frch. str. *Menzaleh*, Pasqualini, 1,008, from Hongkong, Mails and General, to M. M. Co.
- Feb. 19, Ger. barq. *Christine*, Wildfang, 542, from Cardiff, Coals, to M. M. Co.
- Feb. 19, Jap. str. *Genkai-Maru*, Hussey, 1,917, from Kobe, Mails and General, to M. B. M. S. S. Co.
- Feb. 21, Danish brig *Jylland*, Lamb, 267, from Takow, Sugar, to Chinese.
- Feb. 22, Jap. str. *Nagoya Maru*, Conner, 1,914, from Shanghai and ports, Mails and General, to M. B. M. S. S. Co.
- Feb. 23, Brit. str. *Sunda*, Reeves, 1,704, from Hongkong, Mails and General, to P. & O. Co.
- Feb. 25, Am. str. *City of Peking*, Tanner, 5,079, from Hongkong, Mails and General, to P. M. S. S. Co.

DEPARTURES.

- Feb. 9, Jap. ship *Niigata-Maru*, Walker, 1,685, for Shinagawa, Ballast, despatched by M. B. M. S. S. Co.
- Feb. 10, H. B. M.'s S. *Modeste*, Capt. Buller, 2,106 tons, 14-guns, for Kobe.
- Feb. 10, Brit. bark *Parmenio*, Abbott, 396, for Kobe, Ballast, despatched by Captain.
- Feb. 11, Brit. str. *Gaelic*, Kidley, 2,756, for San Francisco, Mails and General, despatched by O. & O. Co.
- Feb. 11, Brit. schr. *John Mackean*, Lucas, 198, for Nagasaki, Ballast, despatched by C. A. Fletcher & Co.
- Feb. 11, U. S. gunboat *Palos*, Baker, 305 tons, 6-guns, for Nagasaki via Kobe.

- Feb. 12, Jap. str. *Meiji-Maru*, Peters, 1,010, for Kobe, despatched by Lighthouse Dept.
- Feb. 13, Brit. str. *Oceanic*, Parsell, 3,700, for Hongkong, Mails and General, despatched by O. & O. Co.
- Feb. 13, Frch. str. *Tibre*, de Girard, 1,009, for Hongkong, Mails and General, despatched by M. M. Co.
- Feb. 14, Jap. str. *Tokio-Maru*, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
- Feb. 15, Brit. barq. *Serpent*, Abell, 350, for Nagasaki, Ballast, despatched by Captain.
- Feb. 16, Jap. str. *Tanaka-Maru*, Nye, 560, for Hakodate, Mails and General, despatched by M. B. M. S. S. Co.
- Feb. 17, Jap. str. *Tokai-Maru*, Ward, 656, for Kobe, with Troops and War Material.
- Feb. 17, Brit. str. *Benarty*, Potter, 1,120, for Kobe, General, despatched by Wilkin & Robison.
- Feb. 18, Brit. barq. *Harriet Armitage*, Mailer, 233, for Nagasaki, Ballast, despatched by Ed. Fischer & Co.
- Feb. 20, Brit. str. *Malacca*, Edmonds, 1,709, for Hongkong, Mails and General, despatched by P. & O. Co.
- Feb. 20, Jap. str. *Saikio-Maru*, Vroom, 2,145, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.
- Feb. 21, Jap. str. *Sumida-Maru*, Gorlach, 896, for Kobe, with troops.
- Feb. 22, Brit. str. *Galley of Lorne*, M'Donald, 1,389, for Hiogo, despatched by Jardine, Matheson & Co.
- Feb. 22, Brit. ship *Coulnakyle*, Gordon, 579, for Hiogo, despatched by L. Kniffler & Co.
- Feb. 23, Jap. str. *Genkai-Maru*, Hussey, 1,917, for Kobe, with troops.
- Feb. 26, Jap. str. *Nagoya-Maru*, Conner, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

PASSENGERS.

- Per Jap. str. *Genkai-Maru* for Kobe:—Messrs. P. S. Dowson, and M. T. B. Macpherson.
- Per Brit. str. *Gaelic* for San Francisco:—Messrs. L. H. Clifford, W. Harvey and wife, Ross Fox, F. A. Goddard, W. P. Lyon, G. Videau, G. Bardack, J. H. Brooke Jr., F. C. Peters, and N. Fleney.
- Per Lighthouse Tender *Meiji-Maru* from Kobe:—H. B. M. Minister and Secretary of Legation, with one trooper and two servants; the Italian Minister, Interpreter and servant; the Russian Minister, Secretary of Legation and servant; the Austro-Hungarian Minister, Secretary of Legation and servant; the Spanish Minister and Interpreter; and the Secretary of the French Legation and three servants.
- Per British str. *Oceanic* from San Francisco:—Messrs. W. P. Brooks, J. Isaacs, C. E. Hill, F. Jasper, W. Clutterbuck, K. Yosio, J. Kawachi, M. Ishawara, J. R. Morse and wife, and W. J. Chaplin and wife.

FOR HONGKONG.

- Mr. J. Brown, Mrs. Wyman; and 111 in the Steerage.
- Per Frch. str. *Tibre*, for Hongkong:—Messrs. P. McMaster, Hansen, Zembsch, W. Heise, and Hunt.
- Per Jap. str. *Tokio-Maru* for Shanghai and ports:—Messrs. Hiyashi Yuzo, Goto Shogiro, Miya Aki, Mori, Yasuda, Omdzuka, Hosokawa, Hosokawa, Jr., Sekiguchi, Hata-yama, Tanimoto, Kitamura, Nakajima, Komuro, Tanaka, Hiroda, Nabeshima, Nabeshima, Jr., Oye, Tsuzoya, Kokura, Tashiro,

Shibuya, Shimadzu, Hirose, Kasuda, Yamaguchi, Okamoto, Setoguchi, Ijuing, Yamada, Chas. E. Hill, C. Rickerby, Kadoma, Funaki, Okamoto, Nozu, Yeend Duer, Huggan, Murai, Hirose, Koeki, Masuda, Arima, Honcho, Kawano, O'Otuka, J. N. Sawkins, Mr. and Mrs. Nakamura, and 2 children, Iwazami Ko-o, H. MacGregor, Takahashi, Itagaki, Yamanchi, Tanaka, Seiki, Tatekawa, Sugimoto, Masuma, Ota, Furugaki and Koreishi.

Per Jap. str. *Saikio-Maru* from Shanghai and ports:—Mr. and Mrs. England, Miss Cargill, Hon. J. Saumarez, Messrs. Cargill, Strachan, Armstrong, Aldrich, Reid, Samejima, Monze, Ishibashi, Nagata, Nakamura, Miura and Hinoshi; and 109 in the steerage.

Per Frch. str. *Menzaleh* from Hongkong:—Messrs. Ullmansa Sura and Boissand.

Per Brit. str. *Malacca* for Hongkong:—Miss Gray, and Mr. H. Woollett; and 1 Chinaman in the steerage.

Per Jap. str. *Saikio-Maru* for Shanghai and ports:—Mr. and Mrs. Illies and infant, Mr. and Mrs. R. M. Brown, Messrs. Hiraya, Kuroda, Kato, Lieut. Hiyashi, J. N., Takashima, Mouye, Yamada, Nichishima, Sasaki, Watanabe, Mrs. Ishikawa, H. Kniffler, C. D. Moss, Okauchi, Kuruoka, Kikuda, 19 Police Officers, and 25 Military Officers.

Per Jap. str. *Nagoya Maru* from Shanghai, and ports:—Revd. S. L. Hoyt, Mrs. Hoyt and 4 children, Mrs. Myers and 2 children, Mrs. Carruthers, Miss Shimadzu, Captain Bridgeford, R.M.A., Captain Brown, Dr. Sibund, Messrs. John Robertson, Duplaquet, Bouree, Kempermann, Huggan, Higikata, Onishi, Siki, Sada, Maruta, Kawabe; and 3 Europeans, 3 Chinese, and 151 Japanese in the Steerage.

Per Brit. str. *Sunda* from Hongkong:—Mr. Cox and Mrs. Schraub; and 4 Chinese on deck.

Per Am. str. *City of Peking* from Hongkong:—Captain F. Williams, and Mr. A. Marks, wife, 2 children and servant.

FOR SAN FRANCISCO.

Mrs. E. Hamilton, Mr. G. W. Stave, Mr. A. Freig, Miss M. Anderson, Mr. J. H. Drummond and wife, and Mr. Petersen.

REPORTS.

The British steamer *Oceanic* reports:—Sailed from San Francisco January 16th, at noon. Hard Westerly gales with high sea, almost the entire passage.

The German Brigantine *Tartar* reports:—Sailed on 26th December from Hongkong, bound to San Francisco. Had constant heavy gales from N. E. with heavy seas, washing away bulwark, &c., and doing a considerable lot of damage. Bore up for this port to repair.

The American Barquentine *Almatia* reports:—Sailed from Nagasaki at 8 a.m. on the 14th January. Had strong N. W. wind along the coast. Arrived here at 6 a.m. this morning.

The German barque *Christine* reports:—Sailed from Cardiff Sept. 18th: came through Ombay and Sillolo passage: light winds: since arrival on coast heavy gales from N. E.

The British steamer *Sunda* reports very heavy weather after leaving Hongkong and up to the coast of Japan.

The American steamer *City of Peking* reports:—Sailed from Hongkong on February 19th, at 3.20 p.m. To Feb. 23rd had light variable winds and smooth sea: and thence to port fresh gales from N.N.W. and clear weather. Arrived at Yokohama February 25th, at 6.30 p.m.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

The political troubles referred to at length in the Mail Summary sufficiently explain the almost total inactivity of the market for manufactured goods of all classes. Actual transactions have been very small at declining prices, and the quotations given below are entirely nominal.

11,000 piculs of new Formosa brown Sugar have changed hands at \$4.15 @ 4.42½, and a fair demand continues.

The steamers *Benarty* and *Galley of Lorne*, with general cargoes from London, and the barques *Annie W. Weston* and *Christine*, both with coal from Cardiff, have arrived. Transhipped cargo ex steamers *Enphrate* and *Deccan* from London, *Stentor* and *Patroclus* from Liverpool, and *Tigre* from Marseilles, is also to hand.

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—Business, which at the commencement of the fortnight appeared to be likely to revive a little in consequence of the concessions made by holders, was quickly stopped by the bad news received from Europe; and the rise of \$15 to \$20 which had at first occurred was soon lost. Since then the market has fallen into complete inactivity, and purchases have been absolutely null. The quotations which we give below must thus be considered quite nominal. Buyers, did they show the smallest inclination to purchase, might buy at slightly lower figures; but directly the Japanese perceived that Europeans were willing to come into the market, they would raise their demands. After all, there is perhaps no reason to be very much alarmed at the low rates prevailing in Europe. They have been given, it is said, only in the case of the forced sales made on account of a House which had gone a great deal too far during the season, and had to submit to the consequences at all hazards. There can, indeed, be no question that the consumption of the material has not been so great as was hoped for; but, whatever may be the causes, the actual fall is evidently exaggerated; and, if only other holders will keep up their courage, when once the forced sales to which we allude are completed, the European markets will certainly become firmer, especially for fine silks, which, beyond dispute, are by no means abundant.

But, however things turn out, we are now affected here by the consequences of the situation; and that is the more easily understood that the Japanese merchants are now under the influence of other preoccupations arising out of the political events which are taking place in this country.

The French Mail, which left this morning, took 86 bales, bringing up to about 19,430 bales the total of exportations to date. Stocks are now estimated at 1,800 bales. Arrivals are very few. Total for the season so far 23,700 bales.

TEA.—A moderate business at declining rates has been done during the period since the date of last issue, settlements amounting to 2,000 piculs, and prices showing a decided tendency downwards.

Supplies are coming in very slowly, and stocks here are almost nominal. It is quite evident that most of the season's produce has already come to market.

From the very low prices which the higher grades have realised this season in comparison with medium classes, it is not improbable that in the coming season the supply of these will be much curtailed, as the country merchants complain that they do not pay in proportion to the extra amount of expense entailed in their preparation.

The Japan Gazette

MAIL SUMMARY, SHIPPING AND MARKET REPORT.

PUBLISHED TWICE A MONTH.

Per O. & O. Str. "Oceanic,"
and M. M. Str. "Menzaleh."

YOKOHAMA, MONDAY, MARCH 12TH, 1877.

Single Copy, 25 cents.

THE "Japan Gazette" MAIL SUMMARY.

FROM 27TH FEB. 1877.

BIR
On the 24th instant, at
FAULDS, of a son.

MARRIAGE.

On the 8th March, at H. B. M.'s Consulate, and afterwards at Christ Church, by the Rev. E. W. Syle, M.A., assisted by the Rev. W. F. H. Garratt, M.A., FRANCIS AUGUSTUS, fifth son of the late A. L. COPE, Esq., of Peckham, Surrey, to ELIZABETH THERESE, only daughter of J. M. JAQUEMOT, Esq., of Yokohama.

DIED.

On the 1st instant at No. 88, Settlement, N. STIBOLT, aged 46.

OUR last Mail Summary was despatched per P. M. Steamer *City of Peking*, which left this port at daylight on the 28th February. Since that date we are in receipt of the following mails:—

	DUE.	ARRIVED.
French Mail	Mar. 4.	Mar. 3.
American "	Mar. 10.	Mar. 7.
English "	Mar. 10.	Mar. 8.

Latest dates are:

London.....	Letters	Jan. 19.
"	Telegrams	Mar. 9.
New York	Letters	Jan. 23.
"	Telegrams	Mar. 9.
San Francisco	Letters	Feb. 1.

Summary.

BUSINESS, during the short interval which has elapsed since the publication of our last summary, has been very dull, having been almost completely interrupted through the Satsuma insurrection. With reference to

this rising we are still in the dark as to the actual nature and extent of operations undertaken to repress it, the Government still abstaining from making any official reports, and enforcing the regulations which restrict the press in reporting progress. If what rumors do find their way into the papers are to be trusted, the balance of success has rested with the Imperial forces, who have, nevertheless, even from that testimony, sustained several severe checks. The siege of Kumamoto by the insurgents has not yet been raised by the troops; and it is there that Saigo is and that the result, one way or other of the campaign must declare itself. Reports which are, naturally enough, not published in the Japanese journals, assert that Saigo's demands have assumed a definite complexion and that he asks for nothing more nor less than virtual home rule for Kiusiu, which island would, however, under the scheme he has devised, still be a part of the empire of Japan, and retain a nominal allegiance to the Mikado. It appears certain that Shimadzu Saburo has not declared himself for one side or the other. The native papers state that when Saigo was going to set out for Kumamoto from Kagoshima at the head of his forces, he, on two occasions, sought an interview with the old chieftain, and was twice refused admittance to his presence. While the Japanese papers are writing in a high flown style of the efficiency and loyalty of the navy, of men-of-war watching all parts of the coast and mouths of the rivers of the insurgent province, of rebel junks seized, and steamers captured or sunk, other rumors through other, and probably more reliable sources, state that the Navy sympathise with the Satsuma people, and that the crews of the men-of-war have refused to fire a gun. Under such circumstances it is, of course, impossible to predict with even approaching accuracy what the result of the struggle will be; but those best informed think that a compromise will have to be come to, and state that negotiations have been opened by the Government with Saigo; and others who have the real welfare of the country at heart, hope that this may be so. There is no doubt that an Imperial messenger has been sent from Kioto to Satsuma to confer, if possible, with Shimadzu, through whose intervention probably it is hoped that arrangements may be come to.

A JAPANESE in the act of buying some ammunition at an auction room in the settlement was prevented by the police from concluding his purchase, and taken into custody.

HAKON Kirchhoff (alias Auton Bennett) the Dane implicated in the Hongkong and Shanghai Bank-note forgery, has been sentenced, in the Consular Court of his country, to twelve months' imprisonment. The fate of the other three men in custody on the same charge is not yet decided.

THE Chamber of Commerce annual meeting has been held, and the report for 1876 published. It will be found in this summary.

A VERY heavy snow storm, followed by pouring rain, occurred on the morning of the 5th instant. A smart shock of earthquake was felt soon after midnight of the 5th—6th instant.

THE programme of the Spring Meeting of the Yokohama Racing Association has been issued. The days fixed for the meeting are Thursday, Friday, and Saturday, 10th, 11th, and 12th May.

SEVERAL cases have occupied the attention of the Law Courts. The Judicial Court of Kanagawa (native) has before it a suit for breach of contract brought by Messrs. Van Oordt & Co. against Japanese. The master of the American barque *Annie W. Weston* has had his men before the U. S. Consul General on a charge of refusing duty. An English girl, servant to the wife of the captain of the same vessel, has been charged before H. B. M. Consul with concealing the birth of her child on board, by throwing its dead body into the Bay of Yedo.

It has been decided, at a full meeting of residents, to establish a Volunteer Corps, for the better protection of the settlement.

THE *Alaska*, which left San Francisco on the 1st February, did not arrive till the 7th inst. She experienced very heavy weather on the passage.

WE learn that the War Department intend shortly to take over from the Lighthouse Department either the *Thabor* or the *Meiji-maru*, but which of the two is not yet decided.

THE SOUTHERN DIFFICULTY.

A PARTIAL analysis of the conflicting reports from the scene of civil warfare now raging in Japan, tends to show that our preliminary examination into the pretensions of the insurgents had not only the merit of logical reasoning, but a tincture of the actual truth, in anticipating the real object of the important rising which promises to bring about a revolution in the internal administration of the affairs of this country. Before proceeding with a *résumé* of the intelligence received, it may not be out of place to animadvert on the practices alleged to have been followed by the Imperial troops in their mode of warfare, if the petty encounters of outlying rebel pickets with the advanced detachments of the Government troops, can be dignified by that title. The *Choya Shinbun* says that on the 23rd February a party of the insurgents engaged the Imperial forces at Uyeki, "but before the engagement was decided the troops set fire to the village, and were preparing to advance." The *Hochi Shinbun* says, "on the 23rd February the Imperial forces set fire to the city of Fukuoka, and then advanced against the insurgents who were defeated with considerable loss." On the 26th February the *Japan Herald*, referring to the insignificance of the affairs reported to have occurred between the Imperial troops and the rebels, expressed a sense of contempt for the troops, supposed to be in the service of order, gratifying their feelings of revenge by burning down villages and towns, a feeling which every right-minded man of the present century will share. It is impossible to look on the advance of the Imperial troops, leaving in their rear the smoking remains of villages composed of the mildest, most inoffensive, most even-tempered, and most hospitable people of which travellers have any experience, without a feeling of pity akin to contempt for the commanders who consider their duty authorizes them to spread havoc and destruction of this nature, at the beginning of a struggle which, if suppressed now, will ere long again spring into life, and so on until the final object of the movement is accomplished. We very much fear that the Government is too anxious to have it generally understood that the rebels are being worsted, even to the destruction of their farms and homesteads, to give a flat and emphatic contradiction to rumours so prejudicial to the reputation of the Imperial troops; and we are forced to concede that the reports received respecting the destruction of Uyeki and Fukuoka by the Imperial troops setting them on fire, is too true.

On the 27th we reproduced a report to the effect that SAIGO (the elder) had made his appearance at Kioto and presented to the MIKADO a memorial comprising eleven demands, all of which were categorically refused, and that he had, thereupon, returned to Satsuma. A more improbable story could not well be invented. The dignity of the elder SAIGO; his official rank as Commander of the forces; his family influence; his personal popularity; his intense patriotism; and the earnestness of his views for the benefit of his native country, whether erroneous or not, all tend to point to him as the very head and front of the offensive movement, an inference which the presentation of a memorial would have confirmed. This, in combination with the knowledge which the Government must have had for some time past, of the growing discontent in the South, leads to the reasonable conclusion that if the lion had been once in

the toils he would never have escaped. The exception we have taken to the above mentioned report is somewhat of a distinction without a material difference; SAIGO did not appear at Kioto, nor had he an audience of the MIKADO; but the fact that he has embodied the grievances of the party he represents in a memorial, seems to be an admitted fact. The same paper adds. "It is further said that Itagaki also had an audience as delegate from Tosa, but for what purpose is not known." Itagaki, it will be remembered, resigned office with Shimadzu at the time of the Choshu troubles, and was mentioned by the latter in terms of great esteem in the protest which he then presented to the Emperor." It has been reported that the powerful house of Shimadzu is not connected with the present movement, but we hear at the same moment that the MIKADO has despatched special envoys to convey a message to the house of Shimadzu, and that the Government have not given up all hopes of arriving at a peaceful solution of the Satsuma difficulties. We gather from this that the subjects of the memorial prepared by SAIGO and submitted to the MIKADO, have upon further reflection been found entitled to consideration, but for the Imperial Government to treat directly with the chief of the rebels would be a confession of weakness calculated to create alarm amongst its warmest partisans, consequently the country is informed that "His Majesty has despatched special envoys to the house of Shimadzu."

The *Nichi Nichi Shinbun* on the 27th February published what purported to be the programme of the rebels issued by their leaders to the following effect:—

1.—Touch nothing which belongs to the Government.

2.—Do not molest or kill any Government official.

3.—Do not act in any way likely to cause distress to the people.

Which indicates clearly enough that the demands of the South are an appeal to Right and a prayer for a reform in the Government, or for a change in the *constitutionnel* of the present ministry. It is devoutly to be wished that the MIKADO has heard enough of the Southern movement to induce him to lend an ear to the complaints of so considerable a section of his subjects, and if the rumour or report referred to above, that the telegram of 26th February has any foundation in truth, there is a strong indication that the Government, or the immediate advisers of the MIKADO, are now disposed to temporize with the object of effecting a peaceful solution of an otherwise hopeless question. The telegram runs as follows, "To-day His Majesty himself appointed Yanagiwara and Hanabusa as special envoys to convey a message to the house of Shimadzu."

Several engagements are alleged to have taken place in which the Imperial troops are said to have been victorious. That they have succeeded in destroying two unfortified agricultural towns seems clear; but the truth of their successes is open to considerable doubt. If the sorry skirmishes reported, in which rebel pickets are driven back by advanced guards of Imperial troops, are to be magnified into "great successes," what will be reported when SAIGO himself appears at the head of his troops!

The latest news leads to the belief that the Imperial forces have been far from signally successful in their encounters with the out-

posts of the rebels. The reports published in the native newspapers are of a dubious, uncertain character, rendered weaker by the fact of the censorship of the press exercised by government, but they seem to indicate a lukewarmness on the part of the royalist army which bodes ill for the cause; and that the rebels are not in a worse position than they were in a week ago.

The initiative having been taken by the MIKADO in the dispatch of envoys to the south, the next news will probably relate to a suspension of hostilities.

IT is rumoured that the navy has refused to fight, and that signs of disaffection are manifesting themselves among the Imperial forces. If this news is correct, it may be surmised that the siege of the Castle of Kumamoto will soon be raised. The demand of SAIGO is also said to have assumed a definite shape in the minds of well-informed persons. It is no less than that the Island of KUSIU, though continuing to acknowledge the supremacy of the MIKADO, shall be allowed self-government. We had always thought that the adoption of Western civilization emanated from the Government, whilst the SATSUMA proclivities were conservative in their nature; but a Home Rule movement, originating with SAIGO, would tend to show that his party have made more rapid strides than their brethren of the North. We shall not be in the least surprised to hear of the appearance at KIOTO of Japanese prototypes of Messieurs SULLIVAN and BUTT; and it will be interesting to watch the developments in Japan of an agitation which has evidently been copied from the active restlessness of the Home Rulers of Great Britain. Seriously, the integrity of the Empire would seem to be threatened, unless the Government prove strong enough to withstand the demands now made upon it. But SANJO and TERASHIMA can scarcely count upon the support of their home policy, that a BEACONSFIELD and a DERBY command for their conduct of the foreign affairs of GREAT BRITAIN. They may yet learn, when too late, the mistake they have made in not making some concession to the demands that have been preferred to them for the formation of a Representative Government. The wishes of the people will make themselves heard in one way or another; and we cannot but admit that there has been on the part of the Government an absence of that "due deference" which IYAYASU says should be manifested towards the governed.

THE SOUTHERN DEMANDS.

NOTHING is more exposed to misconception than the officious partisanship of foreigners in the domestic disputes of a nation to whose laws they are not subject. So far we have carefully abstained from doing more than recording, from day to day, the rumours spread in the Capital and reflected in the native press, touching the movement, ostensibly against the Government, which has sprung up in the southern part of this empire. It must have been apparent to every reader that the information vouchsafed to the native press has been of the most meagre and untrustworthy character, and that the real point at issue between the established government and the southern confederacy, is involved in almost hopeless obscurity. To attempt the elucidation of the merits of the question is beyond our power,

nor have we any intention of doing so, but the gravity and importance of the preparations known to have been made by the government, and the generally supposed numerical strength of the opposition, seem to indicate that the time has arrived for a preliminary examination of the pretensions of the so called insurgents.

The chief supporters of the established government are its own dependents, numbers of whom have been alienated by the wholesale dismissals from office so recently recorded; the movement in the south appears to have gained an amount of popularity amongst the samurai and the other classes of the people holding humbler rank, which it could not have earned were it a mere rebellion of a clan, or an insurrection instigated and pressed forward by a turbulent province, or an ambitious and discontented daimio. The causes lie deeper, and are of such magnitude as to dignify the movement as one of national importance superior to the mere order of the government for its suppression.

SAIGO is Generalissimo of the Imperial army; he has not been deposed; and he remains in the very heart of the territory in which this movement originated. This should mean that he is either faithful to, and upholding the Imperial arms, or that he is quiescent and contemplating no immediate action. Whatever course he may hereafter elect to pursue will be the hinge upon which the whole movement will turn, and it is open to considerable question that General SAIGO will oppose an armed resistance to the Imperial standard when raised by the prince of the MIKADO's family who is now in command of the expedition despatched against the insurgents. General SAIGO's disagreement with the present ministry of this country has been in existence for more than two years, during which time he has retired from the active duties of his post at the capital, and has dedicated himself to the improvement of the military power in Satsuma, either for the benefit of that clan, or for the augmentation of the army of the country of which he still holds the high office of Commander in Chief. It would be vain to assume that a man of such noted ability, energy and unquestioned loyalty to the person of the MIKADO, as General SAIGO is admitted to be, should coalesce in a movement of the present description, without having calculated to an exactitude upon its result, and upon the persons of position and influence upon whom he can rely. If, therefore, General SAIGO is faithful to the Imperial Government, how are we to reconcile his inactivity with his known loyalty, unless we suppose that he is waiting to take the lead in a movement which has the support of influential members of the cabinet, if not of the MIKADO himself; or that the cause he may find it necessary to advocate and support, is of so grave a nature as to leave him no alternative but to espouse it, regardless of personal consequences.

The grievances of the south giving rise to this revolution, though few in number, are of national importance; the constitution of the country is not threatened, and, so far as we can understand, the movement is one against a section of the present cabinet only; the insurgents are said to allege, though with what truth or justice we know not, that a certain number of the ministers are men whose private necessities have been more urgent than the exigencies of the country they were appointed to govern; that the administration of justice has been subor-

dated to the will of the ministry; that wrong-doers who formerly held high positions in the Government have escaped the proper punishment due for high crimes and misdemeanours, which could not be committed with impunity in any other country having the slightest pretensions to civilization or enlightenment; that the impunity granted to the powerful wrong-doer is really an oppression of the weak which can no longer be tolerated; and that the representatives of a considerable section of the people have improperly been denied access to the MIKADO for the purpose of presenting their complaints to him.

We confess it must at first glance appear strange to subjects of constitutional powers, that an obnoxious minister or ministers can only be removed by an armed demonstration at least, and possibly by a civil war of indefinite probable duration. In England an unpopular ministry of this century is powerless and has no alternative but to give place to those men who possess, in a higher degree, the confidence of the people. This privilege, however, has not been acquired and preserved without a series of struggles; Magna Charta would never have been granted by the despicable tyrant whose actions were a constant source of degradation to his country, had it not been for the powerful armed demonstration of the barons. In this country the expulsion of a minister obnoxious to the people at large is impossible without an appeal to arms, or such demonstration of force as shall remove all doubts as to the issue of a conflict. It is therefore not unreasonable to suppose that the attitude of the South arises from a strong desire and determination to see the ministry cleared of those who are incapable, and strengthened by new members who should better represent the real wants and requirements of the country. The memorial to be laid before the MIKADO is supposed to be one calling for reform in various departments of the state: the more equitable taxation of the people: the purer administration of justice: supervision over the revenue, its collection and expenditure; and redress for the arbitrary and forced commutations of the pensions of the samurai.

If our views be correct we shall not be surprised to hear of a great triumph of the Imperial forces. General SAIGO's chief object is to temporize, and upon an assurance being given to him that the requirements of the country, as expressed in the memorial, shall receive the consideration of the MIKADO in person, the object of the movement will be attained, and the Government will achieve a bloodless but hollow victory. If the Ministry, however, are determined to press matters to an issue at all hazards by force of arms, who can estimate the consequences? The people of the South, hardly serious now in their warlike demonstration, would become enthusiasts, as the coldest bodies warm with determined opposition, and grow to a violent heat when that opposition is unjust and oppressive: their passions would become engaged, would create a maternal affection in their minds for the cause for which they suffer, and would prolong a war utterly unworthy of a nation such as this is, and promises to be in the future.

Since this article was written, we have seen a report in the *Nichi-Nichi Shinbun*, translated below in our narrative of the progress of the insurrection, announcing the deposition of Saigo, by the Imperial Govern-

ment at Kioto. Should the rumour be well-founded, the declaration of the intentions of the late Commander-in-chief will, no doubt be hastened. He is believed to exercise complete control over the Southern insurgents among whom his *prestige* and his popularity are said to be so great that the order of the Government removing him from his post is not only likely to be ineffectual, but to create another and very formidable grievance to be added to the already long list which we have given above. The deposition of Saigo, by identifying him with the insurrection, is likely to put a very powerful weapon in the hands of its leaders, with whom his then open association would be the event to be most naturally expected and most dreaded by the government. With Saigo still Commander-in-chief, whether actually in the field or not, the loyalty, of the great majority at least, of the army was assured; but, if he is deposed, that loyalty becomes more than doubtful. It is hardly necessary to add that the defection of the army means the success of the insurrectionary movement, and the full consummation of all the wishes of its promoters.

CHAMBER OF COMMERCE.

PERIODICAL reports when issued by Chambers of Commerce are generally reviews of trade, and of the mode in which it is conducted, of considerable importance to the trading world. About eleven years ago a Chamber of Commerce was founded in Yokohama, and proved, for some few years, of very considerable service to foreign merchants engaged in commercial transactions with a country having at that time no mercantile law whatever, while the pursuit of commerce was looked upon with contempt; little or no code of honour regulating trade; an unequal and fluctuating currency, but a rapidly increasing demand for the manufactured goods of European and American production. With one or two notable exceptions legal jurisdiction over aliens resident in Japan, was in the hands of trading Consuls, men in almost all instances unversed in the merest smattering of law; too much interested in person to be impartial judges of questions of right-dealing with the natives; and wholly incompetent to administer, or to deal with the spirit, of that extensive code of civil jurisprudence known as the "Law Merchant." The founders of the YOKOHAMA GENERAL CHAMBER OF COMMERCE among other, but not more important, duties to be undertaken by the newly organized association, intended to frame a system for the better regulation of foreign trade; to reduce it to a practical working form; and to secure the co-operation of the Ministers for the purpose of establishing a custom or usage which could be cited as an authority in future matters of dispute or questionable dealing. The intention was excellent, and, like many others, would have been highly successful if the Chamber had had power to enforce its decrees when issued, or the observance of the regulations admittedly necessary for the common welfare of the traders of Yokohama. In order to ensure the practical working of these regulations the Chamber would have formed itself, on special occasions, into a tribunal of commerce; but the primary causes which led to the defeat of this object were somewhat similar to those which induced merchants, in numerous instances, to settle all their disputes, in however irregular a manner, without recourse to the merchant

Consuls. Their unwillingness to submit to the arbitrament of the Chamber arose partly from a natural dislike to incur the risk of the chance decisions frequently rendered by arbitrators, who too often consider themselves authorized to be judges of the facts and of the apparent justice of each particular case, without regarding the law upon which one of the parties may have relied, and acted up to with perfect good faith. The other and more cogent reason was the great objection to the exposure of business secrets to brother merchants, probably competitors, engaged in the same or a similar business to the parties to the dispute, and in consequence the movement, creditable as it was to its originators, was never perfected, and as a matter of fact the regulations of the Chamber of Commerce, never having been enforced, are never referred to by merchants, nor have they ever been cited in a court of law with the view of proving the usages of trade in this port. The functions of the Chamber as a tribunal of commerce having thus been strangled in their birth, the members still thought the foreign mercantile community would be better represented as a body having common action in matters of trade, and it was tacitly understood that the Chamber should devote itself to form a representative body for the investigation of trade irregularities; for the preparation of trade statistics; and, generally, for the furtherance of the interests of foreign trade in Japan. This being shortly the position of the Chamber, we have to consider how its duties have been performed.

The earlier chairmen and office-bearers were men of the first mercantile position and business experience, and their successors have been chosen for the same invaluable qualities; but towards the close of the year 1872 it became apparent that the utility of the Chamber was more than doubtful. The measures recommended were, seemingly from want of proper concerted action, of the weakest; its influence gradually waned, and an unfortunate schism, arising out of the question of telegrams, ended in the secession of some of the most important firms. From that time, in spite of the efforts of the remaining members whose business, experience and ability no one can question, the Chamber seemed to lose weight and ground; and the prominent position it once held in this settlement, it holds no longer.

The year 1876 was in many respects remarkable for the sudden and we may say violent changes in the import and export trade with Japan. Silk rose from about the lowest figure it had ever reached to the highest; the supply increased with the demand; merchants discounted their orders and advices, and competed with each other to the chief if not sole advantage of the producer; the export doubled the export of the previous corresponding term, and excitement, that springs from gambling of the most reckless kind, reigned supreme over the silk market. Tea, on the contrary, gradually receded both in quality and price; rice became an article of export and now gives fair promise of forming an important item in future calculations; imports were vastly in excess of any previous season, and began to do what they had not done for years before—yield a fair profit for the labour and capital expended upon and invested in them: the state of the native currency and the almost insuperable obstacles in the way of making it a medium of exchange: the action of three of the foreign banks in refusing native bank notes, to the

great inconvenience of their constituents: the Kuma-moto insurrection, its speedy suppression and revivification, and its effect upon commerce; the rapid advances made by the Imperial Japanese Government in the formation of marine boards, the certification of masters and officers of vessels; the pilot regulations; the system of administration of justice in cases where foreigners are plaintiffs; the superiority of the Mitsu Bishi Company to the puny opposition of the P. and O. S. N. Co., and the rapid extension of the fleet and operations of this semi-government undertaking, are all matters of vital importance to the mercantile community of this place, and we not unreasonably looked forward with some expectation to the promised annual report of the YOKOHAMA GENERAL CHAMBER OF COMMERCE. Dickens, in one of the happiest of his clever satires on the abuses of Government departments, has written, "Whatever was required to be done, the Circumlocution Office was beforehand with all the public departments in the art of perceiving—How NOT TO DO IT;" and at the risk of giving unintentional offence to the Chamber of Commerce, and divided as we are in our allegiance to the Chamber and our profound disrespect for the Chamber's report, we cannot avoid the comparison suggested by the extract from "Little Dorrit." All the subjects of grave general interest we have mentioned, and numerous others we have not mentioned, but which were equally in the power of the Chamber to be dealt with, have been totally disregarded, and the few matters touched upon are so unsatisfactorily treated as to force us to the conclusion that the Chamber has ascertained, to a degree of perfection the Circumlocution office would have been jealous of, How NOT TO DO IT.

Of ten paragraphs into which the report is subdivided, two relate to matters of internal administration of the affairs of the Chamber, with which neither the public nor ourselves have the smallest concern; three to matters of some mercantile interest which appear to have been taken up in a lukewarm manner and subsequently dropt or abandoned; one to a recent case tried in the Provincial Court of Kanagawa in which the master of the *Cathaya*, by the ingenuity of his Counsel, successfully contested the claim of the endorsee of the shipper: the Chamber's treatment of this case leaves us entirely in the dark as to the views of the committee or a matter of such very great importance to a community numbering so many holders of bills of lading "without value paid" (*sic*) though we are not surprised that the answers received from the several Chambers of Commerce in Europe and the East in connection with this case should "show a considerable difference of opinion." The remaining divisions touch upon, but do not give any useful information respecting hatoba accommodation; storage of kerosine; and pilotage regulations; while the concluding paragraph dismisses with a truism the whole subject of trade for 1876. We question very much if any of the merchants who framed, received, or passed this report would have signed one of their own market letters concluding with this startling piece of statistical information:—"Trade statistics for 1876 show a notable increase in the value of exports, owing to the considerably larger business in Silk, coupled with very much higher prices."

Fortunately for persons directly interested in trade particulars, and statistics of imports and exports; in the causes affecting the sudden and undue fluctuations in value;

and of the reckless cut-throat policy of foreigners in competing amongst themselves to their own detriment and the great profit of the wary native; there are the valuable trade reports of the British Consul which fortunately are made public. If the Chamber had issued this report for the private information of the members, it would have been secure from criticism: it has, however, been given to the world, and will probably be specially sent to some of the "principal Chambers of Commerce both in Europe and the East," as an example of the collective wisdom of the merchants of Yokohama. We hope there is still time to avoid the disaster; if not, there is some consolation to be found in this just and well-meant expression of honest criticism, for we can, in conclusion, only apply to the report for 1876 the stinging words of *Junius*, for in truth it is one "which will only pass without censure when it passes without observation."

On the subject of hatoba and customs shed accommodation, particularly in regard to the respective liabilities of ships, agents, and consignees, for damage to goods while on the hatoba or in shed, and before delivery to the bill of lading, we shall have something to say hereafter which may probably prove more interesting than the annual report of the Yokohama General Chamber of Commerce.

A RETROSPECT ON THE SILK TRADE OF JAPAN IN 1876.

IT is not our intention to give in the following lines a full review of the silk trade of last year in Japan; but we wish merely to lay before our readers a few remarks, which we trust may not be found uninteresting, whilst we leave to others the care of making a more complete exposition of what took place in this important staple during the course of last year.

The year 1876 has been one of the most remarkable in the history of the silk trade in this century; nay, it has certainly been the most conspicuous since the opening of Japan, both on account of the fluctuations in the value of the article, and also with regard to the profit which the producers must have derived from it.

For three or four months after the opening of the year the prospects of business in silk were gloomy and unsatisfactory in the extreme. Prices both here and at home were unreasonably and abnormally low, nor was there any appearance of an early change in that respect. Some English and French houses had made in January very heavy speculative purchases simultaneously in Lyons and Shanghai, with a view of supporting the home markets which were daily drooping, but even so unusual a circumstance failed to raise the tone of them, or to stimulate business.

In the middle of April a very severe frost took place in France and Italy, which caused serious fears in the minds of some people as to the ultimate result of the crop, which had already begun. Silk manufacturers and consumers took very little or no heed of the occurrence. Their reasons for overlooking it were not without some good foundations. The whole extent of the harm done by the frost could not be fully appreciated until the crop was brought to an end; the remaining stocks of old silk in Europe were considered sufficiently large to supply all wants, even in the case of a some-

what reduced production. Besides, should fine weather return, it was quite possible that the vegetation might recover itself, and that, after all, the pending crop might turn out, if not a large, at least an average one. Prices therefore remained with scarcely any change, but only a little firmer, until the end of May.

In the beginning of June the crop was brought to an end in the south and middle of Italy, in Spain and in the south of France, when it was ascertained that there was a considerable deficiency in the quantity produced; and that the cocoons, being generally of poor quality, would give but an indifferent yield. It would take another fortnight before the result of the crop in Lombardy and Piedmont could be fully known; but it was not supposed that the outturn would be much more satisfactory than in the countries before mentioned.

Whilst the prospects of the noble article in Europe were so wretched, this country was, on the contrary, blessed with splendid weather, and a bountiful *raccolta*. The native dealers were preparing to open the market for the new season at about \$420 to \$430 for good all round parcels of Hanks, when a foreign House forestalled them by offering \$500 for the first few bales of new silk which made their appearance in June. This transaction was soon followed by others at gradually increasing prices, so that before the end of the month \$520 to \$530 had already been paid for several small parcels of by no means remarkable quality.

The beginning of July proved that the crop in the North of Italy had turned out, if not quite so bad as in France, at least inferior by one half to that of 1875. Speculators began in London to buy up all the remaining stocks, and telegrams were poured into China and Japan with orders to purchase freely all the Silk which was sent down from the interior. The excitement here became maddening: prices were rising day after day, not by \$10 to \$20, but by \$50 and even \$100 at a bound. We have no desire to retrace in detail the progress of the *furor*, for it can be called by no other name. Suffice it to say that, after a few trifling fluctuations, the price of good all round parcels of Hanks, at the end of September, had reached, if not exceeded, \$1,100, or in other terms had advanced fully 150 per cent in four months.

The rise at home had been fully as great and as precipitate: in May sales were made of good all round Hanks at 13/6 to 14/s: in September the same class of silk fetched 33/6 to 34/s. Manufacturers who had, at the outset, resisted the advance, had soon been compelled to yield to the torrent; and, by supplying themselves in self defence, increased the firmness of the speculators into whose hands the great bulk of silk on the English and Continental markets had passed.

Meantime this country had derived an incalculable benefit from the eagerness of the foreign silk buyers. Not only had the native produce been sold at rates as fabulous as un hoped for, but, thanks to the beauty of the summer and the abundance of the crop, the reeling had been urged with all possible speed: wages were largely on the increase: all hands in full work: the petty dealers and the merchants in the interior were carousing over their profits: even the Government were drawing Customs duties on a perfectly unprecedented scale; so that every body was participating in the general prosperity. Shipments from Yokohama, from the 1st of July to the end of September, amounted to 12,695 bales, against an average of barely 6,000

bales for the same period in the seventeen previous years, showing an excess of 110 per cent in weight, and of certainly 75 per cent in value.

The first symptoms of reaction showed themselves in October. Silk was arriving on the European markets in such quantities as to remove any fears which might have been at one time conceived of a scarcity of the raw material. Prudent or timid importers realized on arrival, if they had not already sold "afloat." Speculation was cooling fast, besides which a good deal of the produce which had been sold "to arrive" did not turn out equal to the expectation of the buyers or to the representations of the sellers. The result was a general weakness of the foreign markets, which was soon shared by this. The Japanese dealers resisted the retrograde impulsion with their usual cleverness; but it became gradually more and more evident that the article could no longer be supported; and that those who desired to close their operations, had no other resource but to accept the offers of such of the foreign merchants as were disposed to buy at reduced prices.

From the beginning of November up to the present moment the fall has steadily pursued its course, scarcely interrupted by insignificant fluctuations from time to time. Good all rounds Hanks, which, as we said above, were worth at the end of September last \$1,100 per picul, would not fetch to-day much over \$600. Whilst we do not think that there is any great probability of the prices of Silk receding much further, we would guard ourselves against the imputation of seeking to bolster up speculative tendencies which might end again in disappointment. We have witnessed in less than a twelve-month variations, which, for the noble article at least, have not been known in the memory of man. With exception of the frost, which took place in April of last year in Europe, and which may be taken as the primary origin of a tremendous excitement, there was no other very plausible reason to be assigned for it, unless we bear in mind the abnormally low prices to which Silk had been driven during the years 1874 and 1875, and from which it rebounded under the influence of natural and justifiable causes. But the rebound itself was obviously carried too far by sheer speculation; hence arose most of the evil that has been done. If we admit that the European Silk crop of 1876 was reduced by one half, or even, say, by two thirds, we should have considered a rise in price, in the same proportion, to be a fair and reasonable consequence of the diminution alluded to. But, instead of this, we have shown that prices rose not merely 50 or 70, but 150 per cent, that is to say, out of all fair proportion with the deficiency of the crop. We look upon the excess as a sort of vengeance exercised on the silk manufacturers who, being during the two before mentioned years of 1874 and 1875 sole masters of the situation, suffered, if they did not actually cause, the prices to come down to a level which gave the disheartened rearers or educators of silk worms no other alternative but to be starved and ruined, or turn their attention to some other branch of culture. Speculation, which had been deeply asleep for a long time, stepped in and took the game in its hand, with what result we have seen, and, to a great extent, dropped it again as no longer safe. What will be the next move?—a difficult question which we no not undertake to solve.

We have good reasons for believing that

silk manufacturers find it as difficult as ever to dispose of their goods in a remunerative manner, and that silk stuffs have not returned to favor. Stocks of silk piece goods are accumulating unsold: looms in Europe are being taken down; and America herself, although heavily and extensively protected at home, is no better off than her outside competitors. We must not forget, amongst the probable causes of the slackening consumption of silk goods, the complaints which arise in all parts of the world about the badness of trade in general: when so many people everywhere assert that business in almost all branches is unsatisfactory, and that they are obliged to reduce their expenditure, it stands to reason that the articles which will suffer most, are the costly goods amongst which silk occupies a prominent place. The soundness of this argument is nowhere exemplified more strongly at present than in America, where trade is passing through a crisis, in consequence of which people, becoming forcibly thrifty and economical, forego in a great measure the luxuries of which, in more prosperous times, they were large consumers.

The interest of the manufacturers of silk is obviously to drive prices to a sufficiently low point to bring back the demand for their goods in preference to woollens, which are still in fashion. Very different is that of the cultivators, who for some years past have found anything but remuneration for their labours.

There are also those whose opinion is that the crop of 1877 in Europe is not likely to turn out satisfactorily. They ground their opinion upon a deficiency of good seed, in consequence of the bad crop of last year: upon the insufficiency of the shipments of Japanese silkworms eggs: upon the lateness of the season in which the shipments took place, the length of time during which the seeds were kept without much care in the godowns of the native dealers; and last, not least, upon the chance of a return of cold weather in the spring, consequent on the present mildness of the winter in Europe.

Letters and circulars just received by the French mail confirm the serious apprehensions which are entertained about the result of the next crop, owing to the mildness of the season. Should those fears be realized, and the European silk crop of 1877 turn out no better than that of 1876, what will be the position of the article? The holders of remaining stocks will do their utmost to put prices up, and speculators may try once more the game they played last year. But if, when prices were at the lowest, manufacturers failed to enlist the sympathies of the million on behalf of their silk goods, will they be more successful, when the scarcity and the dearthness of the raw material shall compel them to enhance the cost of their produce? We think not, but, on the contrary, believe that they would find themselves in even worse circumstances than at present.

We cannot take upon us to reconcile clashing interests. Leaving to the future the care of unravelling the mystery which lies in its womb, we must be content with the task we have undertaken to retrace the features of what we may justly call one of the most memorable years of the Silk Trade.

— — —
MR. PIERRET, the newly appointed Consul for France at Yokohama, left Marseilles on the 11th February, and will be here about the 1st April. Mr. Kraetzer, however, will not take his departure before the month of August.—*Echo du Japon*.

THE PRESIDENT OF THE UNITED STATES.

THERE is strong reason to believe that the telegram announcing the settlement of the Presidential difficulty, is trustworthy, and that Mr. Hayes has been elected President of the United States of America. The career of the new President has been one of active steady work in the service of his country, and the high honour now conferred upon him is not undeserved. The following short sketch of his life, published in London some time ago when his election was doubtful, may be read with interest.

Rutherford B. Hayes was born at Delaware, Ohio, in 1822, the posthumous son of a New-England yeoman, who had settled and flourished there, and left a substantial farm to his widow. He was educated in his own State, where he graduated at Kenyon College with distinction; and after entering a lawyer's office, went to Harvard, to attend the Law School. Here he worked hard, and profited by the lectures of Story and Greenleaf, taking at the same time a keen interest in public affairs. He was a staunch Whig in 1844, when he first took an active part in an election as an eager supporter of Henry Clay. "I would start in the world without a penny," he wrote, "if by my sacrifice Clay could be elected President." The crushing defeat of his hero cured him for a time of party politics. He returned to Ohio, and practised with good success at Cincinnati, distinguishing himself specially in fugitive slave cases, Chief Justice Chase, with whom, as junior, he was often associated, speaking of him as "a young lawyer of great promise." As yet, however, he was not a declared Abolitionist. This came in due course in 1856, when the Presidential election, turning on the Free-soil question, brought him back into politics, along with many others who had stood aloof till now. He worked as hard for Fremont as he had done for Clay twelve years before, and did not conceal from himself that this question had now to be fought out, and that it was going to be a hard fight. "The election of the day after tomorrow," he writes, "is the first pitched battle; however fares the cause, I am enlisted for the war." Up to this time he had taken no part in public life in his own State. Though he had been in practice for ten years in Cincinnati, he had never been inside the City Council Chamber till he was elected City Solicitor. This office was conferred on him by the Council in 1856, without any canvas or solicitation on his part, by one vote, on a death vacancy; but he was re-elected in the next year by a heavy popular vote, and served till 1861, when, at the expiration of his term, North and South were already arming. "Disunion and civil war are at hand," he writes, "and yet I fear disunion and war less than compromise. We can recover from them." And when Sumter fell, and Lincoln's call for troops came, he closed his office, declaring that the war was just and necessary, and would demand the whole power of the country, and that "for his part he would prefer to go into it if he knew he were to be killed, rather than live through without taking any part in it."

He refused the offer of a colonel's commission, made to him at once by the President, at the suggestion of his old leader at the bar, Chase, then Lincoln's Finance Minister; but set to work drilling and studying his new profession with such vigour, that by the beginning of June he had satisfied himself sufficiently to be able to accept the majority of the 23rd Ohio Volunteers, of which Rosecranz was first colonel. Two days afterwards he was in camp at Columbus, and, except when invalided for wounds, served without a break till June, 1865. His old corps, the 23rd, formed part of the brigade to the command of which he was appointed in May, 1864, though he only obtained his commission as brigadier five months later, after the battle of Winchester, in which he had gained Sheridan's hearty approval. "General Crook," he writes, "gave me a very agreeable present this afternoon, a pair of his old brigadier-general's straps. The stars are somewhat dimmed by hard service, but will correspond pretty well with my rusty old blouse. Of course, I am very much gratified with the promotion. I know very well that the rank has been shamefully cheapened, but I can't help feeling that getting it at the close of a most bloody campaign, on the recommendation of fighting Generals like Crook and Sheridan, is a

different thing from the same rank conferred,—well, as it has been in some instances."

It had been well earned in his case, for since May, Hayes had been under fire on sixty days, had crossed the three ranges of the Alleghenies four times and the Blue Ridge twice. In the three previous years he had been upwards of 600 days under fire, and four times wounded. His character as a soldier, though all his commanders have testified to it, is best given, perhaps, in the words of a private of the 23rd:—"There was no braver or better man in the Army. If he had a fault, it was that in battle he was too eager. On a long dusty march I could always tell the Colonel's horse, as it was always loaded with the guns and knapsacks of the boys who were giving out the Colonel himself walking by the side, no matter how great the heat. Yes, Sir, he was a kind man, but we had to do our whole duty as soldiers."

Mr. Hayes was the nominee of the Republicans at Cincinnati, and was selected for his absolutely unimpeachable character, tried ability in administration, and the belief, entertained by many of the best men in America, that he may do for the nation what he has, in a great measure, accomplished in his own State. It was during the campaign of 1864 that Mr. Hayes was first nominated for Congress for the second Cincinnati district, and his reply to the suggestion that he should go home on furlough to canvas, was characteristic of a man who understood his duty and was determined to carry it out. He said:—"An officer, fit for duty, who at this moment would abandon his post to electioneer for Congress, ought to be scalped. You may feel perfectly sure I shall do no such thing." The *Spectator* reviewing the chances of the election of Mr. Hayes, adds the following particulars:—"He served in two Congresses, speaking little, but working hard on Committees. In 1869 he was nominated by the Republicans for Governor of Ohio, and won the election against Senator Thurman, and at the end of his term was re-elected and served a second time. Mr. Dana, who is not supporting him now, has nevertheless written of him:—"Hayes is a man of talent; he is a gentleman; he is rich and independent; he served with credit in the war; and his record as Governor of Ohio is without flaw or spot." He was nominated a third time for Governor in 1875, and refused at first to stand, but, on hearing that no other name could carry the State against the Inflationists, accepted, and was again successful. He was doing his work quietly as Governor, when the movement was started to nominate him for the Presidency, but he refused to move in the matter himself, writing to one of his most active friends:—"On the topics you name, a busy seeker after truth would find my views in speeches and messages, and I shall not help him to find them. I appreciate your motives and your friendship, but it is not the thing for you or me to enrol ourselves in the great army of office-seekers. Let the currents alone."

On the 8th of July Mr. Hayes published his letter of acceptance which appeared in the American press. The firm tone and clear enunciation of his views removed any doubt as to his policy if elected: he declared that the rule "to the victors belong the spoils" "degrades the Civil Service and the character of the Government. It ought to be abolished. The reform should be thorough, radical, and complete."

His views on the currency are said to be sound, and he is a determined opponent of the "second term" system. Outside of America there can be little doubt he is a more popular man than his opponent, Mr. Tilden; and his election will be hailed with pleasure and satisfaction in England. We cannot do better than conclude this short

and very imperfect sketch than by quoting from the *Spectator* the following graceful words. "We are far from affirming that, even if he should be elected—and his prospects do not improve—he will be able to break through the bad traditions of American political life, but there is every reason to believe he will try. In any case, should he be elected, his country will have a resolute, able, and upright gentleman for their first ruler, in the second century of the nation's life."

THE SATSUMA INSURRECTION.

(Continued from the Japan Gazette of 26th Feb.)

The *Choya-shinbun* says:—A telegram from Sago, sent at 3.15 p.m. on the 23rd, states that all is quiet there. The Imperial troops gained some advantage at first in the battle at U-yeki, but were at last defeated. During the night they set fire to U-yeki, whence they retreated and encamped at Takase. Six or seven of the troops were killed. The main body of the insurgents left Kuma-moto, and separated into two armies, taking their way to Chikuzen and Chikugo. A *Choya-shinbun* extra of to-day asserts that the Imperial forces are awaiting the insurgents in and about Kumamoto taking advantage of the natural strength of that locality, while a naval brigade will land at Tanigaya, Kogoshima, and encamp at Onohara. It is reported that the foreign instructors in the schools in Kagoshima will be ordered to leave the district, which will probably become the battle-field. A body of troops at Toyotsu having been informed that insurgents were coming to Kunita, Buzen, by sea, separated into two parties and marched to meet them. A telegram says that about 300 insurgents entered Yanagawa early on the morning of the 23rd. Two vessels from Kagoshima, viz., the *Kesui* and *Koyo-maru*, anchored at Nagasaki, have been ordered not to leave the harbour. The *shizoku* of Akidzuki have become much excited. Yesterday no telegrams were received from Kurume.

The *Akebono-shinbun* says:—The Imperial troops in the field at Kiushu consist of ten battalions of infantry, two battalions of artillery, and two battalions of police. This army will shortly proceed against the insurgents. A sailing vessel of Kagoshima, the *Koyo-maru*, has been seized by the man-of-war *Rinjo-kwan* off the coast of Hinaku, Higo. A body of troops at Sakura, Takasaki, and half a battalion of the Utsunomiya garrison have been ordered to come to Tokio to fill the places of those who have left for the South.

The departure of the *Nagoya-maru* has been again put forward. She left this afternoon taking two battalions of infantry and three hundred policemen. She was so full that European passengers were refused accommodation in her. The *Genkai-maru* came down from Shinagawa yesterday afternoon with horses on board, and, after taking in a quantity of ammunition, left during the night for Kobe, having on board Major General Kuroda, and Lieut. General Oyama.

(From the Japan Gazette Feb. 27th)

In Tokio the report most circulated now is that Saigo the elder had visited Kioto lately, and there had an interview with the Mikado, to whom he presented a memorial embodying eleven articles, the demands of himself and the Satsuma people, to each of which a dis-

tingent refusal was returned. His mission being thus unsuccessful, Saigo is said to have instantly returned to his province, whence we now hear of him, openly directing the armed movements of the insurgents. Itagaki, too, as representing the shizoku of Tosa, one of the four counties forming the Shikoku province, wherein he is supposed to have an influence in no way second to that possessed by Saigo in Satsuma, is reported to have been admitted to the presence of the Mikado, but with what object or with what result is not stated. Itagaki is an old friend of Shimadzu, and resigned office with him at the time of the Choshu troubles.

A notification has been issued by Mr. Iwakura stating that a telegram has been received from Kioto announcing the deposition, by order of the Mikado, of Saigo Takamori, Commander-in-Chief, *Sho-san-i*, General Kirino Toshiaki, *Shogo-i*, and Gen. Shinohara Koni, *Shogo-i*.

Another notification from the same source announces the establishment of a Navy Bureau at Kobe, where business of that Department, connected with the suppression of the insurrection, will be transacted.

A telegram from Kurume, despatched at 5 p.m. on the 25th, says that, during the night of the 24th, the insurgents retreated as far as the village of U-yeki, whither the Imperial troops followed them. An engagement was imminent but had not yet commenced. A telegram from the Kumamoto Kencho at Minami-no-seki, sent at 1.10 p.m. on the 26th, states that skirmishes are daily fought between the troops in the castle and the insurgents, the former being always victorious. The Imperial troops at U-yeki and Tabaru fought under difficulties, and broke ground for Minami-no-seki, where they were reinforced by the troops from Yamashiji, and then advanced about two ri against the insurgents. But still no engagement had taken place there during the night of the 25th. Generals Nodzu and Miyoshi had arrived. To-day (the 27th) a general battle is expected to be fought. Saigo, the elder, has advanced at the head of a large army as far as Kawajiri. The insurgents are lightly clad with knitted fabrics, and wear white leggings. The men-of-war *Kasuga* and *Rinjo Kuwan*, now at Nagasaki, captured some insurgent vessels at Kojima. The harbour of Yajiro is protected by the *Hosho-kuwan* and *Koyo-maru*, lately taken from the insurgents, and the bay of Moji by the *Nanba* and *Kinka-maru*. The *Meiji-maru* and *Genbu-maru*, will shortly leave for the harbour of Kagoshima. The War Minister arrived at Fukuoka at about 5 p.m. on the 25th instant, and Prince Arisugawa-no-miya and Kawamura, Vice Navy Minister, have landed at Hakata, Chikuzen. Yesterday morning, at 6 o'clock, the *Nishin-kuwan* left Yokoska for Umanoseki and the *Asama-kuwan* followed at 6 p.m. on the same day. A telegram, received at 4 p.m. on the 26th, says that the three vessels belonging to the insurgents, viz., *Kogo*, *Maidzuru* and *Noshige* have been captured by the Imperial men-of-war. The first was sent to Nagasaki: the machinery of the second has been taken out; and the latter was set on fire. The War Department expended 900,000 yen, between the 17th and 24th instant, in measures to meet the Satsuma rising.

The *Choya-shinbun* writes:—To-day one battalion of artillery and one battalion of engineers will leave for Kobe. A cavalry guard is stationed at the Imperial palace of Akasaka, Tokio. All the Osaka garrison troops will be sent to Shimonoseki, and their place will be filled by troops from Shiga. The

latter place will be garrisoned by men from Aichi. Mr. Kido, *Naikaku-komon*, has left for Choshu to preserve peace there. It is rumored that a body of insurgents will shortly enter Beppu, through the byways leading thither, and that another party occupied the island of Amakusa. On the 27th inst. seven Kagoshima men were arrested by the police in Tokio.

The *Nichi-Nichi-shinbun* says that a brave warrior of Kagoshima, named Kishima, formed a party consisting of fifty tried men, whose object should be to subvert the designs of Saigo's Gakko-to, whom he has long distrusted, and whose leaders he and his comrades were to kill in case they rose against the Government. But his intentions was discovered by or betrayed to the Gakko. Nothing is known now of him and his men. Probably they have been slaughtered by the insurgents. The leaders of the latter are said to have issued the three following regulations:—1.—No public property, buildings or other, is to be destroyed. 2.—No person holding a Government office will be killed. 3.—No trouble must be given to private persons. This seems to be authentic, for Sugeno, a Government official who went to meet the insurgents was not molested and returned in safety. The insurgents are said to have issued a manifesto stating that a great reduction in the land-tax will shortly be brought about by them. This is evidently a bid for the sympathy, moral if not active, of the farmers and peasantry.

February 28th.

THE *Osaka-Nippo* says:—Saigo is now in the old castle of Yashiro in the province of Higo. About one hundred and forty shizoku of Choshu have left their homes to join his men at Kagoshima. Mr. Oyama, the *Ken-rei* of Kagoshima, is said to have offered a memorial to the Government to the effect that Saigo, Commander-in-Chief, and other Generals wished to lay some matters before H. M. the Mikado in person in his capital. All the shizoku in Kagoshima were clamorous to accompany them. No Government order or instructions would be received by them, and the authorities have been obliged to issue a notice, throughout the neighbouring Ken, of their departure from their posts. The following intelligence has been communicated by a passenger in the *Taihei-maru*, which arrived in Kobe, on the 22nd instant, from the bay of Kagoshima. On the 15th instant, about 12,500 shizoku of Kagoshima assembled in that city, where they took leave of their ex-lord (Shimadzu?) and his family, and then left, in good order, marshalled in five parties as follows:—1.—2,500 under Gen. Shinohara, 2.—2,500 under the command of Saigo himself and Murata, late Colonel in the Imperial army; 3.—2,500 under Ikegami, late *Daisanji* of the Kagoshima-ken; 4.—2,500 under Gen. Kirino, and 5.—2,500 under Nagoyama. It is rumored that Shimadzu Hisanitsu followed them at the head of the rear guard. The first party, under Shinohara, marched towards the Kuma-moto castle. Mr. Oyama, *Ken-rei* of Kagoshima, remained quietly in the Kencho, where he released from prison those officials who were captured by the insurgents. Now, since the departure of the armed bands, all is going on quietly, contrary to general expectation.

The *Hochi-shinbun* writes as follows:—Saigo Takamori is said to be about to establish a provisional Government in Kiushu. No change has been made in the Kagoshima Kencho, where public affairs are

being carefully attended to. But all the men in the service of the Saibansho, which was established by the Government during last year, have left their posts. A telegram from Kioto, despatched at 7.30 p.m. on the 26th inst., says that Mr. Yanagiwara, *Gikuwan*, is to be sent to Shimadzu and his son, as Imperial messenger, and Mr. Hanabusa, of the Gaimusho, will follow him. Three battalions of infantry and five hundred policemen will escort him in the men-of-war *Rinjo* and *Seiki-kuwan*. Generals Ito and Yamada, and Colonel Jinrei, will also be sent to Kagoshima to superintend matters in connection with the arsenals there. A telegram, sent from Saga at 10.5 a.m. on the 27th, says that, at about 6 a.m. on the 26th, an engagement was fought at Hasama, in which the troops were victorious. The insurgents have withdrawn to Kiba-machi in disorder, leaving their wounded on the battle-field. The combat ceased at about 1 o'clock p.m. Many of the rebels were captured. A telegram, sent by Gen. Nodzu at 11.35 p.m. on the 26th, states that on the morning of the same day a severe engagement was fought at Takase. The Imperial forces gained the day, and the insurgents broke ground in confusion, leaving their dead and arms and ammunition. Shibuya, a Kagoshima shizoku, captured at Kioto, was lately ordered to be released from custody. But, unfortunately for him, when he was on the point of leaving the police station, paper money to the value of about 40,000 yen was found in a package belonging to him. He was immediately asked where he got the money. He refused to reply and was detained in custody. Branches of the Kumamoto Kencho and Saibansho have been temporarily established in the village of Mifune.

The *Mai Nichi Shinbun* states that some Kagoshima shizoku, resident in China, have sent large quantities of rice and ammunition to the insurgents. All the Hiroshima garrison troops took the field on the 22nd instant, and the gates of the barracks have been closed since the following day.

The *Choya Shinbun* says:—Messrs. Mori, late lord of Choshu, and Kido, *Naikaku-komon*, will leave shortly for Kiushu at the head of forces composed entirely of the former's ex-retainers.

Yesterday, the 27th, the Finance Department handed over 85,000 yen to the War Department.

No vessels nor junks at present anchored in the harbour of Nagasaki, except mail vessels, are allowed to leave.

The *Suikai Shinbun* says that the Kagoshima men have long deserted the Buddhist priests, who were of late allowed by the Central Government to preach their doctrines in Kagoshima. Before they rose against the authorities, they seized about thirteen Buddhist priests from other Ken and killed them, offering their blood as that of enemies to the *Kami*, to insure victory to their own cause.

An official of the rank of Gon-Dairoku at the Kagoshima arsenal, named Sasaki, has been much persecuted by the insurgents. Having seen that he could not prevent the gunpowder in the arsenal from being seized by them, he ordered that water should be poured upon it. To escape the vengeance of the rebels he had to take refuge in various places until they left Kagoshima. He reports that they are variously clad, some being dressed in foreign style, while others wear hakama. Their arms consist of twelve cannon (4½ pounders) and various guns. The rumor spread by them that they were march-

ing by three roads, is false and was designed to separate the Imperial troops. They are really assembled in Kuma-moto in one body.

March 1st.

THE *Hochi Shinbun* writes:—A telegram, stating that severe engagements took place at Yamashika and Kinoha on the 27th ultimo is said to have been received, but its contents have not been made public. On the morning of that day, Generals Nodzu and Miyoshi marched to the field uniting their battalions. As a party of the insurgents threatened to attack Kurume, half a battalion of infantry was sent thither. A telegram from Minami-no-seki despatched at 7.10 p.m. on the 26th February says, that at about 9 a.m. a battle was commenced on three places simultaneously on the river Takase, and that the Imperial forces gained a brilliant victory, and were to continue their march on the morrow. Details will soon follow. A telegram, sent from Nagasaki at 3.45 p.m. on the 27th, states that that morning the insurgents at Takase were driven back with considerable loss. Mr. Midzu-o, of the Kagoshima Saibansho, who left Kagoshima on the 26th ultimo, had arrived at Kioto and reported that Higo's, Kirino's and Shinohara's men do not exceed, in all, 3,000. Yesterday the *Toyoshima-maru* of the Mitsu Bishi Co., which was anchored at Shinagawa, left for Kiushu, taking 3,000 rifles and large quantities of military stores. An extra office of the Judicial court will be established in Kioto. Yesterday a notice was issued to the effect that, owing to the Satsuma expedition, the Daijo-kuwan will assemble daily, including Sundays and general holidays. Yesterday morning a telegram was received from the north, asserting that the shizoku of Shonai had risen openly against the authorities. Yesterday, in Tokio, about 190 men were recruited for the municipal garrison. Mr. Itagaki left for his native country, Tosa, in the *Marugame* on the 24th ultimo.

The *Mai-nichi Shinbun* says, that the Kuma-moto troops in the castle have rice, salt and other provisions sufficient for them to maintain themselves for about thirty days against the insurgents, who besiege them there.

The *Nichi-Nichi-shinbun* writes:—Saigo the traitor has signally failed in carrying out the three following plans which he had formed. 1.—He desired to send out his men in vessels from the harbour of Kagoshima, but was interrupted by Mr. Kawamura, Vice Navy Minister, who blockaded the harbour immediately with men-of-war. 2.—He and his men considered that, when they rose with him at their head in Kagoshima, the shizoku of the various provinces would soon flock to him. But none have yet risen. 3.—He thought that the Kuma-moto garrison troops, consisting mostly of common people, would not stand before his people. The paper adds that about 14,000 men have followed Saigo, Kirino, and Shinohara to Kuma-moto, and that about 600 remain in Kagoshima.

March 2nd.

The *Hochi-shinbun* writes:—A telegram, despatched at 2 a.m. on the 1st inst. says that, on the morning of the 27th February, the insurgents marched along the banks of the Hama river. An engagement took place, and at length the insurgents were driven across the river. The Imperial army encamped at the village of Funagusu. A telegram, sent at 4.40 a.m. on the 1st says that the insurgents fled in disorder after the en-

gagement on the 28th February, and that six of them were captured. Another telegram, from Kioto at 4.10 p.m. on the 28th, states that General Miura, at the head of three battalions, and General Oyama, also at the head of three battalions, with other forces making seventeen battalions in all, were sent to Kagoshima, where the deposition of the governor of that ken will be enforced. The police in the same ken, consisting mostly of men of Saigo's party, followed him to Kuma-moto. Two officers and five sailors of the man-of-war *Seiki-kuwan*, which anchored off Higo, having been engaged in surveying along the coast, landed near Kuma-moto, where they were encountered by the insurgents, who gave them so much trouble that the two officers and only two of the sailors succeeded in returning to the man-of-war, and nothing is yet known of the fate of their three companions. A telegram from Kurume, sent at 1 p.m. on the 28th, states that at about 6 p.m. on the previous day, a party of insurgents made an attack upon the troops encamped at Takase, where houses were set on fire. The insurgents retreated as far as Terada. On the following morning early, they fired upon the sentinels stationed at the jetty in Terada. They were replied to with a heavy cannonade and thirty-four of their number were slain. Lieutenant-Colonel Yoshida fell in the battle at U-yeki on the 24th ultimo.

The *Akebono Shinbun* says:—The Finance Department has already sent about two million yen to the Navy Department to defray the cost of measures taken so far for the suppression of the Satsuma insurrection. The rebels have seized about 300,000 yen in the Kencho at Kagoshima. There is a party in Kagoshima which favors the existing constitution of the Central Government. On the arrival in the harbour of Kagoshima of the men-of-war escorting Mr. Yanagiwara, the Imperial envoy, thither, they are expected to rise against the insurgents, and to effect a junction with the troops.

The *Choya Shinbun* writes:—A telegram from Kurume, sent at 7.15 a.m. yesterday, says that an engagement was commenced at Takase at about 3 p.m. on the 28th February, in which Shinohara was wounded and retreated with his men before the victorious troops. At about 4.30 p.m. on the same day another skirmish was fought with no decisive result. The passes of the mountains of Yakone on the Tokaido, and Utsui on the Nakasendo, are strictly guarded by a number of soldiers. Saigo Takamori, is said still to wear the uniform of his rank as Commander-in-Chief. During the 20th ult. about twenty Kagoshima men, residents in Nagasaki, were arrested.

The *Nichi-Nichi-shinbun* publishes the following notification from the Prime Minister, justifying the action taken by the Government in employing force and arms to quell the insurrection in the South.

NOTIFICATION No. 5.

To Shi, Fu and Ken.

The order for the Kagoshima expedition was issued by H. M. the Mikado in consequence of the following occurrences. During the night of the 31st January, a great number of insurgents forced their way into the military store houses of the War and Navy Departments in the Kagoshima-ken, and removed thence muskets and ammunition. And, during the night of the 2nd—3rd February, they again broke in to them, insulted the Government officials, and seized

all the military stores. Besides this, they took possession of the dock-yard, belonging to the Navy Department, and treacherously changed the sign-board at the gate. Again, on the 8th of the same month, the *Taihei-maru*, on her way homeward from Loo Choo, was detained on entering the harbour of Kagoshima. The officials on board of her were taken prisoner, and the insurgents were in large numbers and walked about armed with forbidden weapons. As such audacious conduct was reported of them, Kawamura, Vice Navy Minister, and Hayashi, Vice Home Minister, were sent to Kagoshima on board the *Tukuo-maru*, in order to enquire into their proceedings. On their arrival in the harbour, two of their subordinates were landed as messengers to the Kencho officials. The insurgents seized them, and swarmed in, in many boats, round the *Tukuo-maru*, handling fire-arms, and threatening to fire upon her. So, the *Tukuo-maru* left the harbor, and anchored off the coast, near to Kagoshima. There Mr. Oyama, Kenrei of Kagoshima, had an interview with the two ministers. Meanwhile insurgents having seized the military stores, as mentioned above, laid hands upon those prefects of police who had arrived from Tokio, and obliged them by torture to confess. (The nature of their confession is not given.) Armed with the admissions wrung from these officers, the insurgents spread a false report, under specious pretences veiling their intentions, and excited many to take up arms against the government. Their treachery having thus been made manifest, the two ministers returned, and reported the matter to H. M. the Mikado, who desired, however, to be still more accurately informed before taking action. Meanwhile, on the 18th February, Saigo, Kirino, and Shinohara, at the head of armed bands, forced their way treacherously into the Kuma-moto-ken, saying that they had something to ask the Government. As they had thus disturbed the peace of the country, and their treason was put beyond a doubt, the Mikado became angry and issued his orders for their destruction, according to the law of the land. The matter must not be misunderstood; and the people under your respective jurisdictions must be instructed not to be distressed by false rumors. The above is hereby notified.

SANJO-SANEYOSHI,

Daijo-Daijin.

25th Feb., 1877.

March 3rd.

The intelligence published to-day in the native papers is very meagre, as will be seen from the extracts we give below:—

The *Hochi Shinbun* writes:—According to a telegram from the South, no engagement has taken place for the past two or three days. General Miyoshi was wounded slightly in the action of the 27th February, in which about two hundred of the insurgents, more or less, were killed or wounded. All the vessels belonging to them have been captured, and they are entirely cut off from communication by sea with elsewhere. On the 1st instant two officials of the Home Department were arrested on suspicion of complicity with Southern designs. Saigo is said to have set up in his camp a large banner emblazoned with the words, "The New Humane Government."

(For continuation see page 22.)

ANNUAL MEETING OF THE CHAMBER OF COMMERCE.

On Friday, 2nd inst., the Annual Meeting of the members of the Chamber of Commerce was held at No. 61, for the purpose of receiving the report, electing officers, and general business. The following gentlemen were present:—Messrs. A. Winstanley, Chairman; A. J. Wilkin, Vice Chairman; A. Evers, E. G. Vouillemont, J. Dodds, T. Willcox, J. Brown, J. P. Mollison, J. J. Keswick, E. de Bavier, J. Rickett, J. J. Van der Pot, H. Barlow, Ad. Milsom, C. G. Dunlop, E. Grosser, and G. K. Dinsdale (Secretary.)

Mr. Winstanley, having taken the Chair, briefly stated the object of the meeting.

The minutes of the last meeting were read and confirmed.

The Chairman announced that the Secretary would read the report which had been prepared. This meeting, he stated, should have been held in January, but, as all the gentlemen present were aware, it was rendered impossible to hold it, as the premises of the Chamber of Commerce had been destroyed by fire. He alluded to the loss of valuable papers at that fire, and expressed a hope that they would be replaced as early as possible.

The following report and statement of accounts were then read by the Secretary.

REPORT OF THE YOKOHAMA GENERAL CHAMBER OF COMMERCE, FOR THE YEAR 1876.

In presenting the Annual Report to the Members, the Committee have to say that few matters of importance have been brought before them during the past year. Various subjects have been under discussion, some of which, as will be seen by the report, will probably have to be again considered by the incoming Committee.

Accounts.—These show that the Chamber does little more than pay its way, and the balance in hand on the 31st December last, of \$224.98, is less than at the corresponding period of 1875 by about \$145, the deficiency being attributable to the increased cost of telegrams, and diminution in the revenue. The issue of circulars again shows a considerable falling off, having decreased to the extent of about 3,000 copies in the twelvemonth, the total sale having been 22,115 against 25,227 in 1875; representing a considerable loss of income to the Chamber.

TELEGRAMS.—These still appear to give general satisfaction, and considering the many fluctuations that have taken place in silk the information given may be taken as having been fairly reliable.

DRAWBACKS.—It is to be regretted that it seems impossible to make any further move at present towards obtaining this desirable concession, and during the year it has appeared to the Committee of no advantage to again press the attention of the Ministers to the matter.

HATOKA ACCOMMODATION.—This subject has received much attention from the Committee during the last twelve months, and the urgent need of the improvements promised in March 1875 has again been brought to the notice of the authorities. The Superintendent of Customs has stated that the improvements will be at once carried out, but so far there is no sign of any work being commenced.

STORAGE OF KEROSENE.—The godown at Nakamura has been largely availed of, but it is only quite recently that the regulations of the Government have been agreed upon, and it now only remains for them to be generally adopted by the Foreign Ministers, for the storage of Kerosene thus to be rendered compulsory.

CATHAYA CASE.—It will be remembered that in an action brought against the vessel for damage to cargo, the plaintiffs were nonsuited on the ground that being only holders of a Bill of Lading "without value paid" they were not the proper parties to bring an action. As the decision seemed full of interest to the mercantile community, the Committee decided to print a pamphlet embodying the chief facts of the case, and send it to the principal Chambers of Commerce both in Europe

and the East, with a view of eliciting some information as to the custom usually adhered to in other ports under similar circumstances. The replies did not throw much light upon the questions submitted for notice. The answers received show a considerable difference of opinion, and are open to the inspection of members.

PROTEST AGAINST A PASSPORT REGULATION OF THE JAPANESE GOVERNMENT.—In the early part of the year the Japanese Government issued a Notification levying a tax upon natives travelling in foreign vessels, against which the agents of the steamship companies protested. The Committee supported this protest, and in addressing the Ministers of the different Treaty Powers, pointed out that the Notification must be considered an infraction, if not of the actual letter, certainly of the spirit of the Treaties. At last the tax, though not altogether withdrawn, was reduced. The fact however, of foreign vessels being placed at disadvantage with native ones is still patent, but the withdrawal of the P. & O. steamers from the Shanghai line, has led to the question being for the present abandoned.

LIMITS OF THE PORT.—The Committee, feeling that some definition of the limits of the port was desirable, addressed the Board of Consuls on the subject, but from the reply received it appears the Consuls were scarcely agreed upon the desirability of any port limits being fixed, and the Committee therefore, for the present, have not pursued the matter further.

PILOTAGE REGULATIONS.—This subject was receiving the attention of the Committee at the time the Japanese Government Notification was issued, and it was felt that no steps could be taken by the Chamber, until the working of the Japanese Regulations had been tried.

Trade statistics for 1876 show a notable increase in the value of exports, owing to the considerably larger business in Silk, coupled with very much higher prices. Tea, on the other hand, shows a reduction both in quantity and value. Yokohama has also shared in the export of Rice from Japan, but though the trade has given employment to foreign vessels, it is as yet by no means a general one. The export actually from this port is comparatively insignificant, as the bulk is shipped at Shimagawa, and the Chamber has found difficulty in obtaining reliable information.

ARTHUR WINSTANLEY,
Chairman.

Yokohama, 2 March, 1877.

STATEMENT OF RECEIPTS AND EXPENDITURE FOR THE YEAR 1876.

RECEIPTS.	
Balance from last account	\$ 375.29
Subscriptions for 1876	-
43 Members @ \$50.	2,150.00
1 Member $\frac{1}{2}$ year	25.00
Subscriptions Additional on account of telegrams	-
43 Members @ \$30	1,290.00
1 Member, $\frac{1}{2}$ year	15.00
Circulars sold to Members, 1876, 22,115 @ 10 cents	2,211.50
Subscriptions from Non-members for Circulars, 1876	151.00

Examined and found correct,

22nd February, 1877.

E. G. VOUILLEMONT, } Auditors.
JOHN THURBURN, }

E. & O. E.

Yokohama, 1st January, 1877.

G. K. DINSDALE,
Secretary.

The Chairman suggested that members might increase the usefulness of the Chamber by bringing to the notice of the Committee any matters bearing upon the interests of trade generally, and which, he thought he might venture to say, would meet with every attention from the Committee. There seemed to be a feeling that such suggestions might possibly be looked upon in the light of complaints, and this feeling deters members from making any to the Committee. With regard to the report, he would be glad to hear any remarks upon it. If the gentlemen present had nothing to say respecting it, he would be glad if some one would move its adoption.

Mr. Mollison proposed and Mr. Keswick seconded, that the Report and Statement of Accounts be adopted. Carried.

The ballot for Chairman and Vice Chairman then took place and resulted in Mr. A. Winstanley being re-elected as Chairman and Mr. A. J. Wilkin as Vice Chairman.

The following gentlemen were then elected as a Committee:—Messrs. H. Barlow, Ad. Milsom, J. J. Van der Pot, A. Evers, F. D'Iffanger, J. Dodds, and Ernest de Bavier.

The Chairman said there were one or two things which had to be settled, one of which was the choice of premises for the Chamber, and he would like to hear the voice of the meeting respecting it. He referred to the lease of the old building, and stated that Mr. Kirby thought of rebuilding on the old spot, but the Committee had insisted on having a separate entrance and it was thought that the present building would answer the purpose of the Chamber very well.

An extract of a letter from Messrs. How Bros. referring to the difficulty of ascertaining the price of Japan Copper in London, on account of the limited stock there, and suggesting the substitution of some other article instead, was then read by the Chairman.

Mr. Wilkin said he would suggest that Wax, Tobacco, Copper, and Camphor might be omitted in the telegrams, as the information given concerning them was of very little practical value, it were better to either save the money or substitute some other words in place of those referred to.

Mr. Mollison thought that if it was a matter of saving expense, then strike out those articles in the telegram; but if a saving could not be effected, he was in favor of the telegram remaining as it now stood, as the quotations of those articles were of general interest.

Mr. Barlow remarked that, if nothing better could be substituted, he was in favour of the telegram remaining as it was at present.

Mr. Vouillemont proposed and Mr. Dodds seconded, "That, in consequence of the difficulty of obtaining quotations for Japan Copper, Bar Silver be substituted," which was duly carried.

The Chairman said it perhaps was unnecessary to mention the fact that all the books of the Chamber were burnt at the fire, but it would perhaps assist the Committee if gentlemen would send in suggestions to the Committee as to the most suitable works to obtain.

Mr. Wilkin said he would like to draw attention to the currency in Japan. During the last six months there had been 15 or 20 millions of dollars exchanged with the Japanese and the best part of that got no further than Benten Dori. In consequence of this, native currency had been forced up very much. He referred to the establishment of a Japanese Mint, and read an extract concerning it from a report of the London Mint. He said that some years ago pressure had been brought upon the Government concerning the establishment of a mint in Japan; and now when it was established foreigners would have nothing to do with it. A short time ago it seemed as if the supply of Mexican dollars would grow insufficient for the requirements of business; and supposing that such an event should take place, what would be the result? We were dependant at present on the existence of the Mexican dollar; and if any pressure is brought to bear upon that article it might collapse. It was therefore expedient that a currency should be supplied which would go beyond Yokohama, and which would naturally come back to buy our imports. But it should not be forced back. The only remedy to the existing evil was to adopt the Japanese silver yen as currency. There were two things of course which would have to be guaranteed, one was that the supply should not fail, and the other would be that the quality of the coin should be maintained. If representations were made to the Japanese Government concerning this we must be prepared to express our willingness to except that coin as currency. He then referred to the objections to the currency of the yen in Hongkong. The yen he thought should circulate through both Hongkong and Shanghai. He had written out an abstract of a resolution which was as follows:—

"That it is desirable that there should be in this port a silver currency among foreign merchants, which shall circulate in the interior of the country and shall at the same time be accepted a legal tender in China."

Mr. Keswick said he had great pleasure in seconding the motion.

The Chairman remarked that the subject was a very important one, but as no notice of Mr. Wilkin's motion had been given to members the gentlemen present were not prepared to discuss it. He mentioned that some time ago a feeling of distrust had been entertained in Japan respecting the adoption of the yen as currency.

Mr. Braun proposed an adjournment of the motion, as the members were not prepared to discuss it.

Mr. Mollison seconded Mr. Braun's proposition, as he thought it was undesirable to pass the other resolution, until it could be fully discussed.

The Chairman thought that by adjourning the question, they would be likely to get a better meeting and arrive at something tangible.

Mr. Wilkin remarked that his experience was that no one ever attended an adjourned meeting.

The Chairman then put the amendment to the meeting and declared it duly carried.

Mr. Wilkin asked if Mr. Braun would name a day for the consideration of the question.

Mr. Braun said that it might be thought, if he named a day, he merely considered his own convenience. He was quite willing to attend any day that Mr. Wilkin would suggest.

The Chairman thought it better not to fix any definite period as they could talk over the matter in the meantime and see what was best to be done.

Mr. Braun said he would propose that the committee be entrusted to call a general meeting within one month for the discussion of this subject.

Mr. Keswick was in favour of supporting the views of the Chairman.

Mr. Wilkin said there was also another small matter he wished to refer to, and that was the Bank Holidays. He did not begrudge the Banks their holidays; but he thought they carried them a little too far. At the commencement of the year the Banks had been shut for nearly a week at a time, and merchants had to keep all kinds of paper during that period. He would suggest that the Banks should not be closed longer than two days at once.

The Chairman said that he did not suppose any gentleman begrudged the Banks their holidays, but he must say that he did not think it right to hold over all manner of paper money so long as they sometimes had to do. The Banks might be open for half a day during the holidays, so that merchants and others might be enabled to pay in their deposits.

This concluded the business of the meeting which was accordingly brought to the close.

THE BATHER'S GUIDE FOR JAPAN.

Notice of the principal mineral waters of the country, and of the use which can be made of them.

By DOCTOR GEERTS.

(Translated from the "*Echo du Japon*.")

Although the use of mineral waters in case of sickness is well established in Japan, and has been known there since a very distant epoch, it is but recently that the Japanese Government have directed attention in a serious manner to the chemical constitution, that is to say to the nature, of the numerous mineral springs which are found in the country; and the solicitude they now display in the matter cannot be too highly commended. A profound study of the subject would not only be of great utility in a medical point of view, but would be equally, and even more, useful for the knowledge of Japanese geology and the various strata of which the soil is composed. The little pamphlet which we now publish, has not evidently the pretension to arrive at this result. We have only proposed to ourselves in writing it one essentially practical object, and have above all had in view the interest of patients who might re-establish their health by using with discernment those springs which Japan possesses in so great abundance, and of which chemical analysis has demonstrated the medical properties. It is only of these that we will make mention, leaving to the future the task of making known those which have not yet been the subject of serious examination on the part of competent chemists.

The most erroneous ideas are held by the Japanese and even by some Europeans on the subject of the nature and properties of

the mineral waters of the country, even of those which have the widest reputation, and that will not astonish any person who hears that chemical analysis of the greater portion of them has only been made of recent date. It was Doctors Ritter, Martin and Dvares, and ourselves (Dr. Geerts) who were the first to enter upon the subject; and, although our results are still extremely limited, and only embrace a restricted number of mineral springs, they may nevertheless have a certain usefulness for a considerable number of doctors and invalids. Such is the motive which engages us to publish this little work, and to make known the results we have obtained without waiting for the day, perhaps still very far remote, when all the springs of Japan shall have been analyzed.

We will here only give a table of the different kinds of the known mineral waters. In a pamphlet having so popular an object as that which we have proposed to ourselves, it would be fastidious and useless to enumerate in detail the proportions of the numerous substances found in each spring. But if anyone should be interested in knowing more minutely such or such spring mentioned in the following lists, we shall be happy to furnish him, gratis, at our laboratory at Benten, all the information he may require.

In another work, which we have in preparation, upon "*The Products of Nature in China and Japan*," we intend to reproduce in a detailed and complete manner all the analyses made up to this day. Those which have already been made by Dr. Martin will be found in the "*Journal of the German Society of Eastern Asia*." As for ourselves, at present, we will confine ourselves to the mention of the waters which have been studied and to the indication of the different diseases in which they may be employed.

To this effect we have adopted the following classification.

- I.—Thermal waters, simple or neutral.
- II.—Acid waters not gaseous.
- III.—Acidulated gaseous waters.
 - a. Mineral alkaline gaseous waters.
 - b. Mineral acidulated calcareous waters.
 - c. Simple mineral acidulated gaseous waters.
 - d. Mineral acidulated ferruginous waters.
- IV.—Saline waters.
 - a. Mineral ferruginous sulphurated waters.
 - b. Saline selenitic waters.
 - c. Saline magnesium waters, or bitter mineral waters.
 - d. Mineral salt waters.
- V.—Mineral sulphurous waters.
- I. THERMAL WATERS: SIMPLE OR NEUTRAL.

These waters are characterised by the absence of gaseous matters and by the presence of a very minute quantity of saline matters. They have not in medicine any other interest than that of their elevated temperature. Their effects are consequently almost the same as those produced by ordinary warm baths of well or river water. A damp heat, good hygiene, walks in the country in the neighborhood of the bath, and a rational diet, according to the particular cases, are the therapeutic agents constituting the treatment for this kind of waters. They can be employed at the same time for baths and to drink.

We recommend them in the following diseases.

Rheumatism in the case of delicate persons and women.

Atonic gout.

Exudations, consequential on inflammations or "contusions."

Excessive abnormal excitation of the nervous system, and partial paralysis arising out of rheumatic attacks.

Skin diseases arising out of any kind of super-excitation.

Certain kinds of diseases peculiar to women.

Protracted convalescence after serious illness.

Slight cases of scrofula.

Below we give a list of the best known springs.

Province of Idzu.

Muyen-no-yu, near Atame	Temp 97° centigrade.
Kona	55° "
Yugashima { Spring a.	41° "
" b.	44° "

Province of Sagami:

Hakone-Yumoto	41° "
a. Anjo-no-yu	45½° "
b. Tamura-no-yu	43° "
Tonosawa { c. Nakata-no-yu	41° "
d. Fukuizumi-no-yu	44° "
e. Tanano-no-yu	41° "
Miyanoshta { a. Mikaizukinoyu	44° "
b. Kuma-no-yu	41° "
a. Sain-ren-to	56° "
Dogashima { b. Muso-no-yu	48° "
d. Yashi-no-yu	45° "
a. Shobu-no-yu	46° "
b. Iwo-no-yu	44° "
Kiga { c. Kami-no-yu	38° "
d. Ataki-no-yu	47° "
e. Tani-no-yu	7° "

Province of Shimotsuke:

Nikko.—Yu-nishi-gawa-mura,)	42° "
Gosho-yu ...)	54° "
Kita { a. Ai-no-yu	54° "
b. Taki-no-yu	54° "
c. Tenzu-yu	54° "
d. Unsen-no-yu	47° to 54° "
a. Ai-no-yu	75° "
b. Taki-no-yu	74° "
c. Hiye-no-yu	49° "
d. Sakura-no-yu	71° "
Onaru-tsuka	

Province of Higo:

Hinago	7° "
Hiragama	7° "

The best known springs corresponding to these in Europe are those of Aix en Provence (France), Bains et Plombières, in the Vosges, also in France, Gastein, Wildbad, Johannisberg, in Germany, &c.

For the inhabitants of Yedo and of Yokohama we recommend, especially, by reason of the salubrity of their site, and the picturesque nature of the surrounding country, the station of Miyanoshta and of Hakone Yumoto. The people of Nagasaki will be able, by preference, to go to the springs of Hinago in the province of Higo.

II. ACID WATERS NOT GASEOUS.

These waters are characterised by an acidulated taste due to the presence, in a free condition, of a notable quantity of non-effervescent acid (sulphuric acid, &c.). They are seldom found in nature, and have scarcely any use in medicine. They are recommended as a bath, but not as a drink, in cases of violent pituitous fluxes.

Province of Shimotsuke.

Nasuno-yu-moto-Sika-no-yu Temp 78° centigrade.

(This spring contains, besides a considerable quantity of sulphate of alumina, a little sulphureous hydrogen.)

[See also Section IV. Vitriolic Waters.]

The corresponding springs are those of Lac-crateré of Mont Indien, in the island of Java, and that of Rio-Vinaigro of Popayan, in Columbia.

III. ACIDULATED GASEOUS WATERS.

These waters contain a great quantity of free carbonic acid, independently of the salts which may be found in them. They froth and sparkle when agitated.

A. ALKALINE GASEOUS WATERS.

(*Natropægæ.*)

These waters are characterised by the presence of a somewhat large quantity of carbonate and bi-carbonate of soda. Some of them contain, further, considerable quantities of chloride of sodium, and in this case they sometimes go by the name of "Alkaline muriatic gaseous waters." They are of real service in a great number of serious diseases: they are much employed as a drink. Their principal physiological action is to keep the blood in an alkaline condition, and, by so much, to dissolve the albuminates which are found in the organism. They increase the exhalation of carbonic acid by the lungs, and so provoke a stronger inhalation of oxygen by these organs. But it is more especially in chronic colds of the pituitous membranes of the throat, the stomach, and the digestive canal, that the salutary effects of these waters have been manifested. They aid digestion, and correct the too great acidity of the chyle and stomachic juices. They are often employed as a bath in the following diseases.

Chronic colds of the stomach and all kinds of dyspepsia.

Ulcus rotundum.

Chronic colds of the intestines.

Hyperæmia of the liver.

Concretions in the biliary bladder.

Abdominal plethora.

Chronic cold in the pharynx and larynx.

Chronic bronchial catarrh.

Chronic pneumonia.

Plenetic and peritoneal exudations.

Cold in the urinary organs.

Concretions in the loins and in the bladder.

Cold in some of the female organs.

Gout.

Scrofulose.

Province of Ise:

Komono ... Temp. 7° cent'de.

Province of Idzu:

a. Shin-yen-zi-yu*	Temp. 40.8° cent'de
b. Ishi-no-yu*	63° "
c. Hiko-no-yu*	66° "
d. Sugi-no-yu	61° "
e. Shin-yu	67.8° "
f. Doko-no-yu	60° "
Shinyenzi { g. Hara-no-yu	64° "
h. Hama-no-yu*	57° "
i. Fuji-no-yu	41° "
j. Miji-rei-san	69° "
k. Kiku-yen-no-yu*	69° "
l. No-la-yu	45.5° "
m. Tatsuo-no-yu	71° "

Province of Kii or Kishu:

Rin-yen Mura	Temp. 49° cent'de.
Hongu or Yunomine*	88.5° "
Tsubaki-no-yu*	27.5° "
a. Hama-no-yu	41.5° "
b. Awa-yu	34° "
c. Moto-no-yu	28.3° "
Kanayama { d. Saki-no-yu	7° "
e. Maba-yu	43.3° "
f. Saki-no-yu	50° "
g. Yagata-yu	50° "

The most celebrated corresponding springs in Europe are those of Vichy, Ems, Bilin, Nenenahr, Mont-doré, Weilbach, etc.

The best alkaline springs of Japan which have so far been analysed have been found in the province of Kii. We most recommend those of Kanayama, among others the waters of Hama-yu, Awa-yu, Moto-no-yu, Saki-no-yu, and Maba-yu. They are almost in all respects identical with those of the spring of Kraehen-brunnen at Ems, in Germany.

The alkaline springs of the provinces of Idzu and Ise, are much weaker.

*Traces of sulphurated hydrogen.

We hope that the mineral springs of Kishin, so little known among the Europeans who reside in Japan, will be one day for that country what those of Vichy are for France and those of Ems for Germany. To these they are in no way inferior. We can speak on the subject with entire certitude; for we analysed them ourselves during our sojourn at Kioto.

B. ACIDULATED CALCAREOUS OR INCRUSTATING WATERS.

These are waters into which enters so large a quantity of carbonate of chalk in solution that they cover in a very short space of time with a solid calcareous crust objects which are dipped in there. They have not a very great importance in medicine. However they are employed sometimes in the following complaints:—

Affections of the skin (in baths) in consequence of their slightly astringent quality.

Dyspepsia, and affections of the digestive organs (as a drink) because of their neutralising properties.

Scrofulose (as a drink.)

C. SIMPLE ACIDULATED GASEOUS WATERS.

These waters contain a great quantity of free carbonic acid, without having any noteworthy amount of carbonate of soda or carbonate of chalk. They are agreeable to the taste, refreshing, and strongly sparkling when agitated. They possess, as a drink, a slightly stimulating action upon the membranes of the mouth and stomach. They are generally sold in bottles or pitchers.

They are found in Japan in the following localities.

Province of Yamashiro:

Sagaragori Dosenbo ... Temp. cold.

Province of Idzu:

a. Shita-no-yu	Temp. 50° cent'de
b. Kawara-no-yu	41.5° "
c. Yakushi-no-yu	44.8° "
d. Hama-no-yu	Variable.

Province of Shimotsuke:

Yamato Shiwabara, Kaziwara-no-yu, Temp. 32° to 40° centigrade.

The corresponding springs in Europe are those of Seltz, Vals, Condillac, &c.

The mineral water of Dosenbo in the province of Yamashiro is without contradiction the best of its kind in Japan. It contains, besides, a little ferruginous bi-carbonate, and is refreshing and of a very agreeable taste. The laboratory at Kioto has commenced to offer it for sale, contained in very elegant porcelain pitchers. Those who have visited the annual expositions at Kioto, must certainly have remarked these pitchers, labelled in so-called English, "Mineral water containing carbonic acid." In spite of this fantastic description, the Dosenbo water, of which we have made a detailed analysis, deserves to become an article of commerce; but means must be found to lower its price, which has so far been too high. Much use has, however, been made of it in the neighborhood of Kioto and Osaka, especially in summer.

D. ACIDULATED FERRUGINOUS WATERS.

(*Chalybopægæ.*)

These waters contain, as principal base, a certain quantity of ironous carbonate in solution in carbonic acid. They have a strongly pronounced ferruginous savor and possess the property of changing to a black-blue color when touched with tincture of gall-nuts. They form a sediment in draining away or in evaporation. They are used both for baths and for drinks. In this latter case they constitute a dietetic and tonic remedy;

and so are employed in anæmic and chlorotic affections. But they can only be prescribed with great prudence for those patients who experience a difficulty of digestion, above all if they are strongly ferruginous. The stomach cannot always hold them, especially with persons of feeble or delicate temperament.

Employed for baths, acidulated ferruginous waters have an astringent and stimulating action upon the epidermis. They excite a contraction of the capillary vessels and augment in consequence the functions of the heart and the nervous system. They are used in the following diseases.

Ordinary anæmia, occasioned by consecutive hæmorrhages after a surgical operation. Weakness caused by violent bleeding at the nose, internal bleedings or hæmorrhoids.

Chlorose.

Anæmic dyspepsia, and chronic diarrhœa. Leucocythæmia, and amyloid swelling of the spleen.

Chronic dropsy consequent on anæmia.

Scurvy.

Protracted and difficult convalescences.

Some forms of hypochondria and hysteria.

Trigeminal Neuralgia.

These waters are found in the following places.

Province of Shimotsuke.

Nasugori, Santokoya,.....Temp. 55° centigrade.

Province of Setsu.

Arima.....Temp. 40° to 41° centigrade.

Province of Hizen.

Wunzengadade, Ko-jikoku...Temp. ? centigrade.

The corresponding springs in Europe are those of Spa, Pyrmont, Griesbach, Rennes, Chatel-Guyon, &c.

We most recommend the spring of Santokoya which is the weakest. That of Arima is very strong and contains further a large quantity of chloruret of sodium. Thus it must only be administered with extreme prudence as a drink to people of delicate constitution.

The spring of Wunzengadade is also highly ferruginous. There are besides very probably many others in Japan, but which are as yet but little or imperfectly known.

IV. SALINE WATERS.

These are springs which contain a quantity of soluble salts, deduction being made of the little carbonic acid which they may also hold.

A. Sulphurated or vitriolic ferruginous waters.

These waters have an atramentarious (inky) savor, astringent and acid at the same time. They blacken when touched with gall-nuts, and form a blue precipitate with ferrosopottassic cyanuret. They preserve this character even after having been subjected to boiling, whereas carbonated ferruginous waters lose it completely. They often contain, besides, a free acid (sulphuric acid) and some sulphate of alumina. They are found in solfataras and in volcanic lands, and are very abundant in Japan.

They are only used for baths. They have on the epidermis a strongly astringent action, and may, in consequence of their qualities, have a rude effect upon the patient; so that they must only be administered with great prudence to persons of a feeble constitution. On the other hand they are of great efficacy in certain cutaneous affections of an obstinate nature. We recommend them principally in the following cases:—

Pituitous flux.

Leprosy.

Syphilitic ulcers.

Scrofulose.

Scald, etc.

These waters are found in the following localities.

Province of Kotsuke.

Kusatsu . . .	a. Kakke-no-yu	Temp. 47° to 52° cente.
	b. Wata-no-yu	" 46 to 48 "
	c. Matsu-no-yu	" 41 to 46 "
	d. Konpira-no-yu	" 42 to 48 "
Gosa-yu	65 to 70 "
Jizo-no-yu	48 to 52 "
Washi-no-yu	49½ to 51 "
Netsu-no-yu	90 "
Taki-no-yu	43 to 47 "

Province of Shimotsuke.

Yumoto Shiwabara	a. Kami-no-yu ...	Temp. 66° cent'de.
	b. Naka-no-yu ...	" 75 "
	c. Teru-no-yu ...	" 56 "
	d. Mudzina-no-yu	" ? "

Province of Hizen.

Wunzengadake, Ojigoku ... Temp. 100° cent'de.

Province of Higo.

Yutani ... Temp. 100° cent'de.
Taretama or Taruki-tama ... ? "

Province of Hinga.

Iwotani ... Temp. 100° cent'de.

All these waters are very strong, especially those of Kusatsu and of Yomoto-Shiwabara.

The corresponding springs in Europe are of Alexisbad, Muskau Parad (Hungary), Bonneby (Sweden), etc.

Saline Selenitic Waters.

These waters are more or less saturated with sulphate of chalk. They have an insipid taste and precipitate soap abundantly. They are but rarely employed in medicine as a drink; but they may be used in baths in treating the following diseases:—

Cutaneous affections of all sorts, because of their slightly astringent qualities.

Scrofulose.

They are found in the places below enumerated.

Province of Shimotsuke.

Itamuro-mura, Nasugori.....Temp. 39° cent'de.

Province of Hizen.

Ureshino.....Temp. 92° "
Takewo or TsukasakeTemp. 50 "

Corresponding springs in France, Les Puits de Paris.

C. SALINE MAGNESIAN WATERS; OR BITTER MINERAL WATERS.

(Picropégæ.)

These waters owe their taste and their purgative properties to the presence of a considerable quantity of sulphate of magnesia or chloruret of magnesium. They are seldom employed as drink. They are sometimes administered in large doses, if a strong purgative is required: they are also prescribed in smaller quantities, but during a longer period of time.

Many of these kinds of mineral waters may be found in commerce, in pitchers or bottles. They are recommended especially in the following cases:—

Abnormal fattiness.

Chronic obstructions.

Plethora.

Sanguineous congestions.

Hæmorrhoids.

Enlargement of the liver.

Some affections of the heart.

Diseases of the intestinal canal.

We have not yet found in Japan any purely magnesian waters; but such certainly exist, and we hope soon to be able to indicate some. We shall take the more pains in trying to find them that they can be of great utility in many diseases.

Corresponding springs in Europe: Pulna, Seidlitz, Epsom, Kissingen, Friedrichshall, Saidschutz, &c.

Saline waters, containing a large quantity of sulphate of soda have the same effects from a medical point of view. They are, in consequence, generally classed among the bitter saline waters. The best known of this kind in Europe are those of Carlsbad, Marienbad, Franzenbad, etc.

D. SALT WATERS.

(Halopégæ.)

The principal base of these waters is ordinary marine salt, chloruret of sodium. They are often classified in three subdivisions. Those which contain only a medium quantity of marine salt, are known under the name of ordinary salt waters. When they are so saturated as to be fit to be used in salt pits, they receive the denomination of "Soolen" a German term. Lastly, a distinction is made of those strongly impregnated with salt, which, besides their principal base, contain also appreciable quantities of alkaline iodurets or bromurets.

All these waters are employed as drinks and baths. In the first case, they are useful to stimulate and give tone to the digestive organs, to accelerate and regulate the secretions of the pituitous membranes, to ameliorate sanguinification, and to remedy interruptions in the discharge of the functions of the glandular system. We recommend them for drinks and baths in the following diseases

Chronic intestinal colds.

Abdominal plethora.

Dyspepsia and chronic colds in the stomach.

Chronic stomachical ulcers.

Diseases of the liver.

Enlargement of the spleen.

Chronic bronchial catarrhs.

Scrofulose.

Swelling or ulcers of the uterus.

Various affections of the osseous system,

to wit; caries, necrosis, rachitis.

Pleuritic and peritoneal exudations.

Strongly salted waters or "Soolen" can be employed as baths in the following complaints.

Scrofulose.

Rachitis.

Exudations of the uterus, the ovaries, the breasts.

Rheumatic exudations.

Weakening of the epidermis.

Chronic exanthema of the skin.

Chronic ulcers in the feet.

Neurosis.

Iodurated or bromurated salt waters are prescribed as baths or drinks in all the diseases where there is occasion to aid resorption, and principally in cases of

Scrofulose.

Glandular tumors.

Exudations of all the organs.

Rheumatic exudations.

Chronic exudations and other affections of the skin.

Ordinary salt waters are found in Japan in the below mentioned localities.

Province of Idzu.

Atami (principal spring).....	Temp. 100° cent'de.
Mino-yu, near Atami.....	" 50 "
Shin-yu	" ? "
Furo-yu	" 97 "
Kawaru	" 100 "
Midori-no-yu	" 85 "

Province of Shinano.

Shima-mura.... Temp. ? "

Province of Mimazaka.

Yunoye or Yunoye. ... Temp. ? "

Province of Higen.

Shimabara, Obama ... Temp. Variable.

The corresponding springs in Europe are those of Munster am Stein, Hombourg, Wiesbaden, Kreutznach, Baden Baden, Bourbonne-les-Bains, etc.

Strongly salted Waters, or "Soolen."

We only know at present one spring in Japan of this nature; that is that at Arima in the province of Setsu, of which we have made mention above in the chapter on ferruginous waters, this spring containing, besides, a great quantity of ironous carbonate. Two other springs which are found in the same province, those of Tada and of Hitokura, are also, it appears, strongly salted; but we have not, as yet, made any analysis of their waters.

The corresponding springs in Europe are those of Kissingen, Schonborn Sprudel, Naheim, and Soden.

Strongly Salted Waters, Iodurated and Bromurated.

We have not yet found in Japan any spring of this nature. We will, however, notice that some gaseous alkaline springs in the province of Kii, those of Kanayama among others, contain appreciable quantities of alkaline bromuret. The same may be said of the Arima spring in the province of Setsu.

The best known corresponding springs in Europe are those of Hall (in Austria) Heilbrunn, Kreutznach, Saxon in Switzerland, Dirckheim, Sulza, etc.

V. SULPHUREOUS WATERS.

(*Theiopegæ.*)

These are waters which contain as principal base a certain quantity of sulphurated hydrogen, or an alkaline sulphuret, or both together. The quantity of sulphur which is found in them varies much, or between 0.001 and 0.1 to one thousand parts of water.

They have a disagreeable odor and savor of rotten eggs, and darken solutions of silver and lead. They are used for drinks, baths, and inhalations. In all these sulphureous waters the real medical principle is hydrosulphuric acid, alkaline sulphurets being modified by the acids of the stomachical juice, with a liberation of sulphurated hydrogen. Taken as drinks sulphureous waters have a calming action upon the nervous system: they facilitate perspiration, assist the functions of the skin, and increase the urinary secretions. Employed as baths, they exercise a stimulating action on the epidermis, and, in consequence, increase and activate perspiration.

We recommend them in the following diseases.

Chronic muscular rheumatism, stiffness of the muscles.

Cutaneous affections of all kinds, such as, eczema, prurigo, psoriasis, chronic erysipelas. Syphilis.

Chronic poisoning by salts of lead or mercury.

Abdominal plethora.

Chronic catarrhs of the pharynx and larynx.

Chronic bronchial catarrhs.

Chronic inflammation of the uterus and ovaries.

Irregular menstruation.

Neurosis, following on rheumatism.

Sulphureous Springs in Japan.

Province of Idzu.

Oye ...	Temp. ?	
Yoshina ...	41°	cent'de.

Province of Sagami.

Ashi-no-yu	a. Naka-no-yu ...	Temp. 42°	cent'de.
	b. Soko-nashi-no-yu ...	42	"
	c. Ashi-no-yu ...	42	"
	d. Daruma-no-yu ...	37	"

Province of Shimotsuke.

Nikko	a. Naka-no-yu ...	Temp. 48°	cent'de.
	b. Taki-yu ...	48	"
	c. Umba-yu ...	65	"
	d. Sasa-yu ...	63	"
	e. Dzizai-yu ...	69	"
	f. Yakushi-yu ...	41	"

Province of Kii or Kishiu.

Katsu-ura ... Temp. 36.4° cent'de.

Province of Higo.

Yamaga ... Temp. ?

We recommend, especially to the inhabitants of Yokohama and Yedo, the sulphureous spring of Yoshina, in the province of Idzu, because the bath-houses and the bathing-tubs are very properly arranged: then those of Ashi-no-yu in the province of Sagami. These latter are a little stronger than the waters of Yoshina.

For the inhabitants of Kobe and Osaka it would be preferable to go to Katsu-ura, in the province of Kii or Kishiu, where also are found some excellent alkaline gaseous springs.

The corresponding springs in Europe are those of Aix-les-Bains, Bagnères de Luchon, Barèges, Enghin, etc., in France; Aix-la-Chapelle and Weilbach in Germany, Baden near Vienna, in Austria; &c.

We conclude here this summary, still very incomplete, of some mineral springs in Japan, and we trust that the reader, while he will not find there information about a greater number of baths, will thank us, notwithstanding, for our endeavor to be useful to persons, the state of whose health renders necessary the use of such or such of these waters. We are convinced, further, that this preliminary notice will be equally well received by the native population. It is of course understood that it is necessary in all cases of need to consult a sensible physician upon the use to be made, according to circumstances, of the different springs which are here mentioned.

Finally, we will not close without stating that the Japanese Government took the initiative in this useful work. It is to the Department of Public Health (Yei-sei-kiyoku) a section of the Ministry of the Interior (Naimusho)—it is especially to its head, as zealous as learned, Mr. Nagayo Sensai—that the honour of having made known many good springs of mineral water is due. Thanks to the laboratories which we have installed by order of the Government, we have been able to devote ourselves to the studies, of which we have here published the results. Let us hope that we shall be able to pursue these studies, and that the population, both native and foreign, will recognise in this matter the excellent intentions of the Home Minister.

We have still a duty, which it is very agreeable to us to fulfil, that of mentioning here the names of several of our assistants, Messrs. Misaki, Nakamura, Mayake, Onaka, Haraguchi and others, who have greatly aided us in the analyses which we have made of the waters enumerated in our notice.

A SPIRIT STORY.

(From the Japanese.)

A very long time ago there lived in Shiba, Yedo, a very rich family, consisting of the husband, wife, and one daughter, who was celebrated for her great beauty. When she arrived at maturity, her parents, according to the prevailing custom, selected a suitable husband, a man in whom they reposed every

confidence as being in all respects worthy of their lovely daughter and of the possessions which he would succeed to on their death.

The marriage ceremony was performed; and after the festivities had been indulged in to a late hour the happy couple retired. Early the next morning the bridegroom arose, and hastily gathering a few articles of clothing together, went away before the other members of the family were up, and never more returned. The circumstance of his disappearance was greatly wondered at, and a hundred causes were assigned for it. But as he never came back and nobody knew whither he had gone, his image was obliterated from the memories of his former companions and friends until at length he was almost forgotten.

After a few years had elapsed, the parents of the girl selected another son-in-law, and the marriage ceremony was performed, as before; but again the bridegroom only stayed one night. Now the father of the girl began to suspect something wrong on the part of his daughter, so he questioned her closely, but she persisted in her protestations of ignorance.

The singular events related above were soon circulated throughout the neighborhood, and there was not another family who would allow a member to become the husband of the beautiful girl, who was imagined by the superstitious people to be some kind of monster. The relatives of the girl also kept their eyes upon her, both when she was at home and when she went abroad, to see if they could discover anything that would help to clear up the mystery attached to the sudden disappearance of the two young men.

Now, in the neighbourhood, there resided a young man who had been turned away from his parents' home on account of his bad behaviour. (One of the customs in Japan is, that when a member of a family conducts himself with so much impropriety as to bring disgrace upon his relatives, he is turned adrift upon the world to shift for himself.) But although a young profligate, he was exceedingly clever with his pen and was a good arithmetician. One day the parents and relations of the girl, whom they had vainly endeavoured to procure a husband for, met secretly to consider what was to be done to remove the stigma resting upon the family. During the discussion it was proposed that the young profligate mentioned above should be sent for, and, if he agreed to it, he should be adopted as the husband of the girl. He was accordingly sent for; the proposal of alliance with the beautiful heiress was put to him, and he at once acquiesced in the desire of the unfortunate family.

The day for the marriage ceremony was fixed, and it passed as the others had done. At night the bridegroom determined to find out if possible what had been the cause of the sudden disappearance of the former husbands of the girl, so he slept like a cat, with one eye open. About midnight he observed the apparition of a young man come into the bedroom, ensconce itself near the bride, and gaze intently upon her for about two hours, at the end of which it got up and disappeared. The bridegroom at once understood the cause of the sudden disappearance of the girl's former husbands. He turned the circumstance over in his mind and arrived at the conclusion that there was no real cause for alarm, and finally resolved to say nothing about the matter, but just let things take their own course. If the ghost came every night it could not be helped; he would keep his bride and so inherit the possessions of her parents at their death.

Day after day passed away, and every night at the same hour the ghost made its ap-

pearance by the bedside. The neighbours, as well as the girl's parents, were inclined to believe that the bridegroom would soon disappear as mysteriously as the other bridegrooms had done, and were rather astonished to find that he evinced no signs of decamping.

One day, while the husband was walking abroad with the intention of calling on a friend about some matters of business, he was suddenly accosted by a boy, who addressed him by name, and said that his master was desirous of an interview, as he had something to say to him. The lad then led the way to a large building which looked like the residence of a very great person. The man was shown into the reception room, where he sat down and awaited the arrival of the master of the house. After some time a poor, miserable looking young man came into the room. He bore a marked resemblance to the ghost which paid a nightly visit to the bedside of the newly married couple. After the customary salutations had been exchanged, the owner of the mansion abruptly said:

"Excuse me, Sir, but I hear that you have married the rich man's beautiful daughter. Will you kindly tell me if this information is correct?"

"Yes, Sir, what you have heard is quite true," replied the visitor.

"Ah! is that so? is that so?" half musingly interrogated the young man.

Now the husband of the girl began to perceive that this young man who had sent for him loved his wife with an intense passion, and this was the solution of the mystery attached to the nightly appearance of the spirit. It was the disturbed spirit of the young man, which could not rest because of his great love. When he was asked for about the sixth time whether he had married the girl he replied, "I have" and added, "but what do you require of me?"

To this question he received no answer; and so he conceived the idea of deceiving this lover of his wife. After a moment he continued:

"But I am very unfortunate; for a few days after the marriage ceremony my young wife became very ill and shortly afterwards died, and now I am a widower."

As soon as the love-sick young man heard this intelligence, he walked straight into his bedroom without saying a word. The visitor then left the house, and that night nothing was seen of the ghost. The next day as he was passing in the same direction he felt anxious to know how the unfortunate young man was, and going to the house he observed a notice on the gate announcing his death. He felt very sorry; but, as he could not restore the dead to life, he kept the story of his love secret for a long time. At length the neighbours began to suspect something, and finding concealment of no further avail, he told all about it. The parents of the bride were very sorry that the young man should have died of a broken heart through his love for their daughter; and, to show how they appreciated his devotion, they took her every afternoon to his grave to repeat prayers for the repose of his spirit.

One day the young woman went to the grave in company with her husband, and, while they were bending low and praying before the tomb, they felt the ground underneath their feet shake. They were greatly astonished and hastily left the place. On returning home the young woman was taken very ill and could eat nothing. She gradually got worse and worse, and a few days after her visit to the grave she died. Her husband then fell sick and died also; and it was supposed by the people that

they both came by their death through the instrumentality of the spirit of the young man who died from love-sickness.

HIOGO.

Report of the Regular Monthly Meeting of the Hiogo Municipal Council, held at the Municipal Hall on Saturday, 18th February, 1877.

Present: Messrs. N. J. Newwitter (Chairman), A. A. Annesley, C. Rasch, H. Mackenzie, A. H. Groom, C. R. Simpson, G. Duplaquet, C. J. Favre Brandt, R. G. Walsh and J. C. Klein.

The Minutes of the last Regular Meeting were read and confirmed.

The Minutes of the Extraordinary Meeting held on the 15th instant having been read,

Mr. Annesley said the address to the Mikado had not been inserted in the official minutes; he thought it should be inserted.

On the Reports of the Committees coming up for consideration,

It was proposed by Mr. Rasch, seconded by Mr. Groom, and carried:—

That the Report of the Finance Committee be indefinitely postponed.

The Chairman said that during the week the members of the Police Committee had called attention to a matter deserving the Council's attention.

It was proposed by Mr. Rasch, seconded by Mr. Mackenzie, and carried:—

That the correspondence be postponed indefinitely.

It was proposed by Mr. Rasch, seconded by Mr. Mackenzie, and carried:—

That all Committee Reports be postponed indefinitely.

Mr. Rasch said he had proposed a Resolution, seconded by Mr. Duplaquet, at the last Extraordinary Meeting, which had been ruled out of order. He now brought this again forward and would request the Chairman to put it to the vote. He would call on Mr. Annesley to make a statement by the authority of the Governor, and said that circumstances justified him in bringing forward the motion.

The Chairman said the motion was out of order.

Mr. Rasch asked if the Chairman allowed any discussion on the motion or ruled it out of order.

The Chairman said the motion was inconsistent and out of order, and it ill became Mr. Rasch, as a member of that Council, to bring it forward. An apology had been made as requested. The motion was out of order.

Mr. Rasch asked the Chairman if his apology had been accepted.

The Chairman said Mr. Rasch had no intention of accepting an apology. If Mr. Rasch had asked for further information he should have been happy to have given it.

Mr. Rasch asked how the Chairman knew he had no intention of accepting an apology. That question was left to the body of members, not to any one member and not to the one who had to apologise. He complained that when the Chairman ought to have apologised he reproached him (the speaker) with being unfair and impolite. He (the speaker) repeated his motion—"That the Chairman be requested to resign." It was not a matter of intentions or ideas but of facts, and facts which were not in accordance with the dignity of that body. If his motion was ruled by the Chairman out of order, he protested.

Mr. Annesley began speaking, when The Chairman said Mr. Annesley must ask his permission if he wished to make any remarks. He (the speaker) had always done so when Mr. Annesley occupied the Chair.

Mr. Annesley replied that the Chairman had read his address to Mr. Kanda before he (the speaker), then Chairman, had time to consider the business before the Meeting. He now begged leave to address the Meeting. He did not come for the purpose of reading the letters he held in his hand, unless he found that circumstances compelled him to do so in his own justification. When Mr. Newwitter placed his word as equal to his (the speaker's) and to that of the Governor of Hiogo, at the last Meeting, it was due to the Meeting to state that not one word had he stated but what had been confirmed by the Governor.

The Chairman said he objected. Mr. Annesley was desirous of reading some correspondence. Was the Meeting desirous of hearing it?

This having been put to the Meeting and carried in the affirmative,

Mr. Annesley read the following correspondence:—

H.B.M.'s CONSULATE FOR HIOGO AND OSAKA,
Hiogo, 16th February, 1877.

To MORIOKA MASADZUMI, Esq.,
Governor of Hiogo.

SIR,—At an Extraordinary Meeting of the Hiogo Municipal Council, held on the 14th instant for the purpose of hearing the explanations of Mr. Newwitter, the Chairman, for having, without any authority from either the Municipal Council or the Community of Kobe, written out an address in their name and as their representative with the intention of presenting the same to His Majesty the Emperor of Japan at the ceremony held at Hiogo on the 5th instant to celebrate the opening of the Hiogo and Osaka and Kioto Railway, the Chairman stated to the Meeting that in presenting this address he had the sanction and consent of the Governor of Hiogo to do so. I have therefore the honor to ask whether it was with your authority and sanction that Mr. Newwitter should present an address to His Majesty the Emperor of Japan on the 5th instant.

I have, &c.

A. A. ANNESLEY,

H.B.M.'s Acting Consul,

&c. &c. &c.

[Translation.]

February 16th, 1877.

SIR,—I beg to acknowledge the receipt of your letter of to-day's date, in which you inform me that at a Meeting of the Hiogo Municipal Council on the 14th instant Mr. Nathan J. Newwitter, American Consul and Chairman of the Municipal Council, stated that the address presented to His Majesty the Emperor by him, as the representative of the members of the Council and the residents on the occasion of the ceremony of opening the Hiogo, Osaka and Kioto Railway, which took place on the 5th instant, was furnished at my request and with my sanction, and you accordingly ask me whether such is the case. I therefore beg to give you the following reply.

With regard to the presentation of the said address—this was in consequence of a previously expressed wish of Mr. Newwitter; it is with surprise I learn that on the contrary it was presented "at my request and with my sanction."

Having some important business to transact which had no connection with the subject under discussion, I visited the American Consulate either on the 1st or 2nd instant, and it was then that Mr. Newwitter mentioned that in connection with the expected arrival of His Majesty the Emperor, he desired to have an audience of His Majesty, as representing the residents, and to present an address; he further stated that such was the unanimous wish of the community. Accordingly understanding his feelings in the matter, as it was intimated that at the ensuing opening of the Railway an address should be presented by a representative of the Japanese merchants, and in con-

consideration of the precedent constituted by the presentation of an address by a person representing the foreign merchants of Yokohama in a former year, I said that I would refer to the Central Government for instructions and would then give him a reply acquainting him with the result.

On referring the question to the Central Government I was informed that on this occasion an address from the foreign merchants could not be received, and accordingly I communicated this fact to Mr. Newwitter by Sakaki Masazane, Itto-Sakkwan of this Ken. However, Mr. Newwitter informed Sakaki Masazane in reply that as his intention was already formed, if he could not present the address at the moment of having an audience of His Majesty he wished to send a copy of it.

On the evening of the 4th instant it was settled that no address should be received from the representative of the native merchants, and therefore, of course, that none could be received from the representative of the foreign merchants and it was further decided that the various Consuls should be briefly presented by their Ministers—merely their names being mentioned. I therefore communicated this decision to Mr. Newwitter on the morning of the 5th by Sakaki Masazane.

At the ceremony of opening the railway on the 5th instant, Mr. Newwitter, as you are also aware, did not appear in the Audience Hall. At the conclusion of the ceremony, and after His Majesty had retired into the Refreshment Chamber, I there met Mr. Newwitter, when he requested me to present to His Majesty the address, respecting which communication had previously taken place between us—this address being in the shape of a roll fastened with silk cord. In the face of this repeated entreaty I felt that I could no longer let it pass unnoticed, and comprehending his wish, I good-naturedly passed it on secretly to an official of the Office of Ceremonies. Whether it was subsequently forwarded to the Emperor or not I am unaware.

When this address appeared in the *Hiogo News* of the 7th instant I was truly astonished, and immediately communicated with Mr. Newwitter on the subject. I have now further learnt from you in your letter the statement that this address was furnished at my request and with my sanction—at which I am indeed surprised.

I beg you will give your attention to the above, and I wish you to understand that the address was not presented by Mr. Newwitter at my request and with my sanction.

With respect,

(Signed) MORIOKA MASADZUMI,
Gonrei of Hiogo Ken.

A. A. ANNESLEY, Esq.,
&c. &c. &c.

Mr. Annesley observed that what he had said at last Meeting had been fully corroborated. He had not uttered a word which had not been justified and authorised, and he now left it in the hands of the Meeting.

The Chairman said the translation appeared to have been made at the request of Mr. Annesley by Her Majesty's interpreter at the British Consulate. As Mr. Annesley had pointed out, there were explanatory side notes: this showed the translation wanted altering, and they should let the Governor translate it. On the 3rd instant, in the evening, an interpreter had called upon him, took a copy of the address and translated it. This translation was made with the Governor's knowledge and consent. On the 5th, when the Governor saw him, he asked him why he had not come earlier. He replied there was no possibility of passing the guards, having arrived there late. He handed the Governor the address; he (the Governor) thanked him and said it would be presented.

Mr. Annesley said he was also in a position to explain that Mr. Sakaki had translated the document out of good feeling and not by official authority.

The Chairman said the matter seemed to have been made a personal one, and Mr. Annesley had gone to much trouble about it. Mr. Annesley said it was consistent and

fair to defend himself. He did not wish to make it a personal matter and protested against Mr. Newwitter's assertion that it was a personal matter.

The Chairman thought Mr. Annesley's way of proceeding unnecessary. If his (the speaker's) words had contained anything of an insult,—so far, so good. As this was probably the last Meeting he should attend, he had a little matter he desired to explain. Last year, being one of the auditors of the accounts, he had found in those rooms an account for \$29.70. He had asked Mr. Trotzig what it was for, and Mr. Trotzig said Mr. Annesley had asked permission to give a Ball in the Hall. The following bills had been presented:—

Carpenter	\$11.00
Covering floor, 6 men 1 day	4.50
15 yards Drill	1.50
1 lb. Nails	0.80
4 men, 1 day	3.00
Flowers and shrubs	8.90
	<hr/> \$29.70

Mr. Trotzig had endorsed them "For Mr. Annesley's Ball." He told Mr. Trotzig that it was strange that the money of the Municipal Council should be taken for private purposes, and Mr. Trotzig said the bills had been presented to Mr. Annesley.

Mr. Annesley, with much warmth, declared it to be an utter falsehood.

The Chairman said he had asked Mr. Trotzig at the time. Mr. Mackenzie made no remarks; he probably thought the accounts needed none. Being assured Mr. Annesley had personal feelings at this and the last Meeting, he had brought the fact before them for their consideration. The money was used for private purposes.

Mr. Annesley said Mr. Trotzig had never presented the bills to him; if he had done so they would have been paid.

The Chairman admitted he had signed the bills as correct, but said he did so out of good feeling. He now brought it forward.

Mr. Mackenzie said with permission he would explain the whole matter. For the last two years he had been appointed to audit the accounts, and in passing the accounts for 1875, Mr. Newwitter, as co-auditor with himself, came across the vouchers alluded to. They asked Mr. Trotzig what they were for. Mr. Trotzig replied, for Mr. Annesley's Ball. Mr. Newwitter stated that he (the speaker) made no remark. If his memory served him right he remarked that it was a matter for Mr. Annesley. Mr. Trotzig replied he understood it was a diplomatic or half a public Ball. They passed the accounts as made up by Mr. Trotzig, rather than disturb the balance, as it was simply a "twopenny halfpenny" affair. They were unanimous in passing the accounts. The books are here and audited as correct. He might be open to censure for having done as he had, but it was such a decimal matter and was left to the auditors. He would also distinctly state he was under the impression that Mr. Annesley had never been asked to pay the account. He much regretted that Mr. Newwitter had brought such a miserable affair forward.

Mr. Annesley, very excited, demanded that Mr. Trotzig, who was present, should stand up and say on his oath whether he had ever presented those accounts to him.

Mr. Trotzig said that he had never presented them to Mr. Annesley, and Mr. New-

witter was mistaken in saying he had done so.

Mr. Annesley said he was satisfied with Mr. Trotzig's explanation.

Mr. Rusch said that after such unpleasant proceedings it was not consistent with the dignity of himself or his colleagues to sit there any more under the Presidentship of Newwitter, and begged to hand in his resignation.

Mr. Mackenzie said he endorsed every word uttered by Mr. Rusch. He regretted he could not sit at the Meetings while presided over by Mr. Newwitter, and begged to hand in his resignation.

Mr. Groom said he fully endorsed every word uttered by Messrs. Rusch and Mackenzie, and begged to hand in his resignation.

The Meeting then adjourned.
—*Hiogo News*.

Authentic news from the South continues to come in but slowly, and those European generals who regard with aversion anything in the nature of a newspaper correspondent would envy the completeness with which the Government here succeeds in keeping all operations in the field secret. The *Taihei-maru*, the Mitsui Bishi steamer which was impounded at Kagoshima when she arrived there from the Loo Choos, has arrived in Kobe, but has not very much to tell. She arrived at Kagoshima on the evening of the 8th inst., with a cargo of sugar, and soon after anchoring was boarded by some 200 armed men, who took possession of the ship and would allow no communication with the shore. They gradually in a few days went, their place being taken by some policemen who also returned on shore. On the morning of the 19th, Captain Hubenet got on shore, found Kagoshima apparently almost deserted by the male sex, and was told that every male down to the age of 14 had been pressed to march North. He was told 14,000 men—or men and boys—had left in the course of the 14th, 15th and 16th. The foreigners in Kagoshima had been kept under strict surveillance, but were otherwise well treated. Mr. Satow, of the British Legation, had been one of them, but had been able to leave overland for Nagasaki on the 18th. Fresh food had been sent on board the *Taihei-maru*, and as there was no apparent reason why she should be compelled to stay any longer, she got up steam on the 19th and came away, without being interfered with. A friend informs us that a Japanese in Kobe has received a private letter from Kagoshima which incidentally confirms the deserted state of that town, and adds that the rebels goaded the population to march with blows and threats. According to other reports which have reached us, the rumored attack on the Kumamoto garrison has resolved itself into the partial destruction of the barracks by fire, and though there may have been a brush between Satsuma and some troops of that garrison, it is officially stated that no fighting on a large scale could possibly have taken place before last Wednesday; the official information adds that the Satsuma troops had reached only to Hitoyoshi, (a town on a rather considerable river at the South of the Kumamoto Ken). We omitted to mention that the men who boarded the *Taihei-maru* were dressed in Japanese clothes, and were armed with two swords and a rifle each, but the rifles were not all of the same pattern.—*Idem*.

We have been requested to correct two inaccuracies in our Report of the last Municipal Meeting. When the Minutes of the previous Meeting were being read, it was not Mr. Newwitter's address to the Mikado which Mr. Annesley desired should be inserted, but Mr. Newwitter's speech in which he pledged his word against what Mr. Annesley had reported on behalf of the Governor of Hiogo; and again, with reference to the bills for \$29.70, where the Chairman said Mr. Trotzig had informed him that the bills had been presented to Mr. Annesley, the words should be added, "who had refused to pay them."—*Idem*.

Law Reports.

In the Danish Consular General Court.

Before ERNEST DE BAVIER Esq., Acting
Consul-General,

Messrs. E. KRAETZER and FREDERICK KREBS,
(Assessors.)

Thursday, March, 1st, 1877.

The following sentence was passed this afternoon upon Hakon Kirchhoff, alias Anton Bennett, one of the men implicated in forging a \$500 note on the Hongkong and Shanghai Banking Corporation.

JUDGMENT.

Considering that you, Hakon Kirchhoff, calling yourself Anton Bennett, have lent assistance for the counterfeiting of several notes of the Hongkong and Shanghai Banking Corporation of Yokohama, of the denomination of \$500 each, that, though not uttering the notes yourself, you have allowed others to do so with your knowledge: considering, however, as extenuating circumstances, that though you became aware of the fraud soon after you commenced to counterfeit the notes, you had not the intention to defraud when you first began the work: considering further that you were not the originator of the crime, not having had the first idea of it; that the necessary funds and instruments to effect it have been furnished to you by a third person; that you would have derived no direct benefit by the fraud, as the proceeds of it were to go to a third person, the Court, taking into consideration Sec. 271, Chap. 27, of the Criminal Code of Denmark, which reads as follows:

"The punishment prescribed in Sec. 267=270 may however, if the forged Document, from its palpable errors, has been less dangerous, be reduced according to circumstances by one half," finds you, Hakon Kirchhoff, guilty under paragraph 269, Chap. 29, of the said code, and sentences you to one year's imprisonment with hard labour of the first degree, beginning from the 22nd of February, this being the shortest term of imprisonment provided by that section.

(Signed) ERNEST DE BAVIER.

Danish Consul-General.

E. KRAETZER.

FREDERICK KREBS

In H. B. M.'s Court at Kanagawa.

Before H. S. WILKINSON, Esq., Acting Law
Secretary.

Wednesday, February 28th, 1877.

KONDO HIROYEMON AND HAKII SEIJIRO
versus

J. E. CARTER.

The claim of the plaintiffs is for \$360.

The hearing of this case was adjourned

on Wednesday last, His Honour considering the production of certain witnesses, the whereabouts of whom nothing was apparently known, to be very essential, and requested both plaintiffs and defendant, to use their best endeavours to find them out and bring them before the Court this morning. On the Court assembling His Honour asked the plaintiffs if they had been successful in finding out the three men referred to, and they replied that, notwithstanding their efforts, they had been unsuccessful in their search. Information had been lodged at the police stations, and the police had issued a circular enquiring about them. The defendant also stated that he knew nothing of the missing witnesses.

His Honour said it was very important that these men should be found, and he would adjourn the case for a fortnight, so that he might himself communicate with the authorities, and if the men should happen to be discovered before the 14th the circumstance should be reported at once.

Adjourned till the 14th of March.

In the Judicial Court at Kanagawa.

Before MR. ASAINA KANSUI, Vice President.

Wednesday, February 28th, 1877.

C. BRAUN vs. KOJIWO SHOKITSU.

This was an action brought for the recovery of \$6,000, value of some Shirtings sold to the defendant and which he failed to take delivery of.

Mr. Dickens appeared for the plaintiffs.

The Court informed the counsel for the plaintiffs that the defendant had not put in an appearance, notwithstanding they had waited till after eleven o'clock, therefore any statements he had to make would now be entertained by the Court.

Mr. Dickens replied that he had some statements to make. But before producing any evidence he desired to say that Mr. Braun represented one of the largest firms in Yokohama, and it was very much against his wish to bring the case into Court; but of late the Japanese merchants had entered into contracts and failed to fulfil them so often, to the great inconvenience of the merchants, that he felt compelled to bring this case before the Court. The learned gentleman then produced the contract for the supply of 9-lbs. shirtings and stated that that contract was entered into in October last. On the 28th Sept., 1,800 pieces of 9-lb. shirtings arrived in the *Tanis*. The quality and make were the same as mentioned in the contract. On the same day 4,000 pieces of shirtings arrived by the *Hiroshima-maru*; and on the 10th of October there arrived 4,400 pieces of shirtings by the *Glencarn*. Thus, the defendant's statement that some part of the shirtings did not arrive within the appointed time is not true, because on the 10th of October, ten days before the appointed time, there had arrived 19,200 pieces to meet the contract for 5,000 pieces. The arrival of these goods by these vessels on the above dates could be proved by the Custom House entries, if necessary, of which Mr. Braun had copies with him. (Copies produced.) Those were copies made by a Custom House officer.

During the months of September and October, the defendant called very frequently at the plaintiff's office, and knew that the goods had arrived and were ready for delivery at any moment and have been so ever since. The defendant took delivery of 1,000 pieces on the 13th of October, of 100 pieces

on the 16th, of 500 pieces on the 27th, of 250 pieces on the 30th, and 250 pieces on the 2nd of November. Since that time he had not taken delivery of any more; but, until his answer was put in, he never in any way contested the fact of the contract being properly carried out by the plaintiffs, or of the shirtings being ready for delivery at the appointed time. Thus the statement of the defendant is insufficient in that it does not state the correct times when the goods were taken delivery of. The goods having arrived on the 10th of October, the defendant ought, by the contract, to have taken delivery before the 30th of October; and his taking delivery of 250 pieces on the 2nd of November is a clear proof that he admitted the contract had been carried out properly by the plaintiffs. Another proof is, that on the 23rd of Nov. he paid the plaintiffs \$500 on account of the contract; and lastly, up to the time of the answer, the defendant was frequently requested to take delivery and never objected that the contract had been broken by the plaintiff in any way but simply asked for time to be given to him. Therefore the plaintiffs ask the court to order the defendant to take delivery of the goods at once at the price mentioned in the contract, and to pay in addition the sum of \$150 for interest, insurance, godown expenses and loss of time.

During the interval which had elapsed from the opening of the Court, the defendant arrived, and was now examined as to why he had arrived so late. He replied that he had been about the Court all the morning, but not seeing any one, thought the case had not come on. This explanation did not appear to satisfy the Court, His Honour stating that he, defendant, would be punished according to the regulations.

The defendant then stated that he made a contract on the 20th of September with the plaintiffs, and the goods were to arrive in October. He was informed of the arrival of a portion of the goods about the 10th of October, but did not know who it was that brought the message, as he was not present. He did not think that such a large quantity of goods had arrived by the 10th of October as alleged by the plaintiffs, and he was prepared to produce proof to substantiate his statement.

The Court at this stage adjourned the case till the 3rd March at 10 a.m.

Saturday, March 3rd, 1877.

The claim of the plaintiff is for \$6,000, value of some pieces of shirtings sold to the defendant and which he failed to take delivery of.

This first hearing of this case took place last Wednesday, when it was adjourned for the production of further evidence.

Mr. Dickens appeared for the plaintiff.

When the Court sat this morning Mr. Dickens said that the person who was examined on the last hearing had represented himself to be the banto of the defendant. He, Mr. Dickens, had learnt that he was nothing of the kind, and would like to know under what guise he appeared in the case. His reason for asking the question was, that no one should be allowed to give evidence unless he had some personal knowledge of the transaction.

The person referred to, being questioned by the Court, said that, two years ago, he had been employed by the defendant; and he, defendant, being ill had requested him to represent him in the present instance.

Mr. Dickens said he only wanted to know in what capacity the individual appeared in

the court. He then produced the documents, which had been asked for on the last day of hearing, from the Custom house, referring to the arrival of the goods. He explained some slight difference which appeared in the English and Japanese accounts of the weight of the shirtings, though they both amounted to the same thing viz:—9.1b Shirtings. The invoices of 10,800 pieces which arrived by the *Tanais*, 4,000 pieces by the *Hiroshima-maru*, and for the quantity which arrived in the *Glennearn*, were also produced, as well as the godown book, showing entries of the goods being taken possession of. Mr. Dickins then read the dates of the arrival of the various parcels. To prove that \$500 was paid by the defendant on the 23rd of December to the plaintiff, Mr. Dickins produced the Chinese compradore of the plaintiff, who, he said, received the money and gave the defendant a receipt for it which he, defendant, ought to produce.

The defendant said it was a mistake about the \$500 having been paid on the 23rd of December on account of the two contracts as no money had been paid and no receipt received.

The plaintiff's Chinese compradore was then examined in relation to the receipt of the money, and said he did not know the name of the Japanese who paid the money, but another Chinaman who was present at the time could certify to it. This person was then sent for.

Mr. Dickins said he had one more witness, and produced the plaintiff's banto, who stated that during September and October the defendant called nearly every day at No. 30, and was informed on most of those occasions that the goods had arrived and were ready for delivery, and had even gone to defendant to inform him of the goods being ready for delivery, and he, defendant, had asked on several occasions for delay.

In answer to Mr. Dickins, the defendant said that he was of the opinion that the goods had not arrived as he was continually told by plaintiff that they had not. He afterwards admitted that he did not go to plaintiff himself, but some one else did, and that this person was told the goods had not arrived.

A Japanese, who said he was a messenger in defendant's employ, was examined. He told the Court that he sometimes went to No. 30 to buy things for his master, and made the contract for the shirtings the subject of the present litigation. He took delivery of some of the goods, but he could not get the lot as he was told they had not arrived. He was told two or three times that they had not arrived. After the 10th of October he was told two or three times that the goods had not arrived. He was also told so on the 10th. It was a Japanese who told him that the goods had not arrived. On the 8th he was told that not a single piece had arrived. On the 11th information was sent to the defendant that 1,700 pieces of shirtings had arrived. 19,000 pieces may have arrived, but they were for other persons and not for him; this he was told by the Japanese from No. 30. Mr. Dickins asked the witness whether, supposing that the plaintiff had sufficient goods to cover the contract, did he know why they should state they had not sufficient goods? but he persisted in evading the question.

Mr. Dickins said that on the 20th of September there were 9,000 pieces of shirtings in the plaintiff's godown, and on the 10th of October there were more than 9,000 and he could prove that by the godown books if necessary. He then put the question in a

different form, which the witness had succeeded in evading before, with as little success as witness did not or would not understand it, but entered into unnecessary details entirely apart from the question, and at length Mr. Dickins gave up the attempt. The next question was whether he denied that between the 10th and 20th of October the plaintiff had not enough shirtings to cover his contract with the defendant, and he admitted that he did not know.

Mr. Dickins then stated that in September last the plaintiff had twice as many shirtings left in his godown as would have fulfilled the contract with defendant: therefore there was no reason whatever for the plaintiff to say he had not sufficient. These shirtings arrived by thousands every month.

The witness said that since the contract had been made the price of shirtings had fallen, but he did not know how much as he had not purchased any lately: it might have fallen fifty cents. Up to the filing of the answer to the petition the witness admitted that he had not complained to Mr. Braun about the non-arrival of the goods. He admitted that on the 2nd of November he had taken delivery of 250 pieces. He never went to Mr. Braun when his banto said that the goods had not arrived, as he did not see any necessity to make any difficulty about it. He never asked for more time to be given to him to take delivery of the goods; and did not recollect paying \$500 on the 23rd of December.

The Chinaman who was sent for, having arrived, was examined and stated that he remembered the plaintiff's compradore being paid the sum of \$500 on the 23rd of December last, and was present at the time the money was paid and recognised the Japanese who paid the money.

Mr. Dickins said, if the Court required it, he could prove by the books the amount of goods which arrived in September and the quantity that went out, and show that a surplus remained more than sufficient to cover the contract with the defendant.

His Honor stated that he did not see any necessity for the production of the books at present: nevertheless it would be as well if they were produced at the next sitting, as something might arise rendering their production necessary.

The case was then adjourned till the 7th instant at 10 a.m.

Wednesday, March 7th, 1877.

The claim of the plaintiff is for \$6,000, value of some pieces of shirtings sold to the defendant and which he failed to take delivery of.

The hearing of this case was resumed from Saturday the 3rd instant.

Mr. Dickins said he had brought all the information he had promised, amongst other things a list of the different purchasers of shirtings besides defendant during September, October and November. Plaintiffs were opposed to having these particulars published and to evade this Mr. Dickins continued to speak in French, which was translated into Japanese.

Mr. Dickins enumerated the different deliveries from the godown, and the list above mentioned, proving the exactness of the latter by reference to the delivery book. He proved that, just after the time of the contract in question, the price of 9 pound shirtings decreased about 60 cents per piece. Several manifests of ships by which other

quantities of these goods arrived were also put in. From the balance of shirtings proved to be on hand after every other contract had been completed, it was shown that Reiss & Co. had far more than sufficient to meet that of defendant. Mr. Dickins begged the Court to take the list of the Japanese with whom Reiss & Co. had dealings privately; both in order to keep it from defendant who was a rival in the trade and to save it from publication.

Defendant asked plaintiff to state how many pieces arrived up till the 20th October, which he considered the limit day of his contract?

Mr. Brown said that information had been given before. About 19,200 pieces were to hand before the 10th October, and 10,500 were delivered before that date, leaving a balance of 8,700 pieces ready for delivery. It was then defendant should have taken delivery, or within 20 days. From the 10th to the 20th October 3,000 pieces more were delivered, leaving 5,700 pieces to meet defendant's contract for 5,000 pieces. Up till the 10th November shirtings arrived daily, and on that date about 12,000 pieces were ready, over and above all that had been delivered on other contracts.

Defendant asked about the 13,000 pieces of shirtings which had been delivered to other purchasers, and demanded to see the list.

Mr. Dickins produced the list and the proofs of its validity, but again pressed upon the Judge the impropriety of showing to defendant the business of his competitors. Plaintiffs personally were indifferent as to its publication, but it might harm and displease the Japanese.

His Honour, refraining from mentioning names, read over to defendant the above particulars of the deliveries.

Defendant said it was his opinion that the shirtings were delivered at once on arrival, and that plaintiffs had no balance on hand. Defendant named a Japanese to whom 11,000 pieces had been sold. He did not know the mark, nor the weight, nor any other particular.

Mr. Dickins said over 11,000 pieces of shirtings of many different marks and weights had been delivered to the merchant in question, but it is absurd to bring up such information in that manner. The merchant should be called to give his evidence in person.

His Honour informed Mr. Dickins that defendant requested an adjournment till the 12th instant, when he would produce the evidence of several merchants who had had dealings with plaintiffs, and so prove that the quantities he named had really been delivered by them.

Adjourned till 12th instant, at 10 o'clock.

Tuesday, February 27th, 1877.

MESSRS. VAN OORDT & Co. vs. TAKAKE FUSAJIRO.

Promptly at the hour set down for hearing this case was brought on. The plaintiffs claimed the compulsory fulfilment of a contract entered into with the defendant. From their statement it appears that the defendant entered into an agreement to take from them as many piculs of cloves as they could import during January, at \$70 per picul. During that month twenty piculs arrived; and, upon the defendant being informed of the fact and requested to take delivery, he refused, alleging that he had only agreed to purchase five piculs.

The plaintiffs were represented by Mr. Reynders, who stated to the Court that he

had nothing further to add to the statement already filed, but would ask that the defendant be compelled to complete his contract and take delivery of the twenty piculs of cloves.

The Court asked the plaintiff if he had at any time made another contract with the defendant for cloves, and he replied that there had been another contract for the supply of twenty piculs of cloves at \$62 per picul and ten piculs at \$65, but that was not fulfilled as the cloves could not be obtained at Singapore at those prices, and the contract was annulled: the present contract was entirely distinct from that one. The date when the defendant was informed the cloves could not be obtained at Singapore, plaintiffs' representative could not say, as he personally had nothing to do with that transaction, but he believed it must have been some days prior to the second agreement. The time that would elapse between the sending of a telegram to Singapore and receiving an answer might be ten hours or three days, but he did not think it would take longer than three days to receive an answer. He could not say how it was that, as the first contract was annulled, the documents referring to it were in possession of the plaintiffs, but thought it probable the defendant had given up the papers. He did not claim that the defendant should be compelled to take any other than the twenty piculs of cloves which arrived in January. The statement contained in the defendant's reply to the plaintiffs' claim concerning a verbal agreement, was not admitted, it being alleged that no such verbal agreement had been entered into. In answer to questions put by the Court Mr. Reynders said he was not certain as to the date when the defendant was notified that the cloves had arrived, as the message was not sent by him: the goods arrived by a P. & O. steamer, the name of which he did not distinctly recollect; however, the books of the firm would show by what vessel the cloves arrived and also the exact date.

The defendant stated that the first contract referred to had never been fulfilled by the plaintiffs; and with regard to the contract which the plaintiffs were endeavouring to compel him to fulfil, he said that a verbal agreement only had been entered into for the supply of 500 pounds of cloves at \$70 per picul and not more than 500 pounds nor less than 300 pounds. He desired that the plaintiffs' banto might be examined and that the plaintiffs produce their books showing the nature of the agreement.

Mr. Reynders said there could be no objection either to the banto being produced as a witness or the production of the books in Court. The contract would most likely be copied into the copying book, or a memo made referring to it.

The case at this stage was adjourned till the second of March. The defendant was requested to bring to Court on that day the banto and also books in which reference is made to the contract.

Friday, March 2nd, 1877.

The plaintiffs claim that the defendant be compelled to take delivery of twenty piculs of cloves which he had contracted for. When the merchandise arrived at Yokohama he had refused to take delivery of more than five piculs.

This case was brought before the Court on the 27th ultimo, and was adjourned until this morning for the production of what documentary evidence existed relating to the transaction. The defence set up on the

27th was, that a previous contract of cloves had not been fulfilled by the plaintiffs, as cloves could not be purchased for the stipulated price. In consequence of this a verbal agreement was entered into for the supply of 500 pounds at a higher price.

On the Court assembling this morning, Mr. Reynders produced a copy of the first contract, and the books in which reference was made to the contract for the fulfilment of which the plaintiffs sue.

In answer to a question put by the Court, Mr. Reynders replied that the reason why a copy of the contract for the twenty piculs of cloves had not been given the defendants, was because he had not paid any bargain money. The fault of his not receiving a copy of the contract was his, defendant's own, as he never applied for it; and it was not necessary for the plaintiffs to compel him to take what he never asked for.

The Court expressed an opinion to the effect that, as the defendant had given a written document to the plaintiffs, they should have given one in return, notwithstanding that it was never asked for.

Mr. Reynders said, that, unless some bargain money was paid at the time of making the contract, it was not usual to give any document to Japanese.

The entries in the books were then examined.

The Court asked Mr. Reynders how many books it was necessary, according to foreign style, for a merchant to keep, to which he replied, "as many as are required."

The plaintiffs' banto was examined, and said that the defendant had agreed to take 300, 500, or 1,000 lbs. of cloves, or any other quantity which the plaintiffs could import.

The defendant, through the Court, asked how it was that no special quantity was mentioned in the contract, when twenty piculs were entered in the books.

Mr. Reynders explained that the defendant agreed to take all the cloves that could be imported during January; and the entry of twenty piculs was made because that quantity arrived in that month.

The plaintiff having no other evidence to bring forward, the Court announced that Judgment would be reserved.

In the U. S. Consular-General Court

Before Gen. T. B. Van Buren, Consul-General.

Monday, March 5th, 1877.

MARUYA YENHOCHI vs. MESSRS. CARROLL & Co.

The plaintiff claimed the sum of \$1,347.50, for damage done to certain goods which arrived by the British ship *Cathaya* in November, 1875.

The plaintiff was represented by his legal adviser, Mr. Inosuke Shimidsu, who also acted in the capacity of interpreter. Mr. F. C. Spooner appeared for the defendants.

Mr. Shimidsu stated that the claim was for damages to cargo which arrived in the *Cathaya* in Nov. 1875. The plaintiff received notice in that month from the Chartered Mercantile Bank that the ship had arrived; and also a request that he would pay the balance of cost of goods, amounting to \$1,724.40, which the plaintiff did pay and received the bill of lading and invoice of the goods. On the 4th of December, plaintiff went to defendant and paid the freight, amounting to £95. On the 24th of the same month, plaintiff went to the ship and took delivery of 53 packages of caustic soda and 12 packages of medicine.

Three of the packages of caustic soda he found in bad condition; and 35 casks of bleaching powder he could not get, at that time, because they were stowed in the lower hold, under other cargo. The plaintiff was told on that occasion to come again. Plaintiff afterwards went to the defendant's place and asked when he could get the other part of the goods. The same day he went to the *Cathaya* and found that 53 casks of bleaching powder were in bad condition. He returned to defendant and refused to take delivery, and claimed damages for the 53 casks of bleaching powder and 3 casks of soda.

He also produced a letter signed by the defendants, admitting damage having been done to two casks of soda. The document was admitted by Mr. Spooner.

The plaintiff himself was then examined and stated that, on the 30th of November 1875, he received notice from the Mercantile Bank. He went there and paid \$1,724.40 and received the bill of lading and invoice. On the 4th of December he went to defendant and paid freight to the amount of £97, and then went on board the vessel to receive the goods and took away 52 casks of soda and 12 packages of medicine, but could not get the balance of the goods. After that he went on board and found that the remainder of the goods were in bad condition. The casks were broken and the soda was spoiled. He said he had dealt in this particular kind of soda before, and found that if the casks are broken, the air will spoil the contents. On the 15th of January, 1876, he went to the defendant and demanded damages. He saw Mr. Spooner on that occasion who told him that he would pay for damage done to two casks of soda; all the rest he would not pay for.

His Honour remarked that it was evident the plaintiff was suing the wrong parties, because, according to the defendants' statements, they were not agents for the *Cathaya* now. And even if they were, they should be sued as agents of the ship and not as owners of the goods. He would allow the plaintiff to amend his complaint if it would answer any purpose; but if it was true that the defendants were not agents for that vessel they could not be sued for damage done to goods which arrived in her. However he would examine the defendant and ascertain what connection there was between him and the owners of the *Cathaya*.

Frank C. Spooner, sworn, deposed:—I am a member of the defendant's firm. We were agents of the ship *Cathaya*, which was the property of Thomas Hoblay, of Carnarvon. The *Cathaya* left Yokohama on the 17th of January, 1876. While she was here we were agents of the ship. We were made agents by letters from the agents of Mr. Hoblay in London introducing us to the Captain. Those letters are at my place of business. We were appointed agents to receive the inward cargo and collect freight and act generally for the ship. If we got an outward cargo we should have got commission. We did not get any cargo; and settled with the owner in full. The accounts were made up before the vessel went away. We are not general agents for the owner of the *Cathaya*, and our agency ceased with the ship as soon as she left port. We have not any money in hand belonging to the owner of that ship, and are not empowered to act for him in any way. With regard to the letter, it was given to the plaintiff under these circumstances: the plaintiff came to our office, and with the advice of the Captain we acknowledged the claim for two casks of soda, and

would have paid that if the claim was presented while we were agents. It was particularly impressed upon the plaintiff that the vessel was about leaving.

The plaintiff was nonsuited, His Honour remarking that he had no jurisdiction to try the case; and the only course the plaintiff could adopt was to sue the charterers of the vessel in London.

JOHN WALLENSTOFF, a scaman belonging to the U. S. man-of-war *Alert*, was charged by Sergeant Loxton with being drunk and with assault.

A Japanese constable gave evidence that he was called into the "Railway House" last night and requested to take the prisoner into custody. When he went into the house he saw the prisoner conducting himself very violently and brandishing a knife about. He did not care to attempt of arrest him himself so he sent for assistance. The inspector of police came back and they went into the house together, when the prisoner went out at the back door. They followed him, and after some trouble they finally closed with him and succeeded in effecting his arrest. They then got a *jirikisha* and took him to the police station.

The owner of the hotel deposed that the prisoner went there last night about eight o'clock and called for a large bottle of beer. He drank that, then called for a small bottle of the same kind of liquor. He then played roughly with the female domestics until they at length ran out of the house. The prisoner asked the boy in the bar where the female servants had gone to and received a reply that he, prisoner, had driven them away. The prisoner then struck the boy, and drew a large knife. The boy ran away and witness caught hold of prisoner's dress. He soon broke away, however, and threw the spittoon at witness. He evaded the missile, which crashed among the bottles and broke three, two bottles of liquor and one bottle of port wine. Prisoner then broke a door, went out at the back and jumped over the fence. He afterwards came back and a policeman was then sent for. The cost of the three bottles broken was \$2.75, spittoon 30 cents, damage to door \$1, damage done to half a box of cigars through becoming saturated with the spilt liquor \$4.00.

The prisoner said he did not recollect anything about the affair, but he had drunk nothing else but beer.

His Honour told the prisoner he had no business to come on shore without a keeper, if he could not drink a drop of beer without committing such damage. He had not the highest regard for the Japanese rum-holes, but if he, prisoner, would go into those places and destroy property he would have to pay for it.

The prisoner was then sentenced to be imprisoned for one week and to pay a fine of \$10. In the event of the \$10 not being paid before the week was up, he would be imprisoned for a further period of thirty days.

Tuesday, March 6th, 1877.

Charles Sommers, **Andrew Janulsen**, **Robt. Schott**, **Thos. Thomsen**, **Chas. Sinclair**, **Frank Martell**, **John Manning**, **A. Theodore**, and **W. Shannon** were charged by the Captain of the American ship *Annie Weston* with refusal of duty.

Henry O. Winsor, Captain of the *Annie Weston*, sworn:—I have been master of a vessel for about thirty years. When I came to

Yokohama I came from Cardiff, Wales, where I shipped my crew for 24 months. The men have now served about six months. I have not had any trouble with my men on the voyage except small growls about steering. Some of the men have done their duty, and some have not and are not capable of doing it, although they shipped as able seamen. Yesterday morning, the 5th instant, about eleven o'clock, I was in my cabin when the first officer came to me and said that he went forward to order the men to come on deck and clear the snow away and they had refused. I then put on my oil coat and went into the fore-castle and asked the men what was the matter. One of them said, "We want to see the Consul." Chas. Sommers was the only other one that asked to see the Consul. I said:—"Now, men, look at it in a right light. I will be honest and fair with you. I have no objection to your seeing the Consul or advancing one third of the money due you, but I cannot give you any more liberty. You have had liberty once, and that is all you can have. You cannot run on shore out of this ship whenever you like." John Manning said:—"We want clothes." I replied:—"You can have clothes, but you cannot go ashore to get them. I have treated you fairly on board this ship and done all that lay in my power for you. This thing has been made up among you. You have discharged the cargo and nothing has been said to you. It is now blowing stormy; will you return to duty? You cannot see the Consul as it is blowing so heavy that I cannot get off from the ship. Will you come on deck?" The men replied:—"We want to see the Consul." It was blowing heavily at the time and the ship would be in danger if there were no men on board to look after her. There is no one on the vessel besides the prisoners, the two mates, cook, steward, boy and my wife. I asked the men half a dozen times if they refused duty. Some of them were in their bunks, and some sitting on their chests. Their only reply to my question was:—"We want to see the Consul." I told them it was impossible for them to go ashore then, but when the weather was more favourable they could go. John Manning replied that the ship was "all right." I said:—"You shall come out of that or out of your bunks, at all events," and then threw some water over them. They still refused to come out. There was more or less talk, as usual. They never refused duty before and there has never been any trouble amounting to anything before. I said to Manning:—"You will go in the ship, again," and he replied that he would be ——— first. I told them that I had done all I could for them, and could do no more. Schott said that it was not the money they wanted so much, but it was the abuse they had received they wished to complain about. This was the first time I had heard of their being abused. The first officer was near by and heard all the conversation. I called his attention to Schott's saying:—"You (witness) tried to drown a man. You tried to throw him overboard during the passage." Wm. Shannon stepped forward and said:—"I am the man you tried to throw overboard." While on the passage at sea, the weather being nearly calm, Shannon was standing outside helping the second mate to square up the rigging. He did not know anything he was about, and I took hold of him and put him out of the way. I shook him a little, and his hat fell overboard. I said:—"Come in out of that you are no good anywhere." He had shipped as an ordinary sea man. I did not try to throw him overboard; nor did I ever

threaten to do such a thing, or even thought of it.

To Chas. Sommers:—You have done your duty during the voyage, so far as sailmaking is concerned. You shipped as a sailor, not as sail-maker. You have several times spoken disrespectfully, and I have told you of it; and also told you that if you did not shut up your mouth I would punish you. I have never, that I know of, asked you to do anything that you have not done. I do not say that you have ever committed yourself to me or even to the officers until yesterday.

To John Manning:—I did not, when I came to the fore-castle yesterday morning, put my hand on my revolver and say:—"You have got to come out of that, ——— you." I had no revolver. After I had talked with you 15 or 20 minutes I ordered the mate to get buckets and a boy. I hove the water into the fore-castle and wet you from head to foot. I said:—"Those ——— Chinamen shall not come on board ship. I will not have them here. They are bringing liquor on board." I have the right to say who shall or who shall not come on board my ship. I do not recollect your saying that the Chinamen did not bring any liquor on board the ship; that it was my cook from whom liquor could be got at 10 cents per glass, and who furnished the men with all they wanted. I did not call you a "calf." I told you that you were a coward and ———. I told you that you did not do your duty here or on board a man-of-war; and that "I could lick a better man than you." You told me I could not. I said that I had stood at a gun on board a man-of-war; and that I had also held office as sailing master on board a man-of-war. I did not say I was Captain in the navy. I did not tell you that I would take you on shore in irons and bring you back in irons, then shoot you and throw you overboard. I told you I would shoot any man that laid hands on me. I am not under bonds in San Francisco for beating men in my last voyage. I was tried there for assault and battery but am not under any bonds. I was not fined for nearly choking my first officer in a previous voyage.

To Frank Martel:—I did not go to the fore-castle door yesterday morning with a big belaying pin in my hand and say:—"Now come out d——n you." I saw Frank Martel jump forward and thought he might have a pistol; so I seized a belaying pin and told him to come on. I said before we arrived that I did not care whether you all came on shore.

Adjourned till to-morrow morning at 10 o'clock.

Wednesday, March 7th, 1877.

The hearing of this case was resumed from yesterday.

Henry J. Dann, sworn:—I am first officer of the *Annie W. Weston*. I was on the ship the day before yesterday when the men refused to do duty. It was about half past ten o'clock, and had been blowing and snowing all the morning; and, fearing that the snow would freeze, I went forward and called the men out of the fore-castle to clear the snow away. It was blowing hard at the time. I got no answer. A boy only came out. I saw the others were not coming, and I went again. Frank Mantell then spoke and said he wanted to see the Consul. Several others then said that they also wanted to see the Consul. Finding they would not come out, I went aft and reported the affair to the Cap-

tain. The Captain then went forward, and told the men it was blowing a gale of wind and asked them to come out. They positively refused until they could get permission to see the Consul. Common reason should have brought them out. The Captain told them they could not go now but as soon as the weather cleared they could go. The Captain then said, "I'll throw snow and slush in the fore-castle if you won't come out and I'll make it uncomfortable." Both the Captain and myself flung in some snow by shovels and buckets. The men said they would make us pay for doing this. One of them said that the snow would cost the Captain more than a dollar a bucket; that he had more friends in the United States than the Captain had. After this the Captain expostulated with them for not coming out, but the talk did not amount to much. The Captain then went aft and left them. I forgot to mention that, after a few buckets of snow had been thrown in, one of the men, who has a reputation for using a knife, started for his berth, and the Captain said "If you go to do anything to me I'll shoot you." The boy and myself cleared the snow off the deck because there was no one else to do it. I know no cause for this refusal of duty, except that it was that the Captain refused to allow them to come on shore the second time. All but Frank had had leave on shore. I do not know whether he asked to go on shore. The men have been treated as well on that ship as any ship I have ever been in. They had plenty to eat and very few extra watches; and the general practice was to give them an afternoon watch below. I have never heard any complaints made by the men. They have never complained of being abused; neither have they been abused. None of them have ever been struck with the exception of one man who took a knife to the second mate. Some of the men have done their duty and others have not.

To Frank Mantell:—I did not say that you were a privileged character. I never saw you take a knife to any one in the ship. While you were laid up there was some trouble in the fore-castle between Tom and John. I was writing and heard John running aft saying that he would kill the—John got a belaying pin and was going back to the fore-castle. The Captain and I went to the fore-castle. The Captain said, "What is the matter?" John said "that fellow is going to knife me." The Captain thought it was Tom and dragged him out, but as soon as Tom said it was not him, he let him go. John then said "It is Frank." I remember once when you were putting a seizing on a rope you got saucy and the Captain, standing twenty feet away, took up a belaying pin and threatened to throw it at you. I did not see the Captain put his hand to your throat and threaten to throw you over board.

To Thomas Thomsen:—I did not see the second mate strike you with a belaying pin. I was standing at the bridge on the starboard side, and heard the second mate say he would knock the sauce out of you. The second mate had a belaying pin in his hand and you had a knife in your hand, and threatened to cut his guts out if he touched you. The second mate then beat you with the belaying pin, which was a small wooden one. I saw you had two eyes black; and I told you that if a man drew a knife on me I would cripple him. One time you were in the main top, and when you came down you were saucy and I gave you a slap across the face. You

started to draw a knife on me and I told you I would cripple you if you did so. I saw the blood running down your face after the second mate had struck you.

To Robert Schott:—The Captain did not offer me fifty dollars out of his own pocket for me to leave the ship.

To John Manning:—When I called you out of the fore-castle, you did not answer me at first. The second time Frank said he wanted to see the Consul, and John said, "we all want to see the Consul." I said you were all pretty brave not to come out. The Captain did say that you could not see the Consul, but did not say he had been to see the Consul and made it all right with him. The Captain did not say in my hearing that the Consul would not listen to sailors as they told lies. You did not say that the Consul was a gentleman and would listen to you.

His Honour now addressed a few kind remarks to the men; and, while condemning the action they had taken in refusing to do duty, told them that if they would return on board he would allow them to make any complaints and would hear them patiently. But if they refused to return to duty he should be compelled to punish them.

The men, with the exception of a Frenchman who did not understand His Honour's remarks, elected to go on board.

In H. B. M.'s. Court at Kanagawa.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Tuesday, March 6th, 1877.

YOKUZAWA GENSUKE vs. TEMPLE WILLCOX.

This was an action for the recovery of \$150 bargain money paid to defendant on account of a contract for 300 pieces of velvet which the plaintiff never received. Some time ago the defendant sued the plaintiff in the present case at the Saibansho for not taking delivery of the goods. The defendant in that case alleged that the goods were of inferior quality and that was the reason he did not take delivery. The judgment at the Saibansho was against the plaintiff who was now sued for the recovery of the bargain money paid in connection with that affair. The plaintiff deposed, that through one of his employees he entered into a contract with defendant for the delivery of 300 pieces of velvets, which said contract was reduced to writing. (The Japanese version of the contract was put into Court stamped with the stamp of No. 73. The defendant at the same time produced a copy of the contract which had been given him by the plaintiff and also a translation of the same). The witness explained that a clerical error had occurred in his version of the contract which said that the amount of bargain money paid was \$105 when it should have been \$150. The translation of the contract, he said, fairly embodied its contents with the exception of the error referred to. He received samples of velvet at the time the contract was made. On the 23rd of October the steamer arrived at Yokohama with the goods. On learning this he came from Tokio to Yokohama. (The interpreter now explained that the witness had been giving evidence all along of what his employé had been doing, and was warned again by the Court that he was not to say anything about what others had said or done). The witness then continued and said that it was his employé who came to Yokohama. On the first occasion he

returned without any of the goods. He came to Yokohama again and brought back a sample of the goods which had arrived by the steamer and he said he did not think the goods were the same as had been contracted for. Witness himself thought the sample was not of such good quality, and sent word to the defendant that he, witness, considered he had broken the contract. On the sixth of November, witness went to defendant himself, but could get no interview with him. The next day he went again, and three persons, two on witness' behalf and one on the part of the defendant, met to examine the goods. The inspectors decided that the goods were different to the sample, and therefore the contract was broken and witness refused to take delivery. The defendant refused to admit that the contract was broken. Witness told defendant that he had contracted for goods of a certain class, and if he could not get the goods he, witness, did not want any abatement of the price and would not take any other. Defendant stated that he would compel him to take delivery. Witness afterwards complained to the Kencho, but as the defendant's complaint had been previously lodged at the Saibansho, the authorities could not take cognisance of his complaint. The case came on at the Saibansho and it was decided at the trial that the goods were not according to sample and therefore he need not take delivery. When the decision was given in his favour at the Saibansho he asked what was to be done about the bargain money. He was told to go and ask the defendant, and if he refused to give it to him to sue him in H. B. M. Court. He consequently applied to the defendant for the return of the bargain money, but he, defendant, said he had incurred great loss through the transaction and refused to return it.

In answer to Mr. Willcox the witness said the contract had been signed by Yoshimatsu on his, witness's, account. He had previously sold the goods to another party, and explained how it was he had agreed to pay interest on the principal. Yoshimatsu agreed to pay the interest, but he, witness, never objected to it. If the goods had been of the same quality as contracted, for he, witness, would have paid coolie hire and other expenses attached to landing the goods. Velvets of first class quality were \$9.50 per piece at the time the contract was made. Velvets of inferior quality ranged from \$9.00 to \$8. When the goods arrived by the steamer the price of velvets was six or seven per cent cheaper. On the 6th of November, witness did not send Yoshimatsu asking for an abatement of the price and so to end the dispute. He had shown the velvets to several parties in Yedo and they all declared the goods were not according to sample. In a large number of pieces of velvet there might be slight differences in the colour and weight, but not such as to constitute a violation of a contract. But in the present instance there were differences so great as to amount to a violation of contract. There was a difference both in colour and texture. The velvets were to have been black, and when black velvets are contracted for, black velvets are expected. If the price of velvets had not gone down he would not have taken them without demurring. The velvets were previously sold to another party, and when he could not get them from the defendant he did not obtain them from any one else. The value of the goods the defendant wanted him to take was

not equal to the value of black velvets. Yoshimatsu was not at present in Yokohama or Tokio, being about 40 ri distant, and could not be produced within a week.

The Court adjourned the case until the 20th instant, in order to allow the plaintiff time to produce other witnesses.

REGINA vs. ELIZABETH SCARFIELD.

Elizabeth Scarfield was charged with concealing the birth of her child, by secretly throwing its dead body into the Bay of Yedo.

Mr. R. Bishop prosecuted and Mr. Ness defended.

The charge having been read over to the prisoner, she pleaded guilty.

E. Wheeler, M.D., sworn, deposed that he was a medical practitioner, and on the evening of the 12th went on board the *Annie W. Weston*, and examined the prisoner and found that she had lately been delivered of a child. The prisoner told witness that the child had been born at 5 o'clock that morning and that she washed and dressed it; and afterwards finding it did not move she thought it was dead and threw it overboard.

To Mr. Ness.—She did not seem at all excited at the time; and, strange to say, was standing in her cabin.

Mr. Bishop stated that, owing to other witnesses not being able to appear, he would have to ask His Honour to remand the prisoner until ten o'clock to-morrow morning.

The Court granted the application; and the prisoner was allowed bail in her own recognisances in the sum of \$100.

Wednesday, March 7th, 1877.

ELIZABETH SCARFIELD surrendered to her recognisance this morning. As stated in our report of yesterday, she was charged with concealment of birth. An error, however, occurred in the report of the pleading of the prisoner, which should have been "not guilty" instead of "guilty" as reported.

To-day, the Captain of the *Annie W. Weston* and his wife were examined, and their testimony went to show that the prisoner was confined and had confessed to throwing the child overboard; but she had stated that the child was not born alive. The female witness stated that she told the prisoner she had done very wrong; and that she (witness) believed the child was born alive, and that the prisoner had committed murder. She ordered the prisoner to return to bed and would see that she was provided with tea, gruel, and other necessities, but would do nothing further for her until they reached port. The witness stated that on one occasion she told the prisoner that, if anything happened at sea, the Captain might be so angry as to put her on an island. On being cross-examined by Mr. Ness, this witness stated that she had no other reason for supposing that the child was born alive, except that more children were born alive than dead. She did not hear the child cry, though she could distinctly hear any noise in the prisoner's cabin. She said that she told the prisoner that she felt herself very much injured and insulted.

The evidence being concluded, Mr. Bishop said that was the case for the Crown.

Mr. Ness then rose and raised the question of the jurisdiction of the Court, which he wished reserved for so many hours, and if the prisoner did not object within that period, that it be taken for granted that she accepted its jurisdiction. In the meantime they could proceed and the Court give judgment.

His Honour thought it could not be done in exactly that way. If sentence was passed, there would be no other way of dealing with the question except by an appeal. It was finally resolved to adjourn till 3 o'clock p.m.

On the Court re-assembling, Captain Winsor was recalled, and cross-examined by Mr. Ness as to the position of the ship between the six and eight o'clock watch, which resulted in proving that the ship was outside Sagami and Uraga points at six o'clock.

Mr. Ness then addressed His Honour, stating that the Court had no jurisdiction in the case. The evidence of the Captain, he contended, went to show that the ship was a foreign ship, within the territorial limits of a foreign country when the offence was committed, if it was committed at all. If His Honour held that a ship is part of the territory of the nation to which she belongs, and the rule ceases to operate when she enters that part of the sea which is within the dominion of any other sovereign, then, he submitted, the *Annie W. Weston* was not within the sovereignty of Japan at the time the alleged offence was said to have been committed. The evidence of Capt. Winsor tended to show that, if an offence had been committed at all, it occurred before seven o'clock, at which time he was not prepared to swear that the vessel was within the points referred to; and the presumption was that, if the offence had been committed at all, it was outside. He also contended that there is no law showing that the dominion of Japan was bounded by the Sagami and Uraga points, and would ask the Court to give a decision on this important point before he entered into a defence of the prisoner.

His Honour then remanded the case until Saturday at ten o'clock.

PUBLIC MEETING.

The defenceless condition of the Settlement in the event of any attack being made upon it; and also the fact that much property which might otherwise have been saved, has been destroyed heretofore through the want of an organized salvage Corps, has led at length to a preliminary step being taken to provide against such contingencies.

On the afternoon of the 6th inst., a Public Meeting was held at half past five o'clock in the Grand Hotel to consider the advisability of organizing a Volunteer Corps.

From the limited arrangements provided at the Hotel, it was evident that a very large attendance was not anticipated; and, indeed, from the shortness of the notice given, there certainly was some reasonable ground for entertaining such an opinion. However, that the residents of Yokohama considered the question which the meeting had been called to discuss, was of vital importance to the interests of the community was manifested by the large number of gentlemen who had assembled about the hotel even before the appointed hour.

About twenty minutes to six o'clock the Chair was, on the proposition of General T. B. Van Buren, seconded by Dr. Eldridge, taken by Mr. Keswick. The room was speedily filled to crowding; and it was plainly evident that a large number of gentlemen were forced to remain outside.

The Chairman opened the meeting by announcing that it had been called for the purpose of considering the feasibility of establishing a Volunteer Corps. There were times

when an organized force would be very acceptable to such a handful of people as were in Yokohama; and, in the event of danger, it was as well that they should be in a position to defend themselves. He intimated that there were also numerous other reasons why a Volunteer Corps should be formed, one of which was the disastrous fires to which the Settlement was subject during the winter months. And when a fire did break out, the greatest difficulty was always experienced in finding a reliable force to prevent the pilfering which always occurred on such occasions, and to render other assistance. There was also another reason for the establishment of the proposed Corps, which the Chairman thought was a strong recommendation, and that was that if the Corps did no good there was very little probability of its doing any harm. Every evening young men undertook long walks, and he was sure they would only be too glad to have their time otherwise occupied. Besides, a very large proportion of the young men had already gone through a course of drill instruction. He, the Chairman, was of an opinion that the proposed organization need not necessarily be an extensive affair; and as to the arming he had no doubt but that, if they went the right way to work, they would readily obtain such assistance as would fully equip them.

At this stage of the proceedings it became obvious that to carry on the meeting in the apartment where it had commenced was a practical impossibility, as other people had arrived and were clamorous for admission. The manager of the hotel observing the difficulty announced that the large billiard room was at the service of the meeting. With one accord, therefore, a stampede was made to the billiard room. We could now see that between eighty and ninety residents had expressed their sympathy with the movement by their attendance.

General T. B. Van Buren said he had been asked to say a few words, but confessed that he had not given the subject any study and had not even considered the propriety of taking such a step. But the Chairman had stated such plain and forcible reasons for the establishment of a Volunteer Corps, that there really was very little for him to add. And there was no doubt that, if national feelings were laid aside and universal unanimity obtained, the success of such an organization was certain. The speaker had been informed that in Shanghai a Volunteer Association had been formed and maintained with great success, and was of inestimable value to that city. And if a Volunteer Corps proved of considerable benefit to Shanghai, what reason was there that a similar institution should not be of value here? But in a matter of this kind it was evident that the first thing to do was to obtain the sense of the meeting upon the subject. He felt extremely gratified that the number of gentlemen present was so large; and he had no hesitation in saying that the opinion of this meeting would fairly represent the views of the community. He would therefore propose that it be "resolved that in the opinion of this meeting a Volunteer Corps should be formed, to consist of men all nationalities who were willing to take a part in it."

This proposition, having been seconded by Mr. Geoghegan, was put by the Chairman to the meeting and carried without a dissentient voice.

The question of admitting honorary members was then briefly discussed. The Chairman remarked that it might be as well to take the sense of the meeting on this point also. He was of the opinion that, if honorary members were admitted, the popularity of the force would be greatly enhanced.

It was then proposed by the Chairman and seconded by Dr. Eldrige that "The Volunteer Corps consist of both active and honorary members;" and upon this being put to the meeting it was carried unanimously.

General T. B. Van Buren said that he had been informed that Mr. Brewer had been actively engaged in the Volunteer force in Shanghai, and he would suggest that that gentleman be called upon to make a few remarks on the subject they had met to discuss.

Mr. Brewer remarked that he had had the pleasure of commanding the Volunteer force of Shanghai. The volunteers there had been formed in consequence of the massacre at Tientsin. They numbered about 500 men, and were divided into cavalry, artillery and infantry; and at the end of six months from the formation of the Corps, the force had arrived at a creditable proficiency in drill. The speaker was of the opinion that cavalry would be unnecessary in Yokohama. He confessed he did not know exactly what General Van Buren wanted him to say on the subject; but he would say with regard to the present movement that he would be happy to render what assistance lay in his power.

Mr. R. Bishop moved that a committee of seven gentlemen be appointed for the purpose of enrolling a Volunteer Corps.

The Chairman remarked that the names of seven gentlemen had just been placed in his hands. He then embodied the following names viz:—General Van Buren, Messrs. Koswick, Brewer, Kraetzer, Zappe, Eldridge and Geoghegan, in Mr. Bishop's resolution which he put to the meeting and declared carried unanimously.

General T. B. Van Buren requested that his name be struck off the list, and another added instead; but finally consented to allow it to remain *protem*.

Mr. Kilby suggested that it would be as well if persons who had served before as volunteers, would, on placing their names on the roll, state so and also in what capacity they had served. The Chairman, however, intimated that, as the present roll was only a preliminary one, merely to enable the Committee to form some idea of what support the movement was likely to meet with, it would be unnecessary to adopt Mr. Kilby's suggestion, especially as the present roll would be in no wise binding.

This concluded the business of the meeting, and General Van Buren having invited the Committee to his residence next evening to discuss matters, the assembly dispersed

THE SATSUMA INSURRECTION.

(Continued from page 8.)

The *Mai Nichi Shinbun* says:—All the Kagoshima residents in the Sakai-ken have been ordered to appear before the police authorities, and many of them have been detained in custody. The entrances of the city of Sakai are strictly guarded by the Imperial soldiery.

The *Nichi Nichi Shinbun* writes:—The insurgents, who were captured in the engagement on the 28th ultimo, are said to have confessed all the schemes of the enemy. Among other admissions they said that only ten cannon were in the hands of the insurgents. The first action of the latter, on penetrating into the Kuma-moto-ken, was to release all the convicts in prison. A few of the Kuma-moto shizoku have joined the insurgents, whose ranks are considerably recruited by farmers.

The *shizoku* of Fukuoka are holding meetings at temples and monasteries, and are

reported to be anxious to unite with the insurgents.

The Nagasaki Kencho has ordered the Kagoshima men residing within its jurisdiction to return to their own country. They are much distressed in consequence, and assert that they will be treated as government spies by the insurgents.

March 5th.

The *Choya Shinbun* of the 4th says:—According to a telegram, received on the 1st instant, an engagement between the Imperialists and the Rebels commenced at Kawajiri at about 9 a.m. that day. It lasted about two hours, after which the insurgents fled in confusion, leaving their arms on the field. The Imperial forces pursuing them fell into an ambush, and in their turn had to retreat before the insurgents. A telegram from Kioto despatched at 7 a.m. on the 3rd inst. states that at ten o'clock on the morning of the 2nd a battle commenced at Uyeki and lasted till 3 p.m., when the insurgents, having exhausted their ammunition, were obliged to leave the Imperial troops in possession of the field. Murata Shinpachi, one of the hostile commanders, fell with many others. One battalion from Kokura encountered a band of insurgents at Kinsha-machi, where Colonel Yoshi-i was killed. The insurgents who remain at Kagoshima, are very busy manufacturing ammunition and repairing their arms.

The *Hochi Shinbun* writes:—A shizoku of Kumamoto, named Ikebe, has joined the insurgents at the head of his party. He first forced his way into the house of a rich merchant at Kawajiri and seized a large sum of money. Shinohara was wounded in the battle on the 28th ultimo at Takase and retreated with his men in disorder. Uchida, *Karei* of the Shimadzu clan, who was lately governor of the Ishikawa-ken, went recently to Kanazawa, in that district, where he assembled a party of shizoku and excited them to rise against the authorities. A plot of his to capture the military stores at Olateno was discovered and no overtly hostile measures have yet been taken by him. Mayeda, ex-lord of Kanazawa, who is now at Kioto, will soon leave for his former dominions, where he will use his influence with his retainers to preserve tranquility among them.

The *Osaka Nippo* writes:—According to a report which seems worthy of credit, the insurgents are not well provided with arms, ammunition, or even food, while the money at their command cannot be much more than 70,000 yen. The income of the Kagoshima ken is not sufficient to pay the pensions of the shizoku under its jurisdiction. So, about 200,000 yen has been yearly sent from the Finance Department to Kagoshima to supply the deficiency. This year the Kencho requested that this grant might be supplied in good time, and Yokoyama, an official of the eighth class, came to Tokio to receive it, and returned on his way home as far as Kobe, as soon as it had been paid to him. In Kobe, Ki-ire of Kagoshima received about 60,000 yen from a private source. These two men intended to leave together in the *Mikuni-maru* of Kagoshima, which vessel was anchored at Kobe for the purpose of conveying them. But unfortunately for them, her departure was prohibited. Yokoyama and Ki-ire were arrested; and their money, 260,000 yen in all, was confiscated. When the report of the outrage by the Kagoshima insurgents upon the *Seiki-rio-maru* on the 31st January, was first heard by Saigo, whose abode was distant about seventeen ri from

Kagoshima, he left at once for the city, where he learned the details. It is said that he at first disapproved their conduct, of those who had risen; but that at length he determined to side with them against the authorities. He ordered shizoku to assemble at once in Kagoshima. The place he employed for parading his forces was the extensive pasture ground before the principal gate of the castle of Kagoshima. It is surrounded by a fence of high posts. The Gakko-to assembled here on a snowy and piercingly cold morning. All of them were clad in workmen's clothes, wore swords in their belts, and were provided with two pairs of straw sandals, and food which they carried in small boxes. Their first column consisted of about two hundred men, and the whole body numbered about eight thousand. They are not well furnished with arms. On the 16th February, Shinohara Kunimoto advanced towards Demidzu at the head of two battalions; and on the following day Saigo and others proceeded towards the province of Iigo. It was arranged that they should all unite at Midzumata. A report, which is probably true, says that Shimadzu in Kagoshima, differing, in opinion from Saigo and others, will remain quietly at his residence.

A *Choya Shinbun* extra has the following:—The insurgents had established their head quarters at Kawajiri, where Saigo is stopping, and where a hospital has been opened. They seem to be in want of money, for they have lately paid nothing to the coolies whom they employed. A telegram from Nagasaki says that the insurgents had left Kinsha, and that their camps at Kumamoto and Sakate were set on fire on the 3rd instant. A telegram from Osaka, despatched at 4 p.m. on the 4th, states that at about dawn on the 3rd a general action was engaged, and the insurgents gave way all along their line before the Imperial troops, who advanced on the morning of the 4th as far as Takase, Tahara and I-gurazaka. A telegram from Shinonoseki reports that the Imperial forces at Kumamoto were beaten with loss on the 3rd. The shizoku of Okayama-ken are said to have separated into two parties. A despatch from Nagasaki says that at about 5 p.m. on the 22nd ultimo two officers and twelve marines, of the *Seiki-kawan*, anchored off the island of Kojima, landed near Kuma-moto to reconnoitre. They were surprised by the insurgents. One of the officers and four marines only succeeded in returning to the *Seiki-kawan*. The other officer was wounded, and nothing else is yet known of the fate of himself and the eight men who were left behind with him.

The following Imperial men-of-war are now cruising on the South West coast:—Three at Nagasaki, viz., the *Hosho*, *Thabor*, and *Seiki-kawan*; four at Shimonoseki, viz., *Asama*, *Chikuba*, *Moshun*, and *Nisshin-kawan*; two between Kobe and the Bungo sea, viz., *Atsuma* and *Kuwai-fu-maru*. Besides, these the *Kasuga-maru*, *Fujiyama*, and *Takawo-maru* are running between Nagasaki Shimonoseki, and the coast near Kagoshima.

The *Nichi-Nichi-shinbun* writes:—Mr. Shimadzu and his son have had no connection with the insurgents from the first. When Saigo wished to have an interview with him a short time before he rose, Mr. Shimadzu refused, ordering him to leave his house at once. On the day on which he left Kagoshima at the head of his men he again desired to be admitted to Shimadzu's presence. At this time, he wore the uniform of Commander-in-chief. But Shimadzu

again refused to see him; and his men, the Shimadzu—to, evince no sympathy with either the insurgents or the government.

On the 1st instant a military hospital was established at Kurume. A Provost Marshal's Court will be opened at Fukuoka.

The *Mai-nichi-shinbun* denies the report that Colonel Yoshi-i was killed. He was severely wounded.

March 6th.

The *Hochi Shinbun* writes:—A despatch, sent from Osaka at 4.30 p.m. on the 4th, announces:—On the morning of yesterday (the 3rd) the Imperial troops started in pursuit of the insurgents. The engagement had not come to an end on the morning of the 4th. The troops at Takaseguchi had advanced as far as Tahara, Igura and Haki-shigi. H. E. Yamagata, War Minister, visits all the camps in person. A fort at Takaseguchi, has been taken from the insurgents, who left two cannon there. A telegram sent by the Captain of the man-of-war *Moshu-kawan* at 6.30 p.m. on the same day, says that about 500 men from Obi and 200 from Nobe-oka had started to join the insurgents in Kuma-moto. The shizoku in Takanabe seem inclined to assist them, but have not yet overtly risen. The principal revolvers of the Kuma-moto shizoku have been captured by the troops under the command of Colonel Takashima. On the 2nd instant, Mr. Yanagawara, the Imperial envoy to Shimadzu, arrived at Nagasaki with his suite. They are expected to arrive in the bay of Kagoshima to-day. According to various telegrams received from the South-West, the Imperial troops have marched victorious to within three *ri* of the castle of Kuma-moto. The latter is, however, besieged by the insurgents, who bombard it from three places, namely: Gion hill, Yanagawa and the Nagasaki road. A large device, "Saigo Kichinosuke, Commander-in-chief of the New Government," hangs at the entrance of the insurgent head quarters at Kawajiri. On the 18th ultimo, General Tani, Commander of the Kuma-moto garrison, issued an order to the effect that the houses in the city would be set on fire at 12 o'clock on the 19th February. The inhabitants ran in confusion from East, West, North and South, taking their furniture and clothing. They were assisted by large numbers of police. At about half-past twelve on the 19th, the entire city was set on fire by the troops. Arima of Kagoshima, who was arrested at Osaka, was not a favorite with his countrymen. But he desired to join Saigo's men, who refused him; so he formed a party at Osaka, wishing thereby to aid the insurgents. One of his associates betrayed him to the government. On the 22nd ultimo, he and his men were arrested at Tosabori, Osaka.

The *Nichi-nichi Shinbun* writes:—Yesterday no telegram was received by the Government in Tokio, owing to damage done to the telegraph wire between Tokio and Odawara by the stormy weather. About two hundred shizoku of Hikone have been arrested.

The *Choya Shinbun* says:—A telegram, despatched from Kumamoto at 5 p.m. on the 4th, announces that a severe battle was commenced at 6 a.m. on that day, and lasted four hours. A telegram, sent from Hakata at 1.25 p.m. on the 5th, says that about two thousand of the insurgents had assembled at Kikuchi, Higo. Many skirmishes have taken place without decisive result. Besides these we have heard various reports, more or less

credible. 10,000 snider rifles are said to have been sent to Kagoshima from America by order of the insurgents. The shizoku of Kumamoto and Hagi have been ordered to be organised as Government auxiliaries.

The *Akebono Shinbun* says:—On the 2nd instant Colonel Matsumura left Kobe for Kagoshima in the *Chikuba-kawan*. Mr. Kuroda, *Sangi*, landed at Hakata on the 3rd instant. Takashima, of Kagoshima, resident in Kioto, was lately arrested with others, for having conspired to destroy the Imperial palace there by fire. Narahara, *Karei* of Shimadzu, who was recently arrested in Kioto, has been released and allowed to accompany Yanagawara, the Imperial messenger, to Kagoshima.

March 7th.

Writing on this subject the *Higo News* gives the following additional particulars in reference to the events already reported:—

"We have received the following latest particulars of the operations in the South from a source which we believe trustworthy: On Monday (26th ult.) General Nodsu, with two regiments of the *heimin* conscripts from Osaka, and General Miyoshi, with two regiments of the Imperial Guards, were advancing by diverging roads to the relief of the Kumamoto garrison, at present beleaguered by Satsuma insurgents, when each column was attacked by four regiments of the latter, about five *ri* from Kumamoto. The fight with the Imperial Guards lasted up to 1 o'clock on the morning of the 27th ult., without any advantage to either side, but the *heimin* conscripts under General Nodsu achieved a rapid and easy victory, taking many prisoners and arms.

"General Nodsu, we may mention, hails from Satsuma, and General Miyoshi, who was lately commandant of the Osaka garrison, from Choshu. We have been further informed that Kumamoto Castle is amply provisioned and mounted with artillery, which the attacking force is said to be without. The fire which was reported from that place was merely the burning by the garrison of a number of houses which might have afforded cover to an enemy too near the works, and interfered with the artillery practice. It is allowable to suppose that in the engagements of Thursday (22nd ult.) Saigo sent his best troops against the Imperial Guards and underrated, perhaps, the levies under General Nodsu, but under any circumstances this victory of the new class of troops introduced by the Government is most gratifying and will not be without considerable moral effect."

The *Osaka Nippo* publishes the following items:—The Kagoshima insurgents, who besiege the castle of Kumamoto, are commanded by Murata at Minami-no-seki, Saigo at Takase, and Shinohara at Kumamoto. Kirino is at the head of the reserve corps of the rebels. The landing of Prince Arisugawa-no-miya, Commander-in-chief, at Hakata with his suite and three battalions, was prevented for some time by bad weather. On the 1st instant, his forces were united with the Imperialists at the camps of Takase and Minami-no-seki. About eighty-seven soldiers, who were wounded more or less, were brought from the South-West to Kobe by the *Tokai-maru*, which arrived there on the 2nd inst. Out of the nine gates of the Imperial palace in Kioto, six are closed. Each of them is strictly guarded by a number of police, and the inside is protected by the Imperial guards. The *Yijo-sha* Company (independants) in

Awaji, as to whose projects our countrymen were very anxious, have decided to take arms for the Government against the rebels; and have issued the following manifesto through the municipal authorities:—"As we have heard engagements have already commenced at Kumamoto between the Imperialists and the rebels. Since the foundation of the Mikado's government, the discontented shizoku in the various provinces have several times revolted. But none of them can stand before the Imperial forces. The Kagoshima disturbances are, however, beyond comparison with the rebellions of Kumamoto and Choshu. Nearly all of the Kagoshima men are implicated in this treason, which works considerable damage to the wealth and tranquility of the country; and the discontented fellows in the other ken are anxious to follow their example. His Majesty the Mikado is much afflicted. How can those of his people, who are endowed with reason, behold his trouble without concern. So, on the 3rd March, we will hold a meeting at the Monastery of Honmiyo-ji, Tera-machi, Sumoto, in which we will discuss the best steps to be taken for the general benefit. Your Excellencies! Come to our meeting on that day, and do not allow any business to prevent you.

The *Hochi shinbun* writes:—Yanagawara, Imperial Envoy to Shimadzu, and Kuroda and others, have not yet arrived at Kagoshima. The former is stopping at Nagasaki, and the latter is constantly passing between Hakata and Kuma-moto. Yesterday the cavalry of the Imperial guard in Tokio left for Kioto via the Tokai-do. All the documents relating to land under the jurisdiction of Kagoshima-ken, were collected by the insurgents, who set them on fire. Arida, a Kagoshima Kencho official, was arrested at Nagasaki. A despatch from Osaka, sent at 10.20 p.m. on the 5th, announces that the fort on the summit of the Inasayama was captured by the troops in the battle of the 3rd. At dawn on the following day, an engagement was commenced at Yamashika, the Imperial forces advancing victoriously close to the camp of the enemy, who besiege the castle of Kuma-moto. Communication with the castle is expected to be opened within a few days. A telegram, received at the War Department at about 3 p.m. on the 6th, states that the Imperial troops have crossed the river Takase in pursuit of the insurgents who are in confusion, and that three strong places, namely; Yamaka, U-yeki, and Takase, where the insurgents were encamped, were taken by the victorious army. Colonel Fuku-hara was wounded at the first mentioned place. According to a telegram from Kurume, despatched at 5 p.m. on the 6th, an agrarian mob had risen in Uchi-maki, the eleventh district of the Kuma-moto Ken. About eight hundred farmers, with implement of husbandry, were outrageous in their behavior towards the district officials. But they have no connection with the rebels. On the 25th ultimo, about forty young residents of Tomita, Kochi ken, left their homes for Marugame by sea. A despatch from Kurume, on the 5th, announces that the Kuma-moto shizoku, who countenanced the insurgents, had returned to their allegiance through the influence of Hosokawa, ex-lord of Kumamoto.

The *Mai-nichi-shinbun* says:—Large numbers of the insurgents, are in occupation of the Chikugo road. A telegram, despatched from Hakata at 1.5 p.m. on the 5th, states:—About two battalions of insurgents have assembled at Kikuchi, where skirmishes have repeatedly taken place. One of the men arrested at

Tsurusaki, was Tanaka, editor of the late *Hiron Shinbun*, which publication was some time since suppressed.

Colonel Matsumura left Kobe on the 2nd instant, in the man-of-war *Chikuba-kwan*, which will immediately enter the Kagoshima harbour. Twelve Krupp Guns each of 60 pounds, one Krupp gun of 150 pounds and one Gatlin gun are on board. The insurgents seem to have expended all their money, as they have not lately paid for anything they have purchased.

March 8th.

The *Mainichi Shinbun* has the following items:—Prince Arisugawa-no-Miya arrived with his suite at the Imperial camp at Takase on the 1st instant. Colonel Fukuhara remains in the field regardless of his wound. No insurgents are seen about U-yeki and its vicinity: thus three roads to Kuma-moto are left open to the Imperial troops. But a number of the rebels are encamped at Yamaka, and keep their ground under the command of Kirino. Desperate battles have been fought with considerable loss on both sides; but none of them have been decisive. Imperialists are encamped on the Hirayama hill, which is situated opposite the camp of the rebels. Mr. Kawaji, *Daikoku-shi*, who is now stopping at Kioto, will soon leave for the South via the Hinga road at the head of about two thousand police. To each of them socks and leggings have been given instead of shoes, for in such steep and mountainous roads as that of Hinga is, the former are much more convenient for walking than the latter. A telegram from a branch police station at Marugame, Shikoku, to the chief police station at Osaka on the 2nd instant, announces that, at about 12 o'clock last night, the steamer *Owaka-maru* arrived at Tadotsu taking about fifty shizoku of Kuma-moto headed by one Ikoma, who wishes to have an immediate interview with the Mikado in Kioto, and that the vessel had just left for Osaka. In that place, the mouths of the rivers are guarded by large number of police who examine all vessels and boats which pass. Troops are stationed on the hill of Tenpo-zan. On the arrival of the *Owaka-maru* at the mouth of the Yasujigawa at about 10 o'clock at night, she was immediately boarded by a party of police, who strictly examined all the passengers. Thirteen of these confessed that their desire was to have an interview with the Mikado, in relation to the southern disturbances. A small steamer *Nomo-maru* belonging to a resident of Higo, was anchored off the coast of Kojima. The insurgents endeavoured to capture her. But the man-of-war *Rinjo-kwan*, which is cruising in the South sea, interfered just after the rebels had gone on board. Owing to the fact that the tide was low, the *Rinjo-kwan* could not come close to her; meantime the small steamer *Koma-maru* from Nagasaki arrived there with policemen, who were immediately ordered by the Captain of the man-of-war to board the *Owaka-maru*. But it was too late as she was already in the possession of the insurgents. So, the *Rinjo-kwan* fired upon her and sank her instantly. It was not known how many persons were on board. This occurred on the morning of the 25th ultimo.

The *Hochi-shinbun* says:—20,000 rifles, large quantities of ammunition, and several machines, lately ordered in Prussia by Saigo, the traitor, have arrived in Japan. The per-

son to whom they were consigned is said to have asked the government what he was to do with them, and to have been told not to send them to Kagoshima. Mr. Otsuka, *Goto-Honji* and director of the Kagoshima Saibansho, and his subordinates, having been interfered with in the execution of their duty, returned to Nagasaki on the 23rd ultimo. Mr. J. A. H. Schepel, instructor of the foreign language school in Kagoshima, was ordered to leave by the local authorities, owing to the disturbances. At dawn on the 23rd ultimo, he embarked at Ichiki, Kagoshima, for Nagasaki. According to his report, after the despatch of the insurgent forces all was quiet in Kagoshima, and a great feast was given at the Kencho in order to celebrate their departure. Seven Buddhist priests had been arrested by the malcontents. About 2,000 shizoku of the late Saga-ken have formed themselves into a corps, and asked the Kencho to allow them to follow the Imperial troops against the insurgents. Many of the merchant vessels and junks, which were anchored in Kuma-moto and Yajiro waters, were captured by the insurgents. A telegram from Osaka transmitted at 5.20 a.m. on the 7th, after being received from Minamino-seki at 9 p.m. on the 6th, states that in the battle on the 5th, Tawarazaka was taken by the Imperialists, who retreated from it subsequently. On the following day, it was retaken by the troops after a severe battle. A desperate battle was fought at U-yeki, but without victory to either side. Yamaka, which was lately taken from the rebels, is a most important place for the troops, who are now going to build a fort there. No battle took place yesterday. Another telegram, sent by Colonel Mitsumata, says that, according to a note book, found in the pocket of a rebel who died in the battle on the 4th, 400 of the insurgents had been killed or wounded up to the 3rd instant. A letter from Ogaki, Mino, dated the 3rd instant, says that about 1,200 ex-retainers of the ex-Daimio Ogaki, have formed a party calling themselves the Shogitai, consisting of young men between about eighteen and thirty five years of age. They have long been watching the movements of the Kagoshima men. During the last year, when Mayebara rose in Hagi, they became very anxious to follow his example in Ogaki. But his rapid overthrow by the government caused them to defer their designs. The southern disturbances excited them again. They threatened repeatedly to rise against the authorities. Fortunately Toda, ex-Lord of Mino, arrived at the old castle of Ogaki on the 1st instant, where he found them holding a meeting. At the risk of his life, he used all his influence, entreating them to disperse quietly for the general benefit. The inconsiderate fellows yielded to his loyal words and returned homeward. They had collected about 1,000 muskets and a certain quantity of gunpowder.

The *Nichi-Nichi Shinbun* writes:—The insurgents cannot stand much longer before the Imperialists, as their ammunition is exhausted. The eleven men-of-war, which are cruising in South Western waters have all plenty of provisions for three months. The insurgents, who are constantly passing through the city of Yajiro, which is situated on the boundary of Satsuma and Higo, are not organised and they are variously armed. Some wear swords and are dressed in foreign clothing, while others have no arms at all, but wear the simple dress of students.

OSAKA.

FROM the *Osaka Nippo*:—

A communication from Kumamoto, dated the 17th instant, says that since the late insurrection there mobs have appeared. Shizoku wear short trousers and a cane, and desire to leave for the next world, following the example of Shimpuren. With regard to the Kagoshima troubles, the camp is laying in provisions, the Ken officials are sending their families away and the people are in confusion, some of them running away to country places, whereby business is slack at the Saibansho. It is rumored that—several assassins to Kagoshima to assassinate Saigo, and that these were the persons who disappeared from the police office in Tokio and returned to visit their parents, &c. The Kagoshima Kencho has notified that 2 to of rice, with salted plum and *miso*, will be provided per house. The Kagoshima men have fortified Yonenotsu, in a mountain on the boundary of Higo. On that foot called Shimidsugo some thousands of troops (? insurgents) and police of that Ken (? Kagoshima) have assembled. When Kawamura, the Kaiguntayu, went to Kagoshima, all the Satsuma insurgents gathered there, leaving guards on the principal road. Saigo and Kirino want to hear from His Majesty why assassins were sent, and they were to start by land and sea at the head of the shizoku on the 15th. Kagoshima Saibansho has been closed and it is said a messenger has been sent from the Kumamoto Kencho to Kagoshima, so that when he returns there will be information, but his return is uncertain. Matsumoto, a judge of the 7th class, who was in the Nagasaki Joto Saibansho, was appointed Judge of the Kagoshima Saibansho, and started on the 6th instant to go overland, but was stopped at Yonenotsu, and has returned to Nagasaki.

It is not credited that insurgents have crossed the sea to Mitsushima, in Iyo, and that some thousands of Nobeoka, Sadowara, and Takamabe men have gone to Kagoshima.

The Satsuma men sent an advance guard along their line of march, with notices that they would lodge on the 17th in Midsunatayeki, on the 18th in Sashiki, on the 19th in Naku, on the 20th and 21st in Kumamoto.

Some insurgents were ready to cross the sea Tsurusaki, in Bungo, to some place in Shikoku, but were discovered by the Imperial army and arrested.

The Sokokuji in Kioto is being prepared as a station for troops.

In Shimonoseki an arsenal has been built, whence ammunition will be supplied, and if more is wanted it will be sent from Osaka. Some went from Kobe by the *Chitose-maru* on the 21st. Oda, an officer of the branch arsenal, and two or three more persons, have run away; they are said to be Satsuma men. Up to the 22nd, 1,500,000 loaded cartridges had been sent from Osaka arsenal to Kobe.

Three Satsuma men were arrested at Osaka Station on the 22nd. One of them is said to have a writing of the ex-Daimio to persuade the insurgents to remain quiet.

It is said that about twenty Buddhist priests of the Iko sect, who had gone to Kagoshima, have been confined there.

On the 24th ult. the Imperial Railway carriage was called up to Kioto and it was expected H. I. M. the Mikado would visit Osaka.

The hotels in Shimonoseki are examined three times a night, and a man who wished to go from there to Nagasaki found it so difficult that he returned to Osaka.

March 9th.

The *Hochi Shinbun* says:—A despatch, from Minami-no-seki to Kyoto sent at 8 o'clock p.m. on the 7th, announces:—Yesterday the 6th, out of seven forts at Tawarazaka, two were taken by the Imperialists after a great battle, which was ended at about 8 o'clock. The others were desperately defended and the troops could not take them. Next day the attack upon the forts was renewed and lasted till 1 o'clock p.m., while the battle at Yamaka continued till about 5 p.m., when the forts were not yet taken by the Imperials. A telegram from Nagasaki, despatched by H. E. Mr. Kuroda at 9.15 a.m. on the 7th, says that the men-of-war *Kawaga*, *Chikuba*, *Rinjo*, and *Seiki-kwan* will leave for Kagoshima at 3 p.m. escorting Yanagiwara, the Mikado's Envoy, who will embark on board the *Korio-maru*. Besides these, the *Kanagawa-maru* and *Genbu-maru* follow them, taking troops and policemen on board. The man-of-war *Nisshin-kwan* entered Nagasaki on the 8th, and the *Moshun-kwan* followed after a few hours. Mr. Kawamura, Vice Navy Minister, has telegraphed from Nagasaki to send thither ammunition and the other military stores promptly.

The *Nichi-nichi Shinbun* writes:—A detachment of the Imperial troops, having advanced victoriously along the Uyeki road, has opened a communication with the garrison in the castle. Prince Arisugawa-no-Miya has issued the following notice:—

Large numbers of insurgents held meetings in the Kagoshima-ken and treacherously seized gunpowder in the arsenals belonging to the War and Navy departments on three days, viz., 31st January, and 1st and 2nd February. As their conduct greatly excited people in the Ken, the Government sent Kawamura, Vice Navy Minister, and Hayashii, Vice Home Minister, to examine and report. On their arrival at Kagoshima bay, the insurgents obstructed their landing, taking up arms against them, and threatening to capture the vessel in which they were embarked. Thus they were obliged to leave the bay. Still, H. M. the Mikado, desirous to preserve peace among the Kagoshima men, determined to send his envoy to Kagoshima, where he hoped that Shimadzu and his son and Saigo, who had formerly served the empire faithfully, would aid them in their efforts.

But, previous to this being carried into effect, the insurgents had unlawfully arrested some police officers from Tokio, whom they obliged to make a false confession, and then issued an inflammatory manifesto throughout the province. They formed themselves into armed bands, and penetrated into the Kuma-moto-ken against the Imperialists. H. M. the Mikado does not of course desire to afflict his peaceable people, but he was obliged to issue the order for an expedition against the insurgents on the 15th inst. (Feb.) I was appointed Commander-in-chief of the Army and Naval forces. Saigo and others were deposed by the government, and the Imperial troops fled towards the South-West, and will promptly restore tranquility. Now, we establish our head quarters at Mayesu, Bizen, and thus give notice of the reason for the movement of the Imperial forces. The lieges throughout the country must not misunderstand the matter or allow themselves to be misled, and, if they be led away by the insurgents, it will be too late for them to repent.

March 10th.

Mr. Watanabe, the *Chiji* of Osaka, publishes, in the *Osaka Nippo*, a notification to the Kuchu and Kocho under his jurisdiction, under date of the 4th instant, as follows:—

"Since the commencement of the siege of the castle of Kuma-moto on the 21st February, the garrison troops have held it valiantly, and fought bravely against the insurgents. On the 22nd and 23rd the latter were repulsed with a loss of about forty or fifty by the explosion of a mine. Then the gates of the castle were opened, the garrison made a sortie, and drove back the rebels in disorder; and then shut themselves up again in the castle. Since then no insurgent dares to approach its walls. The garrison is well provided. The engagements at Yamaka and Takase were the most severe of all those fought. On the 26th February the insurgents fled from the former place, leaving their ammunition and their dead behind them, and the Imperialists masters of the field, after a fight of ten hours, commencing at 7 a.m. and ending at 5 p.m. The insurgents were entirely routed. None are now to be found at Takase or its neighborhood. Murata-Shinpachi, one of the ringleaders, was mortally wounded. Since then no engagement has taken place. About 10,000 of the Imperial soldiers have already been sent to the South. The naval forces are also on the South-Western coast. In a short time all the troops will proceed against the insurgents. The latter are mustering gunpowder and lead from private supplies. From about the 3rd instant, they have not paid the hire of coolies, whom they have employed, and have become somewhat discouraged. It is hereby notified that these details have been communicated by Okubo, Home Minister. This must be made known to every one throughout your district, without exception, and instructions to give no credence to false rumours must be again issued."

The same paper says that the following telegram was received on the night of the 3rd instant:—

"All the insurgents have left their camps at Yamaka and Takase, and are much discouraged. Since the 28th ult. no battle has taken place. The Imperialists may arrive at Kuma-moto on the 4th or 5th instant. At Kuma-moto the insurgents have sustained much loss and have retreated a few miles from the castle. The fleet has fired upon the insurgent camps along the Kuma-moto coast."

The same paper says again;—The two principal followers of Eto-Shinpei, the Saga traitor, who disappeared when he was arrested, are now known to be among the insurgents. Each of them is at the head of a party consisting of men from various provinces. The following manifesto was found yesterday morning (5th) placarded in every square and street throughout the city of Osaka:—

"A rising has been organised in order to aid the poor. So taxation and all legal penalties are abolished. Let all be tranquil and happy and pursue their respective occupations."

"Any one, defacing or removing this paper, will soon be punished severely."

"A BRANCH OFFICE OF THE
NEW GOVERNMENT."

The following rules are said to have been laid down by Saigo, Kirino, and others for observance by the Shi-Gakko-to, each of whom has bound himself by a signature in his

own blood not to infringe them. "1.—They will live or die together. 2.—They will not go to a distance of 25 ri from their school. 3.—Once a week, they will hold a meeting and walk a distance of 6 or 7 ri for the benefit of their health. 4.—They will attend at their school daily, where they will read Saden and Shiki (Chinese books) from 10 to 9 a.m. and any military books which they please. 5.—Having finished their reading, they will amuse themselves by debating on current topics." When they rose against the Government, they added the three following articles. "1.—No Government official will be killed. 2.—No trouble is to be given to private individuals. 3.—No public building will be set on fire."

The *Hochi Shinbun* writes:—A telegram from Fukuoka yesterday announces that all the Kuma-moto shizoku have left the insurgents and joined the Imperialists, who have been helped by them. The Owake-ken is far from tranquil; and important documents belonging to the Kencho have been removed to a safe place, while money to the amount of about 250,000 yen was sent back to Osaka on the 1st inst. On the 7th inst., two Kagoshima men, one named Saigo and the other Kirino, arrived in Tokio *ex the Tokio-maru*. They were taken to the police station on suspicion, their names being the same as those of the ringleaders of the insurgents. But they were soon released. They are students of the Kaisai Gakko, and the following information was given by them. They both left their homes on the 26th February. About 10,000 of the Gakko-to had followed Saigo to Kuma-moto up to that day. The Churitsu-to (neutrals?) and Shimadzu-to remain in the province of Satsuma. But the former party seem to be acting in concert with Saigo, and are defending the harbour of Kagoshima. The latter will, it is thought, also assist him as a rear guard of his forces. One of the police officers who are said to have been sent by the Government to assassinate Saigo and others, betrayed their cause, and informed the Gakko-to of the nature of their errand. The "scholars" became much excited and about fifty of them guarded Saigo in his house at Nishida distant about one ri from Kagoshima. They discovered three men, each of them armed with a sharp dagger, concealed beneath the floor of his room. Two of them were instantly cut to pieces, and the third was arrested. He subsequently confessed all the scheme, in which he was implicated.

Miscellaneous.

An accident occurred, on the morning of the 27th ultimo on the premises of Messrs. Langfeldt & Mayers, No. 52, Main Street. A foreigner was exhibiting some old firearms to a Japanese. One of the guns was loaded with ball, but this circumstance was unknown to the European who, in unwinding some cloths in which the weapon was wrapped, released the hammer and discharged the piece, the ball from which traversed the fleshy part of the right thigh of the Japanese, but, missing the bone and arteries, inflicted no very serious injury. The patient was at once taken to Dr. Eldridge, who dressed and bandaged the leg.

On the 5th inst., for the first time, a Japanese lawyer appeared to conduct a case in the U. S. Consular-General Court.

A LETTER, of which the following is a copy, has been sent to the various Consuls by the governor of Kanagawa.

"Kanagawa, 24th February, 1877.

"SIR,—I have the honor to inform you that, in the event of any sudden emergency, five successive strokes of the fire-bells, repeated at intervals, will be the signal to summon all police off duty at the time.

"I would request you to communicate this to your colleagues, in order that the foreign residents may be notified thereof and unnecessary alarm prevented.

"I have, &c.,
(Signed) "NOMURA YASUSHI,
"Kanagawa Ken Gonrei."

H. M. THE MIKADO, accompanied by Prince Arisugawa-no-Miya and other dignitaries, visited the Eigo-Gakko at Osaka on the 15th ultimo. Addresses were presented on the part of the native and foreign professors of the College.

It seems as though Kioto might become once more the centre of Government. The fact of the Mikado and so many of his Ministers being there at the commencement of the Satsuma rising has tended to this result. One by one offices of the various departments are being opened there. The *Akebono-shinbun* says now that succursals of the Home and Finance Ministries are to be established at the Imperial Palace in the old capital.

ABOUT 10.15 P.M. on the 28th ultimo, the fire bell at the No. 3 Police Station rang an alarm which was immediately taken up by the hour bell on Isejima and the various bells in Yokohama. The fire was seen to be in the direction of Ota hill. A brisk breeze was blowing at the time; and as the weather has been dry of late the inflammable materials of which Japanese houses are constructed were easily and rapidly ignited, and in a very short time a large number of houses were reduced to ashes. The fire being so far away from Yokohama, it was some time before the native fire brigades arrived on the spot; and when they did arrive the fire was burning so furiously that their efforts to stay its progress were entirely unavailing, and it burned away until everything within its reach was consumed. Several buildings in the path of the flames had to be pulled down to prevent their progress. The number of houses destroyed is variously estimated at from thirty to one hundred and fifty. As the buildings were very small the probability is that a figure somewhere between the two numbers would be correct. Fortunately many of the tenements destroyed were unoccupied.

WE read in the native papers that the name of the Japanese who purchased ammunition at Mr. Wallace's rooms on Lot No. 26, recently, is Isuke, and that he is a nail-seller residing at Ichome, Yoshida, Yokohama. It is further stated that he is on trial before the police authorities for having violated the notification prohibiting the purchase of munitions of war by private individuals.

ABOUT two o'clock on the morning of the 1st instant a Japanese was observed by a policeman walking along the Bluff with a bag over his shoulder. The officer accosted him and made some enquiries respecting the contents of the bag, when two other men came up and struck the policeman on his head with a stick, knocking him senseless. His assailants together with the man with the bag, then made off.

THE story, translated below from the Japanese, of the spirit of a living person appearing, at a distance from the body, near a beloved object, establishes an identity between a not uncommon belief in Japan, and an analogous superstition prevailing in many countries of Europe. Accounts of the appearance of wraiths of persons still in life to friends at a distance are often found in the folk-lore of Scotland, while the *doppel-gänger* plays an important part in the demonology of Rhineland.

DESTRUCTIVE fires are still of daily occurrence in one part or other of the empire. Utsuno-miya, in the north, was visited on the 1st instant by a fire which was not extinguished till it had burnt to the ground upwards of seventy houses.

THE *Niigata-maru*, late *Behar*, has arrived from Shinagawa, and is now ready to sail for London, with a full cargo of rice. As she lies in the harbor, with her new masts and rigging, she presents quite a man-of-war appearance. Our readers will remember that she is being sent to Europe under sail by the Mitsui Bishi Company, in order to be fitted with new engines and boilers.

THE *Hechi Shinbun* complains of receiving, and publishing one day, reports which are denied the next. So the management declare their intention of opening a branch office in Kioto, and sending two of their editorial staff thither, one of whom will travel southward, and keep as near the scene of action as possible, so as to be able to furnish to his paper trustworthy reports.

WE are informed that the agreement between the authorities of the Machi Gaisho and the Gas Committee for lighting once more the streets of the settlement has been drawn up, and will, in the course of the next few days, be circulated among the residents for signature. An addition of about ten per cent is required to the amount already subscribed; but we trust that no difficulty will be experienced in making up this deficiency. As, however, the sum to be paid by the community has been fixed at the lowest possible figure, the new agreement provides that the Gas Company shall be authorised to "extinguish the lamps during such portion of the night when the moon is shining or should shine, relighting them again as necessary; but such hours not to exceed the equivalent of seven whole nights in the month." We hail with gladness the prospect of the streets being relieved from the often Cimmerian and dangerous darkness which enshrouds them. The new arrangement will render unnecessary the heroic measure proposed by *Punch*, of making torches of the members of the Gas Committee.

THE 4th inst. was beautifully fine; but at sunset indications of a rapid change were not wanting. About three o'clock next morning a heavy snow-storm set in, changing soon before nine to a deluge of rain, which, with the rapidly melting snow, was a great deal too much for the drains to carry off as quickly as it accumulated, and the streets, for a couple of hours, were, in places, ankle deep in water. At noon, however, the weather broke; and a great part of the afternoon was cloudless.

A TELEGRAM was received on the 4th from the United States Minister, stating that Hayes has been declared President. This being so, his inauguration will have taken place to-day.

THE *London and China Express*, commenting upon the Kumamoto insurrection, notice of the outbreak of which reached it in January last says:—"It is sincerely to be hoped not only that they (the Japanese Government) will display moderation in this respect (dealing with the revolvers), but also that the present Administration will take warning by the outbreak, that it behoves them to exercise their powers with moderation, and that oppressive and unjust measures cannot be resorted to even by the most powerful Governments with impunity."

FOUR seamen belonging to the *Alert* reported themselves on the morning of the 5th to the U. S. Consul-General as being unable to proceed to their vessel, as the weather was so rough that a sampan could not be obtained to take them on board; and as their leave on shore was up they feared being treated as deserters.

TWO hen-pheasants flew through the open windows into a carriage in the 3.45 P.M. train from Tokio on the 6th inst., near Kawasaki, and were easily captured.

THE changeable weather of the previous few days was followed by a very severe shock of earthquake at ten minutes past of the 5th—6th instant midnight.

IN addition to the rumors of disaffection prevailing among the Imperial forces to which we alluded elsewhere, others are current now to the effect that the Navy have refused to fire a shot. It seems beyond a question that no important success has been achieved by the Government arms; for, had these been victorious in any encounter, not even very decisive, the news would have been blazoned abroad. It appears more and more probable that a policy of concession will have to be adopted towards Saigo and his party; and that their demands will not merely be "entertained," but will have to be complied with.

A few days ago, we had the pleasure of attending at the trial trip of a small paddle steamer, built and engined by the Japanese Foundry Company. This vessel is the second constructed by that company for passenger traffic on the Tone-gawa river near Tokio. It is built of wood, and is 72 feet long by 9 feet beam, and has only a draught of 18 inches, when loaded. The engines are high pressure, of the horizontal direct acting type. The cylinders are 8 inches diameter by 12 inches stroke. The crank shaft has a spur pinion fitted on it, which works into a spur mortise wheel, fitted with wooden cogs, on the paddle shaft; and the motion is almost noiseless. The paddle wheels are 9 feet in diameter, and are each fitted with seven floats. The boiler is of the ordinary multitubular form, and will carry a steam pressure of 80 lbs. This little craft has fore and aft accommodation for 50 passengers, and is named the *Daini-tsu-un Maru*. We understand she made her first run to Tokio in little over two hours. The Japanese Foundry Company deserve great credit for the substantial manner in which all the work has been done, and we are glad to learn they have an order on hand for a third steamer of the same size. We are indebted to the courtesy of Mr. A. King, the designer of the engines and boilers, for the opportunity of inspecting this steamer; and it speaks well for the progress of engineering in Japan when such work is turned out entirely by Japanese workmen.

THE steam yacht *Sunbeam*, of the Royal Yacht Squadron, with the owner, Mr. Brassey, M. P., and family on board, arrived on the 26th ult. in Hong Kong from Shimonoseki.

THE *Letty Gales* from Amoy to London was lost on Pratas Shoal on the morning of the 11th February. Two seamen and two apprentices were drowned alongside: one boy was lost while attempting to make a raft: four men are still missing. A junk brought to Hongkong on the 24th ult. the captain, chief-mate and three seamen, being the remainder of the crew.

We note that Messrs. Russell & Co. are appointed agents of the P. M. S. Co. at Hongkong.

From trustworthy Japanese authority we learn that the Government has counted the total cost of the suppression of the insurrection at ten million yen, and estimates the time to be occupied from the outbreak to the period of its extinction at seven weeks. Half the money has been already spent, and more than half the time has elapsed. We gather from the same source that during the difficulty, twelve months ago, then expected to terminate in war, between the empire and Corea, the Government intended, in the event of an invasion of Corea being inevitable, to establish head quarters at Kagoshima, where, accordingly, large quantities of ammunition and arms were stored in the two arsenals of the War and Navy Departments respectively. Thus, the insurgents are not destitute of arms and stores, but they are short of money. At a rough calculation they are supposed to have an average of about fifteen yen each man.

It turns out that George Hansen, the man who is awaiting trial for being implicated in the recent forgery case, is not a Swede, as he at first represented himself to be, but a Russian; documents proving this being in the hands of Mr. Pelikan, Russian Consul, by whom he will now be tried.

A Loan of Tls. 5,000,000 has been negotiated with a well-known native banker through foreign agency; and Tls. 100,000, have been paid as bargain-money, Tls. 3,000,000 of the entire sum are to be forwarded to Kansuh for the prosecution of the war, while the remaining Tls. 2,000,000, are required for the bankrupt province of Fokien.—*S. C. and C. Gazette*.

We regret to learn from the *Daily Press* that Sir Brooke Roberson is much worse again. He has had a relapse, and his condition is considered grave.—*N.-C. Daily News*.

It is reported that the Chinese Government has contracted a loan of Tls. 5,000,000, which is to be remitted from Europe in silver.—*Idem*.

Correspondence.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

To the Editor of the *Japan Gazette*.

SIR,—I am a new comer, in a quandary; and as such I crave the favor of your sage counsel. A lover of all kinds of sport, and keenly appreciating the pleasures of the turf, one of the first desires I conceived on my arrival in this town, was that I might become

an active participator in its racing recreations. With this object, I made enquiries among those to whom I had been favored with letters of introduction, hoping that I might be enabled to accomplish my desire, but the result of my enquiries has left me in a similar position to that of the old gentleman whose story is told by *Æsop*. I cannot make up my mind whether to ride, or not to ride, or to ride double. I find that the sporting members of the community are divided, and that I cannot join myself to one party without offending some adherent of the other; while, on the other hand, to unite myself to both would be to incur an expense I can ill afford, and to lay myself open to the accusation of running with the hare and hunting with the hounds. As there are, to my knowledge, others in a similar predicament, I would beseech you, Sir, no less on their behalf than on my own, to show us the way out of our difficulty.

I beg leave to subscribe myself,

Yours solicitously,

JOHN NEWCUMBE.

Yokohama, March 3rd, 1877.

IMPERIAL CUSTOMS' RETURN FOR HALF YEAR ENDED 31ST DECEMBER, 1876.

To the Editor of the *Japan Gazette*.

SIR:—I have read above Return in the columns of the *Japan Mail* of 3rd inst., but I cannot endorse the remarks of the Editor of that journal, when he says, "The manner in which the Return has been prepared, and the form in which it is presented, are a great improvement upon former efforts, and reflect great credit upon the compiler," although I quite concur in his remark that it "is a result widely different from that of usual Returns."

In the first place, why, in a Japanese Return say, "Domestic productions imported into and exported from each of the various Foreign Countries?" Why not say, "the total value of Foreign and Domestic productions imported into and exported from Japan?" Japan is the object under review, not "the various Foreign Countries."

Proceeding to consider the figures, guided by the preceding description of what they represent, I find the

Exports from France - - \$6,549,377 54

Do. Do. England - - 6,076,028 01

Therefore the Exports from France to Japan, or (as I would put it) the Imports from France exceed the Imports from Great Britain by nearly \$500,000! I have no hesitation in pronouncing this to be fudge.

Yours truly,

SCRUTATOR.

Yokohama, March 5th, 1877.

To the Editor of the *Japan Gazette*.

DEAR MR. EDITOR:—Who has been hurting the feelings of the *Herald* to cause it to recommence the question about the comparative merits of the Y. R. C. and Y. R. A.? Surely there must have been some other cause than your foot-note to Mr. Newcumbe's letter on Saturday; because prior to its publication even I, who do not give much thought to the differences existing between the two Clubs, had heard of the sale of the two best and only

stables fit to compete against another which shall be nameless.

The *Herald* is well known as a staunch supporter of the Y. R. C., and has been always ready upon every trivial occasion to indulge in personal attacks, not wholly free from vulgarity, against those suspected of wishing to reform existing evils. The spiteful paragraph of last evening is a sample of the style of writing which the *Herald* is about to provide for its readers, for the next ten weeks, and I can confidently recommend to all lovers of scandal the pages of the *Herald* until the races are over and forgotten.

If it were possible to obtain from the *Herald* the slightest courtesy, or even decency, on the consideration of questions connected with the rival clubs, some object might be attained by discussing through the press the probable means of securing a reconciliation and union of the opposing bodies. This being impossible, the only course left is to allow the Y. R. C. and Y. R. A. to fight their own battles as best they may; the result of the struggle it is not difficult to foresee; "they laugh who win."

Yours truly,

BROOKS (of Sheffield).

6th March, 1877.

Nippon Notes.

In Osaka and neighbouring villages, robbers armed with swords force their way into and rob houses by night.

On the 21st ult. a steam vessel from Hiroshima arrived at Kobe. When the passengers landed at the hatoba, two of them, having been found to be Kagoshima men, were arrested and taken to the police station for examination.

NAKAYAMA and about fourteen other Kagoshima men have been convicted of conspiring to murder the Home Minister at the end of last year. They will be condemned to hard labour.

(From the *Nichi-nichi Shinbun*, of the 16 Feb.)

OPEN your eyes and look at the condition of the Imperial troops besieged in the castle of Kuma-moto! The full force of the southwestern insurgents is being brought to bear against this castle. According to a rumor, which we have heard, the insurgent forces started on three roads, viz., Hirato, Kuma-moto, and Bungo. Their proceeding to Hirato seems to be a false report, as the fact of their having penetrated to that place has not yet been established. Did the report originate through the ten insurgents being arrested on landing at Mogi-ura, close to Nagasaki? We know nothing yet either about the party which are said to have proceeded along the Bungo road. There being no telegraph thence, no prompt intelligence can be received by us. But in the event of anything of importance transpiring, intelligence must be sent to Kokura, which will take two or three days, and from there be transmitted to the Government by telegraph. And on a telegram from Kokura referring to the insurgents being received by the Government, it would soon be known among us. But no information has yet been received; and the rumour may be said to be without foundation. If it should be true, one to a thousand, their party will consist of a small number of the Sadowara shizoku. But it is different with regard to Kuma-moto, which is now besieged by many thousands of insurgents. The castle

is defended by eight battalions of infantry and artillery. As in the case of the attack on the castle of Chiba by Hojo's forces, the insurgents seem to think that their fortune depends on a battle of Kuma-moto; and that if they succeed in taking it, they will immediately be reinforced by those throughout the country who now neither take one side nor the other. So, we are not far wrong in saying that the entire forces of the insurgents are centered at the castle of Kuma-moto. And we are of the opinion that the Kuma-moto garrison troops have shut themselves up in the castle, as we have remarked above. Then it is said the insurgents were advancing into the Kuma-moto-ken, and the garrison troops offered no resistance to their advance. They seem to have determined that, as they could not prevent the progress of the insurgents, they had better shut themselves up in the castle and wait for the arrival of Imperial forces, who will attack the rebels in the rear. The Tenshu (the high tower of several stories which is within the walls of the castle) of Kuma-moto was set on fire by the land troops and will answer no purpose except to act as a signal to the enemy; and a large part of the city was also set on fire. According to what we have heard, large numbers of the insurgents are in the city of Kuma-moto; and all communication between the castle and Kurume is cut off. Intelligence was received on the evening of the 24th inst., stating that the Imperial forces had left the hill of Takase, which was soon taken possession of by the insurgents. The troops had arrived from Kokura and encountered the insurgents at Mana-oke. One party of the insurgents advanced on their way to Takase and the other besieged the castle of Kuma-moto. Yesterday morning, the 25th, General Nodzu it was expected would arrive at Mina-mi-no-seki at the head of four battalions. We and our countrymen are casting our eyes upon the castle of Kuma-moto and the authorities too. Now let us pass a few remarks concerning the military officers stationed in the castle. What men are they? They are brave and we have no reason to distrust them. Gen. Tani, commander of the Kuma-moto garrison troops is a man of the Kochi-ken. His name is well known. Besides him there are Cols. Hanoyama and Kodama. The former belongs to Kagoshima; and, when the rumor was published to the effect that the Kagoshima men had risen against the authorities, he sent a letter to a friend in Tokio, stating that there was no cause to be anxious concerning the Kuma-moto castle so long as he and others remained there; and they were not afraid even if the place was attacked by a hundred Saigos. This is quite enough to enable us to understand his disposition. Col. Kodama comes from Choshu. During the end of the last year, when the Kencho officials and military officers were killed by the Kuma-moto insurgents, he alone escaped. When this intelligence was received at Tokio, Gen. Nodzu said to the War Minister "Since Colonel Kodama is not dead, the castle of Kuma-moto will remain safely in the hands of the Imperial troops." Besides these officers there are Shinagawa and a number of others, whose names are well known and whose loyalty is not to be questioned. Such brave soldiers, shut up in the castle of Kuma-moto which is rendered very strong from its position, could not be destroyed by Saigo, Kirino and Shinohara combined. Meanwhile, Gen. Nodzu will appear before the castle at the head of re-inforcements. We know that the Kuma-moto castle will not be easily captured.

In a few days we may expect to receive information of a battle, the result of which will decide whether we are right or not.

THE staff of the *Kuma-moto-shinbun* have been obliged to remove somewhere, owing to the proximity of the Kagoshima insurgents.

On the 27th ult. the editors of the *Choya* and *Bumei-shinshi* were summoned to appear at the police station.

THE *Hochi-shinbun* denies the report that Mr. Narahara, *Karei* of the Shimadzu clan, was captured at Kioto.

FIFTEEN vessels of the M. B. M. Co. are now held at the disposal of the War Department.

At about ten minutes to three a.m. on the 28th ult. a fire broke out at No. 2, Tatami-cho, Tokio, which was not extinguished till thirty houses were burned.

At noon on the same day, a fire broke out at Odawara, near Hakone, and destroyed two houses.

THE *Choya-shinbun* states that the Chinese Government have offered to Mr. Soyeshima, late *Gaimu-kyo*, an appointment worth 800 yen per month.

MR. IWAKURA has subscribed fifty yen towards building a stone monument to the memory of the late Mr. Minomura, Vice-President of the Mitsui Company.

A HAIR dresser, named Sakuma, living at Nege, Yokohama, having been told of the Satsuma Expedition, formed a wish to serve the Government against the rebels, and has got together a company of about 250 men of his own trade in Kanagawa. He has offered a petition to the Kencho, through an official of the Custom House, for leave for himself and his companions to follow the Imperial troops to Kagoshima. The *Akebono-shinbun*, in reporting this, has a panegyric upon his loyalty and an inferred censure upon the cowards who would not take arms to serve their country, so forcible that it is impossible to translate the phrase into an English journal.

(From the *Choya-shinbun* of the 28th Feb.)

SAIGO TAKAMORI has taken up arms against lawful authority, and the Government has notified that he has been deposed from the high position he held. No one will dare to defend his traitorous conduct. What kind of a man is he? At the time of the establishment of the present Government he rendered valuable service to the Mikado, and every man in this land regarded him as the "Hokuto" (Great Bear) of Japan. His loyalty was unquestionable, and his reputation stood far above that of either Ito-Shinpei or Mayebara-Issei before their defection. But now he has incited a rebellion, resisted the imperial troops, and brought much affliction home to the Mikado and the people. Ah, that great Saigo! famous for virtue and meritorious actions! He now gives trouble to our sovereign and the people. Alas! is this not enough to make us sad? But Mai-in, Keiyetsu, and Eifu (ancient Chinese) were once loyal to their lords, though each of them died in revolt.

When it became known that the Kagoshima men had rebelled against the Government it was not imagined, by either wise or foolish persons in Tokio, that Saigo was at the head of the insurgents. On the contrary comments were frequently made in his favour. We could not publish anything contrary to the opinion of the public, though we were not sure of his

loyalty, and in fact distrusted him considerably. But on the 16th we ventured to publish our opinions respecting Saigo, though we were much afraid of being regarded as transgressors through exciting distrust in the people, and therefore did not say as much about him as we should otherwise have done. Those persons who read those remarks will see that we were correct, as his treachery has now been known for some days, as has also the fact that he is in command of the insurgent forces. It was first said that when his instructions to the insurgents to disperse quietly were not obeyed, he left his home and went somewhere. Some may say that Saigo was compelled to take command of the insurgents, but they are deceived. We dare say that he left his home after the manner of Ashikaga-Takanji. When Ashikaga rebelled against the Kamakura authorities, the then Mikado despatched Prince Dai-chi-in at the head of an army to oppose him. Ashikaga clothed himself in a Buddhist robe and fled to a temple, where he shut himself up and sought forgiveness for his crime. His family and retainers followed him to his retreat and endeavoured to persuade him to take up arms, but he finally refused. At length they wrote a letter to him, in which they stated that as their persuasions had proved unavailing, they had resolved to die. On receiving this communication Ashikaga was induced to rise against the authorities once more. Now Saigo seems to have followed his example. At first he fled from the insurgents and refused to listen to their persuasions. Saigo's defection is the more deplorable that in times past his fidelity was equal to that of Nitta and Kusunoki, who are now revered for their services to their sovereign. Saigo overthrew the Tokugawa Shogun, and established the present Government. What has come over his mind that he has now become the ringleader of the insurgents, thus followed the example set by Ashikaga?

THE agrarian disturbances in the province of Echhu have been entirely suppressed, and about ninety of the most prominent of the rioters have been arrested.

HALF a battalion from the Sendai garrison has been sent to Shonai.

It is rumored that Mr. Mayeda, late lord of Kaga, will shortly proceed to Kiushu, at the head of his ex-retainers.

MR. OKUMA, Finance Minister, will leave shortly for Kioto.

On the 1st instant, the Finance Department sent 300,000 yen to Kioto through the National Bank.

THE Chiba Kencho will shortly be connected by telegraph wire with Tokio.

NOTIFICATION No. 26.

It is hereby notified that matches manufactured in Japan may be exported free of duty till further notice. Should the government find it expedient to impose an export tax, two months notice will be given.

IWAKURA TOMOMI,
U Daijin.

March 3rd, 1877.

At dawn on the 4th instant, a fire broke out at Shirokoji, Ueyuo, Tokio, which was not extinguished till about three hundred houses were destroyed.

FIFTY policemen left in the *Tsusei Maru* which sailed from Shinagawa for the North on the 2nd instant.

NOTICE.

THE interest and responsibility of MR. CHARLES DAVIS MOSS in the co-partnership business of the "JAPAN GAZETTE" ceased by consent on the 31st December, 1876.

Mar. 1, Am. barquentine *Albatra*, Blanchard, 387, for Nagasaki, Ballast, despatched by Captain.

Mar. 1, Danish brig *Jylland*, Lamb, 267, for Newchwang, Ballast, despatched by Chinese.

Mar. 3, Jap. str. *Hiroshima-Maru*, Burdiss, 1,870, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

Mar. 6, Brit. str. *Sunda*, Reeves, 1,704, for Hongkong, Mails and General, despatched by P. & O. Co.

Mar. 9, Am. str. *Alaska*, Howard, 4,012, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Mar. 10, Jap. str. *Tokio-Maru*, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. M. S. S. Co.

PASSENGERS.

Per Frch. str. *Tanais* for Hongkong:—Mr. and Mrs. Cargill, 3 Misses Cargill and 2 children, Messrs. Huggan, Cowderoy, Bonrce, Curwen, Col. Malet de Carteret, Ernest Griolet, and Wm. Cowles.

Per Jap. str. *Hiroshima-Maru* from Shanghai and ports:—Mr. and Mrs. Ed. Fischer, Capt. James, Messrs. Rees, Sawkins, Fobes, Duus, Ley, and 19 Japanese in the cabin; 1 European, 6 Chinese, and 167 Japanese in the steerage.

FOR AMERICA.

2 Europeans and child in the steerage.

Per Am. str. *City of Peking* for San Francisco:—Rev. S. R. Hoyt, wife and 4 children, E. Baland, wife and child, Mrs. A. H. Moore, Miss J. Carruthers, Miss E. O. Hine, Messrs. J. W. Sawkins, W. T. Stevenson, Taroki, Chas. Blany, Peter Malle, L. Harlow, Wm. Hall, J. Vavasseur, and 8 in the steerage.

Per Brit. ship *Fiery Cross* from London:—Mr. A. Green.

Per Jap. str. *Tamaura-Maru*:—Mr. T. W. Blakiston.

Per Jap. str. *Hiroshima-Maru* for Shanghai and ports:—S. Omura, Esq., ex-Daimio of Omura, Messrs. Honda, Robertson, Wyper, Essabhoj, Taguchi, Takita, Furoki, Tanabe, Kashiwabara, Hack, Bollenhagen, Burmeister, and Sharp.

Per Frch. str. *Tibre* from Hongkong:—Messrs. D'Assonville, Geerke, and Hans.

Per Brit. str. *Sunda* for Hongkong:—Mr. and Mrs. J. Simpson, Mr. A. A. Strand, Mrs. Siheant, Mr. Lacey, and 1 European and 10 Chinese in the Steerage.

Per Jap. str. *Tokio-Maru* from Shanghai and ports:—Major Arnold, Dr. Harris, Messrs. E. Satow, C. D. Moss, Coops Burges, W. Smith, J. E. Thompson, A. Sutherland, C. Carrothers, Ewals, Yamada, Nishimura, Inouye, Demized, Nakamura; and 172 in the steerage.

Per Am. str. *Alaska* from San Francisco:—Paymaster Chas. W. Littlefield, U.S.N., Mr. and Mrs. J. Merriman and son, Mr. and Mrs. Wm. Houghton, Miss S. B. Johnson, Mr. and Mrs. J. P. Sutton, Baron F. Cunliffe Owen, Lieutenant Hidaka Ziro, W. Tawara, K. Tetuka, S. Fukami, and N. Fukagawa.

FOR HONGKONG.

Alfred Steigerwald, and Dr. and Mrs. H. T. Whitney.

Per Brit. str. *Bombay* from Hongkong:—Mr. Matsudaira, and 4 Chinese.

Per Brit. str. *Oceanic* from Hongkong:—Messrs. Goodrich and child, W. de Russett, J. A. Blogg, J. K. Morrison, Mrs. J. Middleton, M. Ullmann, A. Center, Dr. G. Dolds, wife and 2 children, Mrs. Gray, P. Shilaber, wife and servant, Col. J. Y. Moggridge, and 415 Chinese in the steerage.

Per Jap. str. *Tokio-Maru* for Shanghai and ports:—Messrs. Iwasaki Yanoske, E. C. Kirby, Nishi, Yasuzomi, Kifuji, Echizenya, Osbler, Arnold, Shiba, R. de Nully, Narushima, Shibata, Kovoshi, Nishi, Hisataki, Iwanaga, Fuka, Kawadzu and J. A. Stewart.

REPORTS.

The British ship *Fiery Cross* reports:—Left Downs Oct. 23rd. Had light winds down Channel, passed the Start on the 26th and met with light winds from the S. W. across the Bay of Biscay. Had no regular N. E. trades at all, the wind prevailing from S. W. Crossed the Equator in 24° W. Nov. 22nd. S. E. trades moderate extending to 20° South. Thence light northerly winds to the Cape. Passed Meridian of the Cape in 41° 40' December 18th. Ran the Easting down in 42° South: moderate winds. Sighted St. Paul's 30th Dec., and made Sandalwood Island Jan. 15th—were 11 days coming through the passage—clearing Foal Island on the 26th. In the Pacific had moderate northerly winds and rain. Sighted the Loochoos 21st Feb., the Japan Coast on the 25th; and arrived in Port evening of the 27th—129 days from London, 127 from the Downs.

The British steamship *Cairnsmuir* reports:—Left London on 18th Dec., Penang on 6th Feb., and Singapore on the 10th. Across the Bay of Biscay had terrific weather for eight days. Had strong N.E. monsoon the last three days.

The German schooner *Augusta Reimers* reports:—Heavy weather. Anchored in Simoda, and lost an anchor in getting under way.

The American steamer *Alaska* reports:—Left San Francisco February 1st, 1877, with 18 Cabin, 2 European and 102 Chinese steerage passengers. Experienced during the first 12 days light variable winds and fine weather. From the 12th to port of Yokohama strong Westerly gales. March 3rd at 8 a.m., Latitude 31° 08' 54" N., Longitude 150° 35' 34" E., encountered a cyclone passing to the N. W. ship on the S. E. Quadrant, steering to the N. W. Wind veered from S. W. to W. to N. W. Barometer falling to 29.20. At 2 o'clock tacked ship to the S. At 3 o'clock barometer began to rise. At 12, midnight, ship on her course W. N. W.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

In the interval since our last report the import market has shown some little enquiry for 16/24 Cotton Yarn of medium quality: prices are, however, weaker, especially for shirtings, which are very difficult of sale. The general tone is extremely unsatisfactory, and will probably be rendered more so by the weakness of exchange on London.

The ship *Fiery Cross*, and steamers *Cairnsmuir* and *Gadshill*, all with general cargo, have arrived from London. Transhipped cargo ex *Cassandra* from Hongkong, *Anadyr* from Marseilles, and *Australia* from London is also to hand.

ARTICLES.	PRICES.	REMARKS.	
COTTON PIECE GOODS.			
G. E. Grey Shirtings—			
7 lbs., 38½ yds. 39 in. per piece.	\$1.30 to 1 60	} Still very difficult of sale even at these low rates.

do. (baskets) "	3.95 to 4.05		
do. Swatow brown per case.	3.20 to 3.40		

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

TEA.—Our market has continued dull and flat since departure of last American mail, settlements amounting to Pels 1,850, and prices very irregular, holders evidently forcing off their stock whenever they saw a chance of realising. Prices in consequence are entirely nominal, and the selection of Teas to hand being very mixed and inferior, but little more will be done prior to the arrival of New Crop musters.

Our Total Export from all Japan to date amounts to 21,750,000 lbs., and for the balance of the season we hardly expect an additional export of over 500,000 lbs. prior to the 1st of May, thus rendering Total Export of Japan for season 1876-77—22½ million pounds or 2¼ million pounds short of that of preceding season 1875-76.

SILK.—We have only to repeat what we said in our former Summary relative to the condition of the Silk Market, namely that business has been very quiet during the fortnight. With the exception of some lots of Hanks treated for by two or three houses, who, by the way, were obliged to send back two thirds of what they had bought by reason of the inferiority of the material, and its want of conformity with the samples, next to nothing has been done. As for prices, which are for the most part nominal, we can state that for the small quantities purchased a reduction of from \$15 to \$20 has been obtained. But now, in consequence of telegrams received announcing the pacific solution of the Eastern Question, although that event does not appear to have produced any effect upon the European Silk Markets, our own is a little firmer, and there is even some enquiry. After all, with the exception of common and inferior silks, which are more offered and more abundant, and to dispose of which holders would certainly make some concessions, we have scarcely any change to make in our previous quotations.

Arrivals are more and more restricted. The total for the season is about 24,000 bales. That of exports is 19,472 bales, exclusive of about 100 bales to go forward by the French mail. Stocks may be estimated at about 1,800 bales.

Summary.

THE civil war or the insurrection in the South, continues to occupy the greater part of public interest, and is still the cause of considerable quietness in business. The public is as much in the dark as ever as to the actual status of affairs, the Government not only forbidding the publication of "unreliable" rumors, but interdicting the conductors of the native press from furnishing information as to the number of imperial troops killed and wounded in the several actions. It appears, however, that the insurgents are far from being quelled, in spite of the large number of forces arrayed against

them. Indeed, the Government would appear not to be satisfied with the extent of the armies they have already in the field; as a few days ago the forwarding of troops, which had been suspended for two weeks, was resumed, and reinforcements to the number of about two thousand men were despatched from Tokio, which is now only garrisoned by newly enlisted police and troops from the northern garrisons, augmented by such recruits as can be obtained. All the disciplined and proved police forces have been sent with the troops to the South, and appear, from what accounts of various affairs have been published, to have done better service than the soldiers themselves. This is not to be wondered at when we remember that the police are all shizoku, and that, on the principle that "when Greek meets Greek then comes the tug of war," they are better able to compete in arms with the warlike fellows from Satsuma than the raw levies of heimin could be expected to be. Altogether the Imperial forces now in the field cannot number much less than 30,000 men, and they are so disposed that they have completely surrounded the forces of Saigo, some of which in their turn are besieging the castle of Kuma-moto, which appears to be in the possession of its Imperial garrison even yet; though this, like so much else in connection with the state of the campaign, is uncertain. The Imperial commanders seem in no hurry to risk a general engagement. Probably they have not sufficient confidence in their own men, many of whom have displayed a well developed horror of the terrible swords of the Satsuma warriors. Their project probably is, by shutting Saigo up in a circumscribed territory, to starve him out; but the process would be a long one, as he has selected a rich and fertile country for the scene of his resistance. Meanwhile there are still rumors of a compromise, which, however, there seems little likelihood of the Government resorting to until the last moment. Shimadzu Saburo still remains quiet. The Imperial mission to him appears to have been productive of no results.

OYAMA, the ex-Governor of Kagoshima, was requested to "accompany" the envoy back to Kobe. He offered no objection. On his arrival there he was put under arrest and transferred, with great indignity, to Tokio, where he now awaits trial before a special

judicial com-
plicity in

anguish.

TROUBLES WERE
but appear to have been

ANOTHER VOLUNTEER meeting
held. The U. S. Consul General, and
other Consuls who were connected with the
movement, have, owing to the representa-
tions of Mr. Nomura, the Governor of Kana-
gawa, withdrawn from active participation in it.

ANOTHER man-of-war, the third built there,
has been launched in Yokoska dockyard.

THE case of the Tokio-fu vs. Blockley and
Blockley is in course of hearing in H. B.
M.'s Consular Court at Yedo. This case
resembles that of the same plaintiff against
Mr. Batchelder, which was decided in favor
of the defendant in the U. S. Consular Gen-
eral Court, and is a claim for arrears of ground
rent, which defendants refuse to pay, on the
ground of breach of contract on the part of
the Japanese Government in allowing for-
eigners to reside outside the concession. This
time the Tokio-fu is represented by Coun-
sel, Mr. J. F. Lowder, and the result is
looked forward to with much interest.

FIRES are still prevalent in all towns of
the empire apparently. Two serious ones
have occurred in the neighborhood of Yoko-
hama, one in Honmura, and the other in
Benten, since our last Summary.

A MEETING of the Chamber of Commerce
to consider the important question of the
local currency was convened, but enough
members did not assemble to form a quorum.

AN appeal has been made through the
Japan Gazette for aid to the famine-stricken
populations of the Chinese provinces of
Shantung and Chihli.

A SKETCH map of the seat of war is pre-
sented with this Mail Summary.

THE VOLUNTEER MOVEMENT.

THE Volunteer movement threatens to provoke an ungracious discussion. Already in the columns of a contemporary has appeared a letter, whose author is evidently one of those giants from the British Isles whose favorite diet is "native" blood. *Fee! Fo! Fum!* The Governor of this district has ventured quietly to intimate to the four Consuls, who lent their countenance to the movement, that their action is not considered friendly. He is at once likened to a Turkish Pasha, an Oriental Satrap, and visions of *bashi bazouks* are conjured up as preparing to repeat in Japan the sickening atrocities that have taken place in Bulgaria. He is accused (in good company) of meddling and muddling with things that do not concern him; and is called upon to take warning by the result of his so-called blunder in the Bank note affair. He is reminded that the Japanese Municipality is handsomely paid for keeping our streets and promenades in order, and for keeping the streets; but, for the rest, he is only a *kai* whose duties are in municipal offices, and that he has abdicated self-help. The age of his rate, and the Volunteer and stem half-mean). Charged by the four Consuls, we are very obliged that remonstrance, we them; let them at once resign membership of the Volunteer Committee, and leave the remaining members unembarrassed to follow their own devices. It is a pity that this remonstrance should have been made; it is of course an act of presumption on the part of the *Gonrei*, to have made it possibly only temporary in its consequences; but the organization of a Volunteer Corps has been resolved upon, and its formation is to suffer no delay on account of the "unwarranted outside interference" of the Governor. He and his wishes are absolutely of no account whatsoever. As for the Consuls, an eclectic view of their duties may possibly conflict with the interests of the Volunteers;—*Messieurs, adieu*. The foreign representatives are not famous for quick decisions, and may therefore be wholly ignored. We are sorry to lose the possibly valuable support and assistance of these authorities, but we cannot for a moment allow such considerations to stand in our way; the danger is imminent; our one sole object now is expedition; "and a resolute check to the Governor is of paramount importance."

In grim contrast to the above raving of a VOLUNTEER is a curt letter from one calling himself OIDA, who points out that, so far as Englishmen are concerned, (and we apprehend the like holds good in respect to all foreigners commorant in Japan) the training of persons without lawful authority to the use of arms is illegal.

The overbearing tone of VOLUNTEER is only too characteristic of a class of fire-eaters,—gradually decreasing in numbers, we are glad to think,—common to foreign communities in the East.

But we shall offer no excuse for pointing out to them, in all earnestness and sincerity,

that the publication of their views is a grave offence against better informed public opinion as well as against good manners, and can have but one result, and that a serious and a sad one. It is calculated to keep alive that deplorable spirit of antagonism and misunderstanding which was unhappily generated between ourselves and those upon whose hospitality we have forced ourselves, when, in the early days, our intercourse with the Japanese was, by some of the more unscrupulous, conducted revolver in hand. We desire that those disgraceful episodes should be forgotten, and if possible effaced; but the publication of such letters as those of a VOLUNTEER are calculated to have the very opposite effect. One foreign journal at least in Yokohama shall be found to protest against such childish and mischievous bounce; and we are largely mistaken in our estimate of English character if we fail to meet with the unanimous support of the respectable portion of the community in so doing. It may be true that all the sources of human conduct are traceable to two prevailing instincts which are born with us, and that one of these is self-defence. But, before we give that instinct full play, it is clearly our duty, if for no other reason, because of the strength of its motive power, to ascertain definitely that there is good cause for its exercise. Every man may be said to possess the inalienable right of self-defence; but the same cannot be said of every body of men. The protection of life and property in the aggregate is at once the one sole cause of the existence of Governments and their paramount and inalienable duty. When they fail in the discharge of that duty, their *raison d'être* is at an end, and they are replaced. But, until they so fail, it is equally the duty, as it should be the instinct, of every individual, whether alien or subject, to support them; and this mutual obligation is as clear and imperative in the case of the Japanese Government and ourselves, as it is in that of any other Government and its subjects. We may have each our sympathies if you will; but our duty is one and unalterable. No treaty has ever yet been entered into that can alter that relationship, or that can alienate or in any wise diminish that mutual obligation: certainly that is not the object of any of the treaties that have been concluded between Japan and other nations. We would ask then, has the time arrived when, the Government of Japan having been proved unequal to the discharge of its duties, we are justified in ignoring it, and proceeding to take measures for self-protection? Where are the signs of such powerlessness? Are we children, that we should take fright at an insurrection in the far South, which, though it may possibly assume the dimensions of a rebellion, does not threaten us foreigners in person or pocket? Whether the present Government is successful or the reverse,—a question we are not at present concerned to discuss,—we fail to see that our safety or our property are jeopardized by a want of ability or desire on the part of the authorities, be they who they may, to protect us; or that we are even threatened by any existing faction in the State. This Volunteer movement then, if it has for its object self-protection against armed violence, seems to us not only premature but altogether without reasonable foundation. Indeed that it has any such object is emphatically denied by its promoters. The motives of the *Gonrei* in deprecating it are unknown to us. They may be reasonable or otherwise: it

is quite possible, and very natural, that he should consider the movement in the light of a reflection on the Japanese Government, and so resent it; and his remonstrance is all the more reasonable in that four Consuls have taken a prominent part in the organization of the corps. But our object is not so much an investigation of the motives of the *Gonrei* as to point out to those of our fellow townsmen who think and act with VOLUNTEER the propriety of exercising common sense and ordinary courtesy. So long as the Volunteers have in view the salvage and protection of property on the occasion of fires, they will have our hearty sympathy; for it is on those occasions that they can be of real use. They can protect and save foreign property from foreign depredation as well as native. But when they go further, and, without the vestige of an excuse, in language such as that made use of by VOLUNTEER, assume to themselves functions, the exercise of which is only justifiable as a last resource in the utmost extremity, they must not expect support: on the contrary we shall not hesitate to rebuke their presumption and to condemn their folly.

PROTECTION.

AS this subject has been forced into discussion by a paper "born out of due time," which, honestly perhaps, but with positive certainty, mischievously, is doing its best to induce the Government of Japan to adopt a protective policy, it may be as well to show in a few words what effects that policy has wrought in the United States. And the little we shall have to say will convey a more practical lesson, and one more useful as well as more easily learned, than that attempted to be taught, with the aid of assertions as baseless often as they are in bad taste, to "Japanese readers" under the guise of a treatise on political economy in the journal referred to. At the 1873 dinner of the Cobden club in London one of the guests was the Hon. DAVID A. WELLS, an American politician competent to speak upon the subject, as probably will not be denied even by those of his countrymen whose views are not identical with his own. To us indeed his opinions appear to be weightier than those of most men, for the reasons that he devoted himself to public life, not for party purposes or for the sake of office but to give effect to the principles of policy which he believed to be essential to the welfare of his country and of mankind, and that, while possessing in a high degree the qualities of a scientific economist, he arrived at his conclusions through the practical experience of an official life, which placed at his disposal the most complete and accurate information. Such is the man who, speaking four years ago, said that, after full trial for ten years on a scale of unusual magnitude, and under circumstances in many respects peculiarly favorable, the result of the protective policy in the United States was "nothing but failure and disaster." He stigmatised in burning words that policy, as a "diminution of abundance, a premium on scarcity, and a restriction on growth," nor did he confine himself to mere declamation, but adduced a convincing array of facts and figures which cannot lie, to prove the baleful effects of the policy he denounced upon the purchasing power of labor and upon the savings of his nation. What was true four years ago is equally true now; and the following words, written by Sir LOUIS MALLET when fresh

from the influence produced upon him by the stirring speech of Mr. WELLS, have an application which might well be taken to heart by those writers who would persuade Japan to adopt a policy which, tried in a country wherein, if it could be beneficial anywhere, it had ten times more chance of working out some good than it has here, has been weighed at great cost and found woefully wanting.

"The value of this (Mr. WELLS') testimony to the failure of the most recent and thorough going experiment of the protective system cannot be over estimated; and while strengthening the hands of those who are still contending against the retreating, though unsubdued, forces of monopoly in Europe, it may not be without its effect on those younger communities of our own race* in which the seeds of the same evil are already sown; and which, undeterred by the warnings of Europe and America, seem bent on reviving exploded fallacies which have left their dark trace wherever they have prevailed, in every form of social disorder, in class hatreds, international jealousies, in pauperism, and in war."

Protective or high tariff legislation originated, in the United States, in what were conceived to be the nation's necessities growing out of the Civil War. It is now well known, though it was not so understood at the time, that those necessities were taken advantage of by the protectionists, who made of course free use of the well sounding word "patriotism," for the furtherance of their own policy in regard to the benefit of certain official interests. Pretending that increase of revenue was their main object, they yet "fixed duties during the war at rates far above the point at which the maximum revenue was attainable." And, to what lengths has their system been carried! Duties on dutiable imports averaging fifty per cent, and as an adjunct of protection the maintenance of an irredeemable paper money of more than three dollars for every one of that redeemable paper which sufficed for the necessities of the nation in 1860. Those who would advocate protection for Japan had better carry their argument to its full length, and recommend the expulsion of foreigners and the closing of the country to all foreign trade. They would, in so doing be only following on the steps of the Philadelphian apostle of protection, Mr. HENRY C CAREY, who held and probably holds that the best thing that could happen to the United States would be the "conversion of the ocean into a sea of fire so impassable that if Dives was in Europe and Lazarus in Pennsylvania, they could not under any circumstances enter into commercial correspondence." The same man felicitated the United States upon the death of RICHARD CORDEN; and writers of his school and town took for the title page of one of their tracts that motto which GOETHE certainly never enunciated as his own sentiment, but put into the mouth of MEPHISTOPHELES, whose name

is a synonym for fatal guile, that trade is equivalent for piracy:

"Talk not to me of navigation:
For war and trade and piracy—
These are a trinity inseparable."

Such are the auspices under which protection was introduced into and has had its trial in the United States, with the result of "failure and disaster." Mr. WELLS challenged "the advocates of protection one and all to name one single favorable result which has not been more than counterbalanced by some directly consequent injurious influence; or to cite one branch of industry which has prospered through protection in any other sense than the tropical vine prospers at the expense of the tree upon whose trunk it clammers and twines, simply to paralyse and destroy." He showed how, under its influences, the purchasing power of labor in regard to the ordinary necessities of life had decreased at the time he spoke 19½ per cent since 1860, while for luxuries it had increased, thus indicating that the general result had been to augment the means of enjoyment on the part of the rich and the poverty of the poor. He showed that the increase of production was far less under a decade of a protective than under one of a low tariff: that the increment of exports during ten years of protection was principally in articles which are the gift of God, and, in a small degree, in productions of the most unskilled and poorest of labor: that, in spite of home-made and labor-saving machinery in the boot trade, the cost of boots and shoes had increased at home 50 per cent, and that the export trade in those commodities which had formerly been very large had dwindled till it was almost inconsiderable; and that even the increasing amount of savings bank deposits was not due to the investment of the laboring, but of the well-to-do classes, "who resort to the savings bank to such an extent, for the sake of security and avoidance of taxation, that less than one tenth of the whole number of depositors in Massachusetts own more than fifty per cent of the deposits."

So much at present for Protection in the United States. We might have availed ourselves at greater length of the material provided us by Mr. WELLS for argument; but we have drawn enough to show that Protection has proved a disastrous failure in a country where it should have flourished could it have flourished anywhere; and that the just inference is that its introduction into Japan would be much more cruel and calamitous, if indeed, which we can hardly believe, it were possible.

Mr. WELLS' comparative definition of Free Trade and Protection will form an apt conclusion to this article, and convey in terms as true as they are well chosen the respective bearings of those two antagonistic principles:—

"Free Trade, in its largest sense, deals most effectively with those elements of a great problem which admit of being brought most readily under human influence, inasmuch as, by removing obstructions, it provides that production shall be carried on under those conditions which ensure the maximum of abundance, and promotes equality of distribution by preventing all unnecessary interference and waste in the exchange of products.

"Protection, on the other hand, has for its essence obstruction, and for its object scarcity, and, by the enactment of prohibitive or restrictive imposts, virtually declares that there is no brotherhood in

"man, and that the interests of nations are naturally antagonistic.

"Free trade, in its highest sense—the essential condition of abundance, of a larger and higher life, of peace, good will, and amity between the nations."

THE PROJECTED ASSASSINATION OF SAIGO.

A FEW days ago we called attention to the apparent discrepancies in the confession of TAKAHARA HISAO, published in the *Japan Mail* and subsequently reproduced by the *Japan Herald*. Later on we announced that certain documents purporting to be confessions corroborating that already published, were in our hands; but justice and fair play to the persons implicated in so infamous a plot determined us in a resolve to await the decision of a competent tribunal, before which the ruffians now under arrest will undoubtedly be brought, in order to be in a position to speak with firmness and impartiality of an event which involves not only the Government, but the whole people of Japan as a nation. Our contemporaries have not been so particular; the public appetite for news, however improbable and untrustworthy the news may be, must be catered for; murder, burglary with violence, and crimes of a like or similar nature are fortunately comparatively rare in fair Japan, or at least we foreign residents hear not of them; some papers are, however, obtained and their substance is at once converted into "confessions." One at least of the highest officers of the cabinet is accused of a crime so gross and shameful as should make the most hardened scoundrel in the world blush to be charged with; the statements of a police corporal, an ex-schoolmaster, and sundry police constables, with all the errors of faulty translation, without sifting, without the parties chiefly concerned having been heard in reply, are taken as gospel and we now learn, certainly for the first time, "that the Government is gravely compromised by these disclosures, and if it would not lose caste in the eyes of the world, it must lose no time in giving incontestable proofs of its innocence of the foul charge."

The first villain in this would be tragedy is a corporal of police, who within eleven months of his appointment is sent for by the chief superintendent and ordered "to confront SAIGO and kill him. I submitted to his order, and subsequently—I do not recollect the exact day—I went to the house of OTAMA KANSUKE, a *shizoku* of the Kagoshima *ken*, and was told by him, that if SAIGO originated any insurrectionary movement he must be killed." This ingenuous person somewhat superfluously adds "I kept these intentions secret;" and we are then informed that discussion was to be created among the members of the military school, that they should be won over to the conspirators, and during the excitement so caused SAIGO should be assassinated, the fact he at once telegraphed to Tokio, a combined attack be made simultaneously by the army and navy, and the members of the military school (those of them, at least, who were unpatriotic enough to refuse to join a gang of suborned murderers) were to be killed to a man. We have here some remarkable features. The chief superintendent of police instructs a corporal of eleven months' service to commit murder, and this corporal, in combination with his co-conspirators, has the power to arrange for a combined attack of the army and navy in

* The allusion here is to the Australian Colonies, more especially, where a protective policy has also been tried, with what results we may some day point out. What would the writer have said could he have foreseen the possibility of a countryman of Mr. Wells, endeavoring to persuade an oriental people just emerging from the mists and darkness in which their tradition, their religion, their form of government, their very physical constitution had long kept them shrouded, and seeking eagerly for a higher life, one in which they should be lighted on their way by occidental civilisation, to adopt into their policy the cruel and progress-stifling policy of Protection?

furtherance of the scheme. The second villain who appears upon the scene is an ex-schoolmaster, NOMURA TSUNE, who arrived in Tokio on the 28th December, and immediately addressed OKUBO to the effect that he knew something of the state and condition of affairs in the Kagoshima *ken*. Six days afterwards Okubo made an appointment with this intelligent patriot, who utters a number of platitudes and retires, promising "to call again," which he did on the 29th January. As the name of a minister of very high rank has been thus dragged forward as a suborner of murder, it may be interesting to quote at length from the "confession" of the ex-schoolmaster "I was then ordered to proceed by the mail steamer leaving Yokohama on the 31st of the same month. I was told that the men of Kagoshima were in such an excited state that it was feared a rising would take place in February or March, and that steps had already been taken by the Army Department for seizing the ammunition at Kagoshima. I was ordered to inform Mr. Okubo by post or telegraph of all occurrences of any ordinary nature, but should any kind of disturbance arise, I was to return and give the information myself, as postal and telegraphic communication was likely to be cut off at such a time. I was further told when an insurrection is expected it is necessary that military preparations should be made, but should such steps be taken before the disturbance breaks out, the people might become alarmed, and thus it is that your information is requisite and you must come with it. Spies from the Bureau of Police of determined courage, have, at the risk of their lives, already gone to Kagoshima, and when the rising takes place they will surely accomplish certain objects, more or less important!" Now we have to chronicle, not the small beer for that has already been done, but the cream of this veracious history:—"From certain expressions I inferred that the object of their (spies from the police bureau?) mission was to assassinate the leader of the insurgents, to set fire to the magazines and the like, and thinking that such deeds could be carried out, I said I would comply with the order."

The plot thickens; for in the next scene we have a number of police sergeants, corporals, and constables, all appointed to the force in the interval between January and December 1876, who all received secret orders from the Chief Superintendent and "attempted to perpetrate a monstrous crime of which we now repent with shame." "There are thirty-seven others who have confessed to their complicity in the plot, but their names are not given." Truly the Chief Superintendent of police must have had a childlike confidence to trust such a precious set of rascals with his murderous secret instructions, and could not have felt surprise when he heard of the betrayal of the plot and the "confessions" which have since been published. Is it by such stuff as this that the "Government is gravely compromised?" Is it not equally probable that the whole has been concocted by men of SAIGO's own party, to create a diversion in his favour? In any case we should be unwilling to condemn the greatest scoundrel unhung, upon the so-called "confessions" of a pack of his accomplices, who, whatever their other crimes may be, have shown themselves capable of being suborned to commit murder, consequently perjury and false witness are but as "cakes and gingerbread" to them; and it is upon such evidence, which, in contradistinction to the *Mail*, we consider bears

illegitimate inferences, and falsest premises, that a high minister of state is to be connected with the attempted assassination of Saigo. Let us pause: let us at least have the common decency to wait for some evidence, some facts which shall bear the ordinary tests applied to evidence, before we give ear to inferences so shameful, so infamous as these.

The merits of the struggle which is now raging in the south are wholly unknown to foreigners, and no decided expression of sympathy for either the government or the insurgents has been displayed in the foreign press. We, ourselves, incline to believe that SAIGO has some pretence of right for the cause he has embraced and the course he has elected to follow; and that the Government would have better consulted its own honour and safety, and the welfare of this rising empire, by using its utmost exertions to secure a peaceful settlement. Circumstances have rendered that much to be desired end impossible; and all that is left for us is to comment upon the news we receive, which we intend to do without fear or favour, but, for the credit of the press, with impartiality and common justice.

THE POLITICAL ASPECT OF THE SOUTHERN DIFFICULTY.

THE year 1877 bids fair to be remarkable in the history of this country. Scarcely ten years have passed since the government was administered in secret session by the Shogun, and the people lived in blissful ignorance of their political rights and responsibilities, happy enough under the paternal care of their great chieftains. With the dissolution of the Shogunate, the assumption of temporal power by the Mikado, and the extended views and requirements of the country, it followed naturally that the reins of government should pass into the control of a number of men who should form the ministry of the nation. Unprepared as the Japanese people were for so radical a reform, all worked well until the desire for change took possession of their minds. The ministers, having held office for a certain number of years, and satisfied with their own action, were averse from change: the wants of the people were incomprehensible to them: dissatisfaction became disaffection in their eyes, and a petition of right was construed into treason and rebellion. The people, on the other hand, have tasted the first fruits of reformed government; they have begun to appreciate the changed order of things, and to long for a government which should represent the wishes of the people. Desperate diseases require desperate remedies. A brave and generous people labouring under a distasteful yoke may remain loyal for a time, but eventually the popular voice will make itself heard, the tide will flow, and what power on earth can stem it? It requires little imagination to carry us back to the misrule of Charles the First and James the Second of England, to the corrupt and effeminate state of France in 1785, or to the resolute determination of the founders of the United States of America, in 1773, to rid themselves of control which had become burdensome, and of rulers incompetent to deal with the growing wants of a new state of independence and national liberty. The advocates of despotic government are fast melting away under the genial sun of constitutional influences: the time is not far distant when the control of the

presentatives of the people; and the "divine right of kings" will be relegated to the realms of romance and poetry.

Unless Japan is to form the inevitable exception to the rule, the present generation may live to see an honest and independent state grow out of the ashes and apathy of past centuries, with a system of free representative government second to none in the world. Has the beginning of the end arrived? May the present revolution in the South of Japan be looked upon as the natural consequence of too long a continuance of the same administration? For some years past movements of a similar character, of greater or less intensity, have been observable in various parts of the country, have been forcibly quelled by the Government; and the leaders, who were all men of note with the reputation of patriots, have been executed. The disaffection of the South, the courage of the people, their independent spirit and their wealth, are all matters with which the Government is well acquainted, so that the insurrection in Kinsiu must have been fully expected, and we may consider that the force put forward by the Government for its suppression is the utmost that can be done after long thought and preparation. We see the Government that is, arrayed in arms against the Government that would be. The leaders of the revolutionary movement are men of the highest renown in the recent history of this country, whose previous actions and blameless lives shield them from the imputation of being actuated by selfish or personal motives in their attitude towards the powers that are, or against the individuals who hold that power in their hands. Their demand is for reform in the administration; and with this belief it would be unjust to accuse them of any other consideration, than the real or imaginary call of their countrymen, to free them from a ministry whose long tenure of office has become distasteful to the people. Are such men to be shot down, stamped out, and exterminated for this? Can the Government follow no better course than to institute a reign of terror which must cost this country, not only money it can ill afford to squander on such a cause, but the lives of some of the best men in Japan, whose mental culture is second to none; or to attempt to terminate a domestic political question by a bloody civil war?

To the foreign mind the present aspect of affairs causes neither wonder nor surprise: how the voice of the people has been stifled for so long is almost incomprehensible to men who would rather part with their lives than their liberty of speech, action and self-government. Tradition, history and education combine to instil into us a firm belief that a permanent administration ceases to be a representative, and degenerates into a personal, government: consequently, with us, every care has been taken to guard against the faults of a prolonged administration. In Great Britain the duration of parliament is limited to seven years at the utmost: it can be dissolved by the royal prerogative: it may also be dissolved for the purpose of appealing to the country at large, in support of, or opposition to, the policy of the Cabinet; and it expires within six months of a demise of the crown. In the United States, similar precautions are taken to secure a government which shall reflect the opinions and wishes of the people: even the high office of president is limited to a four years' term, while the rotation of retirement of president, senate, and congress, is arranged

upon the principle best calculated to secure the great object of representation. Speculation upon the system of constitutional Government would be wasted labour were we to omit from our enumeration the power of public opinion contained in a free press, which is at once the safeguard and the glory, the protector and advocate, of the rights of the people.

In Japan parliament and congress are unknown; but a certain body styled the Genro-in, or Chamber of Representatives, has been in existence for some years. How its duties have been performed, if performed at all, no man knows; if it was, as it ought to have been, consulted by the government prior to the adoption of the measures for suppression of the rebellion, it must either have failed in its duty to the people by according support to the government policy, or the government must have treated its resolve with indifference, if not with contempt. Has this body no voice in the control of internal public affairs? Is it not in a position to come forward and put an end to this lamentable bloodshed? In the present crisis it ought to assert its power as the representative body of the nation, and demand to have the complaints of the insurgents looked into, discussed, and, if worthy, redressed. We have a firm belief that such action on the part of the Genro-in would go far towards putting an end to the present trouble, and tend beneficially to the assurance of the future domestic peace of Japan.

A COMPROMISE DESIRABLE.

THE sympathy evinced for SAIGO in the letter of our correspondent who writes below on the Southern difficulty, is shared by many Europeans, who, if asked for the reason of the faith that is in them, would find it hard to give a coherent answer. Those who do not go so far as to wish the insurgent chief success, or to express their sympathy aloud, yet feel sorry to think that one whom they have always looked upon as the noblest type of Japanese manhood, and the personification of Japanese patriotism and loyalty, should be found in arms against the cause which he has served so long and so well. Both classes derive their sentiments from the profound conviction, which has become so to speak a habit of thought, and like many other habits hard to trace directly to its origin, that SAIGO was identified with the cause of progress. And so he was; and for that cause, as he understands it, and which he thinks the cause of his country, he is now battling. With that cause, does he succeed or fail in his courageous attempt to effect a revolution, his name will ever be associated. One cannot but recognise that a system of government which can drive such a man to rebellion must have many defects. Even at this hour of the insurrection, all friends of Japan, whether among her own people or her foreign guests, must wish to see an arrangement come to, to stop an internecine strife which has, in the short time it has already lasted, dealt to the prosperity of the country a blow the effect whereof must be painfully felt for years. As we have already pointed out, the true remedy for the existing disaffection, which manifests itself in now frequently recurring risings, is a change of government, and the establishment of some legislative body which shall represent all classes of the people. The rights of the descendants of the ancient aristocracy

and gentry of the country should not be altogether put on one side; nor their voice entirely disregarded. A government in which they, the agricultural, and the trading communities, shall all be represented, is part of SAIGO's scheme; a government responsible to the nation, whose voice can remove it, and fill its place with a better one, when it ceases to possess the confidence of the public. That such a government must be established, if the future welfare and happiness of the country is to be assured, is evident; and its inauguration is probably only a question of time. Far better for it to come now when it could command the services of such a man as SAIGO: to be at once established through a peaceful compromise with him, than for his blood to be the seed from which in the process of time it shall grow and flourish. The evils of the present system of government, which, if allowed to continue, will become more and more that of an irresponsible oligarchy, may be best illustrated by simply indicating the fact that the disastrous troubles, which are costing so much good blood, and an inestimable amount of treasure, would have been avoided, had a few of the ministers resigned their office. They would not do so, and "hence," literally, "these tears," tears of blood wept by a beautiful but suffering country. And another instance is the feeling, expressed by both natives and foreigners, that even if SAIGO falls, the ministers, whose continuance in office he holds to be a curse to the country, will have to be provided for in foreign lands, as they will no longer be able to possess their lives in safety in their own. So that their case stands thus. Should SAIGO gain his cause by arms or by negotiation, they lose their office. Should he fail they have to leave the country, or dwell in it in hourly danger of assassination. Who would not desire to see an understanding come to? Who can hold that it would not be to the lasting benefit of Japan?

A SALVAGE CORPS.

"Z," IN the correspondence columns of the *Echo du Japon* last week complains that a want of courtesy was shown on the occasion of the recent meeting of residents to consider the Volunteer Corps question, in not inviting the French portion of the community to take part in the proceedings. He writes "*Je trouve comme vous, Monsieur, qu'on en a usé beaucoup trop cavalièrement avec la partie française de la communauté, et que le plus simple sentiment des convenances indiquait qu'il fallait lui convier à un meeting où devait se discuter un projet dont elle ne pouvait se désintéresser.*"

It will probably be sufficient to mention that nobody, not to say no nationality, was specially invited, to convince "Z" that no slight was intended by the committee, of which at that time, by the way, the acting French Consul was a member, to the French residents. The meeting was convened by public advertisement in the public journals, and was addressed impartially to "the citizens of Yokohama." That the advertisement might as well, under the circumstances of the case, have been inserted in the *Echo* we are quite willing to admit: that it was not so inserted was probably owing to the thought never occurring to the committee collectively or individually; but the idea that any slight was intended is too improbable to be for a moment seriously entertained by any

but the most super-sensitive. "Z's" complaint however, is worthy of notice, as indicating how careful the promoters of a movement which professes to be cosmopolitan and social in a very extended sense, should be to avoid anything which may tend to hurt the susceptibilities, national or individual, of those whose sympathies they wish to enlist. It also indicates that some difficulty may be experienced in the performance of the task they have undertaken of being all things to all men, and making all men all things to one another. Still, if properly managed, the movement should arrive at a good result. But if its promoters really wish to make it a success, they should forego all such rhodomontade as disfigured the speeches of some of those who took part in the meeting a week ago. They should endeavor to enlist the sympathies of the public, but not in hostility to the action of Mr. Nomura, who quietly remonstrated with the Consuls upon what he thought to be an unfriendly move of the foreign community. Let them convince him that their designs are friendly: that they only desire to promote good feeling between foreigners of different nationalities, and between foreigners and Japanese.

As we have before indicated, the foreign settlement is really in need of a Salvage Corps. Why should not those who are willing to enrol themselves in a Volunteer Corps form themselves into a Salvage Brigade at once. Let them meet as often as they like for "drill and recreation," with a view to attaining a high degree of discipline and effectiveness of movement. The benefits which they could render in case of fires are so evident as hardly to need recapitulation. They would be of eminent service in preventing the pillage of property; and they would rescue from destruction, to the great saving of the Insurance Offices and of private individuals, a quantity of goods which under the present want of system fall an easy prey to the flames. Let us have a Salvage Corps then by all means, which shall work in concert with the various Fire Brigades. The duty of its members should be kept quite apart from that of the regular fire-extinguishers. They should be provided with light, roomy, and substantial trucks or wagons, in which all property as it is brought out from a burning tenement should be speedily stowed, and, as soon as each conveyance is filled, it should be taken away to some large central godown, set apart specially for the purpose, where the salvaged property could be stored safe from further danger of injury, and from all chance of pillage. Such an organization might be of great service to the native and foreign community, and would have some worthier object for its existence than the idle one of playing at soldiers.

A CLOSE SEASON.

THE shooting question, as regards the restriction of the sport, as far at least as foreigners are concerned, to persons who have provided themselves with a license, on the payment of a ten dollar fee for the season to the Kencho authorities, was settled, as our readers will remember, in the beginning of January last, and came into force on the 6th of that month. We then pointed out that the true sportsman would hail with pleasure the settlement of a question which would put a stop to the vagaries of a certain class of persons who used to "go out shooting." We had hoped that the regulations

would bring about some further advantages, some measure for the preservation of game. In Great Britain the "close season" and the enactments which enforce it, are, like the results of all modern legislation, the outcome of centuries of experience. The birds, if it is wished to ensure them a fair amount of fruitfulness, require to be left unmolested not only during, but for some time previous to, the breeding season; and to this end the sale of protected birds should be forbidden within the most rigidly enforced limits. The *Weekly Mail* of the 6th January last wrote thus.

"But we have not yet come any nearer to a close season in the market, and this is what is really wanted to ensure good shooting. So long as the town is supplied with game during the months in which the birds are breeding, so long will they be eaten in the hotels and restaurants, where variety tells in favour of the establishment which provides it. We have even known a *salmi* of pheasants served—with closed doors—during the sacred months, in houses of severe reputed orthodoxy. The stealthy glass of surreptitious Tokay has before now prevailed with the musselman, much more the prohibited bird with the gourmet. We do not see any serious objections to a close season, and certainly without this the shooting will never be what it might be. But we cannot expect it until or unless the Japanese themselves become sportsmen, in our sense of the word, and think that it is desirable to make such rules for the preservation of game as exist among the more advanced nations."

We are still, apparently, as far from a close season in the market as we were then. One morning recently, on visiting the market between seven and eight o'clock, we counted upwards of thirty pheasants, more than half of them hens, and on our way thither we met several cooks carrying birds of course intended for their masters' tables. Pheasants in this country should not be shot later than the 28th February, the last day on which an English sportsman would think of killing them. In England and Scotland the pheasant shooting season ends a month earlier. In Ireland, where it commences a month earlier than in the sister island, it closes on the 10th January; and here the 28th of February is at least late enough to stop the slaughter. The necessity of preserving the most noble species of winged game from extinction in this country, should induce the Japanese government to decide upon a close season for the market, and to insist upon its observance. Meanwhile, foreigners may do something towards checking a quite unwarrantable destruction, by interdicting the purchase of pheasants for their table after the close of February.

REVIEW.*

IN modern ship building the preference is given to the use of iron over wood in construction. It is cheaper and better, and in many respects more durable. An important feature in connection with iron ships is the effect of the material of construction on the ship's compasses; and there can be no doubt the danger of navigation is considerably increased if the master be not thoroughly conversant with the principle of compass deviation. The speed of sailing vessels and steamers has improved with their new modelling; and if a steamer constantly makes long passages her reputation is at peril; and it is no excuse to plead thick weather with no possibility of getting an

* *Compass Deviation in Iron Ships, described practically by R. M. Tulbot; Amoy, 1876.*

observation of sun or stars. Great reliance must, therefore, be placed on the compasses; and a proper understanding of the laws affecting them becomes a duty requiring considerable study and observation. Every endeavor which tends to make the shipmaster and officer familiar with the results of scientific research, the principles and their application with regard to compass deviation, is to be heartily welcomed, not only by those directly interested, but by the public at large. A little work recently published is a step in this direction, and we have pleasure in calling attention to it. The object of the writer has been to convey in concise and simple language the requirements of a good compass, the selection of position for standard and steering compasses. He gives a short account of natural and artificial magnets, explanations of the semicircular and quadrantal deviation, the deviation-coefficients and their use, the adjustment of the compass, and the heeling error. The construction and use of Napier's curves are explained, as well as the different methods in use for ascertaining the compass error; and there is no doubt that every person interested in the subject will benefit by the perusal of Captain Talbot's labours. The rules given are simple, and require little or no mathematical knowledge, and a series of carefully prepared diagrams illustrate the text.

In recommending this work to those for whom it has been written we feel confident it will be found to be a most useful manual to the shipmaster, who, when he thoroughly comprehends the writer's meaning, will find the more elaborate works on the same subject simplified and explained, should he be desirous of further and more technical information. For the practical seaman, however, this book contains all that is requisite for him to know about compass deviation. We conclude in the writer's own words: "While disclaiming all intention of giving offence, it may be said that the theory of compass deviation is not generally so well understood as it might and ought to be. With so many admirable books on the subject as are now published, every commander ought to be perfectly familiar with the magnetism of his ship; there is nothing very abstruse in it, although the mathematical formulæ and nomenclature which strike the eye on first looking into the more scientific works on the subject, would lead to that impression."

THE SATSUMA INSURRECTION.

Japan Gazette, March 13th.

The *Choya Shinbun* says:—On the 7th instant, four men-of-war and four transports, namely; the *Kasuga*, *Riujo*, *Seiki*, and *Chikuba-kunwan* and the *Kanagawa*, *Genkai*, *Korio*, and *Genbu-maru*, left Nagasaki for Kagoshima. The first is commanded by Isobe, the second by Fukushima, the third by Inouye, and the fourth by Matsumura. H. E. Yanagiwara, Imperial Envoy, embarked on board the *Korio* and H. E. Mr. Kuroda, *Sangi*, *Genbu-maru*. On the 10th instant, a corps on board the from the Tokio garrison was despatched for the mountains of Hakone on the Tokaido and another for the mountain of Usui on the Nakasendo. In the Osaka Post Office, letters from the South West addressed to private persons are sometimes opened by the authorities. About five hundred shizoku from the Gunba-ken have been added to the force of police in Tokio to fill the places of those who have been sent out to the South West.

Large numbers of the same class in Mayebashi hold meetings and express a wish to attach themselves to the Imperial forces. No telegram was received from the South West during the 10th and 11th instant. It is rumored that in spite of the General Tani, Governor of the castle of Kuma-moto, his forces have become much discouraged, to his great distress.

The *Hochi Shinbun* states:—A telegram, sent by H. E. Mr. Yamagata, War Minister, at 5.10 p.m. on the 10th instant, says that at about 6 p.m. on the 9th, three forts in the village of Uchihara were captured by the Imperial forces. The insurgent troops, commanded by Saigo in person, consist of those who have seen many battlefields during the war between the Mikado's and Shogun's parties. They are not many in number. Saigo is still encamped at Kawajiri at the head of these veteran forces. But he is expected shortly to proceed to Yamaguchi. H. M. the Mikado sent Mr. Takasaki, his chamberlain, South, in order to express his good will to Prince Arisugawa-no-Miya, and others, and his doctor Saruwatari to inquire after the health of the wounded soldiers. They left in the *Hiogo-maru* at 12 o'clock on the night of the 9th instant. On the 5th instant, a foreign resident in Kobe was requested to purchase five cannon and seven hundred rifles, by a Japanese who declined to give his name and address. The matter was soon reported to the local authorities, and a strict search is now being made for him. He has not yet been found.

The same paper says:—A telegram from Nagasaki, despatched at 11.5 a.m. on the 12th instant, announces that H. E. Mr. Yanagiwara, Imperial Envoy and his suite arrived at the bay of Kagoshima on the 9th inst., and landed with his followers on the following day without opposition. Another telegram from Nagasaki, sent at 2.45 p.m. on the same day, says: The Imperial Envoy having landed peaceably at Kagoshima on the morning of the 10th instant, proceeded directly to the residence of Shimadzu, and delivered to Shimadzu an Imperial order. In Kagoshima all is quiet and the Envoy received all the authorities from Tokio, who were captured by the insurgents, and then returned to his lodgings in the city. A body of troops was immediately sent by him to Kajiko and other places, where large quantities of ammunition are reported to be stored. Mr. Kishima, a Kagoshima man, whom it was thought had been killed by the insurgents, collected 200 shizoku and left for Bungo before the arrival of the Imperial Envoy with a view of uniting with the Imperial forces.

The following is related by a man who arrived from Kagoshima, in the *Taiheimaru*:—The boundary of Satsuma is strictly guarded by a number of shizoku, who would not admit any person to enter or go out. But since Saigo and his men have left for Kuma-moto, all is calm. The men who have followed Saigo range from youths of seventeen to men of sixty years of age, but persons over sixty were not admitted into his party. Saigo, the traitor, is reported to have intended to reach Tokio in fifty days; and to spend five days in capturing Osaka castle. Previous to his departure, many merchants and farmers in Kagoshima presented him with a large sum of money. Colonel Fukuhara, who was wounded, returned to Osaka on the 6th instant.

Yesterday, in Tokio, a Naval officer was summoned to appear before the Tokio-Saibansho, where he was deposed on suspicion.

According to a letter from the South, Major Matsumoto was killed in an engagement with the rebels, and about two hundred soldiers have already been killed and wounded. The Imperial head quarters were removed on the 11th instant from Minami-no-seki to Takase.

The *Aichi Shinbun* says that Major Takikawa in the castle of Kuma-moto was killed; and that since the battle on the 26th ultimo.

The *Mai-nichi Shinbun* says:—The town of Minami-no-seki was entirely destroyed by fire and the seventh part of the city of Kurume was also set on fire. The Custom House at Muman-no-seki was given up by the authorities, and is now occupied by the troops, who defend the coast. It is said that General Minra was mortally wounded in the battle at Takase and that he died in camp a few minutes afterwards. On the 10th about 2,000 troops left for Kobe in the *Tokio-maru*. All the Kagoshimas men among the police at Fukuoka have been arrested. Seven or eight policemen in Osaka daily resign their posts. It is reported that large quantities of copper and iron were lately imported from Corea to the arsenals in Kagoshima.

The *Nichi Nichi Shinbun* says:—Kawajiri, where Saigo has established his headquarters, is mostly inhabited by rich merchants and farmers. He desires them to join his party and to support his expenses. Kirino, who had been at the castle of Kuma-moto for three or four years, is well versed in the geography of Higo. The Kumamoto Kencho has been temporarily transferred to Minami-no-seki. About three hundred workmen are daily working very busily in the arsenal at Koishi-kawa, Tokio. At night, they work till twelve o'clock. A letter from Fukuoka, dated the 2nd instant, states:—About seven or eight vessels are daily plying in the harbour of Hakata, and sometimes about twelve or thirteen. All the troops from Tokio, Osaka, and other places have been despatched to Kumamoto. Jinrikisha and wagons are very scarce and the prices charged for them have much increased; their owners demand about one yen per mile. Prince Arisugawa-no-miya is stopping at the Kencho. The shizoku in Western Higo are said to have joined the insurgents. Since the 26th February the inhabitants in the towns of Hakata and Fukuoka have been much afraid and confused and have taken away their furniture and clothing, in obedience to orders from the authorities.

From the *Osaka Nippo* we learn that a telegram despatched from Uma-no-seki at ten a.m. on the 8th instant, announces a severe battle having taken place that morning at Uyeiki, resulting in great loss to both parties; though no decisive advantage was gained on either side.

Tawarazaka is the most important and strongest military position in the province of Higo, and lies about four *ri* from Kuma-moto. It is bounded by a range of hills which enable it to be easily defended. The ex-retainers of the ex-lord Kuma-moto, have also designated this place Harakiri-zaka, signifying that if they permitted an enemy to cross the hills, the defenders would have to commit harakiri as it would be useless contending against an enemy who had succeeded in overcoming the natural difficulties of the situation. Now at this strong place the insurgents have constructed five forts, two of which were captured by the Imperialists in the engagement on the 7th instant. If the Imperial troops succeed in taking the remaining three, it will be impossible for the

insurgents to remain longer at Uyeiki or Kuma-moto. Mr. Yamagata, Minister of war, took the field in person on the 7th.

March 14th.

The *Osaka Nippo* says:—Severe engagements have taken place at Tawarazaka. On the 8th instant a terrible battle was fought at the same place. About fifty Imperialists were killed by a mine of powder, which was exploded by the insurgent party. A merchant from Kumamoto, who returned lately to Osaka, relates as follows:—At the first engagement at Uyeiki, the Imperial troops lying in ambush were totally routed and obliged to retreat in disorder as far as Minami-no-seki. On the 21st February, the city of Kumamoto, which was set on fire, was entirely covered with dark smoke; and besides it was very foggy weather. Having taken advantage of this, the insurgents advanced close to the moat of the castle. When the weather cleared up, they were found besieging the place. A mound of earth about 6 feet square has been built at the door of the headquarters of Saigo at Kawajiri. It is surrounded by a bamboo fence. In the centre, a large post is standing with the following legend: "Head-quarters of Saigo Takamori, President of the new government, and Commander-in-chief, of the rank of Sho-san-mi." Saigo has advanced to within one *ri* from Kumamoto. He seems to be calm and to fear nothing. He is said to amuse himself by playing chequers in camp. He is fond of witnessing wrestling. During December and January last, many hundred wrestlers from the various provinces assembled at Kagoshima. They followed Saigo on his departure and assisted the insurgents in the transport of cannon and provisions. Some persons say that Saigo's treachery seems to have been from the first known by the shizoku in Kumamoto. As early as the 15th of February, they were very busy removing their furniture and clothing over which they formed an armed guard. When they were opposed by the police, they threatened to kill them. Thus confusion became general throughout the city and neighbouring towns. On the 17th, the common people ran about removing their furniture and clothing in great disorder, but they were strictly ordered by the local authorities to remain peaceably at home. At about 2 p.m. on the following day, notice was issued to the effect, that all the citizens must leave their houses by 12 o'clock on the 17th, when the place would be set on fire. By that time, the insurgents were housed. Carts and jinrikishas, for the use of each of which 20 or 30 yen was demanded, were scarce even then, and many of the poor citizens hardly succeeded in leaving their houses alive, taking nothing with them. The towers in the castle were first set on fire, and in a moment the entire city was embraced by a terrible conflagration. The governor of the Kumamoto-ken, accompanied by about 150 policemen, is shut up in the castle. Among the insurgent forces there is a party named the Soyeiki-tai, whose number is not known. They are not armed with rifles, but with lance and sword. The sea off the coast of U-to, Kojima, Takahashi, and Kawachi in Higo is blockaded by about one hundred fishing boats, in each of which soldiers and policemen are embarked.

The *Hochi-shinbun* says:—A telegram from the South, despatched at 3.40 a.m. on the 13th states:—At dawn on the 11th in-

stant the Imperial troops attacked the fort at Yoshijigoye, which was captured after a short struggle, while the two forts at Tawarazaka were also taken by the other Imperial forces. But the victorious army could not remain masters of the place for a long time, for their communication with the army was cut off, and they were besieged very soon by the insurgents, who quickly recovered possession. About forty rebels, each armed with lance and sword, forced their way through the Imperial troops, in spite of a tremendous fire of small-arms. Before they reached their camp, nearly half of them were killed. Thus both parties have many killed and wounded. The combat was hand to hand. On the same day an engagement took place at Yamaka, the result of which is not yet known. A telegram from Osaka, sent at 11.35 p.m. on the 12th instant, announces that the insurgents are much discouraged. In Kagoshima new insurgent forces are being raised by Sonobe and Hanayama, who have sent some mortars to Saigo. Many and various rumors are heard in Kagoshima reporting in favor of the insurgents, who are said to have taken the castle of Kuma-moto. On the 8th instant three battalions of infantry were dispatched from Osaka to Kiushu. A telegram which was sent by Mr. Yamagata, War Minister, at 8 p.m. on the 13th, says that an engagement was commenced at Shirayama at about 6 a.m. on the 12th instant. The Imperialists advanced through the Main Street and destroyed the fort at Nabeta, but were eventually obliged to retreat before the insurgents, who were stationed in a strong strategic position.

The *Nichi Nichi Shinbun* publishes the following items:—A telegram from Minami-no-seki, despatched at 10.40 a.m. on the 13th, announces that an engagement had commenced at Tawara. The insurgents attacked the Imperial troops on the Yoshijigoye road. In a few minutes, both parties retreated mutually from the battle field. The battle at Yamaka was commenced at about 8 a.m. on the same day. The Imperial forces attacked from the roads of Iwamura and Shirayama and captured a fort. But the insurgents, having entered the place again at sword's point, fought with desperation, and carried it by storm, the Imperialists retreating as far as Shirayama, where they held their ground. The troops at Iwamura advanced victorious, and the rebels at the village of Nabeta broke ground and set the village on fire. Another insurgent party, stationed at Shirayama and Kawadzu, was attacked by the Navy. Yesterday Washio, a kuwazoku, and one Shima-moto of the Kochi-ken, were both arrested in Tokio.

March 15th.

The *Akebono Shinbun* says:—A telegram sent by H. E. Mr. Yanagiwara, Imperial envoy, from Nagasaki, at 4.25 p.m. on the 13th, announces that all his business was finished in Kagoshima, and that he had returned to Nagasaki and was to leave for Kobe that night. The men-of-war *Rinjo*, *Seiki*, and *Genbu Maru* returned from Kagoshima to Nagasaki on the 12th instant. Two war vessels, viz., *Kasuga* and *Chikuba* remained in the harbour of Kagoshima. Repeated mention was made of Mr. Kishima, who left by the Bungo road at the head of about two hundred Satsuma men to join the Imperial forces. He is a brave soldier of Kagoshima. He served the government as colonel, and once held an important command in Kagoshima. During 1874, the barracks were burn-

ed by accident and all the troops were withdrawn from the place. Since then no troops have been stationed in Kagoshima, and Kishima always objected to its being left unprotected. He is said to have suspected Saigo and to have watched the movements of him and others. Mikina, karei of the ex-Daimio of Hikone, was lately arrested in Kioto.

The *Hochi Shinbun* says:—A telegram sent from Osaka at 12.25 on the 14th announces that about one hundred policemen, divided into three parties, and armed with swords had forced their way into three forts simultaneously at about 4 a.m. on the same day. After a short struggle, these forts were captured with the loss of ten policemen, and the same number were wounded more or less. The boys in Kagoshima between thirteen and seventeen years of age have formed a party, and are armed with sword and lance and dressed in hakama. In spite of fatigue and hardships, they followed Saigo as far as Yajiro, where most of them were too tired to proceed. Saigo and others ordered them to return and remain peacefully at their homes. But the boys desired to be allowed to follow the insurgent army, saying that they could not return home, where their mothers would not expect to see them again. Merchants and farmers, also armed with swords, have joined Saigo's forces, and are anxious to do any service for him. A reporter of the *Saikai-shinbun*, dressed as a merchant, advanced boldly as far as Uyeki, where he was unfortunately arrested by the insurgents and placed in custody. But he seized a chance to get away and escaped to Minami-no-seki. H. E. Mr. Kuroda, *Sangi*, sent a telegram at 10.45 a.m. on the 13th instant from Nagasaki stating that 300,000 cannon and rifle balls, 1,000,000 pounds of gunpowder and large quantities of military stores, belonging to the insurgents, were captured in Kagoshima. Besides this the machinery has been removed from the arsenals, and will soon be brought to Nagasaki by the steamer *Kagoshima-maru*. Communication between the insurgents and Kagoshima was cut off. All is quiet in the ken, where Shimadzu and his son and others received the Mikado's envoy with hospitality, and aided him in his business. Nothing alarming was observed in the province of Satsuma. The following narrative is from a man who left Kuma-moto on the 24th Feb:—At about 6.30 a.m. on the 22nd Feb. about two battalions of the insurgent forces left Saigo's head-quarters at Kawajiri and penetrated into the ruins of the city of Kuma-moto. Half a battalion of the Kuma-moto garrison troops advanced against them, and met them at Hokke-zaka, where an engagement was fought lasting till about 11 o'clock a.m. The insurgents gave way before the troops and lost seven men. The victorious forces encamped at Tsuboi. At about 1 p.m. on the same day, the battle was renewed, and the rebels impetuously attacked the troops, who retreated in disorder to the castle, leaving the enemy masters of the entire ground south of the castle, which was soon surrounded. At 10 p.m. the engagement ceased. On that day, the troops are said to have fired 30,000 rounds. During the night of the 21st, two steamers belonging to the insurgents arrived off the island of Kojima at the mouth of Kawajiri, where they landed large quantities of ammunition and provisions which were brought directly to their head-quarters. The rebels are said to be well furnished with every thing except cannon. Their engineers commenced to build an embankment before the principal gate of

the castle at about 2 p.m. on the 22nd. 300 bags of rice at Tsuboi, which the Imperialists desired to transport to the castle, were seized the same day. Mr. Takasaki, the Mikado's chamberlain, who was sent to the army in order to inquire after the health of Prince Arisugawa and others, brought 100 yen to the Prince instead of sake and fish, 50 yen to each of the generals, and 25 yen to officers of lower rank. Each of the soldiers also received a certain amount of money from the Mikado. On the 10th instant, 3,000,000 snider rifle balls, 5,000 blankets, and 20,000 pairs of straw sandals were sent from the arsenal in Osaka to the south. Lieut Colonel Yoshimatsu was killed at Takase on the 27th February. About 100 officers and soldiers are now in hospital in Kurume. On the 10th instant, all the Imperial guards then in Kioto were sent to Kiushu.

The *Nichi Nichi Shinbun* says:—General Oyama is encamped at Yamaka, General Nodzu at Yoshiji-koge, General Miyoshi, who was recently wounded slightly, at Tawarazaka, and General Miura passes between Yamaka and Minami-no-seki.

March 16th.

The *Choya Shinbun* publishes the following letter from Minami-no-seki dated the 4th March:—Any justification of the treacherous conduct of Saigo and his companions must be found principally in the two following matters. In January of this year, Nakahara, *Chu-kei-shi* of the Police station, and twenty policemen in Tokio resigned their posts without any apparent reason. They were secretly ordered by—to assassinate Saigo, Kirino, and Shinohara in Kagoshima. On their departure,—gave them respectively 100 yen. Two of them betrayed him and held secret communication with the Gakko-to, who consequently arrested Nakahara and others, who were obliged by severe torture to confess their scheme. This is one of the justifications of the insurgents. The other is the removal of the military stores from the arsenals in Kagoshima. Saigo-Takamori issued a manifesto to the effect that he was soon about to start for Tokio there to change the constitution of the government and depose two or three bad officials in the cabinet. This spread immediately and created an immense excitement among the shizoku through the province of Satsuma. A considerable number assembled at Kagoshima. On the 31st January, they broke into the arsenals, where they seized all the military stores. On the 10th they assembled on the extensive plain before the castle of Kagoshima. On the 16th Beppu-shinsuke, at the head of one battalion, forming the first detachment of the insurgents, advanced as far as Midzumata about twenty ri from Kumamoto. In the latter place various discussions took place between the local authorities and the military officers. Some wished to meet the insurgents outside the castle, while others, on the contrary, said it was better to shut themselves and followers up in the castle. No decision was arrived at till the night of the 18th February, when the latter course was decided upon, and the insurgents arrived before the castle early on the morning of the following day.

The *Hochi Shinbun* says:—A telegram from the South, despatched at 9.20 a.m. on the 15th, announces that the insurgents seem to have exhausted their money and provisions. They pay no hire to the coolies whom they employ, and seize rice and other stores from private persons. So they are rapidly losing their

popularity. The merchants and farmers have banded together to defend their property against them. Another telegram from Fukuoka, sent at 8.5 p.m. on the 14th, says that Mr. Oyama, Governor of Kagoshima Ken, accompanied the Imperial envoy to Nagasaki, where they landed on the 13th instant, and will proceed together to Kioto. But Shimadzu, who has not been connected with the rebels from the first, promised the envoy that he would soon leave his home and help to restore tranquility. On the 14th instant desperate battles were fought at Uyeki and other places, where both the Imperial troops and rebels suffered considerable loss. The Governor of the Fukuoka Ken has issued a notice to the effect that about 300 shizoku of Toyotsu and Yamaguchi will be raised in order to garrison for the government the barracks at Fukuoka. The insurgents have become much exhausted, and Kirino, the rebel commander at Uyeki, is said to have returned to Kagoshima in order to raise reinforcements there. The head-quarters of Prince Arisugawa-no-miya have been removed from Hakata to Kurume. To-morrow six battalions will be sent to Kobe from Tokio.

The *Mai-nichi Shinbun* says that Lieut-general Shijo will leave for the south in order to take the place of General Miyoshi who was wounded.

The *Choya Shinbun* says:—At the outbreak of the insurrection telegrams were repeatedly despatched from Kuma-moto to the central government in Tokio asking what should be done against the Kagoshima men. No answer was received at Kuma-moto till 11 a.m. on the 19th Feb., when a telegram was sent by Mr. Sanjo, *Daijo-Daijin*, to the effect that an expedition would be sent to Kagoshima shortly. The inhabitants were at once ordered to leave their houses, and the kencho was removed to Mifune about four ri from Kuma-moto. At the same time, while confusion was general through the city, a fire broke out accidentally in the residence of General Tani, Commander of the Kumamoto garrison. A strong wind was blowing and the fire soon spread to the famous many-storied tower. Early on the following morning, the insurgents rushed pell-mell into the city, where the fire was still burning here and there, and besieged the castle. An insurgent corps also threatened to march to Mifune and attack the kencho which was accordingly again removed to Jufu-machi, about six ri distant from the castle. But the insurgents followed them thither. The Governor, Tomioka, was not there. He had shut himself up in the castle with Mr. Shinagawa, secretary of the Home Department. The Vice Governor ordered the officials to withdraw and to close the office which it was useless to keep open. One special book, relating only to the business and property of Shimadzu's daughter, is preserved in the kencho, the authorities of which seem to act as her bailiffs. When the ex-lord desires to journey anywhere the kencho issues a notice along the route through which he has to pass, ordering the police to guard him. All the rich merchants in the province of Satsuma are held to be retainers of the Governor. No notification from the central government is circulated in the ken. The entire power and influence of the kencho is in the hands of the Gakko-to, by whom persons are appointed to positions of authority.

(Continued on Page 36)

EARTHQUAKES AND BUILDINGS.

IN all countries subject to seismic influences, endeavors to solve the there all-important question of how buildings can be constructed so as best to resist the effects of earthquake shocks, must have a peculiar interest. That man who shall give to the world some system of building which will materially reduce, if not altogether annihilate, the risk daily and hourly run by the inhabitants of countries liable to the earth convulsions which involve such terrible destruction, not of property only but of human life, as was wrought here in 1856, will deserve a prominent place in the roll of the benefactors of his species.

The work which we publish below is by a gentleman of practical experience. His remarks and suggestions, as they will appear in these columns, have by this time been read before, and discussed by, a learned society of engineers in Europe, whose debate and decision upon the matter we shall receive in due course. We do not claim infallibility for the author; but we cannot deny him the credit of patient research, added to considerable ingenuity and a broad scope of view. His work contains much which will, we think, be new to all our readers; as for instance where he boldly combats the theories that the mode of building prevailing among the Japanese is well calculated to resist horizontal shocks of earthquake, and that the system of heavy roofing is part of that design instead of, as he holds, a mere consequence of it. But on this and the remainder of his interesting subject we will let our author speak for himself in his paper, which will be found very lucid, and as attractive as any dissertation, which from its nature is compelled to deal largely in technicalities, can be expected to be. For the furtherance of the object he has in view, namely the introduction into Japan of a simple system of domestic architecture, which shall allow the people to live free from the apprehension of the hourly danger they are now in of the walls and roofs of their dwellings crumbling about their ears, he invites discussion, and asks that any fallacies which may be discovered in his theory shall be exposed. For the purposes of such debate, calculated to be of great practical utility, our columns are always open.

AN ESSAY ON JAPANESE BUILDINGS AND ON BUILDINGS IN GENERAL, CONSIDERED IN CONNECTION WITH EARTHQUAKES;

AND

A DESCRIPTION OF A SYSTEM DESIGNED TO GIVE VERY CONSIDERABLE SECURITY TO CONSTRUCTIONS IN MASONRY.

PART I.

JAPANESE BUILDINGS AND BUILDINGS IN GENERAL CONSIDERED IN CONNECTION WITH EARTHQUAKES.

The pretended solidity of Japanese buildings against the effects of earthquakes has been much vaunted; and if we are to believe some persons they are models of their kind in this respect; but we have come to the conclusion that, if earthquakes have not caused greater destruction than has so far occurred to Japanese buildings, the cause is to be found rather in the restricted dimensions of the constructions themselves, than in any merit in the principles on which they are built.

All Japanese houses are of wood: they have often only a ground floor rather low;

the first floor, if they possess any, is only about seven or eight feet high; and it is a rare occurrence to find houses having a second floor. The method of construction may be easily imagined from the following description.

Hardly any or no foundations.

A basement, or simply blocks of stone on which rest ground-plates receiving the feet of the posts, or even blocks of stone whereon rest posts which themselves receive the ground-plates

Posts, few in number, and between which are placed those panels with squares of paper, which have given rise to the saying that Japanese houses had paper walls. And in fact all the internal divisions of the houses as well as the frontage walls are so made, that, when all these sliding panels are taken away, nothing remains but the flooring, some posts here and there, and the ceilings.

An utter absence of ties or bearers, whether at top or bottom of the said posts.

A very heavy roof-frame of timber, composed of several principal beams or large horizontal pieces, placed one above the other, on which rest posts placed vertically without braces, and of height arranged according to the degree of inclination of the roof: binding-rafters joined to the extremities of the horizontal tie-beams placed one above the other, and of these posts: some hip-corners only: some rafters: some thin planks of white wood: shingles: some plaster in earth or lime; and then heavy tiles.

This is a tolerably succinct description of how a Japanese house is built. It will be seen that such a method of construction may apparently present certain advantages of security against earthquake shocks of little violence, by reason of the amount of oscillation which its comparative want of rigidity will allow it to bear; but we shall see further on that it is very badly designed to resist any violent horizontal shocks.*

In the first place the Japanese rest their structures on the ground only, without deep foundations, in order, say they, to offer no resistance to the lateral displacement of the building during the horizontal oscillations of earthquakes. This absence of foundations

* The opinion of a very intelligent Japanese gentleman, with whom we had some conversation on the subject of earthquakes the other day, coincides with that of the author in this particular. He cited, as an irrefutable proof of the instability of Japanese structures under severe shocks of this nature, the terrible earthquake of 1856. That earthquake was horizontal; and in Yedo and the neighboring districts comparatively few houses were left standing, while the native records of the calamity give a total of 120,000 persons destroyed! Before that time, our informant states, all the mercantile houses in the capital were two stories high, and their roofs were ornamented, while their weight was increased, with the addition of heavy ornamental pieces, at the four corners and on the extremities of the apex, known as *onkawara*. He adds that one-storied buildings, previous to that time, were rarely seen in Yedo. Warned by the experience of the terrible disaster which had come upon their city, the survivors, in rebuilding the town, carefully avoided either constructing two-storied houses, or weighting the roofs with ornamental tiles. They neglected the main point, however, namely, to secure a style of building which should offer the maximum of resistance to seismic influences to a minimum cost of construction. Further, as in the lapse of time the lessons of experience so dearly bought twenty years ago have lost much of their force, the old fashion of building has again come into favor; and hence we see many Japanese houses newly built, especially in Tokio, two-stories high, and with the heavily weighted roofs which the author and our Japanese friend hold to be such terrible sources of danger in cases of severe horizontal earthquakes.—Ed. J.G.

appears, at first sight, logical enough; but if we follow the subject further it will appear more difficult to admit the possibility of establishing surfaces sufficiently slippery for the effect to be thoroughly produced. We think rather that, in consequence of the weight of the construction, and the nature of the points of contact with the soil, it must be admitted that the house will follow, at least in great measure, the movements of the soil. At all events, and following up the Japanese principle, the buildings with ground-plates resting on blocks of stone would be preferable to those in which the ground-plates rest throughout their entire length upon basements of masonry; and the advantages of the first over the second system would be in proportion to the extent of surface in contact with the soil.

We may presume that the experiment of the sheet of paper which can be drawn from under a heavy object without displacing it, provided the action is very rapid, plays a large part in the Japanese principle of the sliding of a building upon its foundations. But they forget that the heavy object would be drawn along with the paper, if the action were not performed with sufficient rapidity:—that is to say if the quickness of motion imparted to the paper were not sufficiently great. Besides, it is scarcely admissible that, in an earthquake, the horizontal waves or shocks can ever attain a speed corresponding with that of the sheet of paper in the experiment which we have just quoted; and, even if some should reach it, we must not forget that others may be very disastrous and yet fall short of it, and that most frequently, if not always, the house will be drawn along with its foundations, as is the case in the experiment of the weight and the sheet of paper, when the speed given to latter is not sufficiently great.

Among other projects, it has been proposed, in San Francisco, to rest the wooden structures of California upon convex surfaces and even upon balls. We have been told that, in Japan, a light-house had been built upon balls; but that experience had condemned the system; and that it had been necessary to reconstruct the light-house upon the ordinary principles.†

† This is the light-house alluded to in a paper on "Japan Lights," read by Mr. E. H. Brunton, on the 14th November last, before the Institution of civil Engineers in London. We quote below the portion of the paper referring to the matter; and mention incidentally that Mr. Brunton would appear to be in favor, if anything, of the principles applied, in the existing system of Japanese architecture, to buildings of small size, with a view to the counteraction of seismic shocks.—[Ed. J. G.]

"The liability of the country to earthquakes was an important point for consideration in the construction of the lighthouses. Messrs. D. and T. Stephenson, who designed the apparatus, devised what had been named an aseismatic joint, by means of which a break was made in the continuity of a structure, and the propagation of a shock from the foundation upwards was prevented. This was accomplished by the introduction of balls working in cups placed between the platforms, the lower platform being fixed to the foundation, and on the upper platform the superstructure was erected. This arrangement was sanctioned by the Board of Trade for the apparatus of the first lights ordered; but, in the author's opinion, it was defective, in so far that the free motion of the upper, over the lower, part, of a structure would, on the occasion of disturbances, such as a gale of wind, give rise to a distressing, and in some cases probably a destructive, motion in the superstructure. There being two movements in all earthquakes, one tending to overthrow, and the other to restore equilibrium, if a building could be constructed with a sufficient power of resilience, its destruction could not occur, unless the oscillation went beyond its limit of equilibrium. The houses in Japan had been a evident

These various projects for sliding or rolling, are only improvements upon the Japanese principle which we have indicated; and it will be understood that they are only applicable to light structures in wood, and under quite peculiar circumstances.

We come to the conclusion, then, that, if the idea of supposing a building sliding upon its foundation has a logical appearance, it is in reality only fantastical, and from a practical point of view should be considered altogether inconsequent. In fine, we believe that it is necessary to endeavor to give, by more rational means, to structures the security which is so much needed to resist the effects produced by earthquakes of considerable violence.

The absence of ties and of bearers to consolidate the joints of posts with the ground plates and with the upper framework is, in the opinion of the Japanese builders, a consequence of the preceding principle. "If," say they, "we admit that our constructions should glide upon the ground during horizontal oscillations, it is, nevertheless, to be feared that they will only do so imperfectly, and then the play left to the posts in their joints remedies the imperfection of the first system." But, as, with the Japanese, everything is the result of the experience of many centuries, this necessity of suppressing all ties, bearers, and braces proves superabundantly the inefficacy of the principle of a building sliding upon its foundations, although it indicates, at the same time, that a certain elasticity is favorable to resistance, by buildings, to horizontal shocks. For would it not be more logical, if the gliding were properly produced, to stiffen the whole work in such a manner that, altogether, and in consequence of the force of inertia which it should oppose to the wave, the structure should glide upon the ground without any danger of rupture in the higher portions?

Again, many Europeans believe that the Japanese make their roofs very heavy also to provide against the effects of earthquakes. We think differently on this subject, and it appears to us that the very considerable weight of the roofs is only a consequence of their system of frame-work and covering. Let us imagine a frame-work in which there are no main rafters, but simply a large number of cross beams, placed one above the other, and posts or jambs placed vertically, resting immediately, on the one hand, upon the lower beam, necessarily very strong, and, on the other, supporting the beam immediately above, and the binding rafters, and then the hip corners, if the roof is pavilion shaped.

The posts or jambs having no braces require, as a consequence, to be more numerous; and this conduces to necessitate an extra volume in the beams in order that they may preserve a sufficient power to support the weight. Further, Japanese tiles, being all hand-made, are often porous, and consequently require a certain thickness (18 to 20 millimètres) in order to prevent the rain soaking through them: besides, as these tiles are only ordinarily about 255 millimètres high, and have no hook, one is obliged to give them a considerable overlap, even

with a minimum inclination of 30°, to obviate the inconvenience caused by capillarity. Their form recalls that of the "Mosselmann" tile, but they are much heavier because smaller, one square mètre of roofing (tiles only) weighing about sixty kilos. Lastly, their form requires that they shall be placed upon a bed of fresh earth into which the tile is pressed, in order that, under the influence of the wind and the vibrations caused by earthquakes, it will not slip on the roof. In spite of that, it often happens that the rain soaks through the tile, or even ascends by capillarity so as to pass the overlap, or, again, is driven between the overlaps by the wind, in which case the earth gets damp and finishes by causing rot in the shingles and the thin planks of white wood. This is why recourse is often had to the application upon the shingles of several coats of plaster, tolerably thick, and capable of hardening sufficiently for the damp not to penetrate them with so much ease as it otherwise would.

All these arrangements of course make the roof very heavy, and the Japanese have not, as far as we know, any valid reasons to give proving that heavy roofings add to the solidity of their structures in case of earthquakes.

From what we have said about Japanese houses, we see that, in fact, they are of a nature to resist earthquakes of but small intensity; but, if we seek now to find out how they would be likely to behave under the action of a violent horizontal shock, we should find occasion to doubt their pretended solidity. Indeed we have seen above, that the principle of the gliding of the house upon its base does not afford security: we have also seen that the absence of ties and bearers is the cause that, if the sliding does not take place, there will be an oscillation at the base of the posts. Well, if these oscillations are violent, sudden, and of a certain extent, is there not room for fear that by virtue of the inertia presented by the great mass of the roof, and of the considerable speed of the oscillation of the soil, the joints will break and the whole construction tumble down like a house of cards?

It is known that inertia is great in proportion as the mass, and above all the speed, are considerable ($\frac{1}{2} MS^2 = \frac{1}{2} \sum v^2$): or—consequently if, in the case under consideration, the weight of the roof is great, and the speed of the wave is also very great, it will follow, necessarily, that the strain put upon the joints of the posts will be enormous; that they will break if there is no possibility of gliding, and the structure will tumble down. Under any circumstances, the increase of weight, in the roof rather than in the lower parts of the structure, can but aggravate the danger during the passage of a horizontal wave. This is, besides, the impression produced upon us after the earthquakes, pretty numerous already, which we have felt; and we have more confidence in a house heavy at the base, and with a roof, light, but solid and well held together, than in buildings constructed in the present Japanese style.

All that we have said on the subject of Japanese houses may be applied to the construction of their palaces and temples. The same principles and the same systems obtain, with this single difference, that palaces and temples, being larger, are proportionally more substantially built than ordinary structures.

We have only, so far, spoken of horizontal oscillations, because they are evidently the most disastrous, at least for wooden structures. However, earthquakes often make themselves felt by vertical oscillations, un-

dulations, whirlings:—sometimes by all kinds of movements acting at the same time.

The precautions to be taken against vertical shocks are of the same kind as those which would be taken under ordinary conditions to give to a structure the greatest possible amount of solidity, that is to say, very thick walls, very solid foundations, materials of the best quality and offering a great amount of resistance to crushing forces; and further, a perfect arrangement of the diverse portions of the building, above all the floors and other horizontal portions, elasticity in which might considerably damage the adjacent walls during vertical oscillations.

All other movements of the soil being merely combinations of horizontal and vertical oscillations, the conclusion may be arrived at that, if all the necessary precautions have been taken against these two kinds of motions, the greatest possible amount of solidity against other movements, such as undulations, whirlings, &c., will have been given.

It is worth while remarking also, that, in almost all cases, the surface occupied by a building, when compared with the extent of an undulation, is to all intents and purposes so small that up to a certain limit the foundations of a house may be considered as reposing upon a plane, if not always horizontal, surface, vibrating or oscillating all together. And, in support of this our opinion, we will cite a piece of information. During five years now that gas has been used in this town and in the capital, no escape, even the slightest, from the metal pipes, caused by earthquakes, has been noticed, and nevertheless more than 35 kilometres (22 miles) of metal piping have been laid in Yokohama, and nearly 20 (12½ miles) in Yedo.

Once for all, the fact must be recognised that it is impossible to protect buildings against those earthquakes in which the ground opens, or when other effects equally terrible are produced. Very fortunately such catastrophes are relatively rare; and most frequently one has only to fear earthquakes, less violent it is true, but sufficiently powerful, nevertheless, to overturn houses which are solidly put together according to the methods ordinarily employed in the builder's art.

Before speaking of structures in masonry, we will say a few words on an economic method of building in wood, which appears to us to offer many advantages joined to a very great security against earthquakes. It consists of the erection of a frame of wood, with very wide spaces which are filled in by well put together brick masonry, and in the consolidation of the most important joints by ties, holdfasts, clamps and squares of iron.

But it will, no doubt, be objected that if those portions of the outer walls which are in brick masonry are not covered with a very impervious plaster, they will be continually penetrated by damp, and will, by so much, be unhealthy, and will besides help to rot the wood with which they may be in contact. For, in point of fact, with the ordinary wooden frame-works, the brick portion will hardly ever be more than the length of one brick in thickness, or about 22 centimètres; and it is well known that a brick wall of this thickness is generally very damp, and that it is even very difficult, under certain climatic influences, to make it altogether impervious.

We will, therefore, point out a method to protect, from all humidity, both the wooden frame-work and the built-in portions of

ly built with this principle in view. They had a light wooden framework and a heavy roof, and they were so made as to be capable of being moved off the vertical to a considerable extent without fracture. But it being impracticable to follow this method of construction in the light-houses, the author had adopted the only other alternative, viz., giving them great weight and solidity, and so adding to their inertia and checking their oscillation."

brick, and also to make any merely wooden house to which it may be applied as healthy and comfortable as it is solid.

On the external surface of the walls are nailed transversely or diagonally laths of from 8 to 10 centimètres broad by 2 centimètres thick, according to the method followed by Japanese. Then, on these laths are nailed flat tiles, or squares of baked earth, sometimes varnished, and called by the Japanese *tate kawara* (a tile which stands on its edge.) In the manufacture, a little hole is practised for the nails in each angle of the tile, which is generally about thirty centimètres square, and two or three centimètres thick. Lastly, the whole is covered with several coats of plaster. The Japanese frequently only grout the tiles many times in succession.

It will be readily understood that the layer of air, about 2 centimètres thick, thus interposed between the wall and the tiles, is sufficient to prevent the damp from penetrating to the former.

The foundations should be laid in the ordinary way and without thought for the possible or impossible sliding of the house on its base during earthquakes. The roof should be solid but as light as possible.

This is the kind of cheap building, which appears to us the best and the most practical for all colonies, whether there be or be not any likelihood of earthquakes; for, solidity apart, it possesses the great advantage of being very healthy and comfortable. It is preferable to constructions built entirely of wood, through the greater resistance it offers to the effects of fire, heat, cold, and the attacks of rodents, while, in the event of earthquakes, it is more solid than carelessly constructed buildings of masonry.

PART II.

BUILDINGS IN MASONRY.

We have, so far, paid but little attention to buildings in masonry, and what we have said of Japanese structures is sufficient to give some idea of the manner in which the Japanese arrange the frame-work of their houses to protect them against the disastrous effects of earthquakes. The preceding part of our work is perhaps calculated to interest builders who may have to erect houses of wood in countries where such calamities are to be feared. But we think it will also be interesting to say a few words on the subject of structures in masonry in general, and considered from the points of view which we are now taking.

As a general proposition perfection in a building in masonry would be attained if the materials and the cement binding them together were so firmly connected that, to all intents and purposes, the whole of the walls could be considered as a monolith. Evidently, no confidence should be placed in the principle of the gliding of the structure upon its foundations in this case, in which the weight of the masonry is considerable, and the surface offered by the base of the walls to friction is great. It is then, definitively, more rational to fix in the ordinary manner the structure to the soil, and to build it upon very solid foundations; to make of it, in fact, a rigid edifice, heavier at the base than at the summit. While making use of the words "monolith" and "rigid," we do not in any way intend to do away with that elasticity which all masonry preserves more or less; for this elasticity is, above all things, indispensable, especially in case of the sudden and jerky shocks, which are sometimes felt during earthquakes. Brick masonry, being above

all that which preserves most elasticity in consequence of the number of joints which it contains, we would give the preference to this mode of construction.

During one earthquake we saw, from a first story and absolutely under our eyes, an enclosure wall of brick masonry, about fifteen mètres long, two mètres high, and the length of one brick in thickness, and entirely disconnected at one of its extremities, oscillate, at that end, through a space which we estimated at from eight to ten centimètres to the right and left of its normal position. We must admit, however, that as we wore ourselves in movement, our calculation may have been erroneous, and, in consequence, the figures which we give as the extent of the oscillation at the isolated extremity of the wall may not be quite correct. However, after the earthquake, no trace of rupture was remarked either in the bricks or in the joints. The masonry, it is true, was not very well made, the joints were very thick and the mortar of very inferior quality; and, perhaps, if the masonry had been better made, coming closer in fact to a monolith, it might have not so well resisted this succession of shocks of a considerable extent. The house in which we were at the time was built of bricks with door and window cases of stone. The brick work resisted, but many fractures occurred in the stone portions. Thus it appears that a certain elasticity is favorable, and that a homogeneity as perfect as possible is one of the conditions to be sought for. Although brick work has the great advantage, over masonry composed of large materials, of a greater elasticity by reason of a greater number of joints, we must not forget that, in the case of vertical shocks, it is especially a force of resistance in the materials to compression or crushing that we must have in view. It is therefore indispensable that the bricks should be of very good quality.

We will describe, at the close of this essay, a system of iron bars in combination, applicable to buildings of masonry, with the aid of which it is possible to build as securely with materials of large size as with bricks.

But a few years have elapsed since people commenced to build with bricks in Japan (about 1867 at the Yokoska arsenal.) The Japanese did not know anything about bricks or at least did not make use of them for building. Further, they employed stone in the basements or to face externally the wooden frames of certain warehouses. It might, therefore, be rash on our part to presume to lay down definitively, and at this moment, that solid and well built structures in masonry resist better than wooden ones. On the other hand, earthquakes have been of slight violence, comparatively speaking, in Japan for the last twenty-two or twenty-three years, and very fortunately we can only gain experience elsewhere on this subject in a limited number of countries. Thus, if this important question is resolved in other lands, it is not yet resolved in Japan, and we prefer to fall back upon what is known elsewhere to running the risk of falling into errors the consequences of which are in such cases always disastrous.

Still, many of the brick buildings which have already been erected in Japan have borne some sufficiently violent shocks of earthquake; and so far they have appeared to resist them better than analogous structures in wood work have done. Nevertheless, we have often considered if some means might not be devised to add to the solidity of buildings in masonry; for it is incontestably im-

possible to take too many precautions to guarantee, within the limits of human precaution, dwellings against the terrible effects of earthquakes.

We know, further, in Japan, of many brick chimneys of factories, with or without external iron defences; and all have so far thoroughly well resisted earthquakes; and these chimneys afford excellent examples of constructions built according to our views. They are solidly fixed to the ground and are much lighter at the summit than at the base: they have also a very marked elasticity by reason of their height; and their homogeneity is nearly perfect.

We will confine ourselves, for the moment, to these general considerations on the subject of buildings in masonry; because in the following part will be found the necessary complement to what we have already said.

PART III.

DESCRIPTION OF A SYSTEM INTENDED TO GIVE TO BUILDINGS IN MASONRY A VERY GREAT SECURITY AGAINST EARTHQUAKES.

The question of earthquakes has so far, and with reason, seriously occupied builders in those countries where these phenomena are frequent; and in Japan it is generally believed that wooden buildings resist shocks better than buildings in masonry.

We are not altogether of this opinion; for it has always appeared to us that structures in masonry with very thick walls, composed of materials of good quality and solidly joined to the frame-works of the floors and the roof, offered as much security against earthquakes as, while they are much more durable than, Japanese buildings and, generally, buildings in wood. However, and since the contrary opinion has so far prevailed in Japan, we have thought it our duty to search out the means to obviate this presumed want of solidity, and hope to have arrived at a solution as simple and efficacious as it is of small expense, while it will incontestably render structures in masonry more capable of resistance than the best wooden buildings.

By reason, on the one hand, of the increasing scarcity of wood for frames, and, on the other, the extension given to the manufacture of bricks in Japan, the cost price of structures in masonry diminishes from day to day, while that of wooden buildings augments. The most serious obstacle in the way of the adoption of masonry is only, then, at present, that which arises out of the belief that they do not offer sufficient security against earthquakes. It would, however, be dangerous to endeavor to still further diminish the difference in cost price by the employment, in buildings of masonry, of materials of inferior quality, or even by diminishing the thickness of the walls. And economy should not be carried into the suppression of the most efficacious means for binding the walls to the frame-work and together. In one or the other case the consequences of this false economy might be disastrous. When people build in a country where earthquakes have to be feared, it appears absolutely necessary to build well, if they wish to be certain to obtain a greater degree of security than in wooden structures.

For a long time past and in many countries people have sought how to increase the safety of buildings in masonry without augmenting unduly their cost. We know of many systems of trussing, girding, and staying with ironwork, the efficacy of which is more or less approved. We have also

thought, apparently with many engineers and architects, of how to introduce, into constructions in masonry, ground plates and uprights of sheet iron, or of iron of special form, or cast iron, between which we should build in stone, brick, or concrete. But, at first sight, it is apparent that the expense would be found to be augmented in a very large proportion, in consequence of the considerable quantity of material, iron or cast iron, as well as for labor, which the application of these different systems would render necessary. At length we formed the following idea, the simplicity of which is perhaps its greatest merit, and which is specially applicable to buildings in brick or stone masonry.

Let us suppose a certain number of bricks placed one upon the other, in the same manner as if we were building an ordinary wall, but dry, without mortar: then let us shake the table on which this little factitious wall reposes. It is evident that the bricks will tumble down in all directions. But if the pile of bricks is strongly tied together with a cord, a wire, or an iron band, is it not true that no disaggregation of the pile of bricks or wall will follow, and that it will run no risk of falling either to the right or left: that is to say outside or inside of the building of which the little factitious wall is thought to be a portion? The whole of the new idea is there, and it only remains to apply it to buildings.

By reason of the general thickness of walls in masonry, we may consider a portion of wall one story high and about the same breadth as a pile or parcel of bricks or other material, which can be strongly bound together, and, in consequence, consolidated against the disaggregation of its component materials, precisely as we did for the pile of bricks in our experiment. The same applies to all the surrounding portions, and, indeed, to all the walls of the structure.

Let us imagine, next, that all these different parcels or piles of masonry are bound together, and we shall then have a building as homogeneous, and enduring of itself, as any other structure, but with an added force of resistance to disruption, or the disaggregation of materials, equal to the force of the irons employed as ties.

Our principle might, then, be formulated thus:—"Bind your masonry in piles, and bind these piles together, in such a manner that the materials cannot separate nor the walls be torn asunder."

It now remains only to guarantee the walls against a far within or without the construction. The most simple and rational manner to arrive at this end appears to be the employment of strong frames of wood or iron resting upon the epaulements formed by the difference in thickness of the walls of the different stories, and holding by well knit joints the principal part of the frames of the floors and of the roof. The walls should in all cases be strongly bound to the frames and main pieces of wood-work in the building; and the different frames should be firmly connected together if there are many partition walls on each stage. If the extent of the walls should demand it, rigidity of the sides of the frame-work can be ensured by iron stays.

As for the new idea, it appears to us that it should be susceptible of very economical application, inasmuch as the iron which is employed in it is employed under conditions the most favorable to economy of the material; that is to say, in subjecting it to traction. It is known that an iron rod for each

square centimètre (.393 in.) of section will bear with perfect security a minimum weight of 1,000 kilogrammes (2204.62 lbs); and that the rupture of this same rod, according to the quality of the iron of which it is composed, may only be produced by a weight of from four to six thousand kilogrammes (eight to thirteen thousand pounds.)

We see by this that, with iron bands of small dimensions, the solidity of structures in masonry, against the disastrous effects of earthquakes, may be, in a very great measure, increased.

J. LESCASSE.

THE LAUNCH OF THE "AMAGI-KUWAN."

The third official launch of vessels built in the Yokoska arsenal took place on the 13th instant. The first launch was that of the *Seiki-kuan* on the 5th March 1875, or more than two years ago, and H. M. the Mikado in person, on the occasion of his second visit to the Arsenal and Dockyard, presided at the ceremony. The second launch, that of the *Jinkai-maru*, a paddle-wheel steamer built originally for an Imperial yacht, took place on the 4th Sept. last. On that occasion the Emperor, who had intended to be present, was prevented from visiting Yokoska; but his place was filled by the Prince Higashi Fushimi-no-miya and Arisugawa-no-miya, who, prior to the launch, inspected the various departments of the Arsenal and Dockyard, and witnessed, among other things, one of the largest castings which has ever been made there. The third launch is the one which we witnessed on the 13th, that of the *Amagi-kuan*. Naturally enough, there was a marked absence of the great pomp with which the other two ceremonies were invested. H. M. the Mikado is now in his own old capital, surrounded by his ministers, and anxiously watching events, which may result in the dismissal of the latter, or many of them, and a complete alteration in the cabinet, and indeed the whole scheme of the government of the empire. At this moment he is, no doubt, experiencing the truth of the maxim that "uneasy lies the head that wears a crown." Prince Arisugawa-no-miya, too, is absent, and he does not take his nightly rest upon a bed of roses. He is at Hakata, in the face of countrymen who are his enemies. He has the awfully responsible position of Commander-in-Chief of armies in the field against the Satsuma insurgents; over whom, it is not too much to say, he has not gained, so far, a single important advantage, and with whom he will, if matters do not rapidly change in favor of the imperial arms, have to come to some terms of which he will not be the dictator. Very few Japanese of high official rank were present at the last launch. H. E. Terashima, Minister of Foreign Affairs, presided; and he was accompanied by Admiral Nakamuta and a few officials of the rank of secretary, and the two young sons of Prince Arisugawa, who accompanied their father to Yokoska in September last. They are lively and evidently intelligent lads. They inspected the vessel and took great interest in all the details which were communicated to them. A cavalry band came down from Tokio and tended to enliven the proceedings with their music, and the *coup d'oeil* with their brilliant scarlet and blue uniforms. A special boat from Tokio brought down a large contingent of cadets from the

Imperial Naval College, and these young gentlemen visited all the parts of the arsenal in small parties. The models seemed to attract their special and pleased attention.

With the exception of the launch, no specially important works were going on in the arsenal; and as, in our report of the launch of the *Jinkai*, we gave a full description of the institution, we need append little to that. We noticed, however, that the wood sheds had apparently received important additions, and that the store of wood seemed considerably increased. A fence too had been erected, shutting off the ground, made by the discharge of workshop rubbish, from the bay at the back of the Arsenal, which is now completely enclosed both by land and sea.

Many persons, principally French residents, with however a considerable sprinkling of those of other nationalities, availed themselves of the opportunity of making the trip, afforded by the running of the Arsenal boats, as advertised, hence to Yokoska. On board the *Yokoska*, the smartest of these little steamers, were the French Minister, Mr. du Bousquet, the Colonel and many officers of the French Military Mission, Messrs. Conil, Degron, and other prominent members of the French Colony, and several ladies. The other boats were also well filled. In the course of the morning the Messageries Maritimes launch, and some private launches, took down parties of visitors. So that, in spite of the inclemency of the early part of the day, and the absence of very great pomp and circumstance, the assembly of foreigners to witness the launch was large. The Japanese, too, assembled in great numbers from the neighborhood, and the crowds thus formed were greatly increased by the Yokohama and Tokio natives who made holiday. Still, there was an appreciable decrease on the whole from the number of visitors present on the last occasion.

The principal foreign *employés* of the Arsenal were entertained at an official tiffin by Mr. Terashima and Admiral Nakamuta, who then took a tour of inspection through the arsenal, and at 4 p.m. took their places on the stage whence the launch was to be witnessed. The part of the stage in question reserved for these officials was, as on previous occasions, divided from the portion placed at the disposal of other visitors, by a slight partition of white wood. Shortly before the launch two foreigners were leaning against this partition, when the nails gave way, and the strangers were precipitated, rolling one over the other, into the reserved portion. They rose, apparently none the worse for the fall, and the broken partition was not replaced. On the arrival of the two principal spectators the band struck up an air, we think from one of Balfe's operas? the shores were knocked away, and the vessel lay supported by her cradle alone on the well soaped ways. Mr. Thibaudier, himself, through Mr. David, the foreman carpenter, directed proceedings. The last wedges were taken out, a little leverage was applied, and the vessel glided with increasing momentum into the water. So quiet was the motion that it was imperceptible on board, the persons standing on the deck only being aware of their change of position by the evidence of their eyesight. The engines and screw had already been placed in the boat while on the ways. The speed she acquired took her, as had been anticipated, opposite the large crane from which one of the two boilers destined for her was already slung.

She was promptly hauled alongside the crane jetty, and the boilers were hoisted into her, within an hour from the time of her touching the water. The launch was a complete success; and the workmanship of the vessel testifies to the care and thoroughness with which the work is done by the people of the arsenal, native and foreign.

The *Amagi* is a gun-boat, sister ship to the *Sei-ki*, launched, as above said, two years ago. She is, however, a trifle longer. Her dimensions, as furnished us in the dockyard are

Lengthmètres 61.30 = 201.06 feet.
Beam " 9.40 = 30.83 "
Depth of Hold " 5.00 = 16.40 "

The length of the *Sei-ki* is 60 mètres, the trifling increase indicated being given to the *Amagi* to provide increased boiler accommodation.

The *Amagi's* engine has three cylinders each 3 feet in diameter, with surface condensers, and of 700 horse power indicated. The vessel's total displacement is 900 tons.

The hull is composite, kiaki and iron. Oak, at least Japanese oak, will probably never find favor with ship-builders. It does not, in point of durability, at all approach the oak of Northern Europe; but has many points of resemblance with the Italian tree of the same species. The armament of the new vessel will be the same as that of the *Sei-ki*: one large pivot gun of the Krupp type forward, and three ordinary guns aft. The large gun will, however, be mounted a little further aft than was the case with the *Sei-ki*, the difference being intended to bring the gun directly over, and so afford additional protection to, the boilers.

All parts of the *Amagi*, even to the bolts and nails with which she is fastened have been made in the arsenal. The Japanese are so pleased with the progress they have made that they have now laid the keel of a vessel, to be of about the same size as the *Seiki* and *Amagi*, which is to be built entirely under Japanese supervision. We cordially wish them success in their efforts; but would take this opportunity of pointing out to them, that their navy is now quite large enough for their needs. Japan has nothing to fear from schemes of foreign conquest: she can have no thought of conquest for herself. Her navy, then, apart from what service it can render to the enforcement of her revenue laws, is more an ornamental than a useful institution. Indeed, it is to be feared that, in the present difficulties, it may turn out, instead of a safeguard to the present government, a negative if not a direct aid to its internal enemies. With this subject, in this place, however, we will not deal. It is now our part to congratulate the existing authorities upon the efficiency of one of their pet institutions, and the third great success which they have achieved in native government ship-building.

THE VOLUNTEER MOVEMENT.

A meeting was convened on the 13th inst. in the Grand Hotel, by the Committee appointed at the Public Meeting held on the 6th instant, for the further consideration of the volunteer movement, and also for the tendering of their own resignations.

Numerically the meeting was not so large as on the first occasion, probably through many of the residents having gone to witness the launch at Yokoska. As it was, about sixty gentlemen assembled; and the meeting, though of short duration, finally determined

that Yokohama should have a volunteer force, notwithstanding the opposition the proposition had met with.

A motion that Mr. Dodds take the chair was not carried, through that gentleman respectfully declining the honor it was proposed to confer upon him, alleging, as an excuse which was reluctantly accepted, that he was not sufficiently identified with the movement to warrant him taking the position of Chairman.

Gen. T. B. Van Buren then proposed that Mr. Litchfield fulfil the duties of Chairman, which was seconded, and carried, and Mr. Litchfield took the chair.

Mr. S. D. Hepburn kindly officiated as Secretary.

The Chairman then briefly referred to the object of the meeting.

Gen. T. B. Van Buren announced to the meeting that he had been instructed by his colleagues on the Committee to lay before them the results of their labors. At the first meeting of the Committee the following resolution was adopted.

Resolved

That the purposes of the proposed organization shall be recreation, military drill, and exercise, and to be called out for the preservation of order in case of any public calamity such as a great fire, &c.

A Sub-Committee was then appointed to draw a plan of organization. The day following he, the speaker, was waited upon personally by the Governor of Kanagawa, the result of that interview ending in his drafting the following letter and laying it before the Committee:—

Yokohama, March 8, 1877.

GENTLEMEN,—This A. M. I was waited upon by Mr. Nomura Yasushii, Governor of Kanagawa, who warmly urged me to abandon the project of forming a Military Company as proposed, saying that he was confident such an organization would create bad feeling among the Japanese people, and be viewed with a great disfavor by the Government.

He was referred to the removal of the Foreign troops and spoke of the universal satisfaction produced by such removal, and said he should greatly regret to see any misunderstanding or jealousy now created by a movement of the character indicated.

I assured him that our purpose was recreation and military exercise, to which he replied that he did not doubt my assurances, but the people could not well be apprized that such was its only purpose, and he again strongly urged me to use my influence to prevent the organization.

I told him that of course if the matter was viewed by his Government and people in the light represented by him, it would not become me, especially while occupying an official position to persevere in forwarding the movement, and that I would lay his statements before the Committee,

I am, Gentlemen,

Very respectfully yours,

THOS. B. VAN BUREN.

To Messrs. K. swick, Kraetzer, Zappe, Eldridge, Brewer, and Geoghagan, Committee on organization of proposed Military Company.

Thereupon the Committee met, and after some discussion resolved upon this action.

At a meeting of the Committee appointed by the Meeting of Citizens, called to consult as to the propriety of forming a Military Organization for recreation and drill, &c., held at the Yokohama United Club (all the members present), on the 9th March instant, a communication from General Van Buren to the Committee detailing a conversation held by him with the Gonrei of Kanagawa, in which the latter expressed his wishes that the project might be abandoned, was taken into consideration. The following resolution was proposed by Mr. Kraetzer:—

That another meeting of the Community be called for Tuesday the 13th instant at 5 o'clock p.m. at the Grand Hotel, and at that time this Committee tenders its resignation, with a statement of the reason for so doing.

The speaker remarked that perhaps what he had already stated would be considered sufficient to justify the action of the Committee, yet it might be as well for him to say something more concerning what had transpired with the Governor. In the course of the conversation which he had with the Governor, the speaker drew his attention to the fact that he himself had notified that on any indication of trouble a signal would be given to foreigners by ringing the fire-bell a certain number of times. This the Governor acknowledged, and went so far as to confess that it was probably indiscreet on his part to have done so at this particular period when affairs were unsettled. But he emphatically disclaimed that he had been actuated in taking this step from fear that trouble might possibly arise through the political disturbances in the South, and regretted very much that he had been led to publish the signal in reference to trouble at this untimely season. The speaker then referred to the fact that the majority of the Committee were officials, four of whom were Consuls, and stated that it would hardly do for them to persevere in opposing the objections which had been brought forward by the Governor, and therefore the Committee were unanimous that, under the circumstances, it were much better for them all to resign, and then the non-official members could be re-elected if nominated. As for himself he did not think it was necessary to express his own private reasons. He then referred to the correspondence which had taken place in the local newspapers on the subject, and some of the reasons, he thought, were not very well founded. He did not know that he was sufficiently well versed in British law to give a decided opinion upon the paragraph in one of the letters published which referred to a law forbidding British subjects to arm themselves, but he thought that if such a law existed it had reference to the country where it was promulgated, and was never intended to be enforced on a few citizens in this part of the world. With regard to the position the Japanese had thought proper to adopt, Gen. Van Buren thought it unwise. He considered they were unnecessarily sensitive. The residents of Yokohama had their Cricket, Football, Racing and other Clubs, including the Swiss Rifle Club, and yet the foundation of the Japanese Government did not appear to have been shaken in the least by their existence; and the people had certainly not evinced any signs of fear of those Clubs, but, on the contrary, large crowds of natives always assembled on the occasion of any of those Clubs holding a meeting, when the fences would be completely lined with them. And he apprehended that if at any time a hundred or two hundred volunteers marched through the streets or assembled for parade the effect would be the same (Applause). He had one word more to say. He saw it stated in a long and able editorial in a leading paper that, whichever party gained the day in the present struggle, foreigners would be quite safe from harm; and even if they were not it would be useless to contend against an organized expedition. As to the statement respecting the safety of foreigners under any circumstances, the speaker was not prepared to go so far. But with regard to the remarks concerning the uselessness of contending against an armed force, he felt sure that such an organization as they were proposing to form would be of but very little use. Still it was well known that a certain class of persons always

followed in the rear of an army for pillage and plunder; and to meet such persons a volunteer force would be of great value. He could not say that there was even a probability or possibility to resist such marauders, but in the event of such a thing occurring he felt sure an organized company would be of great value. In making these statements Gen. Van Buren did not wish it to be thought that he was encouraging the formation of a volunteer organization, though, he confessed, it seemed to him there were no legitimate reasons why there should not be one. He had no idea that the Government would have taken umbrage at the movement or that it would be considered as unfriendly. On the contrary he thought there would have been no difficulty in obtaining fire-arms from the Government. But it turned out that he was mistaken. Nevertheless, he still thought that if the Government had kept their hands clear of the affair it would have been much better. (Applause.) During his discourse the speaker announced that it was quite impossible for him, being an official, to take part in the formation of a volunteer corps and he wished it to be understood that he wiped his hands entirely of the whole affair; and his fellow Consuls were in a similar position. He mentioned that he had always considered that the movement was principally for the purpose of exercise and recreation, as well as to have an efficient body of men at hand in case of fires. As to the idea that the handful of men they could raise in the settlement would be of use in opposing an organized attack, either by the Government or the rebels, on the Settlement, he scouted the idea. The speaker took his seat amidst continued applause.

The Chairman remarked that the meeting had heard from Gen. Van Buren that the whole of the Committee elected at the last meeting had tendered their resignations and it now rested with themselves as to what was to be done. He invited propositions either for the formation of a Rifle Club or Drill Corps, which, in case of need, would always be ready to turn out. And, if no difficulty ever arose, such an organization would be a benefit in many other respects. The Governor's opposition was, in his opinion, not to be entertained; and in reference to the remarks of Gen. Van Buren respecting British law in reference to fire-arms, all Englishmen might make their minds easy on that point and be under no apprehension of punishment for bearing arms. There certainly had been Acts at one time curtailing the privileges of Englishmen in this respect, but they only existed at such times as that of the Fenian rebellion and were now repealed. He, the Chairman, was of the opinion that a new Committee should be formed.

Gen. T. B. Van Buren called attention to the fact that, if he was not greatly mistaken, the Chief Justice of H. B. M.'s Provincial Court was a member of the Volunteers in Shanghai.

Mr. Marks proposed and Mr. Anderson seconded: "That a Volunteer force be founded in Yokohama."—Carried.

The following gentlemen were then elected as a Committee, Messrs. Litchfield, Evers, Brewer, Geoghegan, Mottu, Dames and Dr. Stuart Eldridge.

It was then proposed and seconded, "that power be given to a majority of the Committee to fill vacancies which might occur through the resignation of some of the members." This having been carried, and a vote of thanks given to the retiring Committee, the

Chairman announced the meeting adjourned until such time as the Committee thought it expedient to call another.

GAITY THEATRE.

La fin couronne les œuvres. We cite this proverb now in a sense more extended than the one in which it is generally received. The successful result of the dramatic entertainment of the 16th inst. more than crowns the means by which it was wrought. The performance is not so remarkable from its success, which, however, was more complete, be it said without offence, than could have been expected, as from its introducing a new feature, which we must hope will become a permanent one in the representations of the dramatic stage of Yokohama. Several ladies, either bearing their own names or veiling their identity under the most transparent of *noms de théâtre*, consented to assist some of our best known gentlemen amateurs in performing on the public stage a couple of pieces for a charitable purpose, the prices of admission being devoted to the relief of families bereaved of relatives through the Civil War in Spain. Rather, it might be more correct to say that, the idea of the relief probably emanating from one of the lady performers, whose sympathies would naturally be with Spanish distress, the gentlemen amateurs assisted the ladies. But, without pausing now to draw nice distinctions, we will say that the Yokohama public, which is particularly alive to excellence and grateful for well directed efforts to amuse it, will congratulate itself upon the idea, which in its fruition brought ladies upon the stage to fill, naturally, characters, which, however well counterfeited, can only be imperfectly put on by the most talented performers of the other sex. However good the make up and dress of a male performer who has reached

"that hirsute season which destroys
With beard and whiskers and the like, the fond
Parisian aspect which upset old Troy,"

however closely he may be shaven, however well powdered and rouged his face may be, his chin and cheeks will wear a bluish, indian-inky, or gunpowdery tinge. And then the voice! Where is the falsetto that can even imperfectly represent that sweetest of melodies, a voice, a woman's voice, "soft, gentle, and low?" There is something indeliberably comic in feminine pathos rendered in a bass or baritone however musical, something which by some recondite train of thought always suggests to us Falstaff's remark to the Chief Justice—"For my voice, I have lost it with holloaing and singing of anthems!" And now that we have had the real thing; now that some of the ladies of Yokohama have overcome the foolish prejudice which exists in the east against their sex taking any part in one of the most intellectual and charming of recreations, we trust that we shall no more have to put up with the at best but shallow fiction of make believe actresses.

Above we alluded to the ladies playing under their own names. In the first piece represented the gentlemen did likewise. We had Mr. Henley, Mr. Bayne, and Mr. Pearson in the programme. Why should this not always be so? There is nothing, as far as we are aware, now-a-days shameful even in the dramatic profession itself. A prejudice does exist against those who make their living on the stage in China and even in native Japan, as it *did* exist in

Europe, where perhaps traces of a vulgar and unjust contempt for actors still lingers, but only among the fatuous or bigoted whose opinion is worth nothing. The same classes may despise the novelist and the historian, and sneer at Dickens as shallow or rave at Gibbon as atheistical. Those who use literature as a crutch, a walking stick, or an amusement, are for the most part glad to do so under their own names. Men or women, amateurs or professional artists, are not ashamed of acknowledging their paintings or sketches. Mr. Johns plays cricket, or foot-ball, or chess, or even billiards, as Mr. Johns and not as Mr. Thomas; and Miss Thomas when she indulges in a game at lawn tennis does not attempt to conceal her identity under the name of Johns. We can understand the feeling which prompts amateurs of the turf to dissociate themselves in private life from stable surroundings; but until some valid reason is given for the assumption of other than their own names by theatrical amateurs we shall contend that there is nothing gained by the practice.

"To oblige Benson" is one of those sparkling comediettas which have flowed from the singularly fertile and potent pen of Mr. Tom Taylor. Mr. Benson, an elderly lawyer, is married to a young wife. To accompany her in all her pleasures would seriously damage him in his large practice. So, after he has been a few weeks married, he deputed, to his artful pupil, Mr. Meredith, the task of procuring tickets to theatres and operas, escorting Mrs. Benson thither, and performing other services for which the husband himself has no time; and which the lady is purposely led to imagine come direct from the young pupil. For one of these obligations she imprudently writes to the latter a rather warm letter of thanks. The young man, who is as inflammable as embryo lawyers are, already a little enamoured, falls or fancies he falls violently in love with his principal's wife, to whom he writes an ardent declaration. This letter, upon which the interest of the piece centres and turns, he slips into one of Mrs. Benson's gloves at a picnic. The gloves, however, are accidentally, before the letter reaches its destination, changed by a Mrs. Southdown for her own. This latter lady, who is a very sensible young woman, being thus in possession of her friend's secret, warns her against its probable consequences, and, not content with that, in order to indicate practically the danger to a married woman of a flirtation, feigns to have herself, by a correspondence with the same Mr. Meredith, incurred the jealous rage of her husband, a good-natured man, like Benson well on in years, devoted not to law but to high farming. Mr. Southdown is persuaded by his wife who does not tell her motive, but simply says "it is to oblige Benson," an all sufficient reason to her husband, to act "like a brute," a part, which, when he is first adapting himself to it, does not suit him at all. His struggles to put it on, however, form one of the prettiest parts of the play. By a roundabout series of disclosures he is persuaded that his wife has really been in correspondence with Meredith, and then his anger becomes too real, to the great amusement of his wife, who thinks at first that he is still acting. Even when she is convinced by Benson that her husband is in earnest, having been informed that Mrs. Southdown had admitted to her friend that she had written to Meredith and received his letter, she is confident that she can put all right. The dénouement is very

cleverly worked out; the great end of playwrights being attained in it, namely creating and sustaining to the last in the minds of even experienced play-goers a feeling of wonder as to how the very ravelled skein is to be unwound. It is unwound, however, in a manner humorous enough, but one calculated to leave in the minds of the audience a not very respectful pity for the "obliged" *Benson*. In the hope that the piece may be repeated, and not wishing to detract from the interest with which those of our readers who have not seen the play would watch it, we will not explain further. Its first representation was decidedly brilliant. The acting was good and well sustained, and the toilets, that essential aid to good acting, in perfect keeping with the characters of the performers. Bouquets were flung lavishly upon the stage during the performance and at the fall of the curtain, when the actors were recalled and received the plaudits they had so well earned.

"From Village to Court" is a more pretentious piece, a comic drama in three acts by Mr. J. M. Morton: The plot turns upon the love of *Rose Walstein*, a country girl, the daughter of a poor but worthy invalid officer, for a young captain in the service of the Grand Duke of no matter where, whom she found wounded and unconscious and tended unseen by him till his recovery. He is affianced to a lady, the *Countess of Lindenburg*, who is sought by the Grand Duke himself. The ambition of this lady, the jealousy of the ducal sovereign, who does not appear, however, personally in the play, the intrigues of the place-loving Baron von Grosenbach, the astuteness of Jeuny, the pretty peasant girl, the rural wit and sharpness of the bumpkin Maximilian Krootz, are each in their place made to tend to the interest of a play which is certainly not without its merits; but which was hardly calculated to show to the best advantage the talent of the performers, who, however, made the best of it. As it has been carefully studied, it will bear repetition, and might even please more on its second representation than on the first. At the certainly dramatic close of the piece the actors were again vociferously applauded, and they must have left the stage with the feeling that they had not labored in vain. The amateur string band, which under Mr. Wagner's training is making great advances towards perfection, with Mr. Griffin at the piano, formed a harmonious orchestra, and played an excellent assortment of music during the evening.

In closing our notice of a pleasant evening we must not forget to commend the punctuality with which the performance commenced; and the comparatively short intervals which occurred between the two pieces and the acts of the second one. For this, which is a duty indeed, but one too often neglected by amateur performers, the stage manager merits the thanks of his audience.

NAGASAKI.

(From our own Correspondent.)

MARCH 8TH, 1877.

Up to the present time here we have had to depend mostly on information from outside sources, it being difficult to learn anything definite from the authorities. Yesterday the vessels engaged in the Kagoshima embassy left this place, and comprised the *Riujo-kuwan* and *Tinslin-maru*, men-of-war, and the following Mitsu Bishi mail steamers troops, the *Genkai-maru*, *Kanagawa-maru*, *Kworio-maru*,

Tokai-maru, and the *Sekirio-maru*, all with either troops or policemen on board. The intention of the embassy is said to be to try and discover the intentions of Shimadzu Saburo, if they can interview him, and if possible to get possession of the arsenal there. There is talk here of there still being 10,000 men at Kagoshima and the vicinity, to defend the place if necessary, and it seems scarcely possible that General Saigo would have left the place unprotected. There are about 3,000 men accompanying the expedition; and if the insurgents are still bent on mischief they may give this force some work before long. A few days ago there was some anxiety here owing to rumours of the approach of the rebels, but this fear has subsided. No news as yet has reached us of the relief of the Kuma-moto garrison, which either therefore cannot get out in the face of superior numbers or does not care to try. But if it is true that the number of Imperial troops in the castle is over 3,000 men the number surrounding it must be much in excess and well organised to have been able to keep them hemmed in so long.

The latest news from Hakata is that there were about 15,000 Imperial soldiers there on the 5th. These would most probably take the field at once. Several M. B. steamers are lying in the harbour at Hakata awaiting orders.

As present there are nine men-of-war here, two French, the *Atalante* and the *Talisman*, two American, the *Kearsarge*, and the *Palos*, one English, the *Modeste*, one Russian, the *Haydamak*, one Chinese frigate, the *Hae Eng*, and two Japanese gun-boats. The *Egeria* and the *Fly* are expected from Hong Kong immediately and there was some mention of the *Tennessee* coming up soon. The *Kearsarge* was under orders to leave here for Yokohama last Monday; but instructions came for her to remain here a few days longer. The Chinese frigate is a fine looking vessel. She carries 18 guns—Krupps—breach loaders; and some interest has been excited here during her stay by the manner in which the Chinese officers on board did the saluting pidgin. It would seem that the vessel is not very well supplied with flags of foreign powers; and, on the occasion of some of the consuls and other dignitaries visiting the vessel, the officers found some difficulty in finding the necessary signals to hoist. The Danish Consul, Mr. Fleischer, was one of the first to call, and on his leaving the usual salute was fired, but in the absence of a Danish flag a code signal—red with a yellow cross—was made to answer the purpose. On the visit of the Russian Consul they hoisted a German flag; and for Captain Buller of the *Modeste* an English mercantile ensign. The vessel has come here, it is said, to watch the Chinese interests. During the time the rebels were expected, a few days ago, the natives in the town were much afraid, and rumours of various kinds were about. There seems no doubt that most of the town of Kuma-moto is burnt, partly by the rebels, and the remainder by the Imperialists; and the Nagasaki people were making up their minds to something similar occurring here in case any insurgents appeared and got the best of the Government troops.

9TH MARCH.

The *Palos* left Nagasaki yesterday afternoon on her way. I believe, to Ningpo, and the Japanese man-of-war *Nisshin-kuwan* came in during the night.

Disaffection is said to be general in the vicinity of Hakata, and rumours not quite favourable to the Government are about. But

this, by the way, is more or less general throughout the country, and is caused by the absence of all reliable information as to the position of affairs; and in the uncertainty arising from continuance of this policy the public surmise all manner of possibilities and improbabilities, in which in most cases the wish is father to the thought. The last report from the field of operations about Kurume, to-day, is that the Government troops are driving the rebels before them. No news yet of the Kagoshima expedition, but we should hear in a day or two if they have been allowed to land or repulsed in the attempt.

ENQUIRY.

An enquiry was held on the afternoon of the 17th instant before H. S. Wilkinson, Esq., H. B. M.'s Acting Consul, on board the British barque *Forget-me-not*, into the death of a Chinaman, Ah Sam, who fell from aloft on the evening of the 10th March last, off Rock Island during a gale. The captain was aloft at the time of the occurrence, and knew nothing about it, till his return on deck, when the pilot told him what had happened. In falling the deceased struck the weather rail, and fell overboard, and was seen no more. It was impossible to lower a boat, even if there had been spare hands, and was so dark that nothing could be discerned at a very short distance.

Daniel Jamieson, Licensed Pilot No. 5, deposed:—I boarded the *Forget-me-not* on the 10th March, at 10 a.m. Wore ship about 7 p.m., and while on the other tack the truss of the topsail yard carried away. I then took the wheel. We hauled the braces tight and squared the yard so as to keep it steady. I saw a man go up the main rigging, and on enquiry was told it was the captain. I took another pull on the weather braces and sent all hands aloft. I shortly afterwards heard something fall, and then a splash in the water, when I immediately sung out "a man overboard," as I supposed it must be so. The mate immediately came aft and cut away the life buoy and throw it overboard. There was apparently nothing faulty in the truss: merely through the sea causing the ship to roll heavily, it broke. In fact it was a very heavy truss for the size of the vessel.

Thoms Claussen, first mate, said:—All hands were aloft. I heard the pilot sing out "a man overboard." I did not see any man fall. I cut the life buoy away and heaved it overboard. The sea was running too high to do anything more. It was a very dark night.

Ah Lee, a Chinese seaman, said he was upon the yard when Ah Sam fell, but did not know anything of it until he came on deck. Witness was on the lee side while Ah Sam was on the weather side. He noticed Ah Sam go. Nothing could be done to save Ah Sam. All was black.

Sing Song, a Chinese seaman, said he saw Ah Sam fall. Was on the same side with him, and as Ah Sam fell he touched his foot. Witness then sung out to the second mate that a man had fallen.

J. D. Poulsen, second mate, was aloft on the evening of the 10th to secure the top-sail yard. He saw no one fall, but heard one of the men say a man had fallen. The ship was in danger. The truss was a strong one, and was quite proper for the ship.

FINDING.

I find that on the 10th instant, Ah Sam fell overboard off the topsail yard of the *Forget-me-not* accidentally, and was drowned, when the vessel was off Rock Island (light bearing N. W. about one mile distant) and that afterwards everything was done that could be done.

From all accounts it appears that the *Forget-me-not* encountered very bad weather, and that, but for the exertions of the master and pilot, the vessel might not have reached the port.

Law Reports.

In H. B. M.'s Provincial Court at Kanagawa.

Before H. S. WILKINSON, Esq., Acting Law-Secretary.

Saturday, March 10th, 1877.

REGINA vs. ELIZABETH SCARFIELD.

The prisoner surrendered to her bail this morning.

On the Court assembling the Crown Prosecutor, Mr. Bishop, informed the Court that, in consequence of the jurisdiction of the Court having been questioned by the counsel for the prisoner on the last day of the trial, he must ask permission to adduce further evidence as to the position of the vessel on the morning the offence the prisoner was accused of was alleged to have been committed. He called

Richard Connor, who was sworn and deposed:—I am a licensed pilot and was pilot for the *Annie W. Weston*. The ship at half past four, on the morning of the 21st February, was about five miles E. S. E. of Sagami. She would have been about $2\frac{1}{2}$ miles inside the line drawn from Sagami point to Susaki. At five o'clock she was two miles south of Kanon-saki, just off Plymouth Rock. It was daylight, about six o'clock. I did not see the accused on deck, though it was quite possible for anyone to have been on deck unobserved by me. The Captain came on deck between seven and eight o'clock, though he might have been there before. I have been a pilot for eight years and am thoroughly well acquainted with the coast. Susaki is about 25 miles from Yokohama, and Sagami about 20 miles.

Mr. Ness then addressed the Court on behalf of the prisoner. He first commented on the law dealing with concealment of birth, and argued that the present case did not come within the compass of that law, which was evidently framed for the prevention of child murder, while in the present case the child had been born dead. He referred to the shame the prisoner would feel under the circumstances; and strongly denounced both the conduct of the captain and his wife, more especially the latter, towards the prisoner, who, he said, had been cruelly harassed. A great deal of responsibility rested on the captain's wife. She was the only female on board besides the prisoner, and ought to have extended sympathy to her. But instead of that she intimidated and threatened the prisoner, which no doubt had a great deal to do with the concealment. He also dwelt briefly on the fact of a woman's mind being, under certain physical conditions, uninged,

and causing her to do what she at another time would not think of.

His Honour said that there was a very important matter for him to consider before pronouncing judgment, viz: the jurisdiction of the Court. He would adjourn until half-past three o'clock in order to allow him time to reduce his judgment to writing.

Saturday, March 10th, 1877.

The following is the judgment delivered in the above case:—

JUDGMENT.

In this case the accused is charged with the offence of endeavouring to conceal the birth of her child on the 12th of last month. That the offence was committed is proved, but on account of the question of jurisdiction raised by the counsel for the defence, it is necessary to go somewhat minutely into the facts of the case. The accused is a British subject. At the time the offence was committed she was on board an American merchant ship. She was not one of the crew of that ship, but was engaged in Cardiff as a servant of the master's wife, who was a passenger on board. When the offence is charged as having been committed, the vessel was on a voyage from Cardiff to this port, and she arrived in this port on the evening of the same day. The question of her exact position at the time will be referred to hereafter. The fact that the accused was delivered of a child that day is proved by her own confession, by the evidence of Dr. Wheeler, who made a medical examination of her, and by the evidence of the master and his wife, who witnessed in her cabin traces of a recent delivery. The time at which she was delivered is proved to have been five o'clock that morning; this is proved by her own statement that such was the time, corroborated by the evidence of Dr. Wheeler, who saw her on the evening of that day and who is able to say that she was delivered within twenty-four hours at most from the time he saw her. The secret disposition charged in the summons is the casting of the body into the sea. That it was cast into the sea is proved by the accused's own statement, corroborated by the evidence of the master as to marks of blood on the cabin window, and there being no child in the cabin when he visited it with his wife. I find as a fact that the child was dead when the body was so cast into the sea. The evidence on this point is the positive statement of the woman, which is corroborated by the evidence of the master's wife who did not hear the child cry, although her cabin was so close that she would probably have heard such a cry. The time at which the body was cast into the sea, I find as a fact to have been between five and half past five that morning. The accused stated to the doctor that she kept the child until 8 o'clock, but the child had disappeared before that hour. The body seems to have been passed through the cabin window, and from that window it would seem that it could only be passed into the sea by some person standing outside the window between it and the rail, except when the vessel was lying over on the port tack, when anything thrown out would fall into the sea. The vessel was in this position between five and half-past five, and taking all the circumstances into account I find that the body was thrown out between those two points of time. That the object of so casting the body into the sea was to endeavour to conceal the birth of the child is clearly proven.

Now I find upon the evidence of the pilot that at four o'clock that morning the ship was in Yedo Bay inside a line drawn from Cape Sagami to Cape Susaki, and that from that hour until her arrival in Yokohama she was not at any time outside that line. At half-past four she was about two miles and a half inside that line; at five o'clock she was right abreast of Kaneda Bay, still further inside that line. At half past five she was over to the eastward—parallel to her position at five—no further in. Yedo Bay is completely enclosed by the land except at the entrance. The points which form the entrance to Yedo Bay are Cape Sagami and Cape Susaki. Cape Sagami is the western head and Cape Susaki the eastern. Sagami point is about twenty miles from Yokohama anchorage—Susaki point about twenty eight miles. The entrance to the Bay is about nine miles across from Sagami point to Susaki point. One can see across from point to point if on the land. If in a ship on one side one can see the sails of a ship on the other side, but not her hull. From one side one can see the land on the other side.

Upon these facts the question is raised whether this Court has jurisdiction over the offence.

It may be taken for granted that if the vessel at the time this offence was committed had been on the high seas, this Court would not have had any cognizance of the offence. The accused to all intents and purposes would have been on American soil, and although, the accused being a British subject, it is competent for the Parliament of Great Britain to legislate for such offences, so as to render them cognizable by British Courts, wherever committed, it has not done so; and the English Courts of Common Law would therefore have no jurisdiction. But a difference has always been made in the case of a vessel coming within the waters of another state. The vessel and all on board of her are then considered to be subject to the law of the country in whose waters she is, and in the absence of Treaty it is competent for the country in whose waters she is to exercise jurisdiction over her and all on board. Some countries decline to do so, but in the absence of treaty it is conceded that they have the right to do so and the question arises—what are the waters within which such jurisdiction will be exercised.

Wheaton says ("International Law," Pt. 2, c. IV., s. 6): "The maritime territory of every state extends to the ports, harbours, bays, mouths of rivers, and adjacent parts of the sea inclosed by headlands, belonging to the same state. The general usage of nations superadds to this extent of territorial jurisdiction a distance of a marine league, or as far as a cannon-shot will reach from the shore, along all the coasts of the state. Within these limits, its rights of property and territorial jurisdiction are absolute, and exclude those of every other nation."

I regret, in dealing with this question, that I have not the benefit of the complete judgment of the Lord Chief Justice in the recent case of the *Franconia*. From the portions of it, however, which are given in the *Mail* newspaper I am satisfied that it in no way affects the question of jurisdiction over vessels in the "ports, harbours, mouths of rivers and adjacent parts of the sea inclosed by headlands," referred to by Wheaton: that it only refers to the waters of the open sea which wash the shore to the extent of a marine league from the coast, with regard to which the Judgment, as I understand it, is that while Great Britain has an undoubted

right by legislation to give jurisdiction to her courts over foreigners on board foreign vessels at that distance from the coast she has not done so, and such courts have no such jurisdiction at Common Law.

With regard, however, to enclosed waters, that judgment, it appears to me, leaves the law as it was. Now, as to the right of a nation to exercise jurisdiction over vessels coming within such places, Sir R. Phillimore ("International Law," Part III., c. VII., s. CC.) says: "Great Britain has immemorially claimed and exercised exclusive property and jurisdiction over the bays or portions of sea cut off by lines drawn from one promontory to another, and called 'the King's Chambers;'" and the claims of the United States, as stated by Mr. Chancellor Kent, cited in the following section, are, as regards the places of jurisdiction, no less extensive. The question then is, what jurisdiction within such places has been actually exercised by English Courts? Upon this subject there is the following passage in "Russell on Crimes and Misdemeanours" (vol. I., p. 153): "It is clear that upon the open sea-shore the Common Law and the Admiralty have alternate jurisdiction between high and low watermark; but it is sometimes a matter of difficulty to fix the line of demarcation between the county and the high sea in harbours, or below the bridges in great rivers. The question is often more a matter of fact than of law, and determinable by local evidence; but some general rules upon the point are collected by Mr. East. He says that 'in general it is said that such parts of the rivers, arms, or creeks, are deemed to be within the bodies of counties, where persons can see from one side to the other. Lord Hale, in his treatise *De Jure Maris*, says that the arm or branch of the sea which lies within the *fruces terræ*, where a man may reasonably discern between shore and shore, is, or at least may be, within the body of a county. Hawkins, however, considers the line more accurately confined, by other authorities, to such parts of the sea where a man, standing on the one side of the land, may see what is done on the other. And the reason assigned by Lord Coke in the Admiralty case in support of the County Coroners' jurisdiction, where a man is killed in such places, because that the county may well know it, seems rather to support the more limited construction. But at least, where there is any doubt, the jurisdiction of the Common law ought to be preferred.'"

Subsequent cases appear to have decided that in such places, the Admiralty and the Common Law Courts have concurrent jurisdiction. But, however that may be, the case of *R. vs. Cunningham* (23 L. J. M. C., 66) decided in 1859, is an authority for the exercise of jurisdiction by the Common Law Courts in any of the places above referred to. That was the case of a felony committed by American citizens in an American ship in the British Channel. They were tried at the Assizes for the county of Glamorgan, and convicted; and, upon a case reserved for the consideration of the Court of Crown Cases Reserved, it was held that the conviction was good. In view of the term of the judgment it is only necessary to say that the spot in question was in the British Channel between the Glamorganshire and Somersetshire coasts inside of two islands which had always been considered part of the Parish of Cardiff, and about ten miles or more from the opposite shore of Somersetshire. That from the place where the ship

was, people on board could see the coast of Somersetshire on a clear day. In delivering the judgment of the Court, the Lord Chief Justice (Cockburn) says:

"In this case we are of opinion that the conviction is right. The only question with which it becomes necessary for us to deal is, whether the part of the sea on which the vessel was at the time when the offence was committed forms part of the body of the County of Glamorgan; and we are of opinion that it does—the sea in question is part of the Bristol Channel, both shores of which form part of England and Wales, of the country of Somerset on the one side, and the country of Glamorgan on the other. We are of opinion that, looking at the local situation of this sea, it must be taken to belong to the counties respectively by the shores of which it is bounded; and the fact of the Holms, between which and the shore of the County of Glamorgan, the place in question, is situated, having been always treated as part of the parish of Cardiff and as part of the county of Glamorgan, is a strong illustration of the principle on which we proceed, namely, that the whole of this inland sea between the county of Somerset and Glamorgan is to be considered as within the counties by the shores of which its several parts are respectively bounded. We are therefore of opinion that the place in question is within the body of the county of Glamorgan."

Now in the present case there was no evidence as to any part of Yedo Bay being treated as belonging to any province or district on shore, but I understand the reference in the judgment to the place being treated as the Parish of Cardiff to have been made, as there stated, by way of illustration and for no other purpose. The principle of the judgment would be the same if no evidence had been given on that point. The principle is, that the British Channel between the two counties formed part of the counties on either side, and therefore of course that it formed part of the realm. That principle is not at all shaken by the subsequent case of *R. v. Anderson* (L. R. I. C. C. R. 161.) which was the case of an American citizen serving on board a British ship causing the death of another American citizen serving on board the same ship, under circumstances amounting to manslaughter—while the ship was in the river Garonne, within French Territory. The Court of Crown Cases Reserved, held that the ship was within the jurisdiction of the Admiralty and that the offence was triable in England, but all the judges in giving their decision admitted that the French Courts might have exercised jurisdiction if they had thought fit.

The situation of the place in which the ship was in the present case would, I consider, have brought the offence within the principle of *R. v. Cunningham* if the land surrounding the bay were British soil. The case of the *United States Witherger*, it appears to me, shows that the United States law is the same, for although the law as laid down in that case appears to have been altered by Act of Congress, such alteration only so far as to give jurisdiction to American Circuit Courts over American Ships in foreign tidal rivers and not to take away the jurisdiction of State Courts over all ships in the tidal rivers within the United States.

Such being the law in England and the United States, we have to consider what is the law when the case happens in Japan. By International Law, as recognized by

Great Britain and the United States, Japan would, in the absence of the treaty, have cognisance of the offence. The question then is what is the effect of the Treaties which she has made with Great Britain and the United States. The words of the Treaty with the United States (of the 29th July 1858) are: "Americans committing offences against Japanese shall be tried in American Consular Courts, and when found guilty shall be punished according to American Law." In the Treaty with Great Britain (of the 26th of August 1858) the provision made is: "British subjects who may commit any crime against Japanese subjects, or the subjects or citizens of any other country, shall be tried and punished by the Consul, or other Public functionary authorized thereto, according to the laws of Great Britain." The effect of those Treaty Stipulations and their interpretation as evidenced by usage, is that Japan has left to the two countries complete criminal jurisdiction over their subjects and citizens. She has retained no part of that jurisdiction herself. The only question is, how much has she given to each? Now, before the Treaties, Japan would have had the same jurisdiction over an offence committed by a British subject in an American ship in her waters as she would have over an offence committed by a British subject on land. It is impossible to bring any evidence as to the actual exercise of jurisdiction, for there was no foreign intercourse before the Treaty upon which any such case could arise. In a treaty then, granting jurisdiction over British subjects in general terms—for the treaty does not say anything about the place of the commission of offences—it appears to me that it is to be inferred that she gave jurisdiction over offences as well when committed in her territorial waters as when committed on land; and that Great Britain has now all the jurisdiction over offences committed by British subjects that, were it not for the Treaty, Japan herself would have had. This does not in the least derogate from the jurisdiction which the United States would have over the offence as being committed on board an American ship. The jurisdiction of the United States over such an offence is unquestioned and unquestionable. Just as in *R. v. Anderson*, English courts exercised jurisdiction over Americans for offences committed in a British ship within French territory, while admitting that the French Courts could also have exercised jurisdiction. So the American courts could exercise jurisdiction over British subjects for offences committed in American ships in Japanese waters without denying that British Courts (taking by Treaty the place of Japanese Courts) might also exercise jurisdiction. There is here no question of dispute between the British Courts and the American Courts. The charge was laid in this Court through the United States Consul General, and I have the satisfaction of knowing that my colleague entirely concurs in the view which I now take of our respective jurisdictions.

Japan having, according to the view I have taken, conferred jurisdiction in this case upon Great Britain, the question is, has it been conferred upon this Court? and I think it undoubtedly has. By section 64 of the Order in Council, 1865, it is provided that every Court may cause to be apprehended and brought before it any British subject being within the district of the Court and charged with having committed a crime or offence in China or in Japan, and may deal

with the accused according to the jurisdiction of the Court, and in conformity with the provisions of this order. According to the view I have already expressed as to the position of the ship, I am of opinion that the offence was committed in Japan. The question does not arise whether the offence was committed within or without the district of this Court, for, by section 65 of the Order in Council, the Court has jurisdiction to try in either case.

His Honour addressing the prisoner said:—Elizabeth Scarfield, the law under which you are charged was made for the protection of infant life, and no case could more strongly illustrate the necessity for such a law than the present one. You, by your own admission, cast the body of your child into the sea, and you have effectually, as it would now appear, removed all evidence of whether you have not been guilty of a greater crime. You are not however charged with that crime; and what passed between you and your infant child is a matter which is to be settled at a higher tribunal. The offence you have committed is a very serious one, but I have taken into careful consideration the reasons argued by your counsel in mitigation of punishment, and I consider the law will be sufficiently vindicated by the light sentence which I am about to pass upon you.

You are to be imprisoned in H. M.'s Consular jail for one calendar month.

In the U. S. Consular-General Court.

Before Gen. T. B. VAN BUREN, *Consul-General*.
Monday, March 12th, 1877.

Thomas Thompson and Frank Martell, both seamen of the American barque *Annie W. Weston*, were charged with being drunk and disorderly in Sakaicho at three o'clock yesterday afternoon. It appeared from the evidence of native police that both men were very noisy and troublesome. They were each sentenced to three days solitary confinement on bread and water, and to pay the costs of Court.

Wednesday, March, 14th, 1877.

E. B. WATSON vs. WALSH, HALL & Co.

This was a case in which plaintiff sued defendants for \$16,000, damages for having delivered a quantity of bags inferior in quality to what they were represented to be.

Mr. Dickens appeared for plaintiff, Mr. Ness for defendants.

Mr. Dickens said that this was a case which he should have liked to have settled out of Court. He was sorry it had come into Court, and could not understand why defendants had allowed it to do so. It was unnecessary to go at any great length into the circumstances of the case, as there were no assessors; but it might be well to state them briefly, and he proceeded to do so. In the pleading by a slip of the pen 8,500 bags had been mentioned instead of 28,500. Defendants admitted that the contract was concluded by the letter of the 11th February, 1876. They denied that the bags were not said to be fit for packing rice. They alleged that they were merely agents of other parties and could not be sued in the matter. This is nothing, for until they disclosed their agents they were liable to suits. The samples, they say, were not shown as samples of the whole of the goods. To show the case clearly, Mr. Dickens called upon plaintiff to give his evidence.

Edwin B. Watson sworn:—I carry on business as a merchant at No. 22 Yokohama.

This is a copy of my letter to Messrs. Walsh Hall & Co. of 11th February, 1876 (produced and read.) That is the note from Mr. Walsh of 5th February, referred to in this letter (produced and read.) That, also, is from Mr. Walsh to me (produced and read) with regard to the letter of the 11th February. On or about the middle of January, 1876, negotiations for the purchase of these bags were commenced. At that time I was overwhelmed with work in my office and at my request Mr. Wilkin, of Messrs. Wilkin & Robison, undertook the whole of the transaction from first to last. Occasionally I met Mr. Walsh and Mr. Gay, but at no time did I interfere in the matter, but left it in the hands of Mr. Wilkin. At the time of purchase I was not in need of bags, having sufficient to meet all my immediate wants. I therefore considered I was doing them friendly offices when I purchased the bags from Walsh, Hall & Co. In the first arrangement I stipulated that I should have the option of taking delivery within three months. I was disinclined to purchase at that time, because I could import direct from the manufacturers in Calcutta on terms cheaper than those of Messrs. Walsh, Hall & Co. The first price mentioned was about 19 cents each bag all round. This proposal was never for one moment entertained. At that time, owing to silver being of low price in India, bags could be laid down here at 12½ cents each, equally good bags for my purpose. I have since imported them at that price. In the rice trade it is important that all bags in one shipment should be the same. After considerable haggling as to the price I agreed to take them over through Mr. Wilkin at a rate slightly over the price at which I could have imported them from Calcutta. About 120,000 were in Yokohama, the balance in Kobe, in all 350,000. Defendants promised to bring the bags from Kobe within 3 months should I desire it. Before sanctioning Mr. Wilkin to close that arrangement, defendants furnished me with a list of the prime cost of all their bags. In that list it is distinctly stated there were 28,000 second-hand bags of which a special sample was furnished. Other samples of the balance of the bags were furnished at the same time. The first arrangement was subsequently altered, and it was agreed by Mr. Wilkin and ratified by my letter of the 11th February that the bags should be taken over on the terms stated in that letter. Before this letter was written the samples had been carefully examined by Mr. Wilkin and myself together; and samples of the 28,000 second-hand bags were undeniably second-hand, but of excellent quality. We decided to accept the second-hand wholly and solely because they were so few. The prices on the list were undoubtedly value of good new bags at the place and time of purchase. From the beginning to the end the bags were represented by defendants as new bags except the 28,000 and were so accepted. These representations were made to me and Mr. Wilkin to the best of my belief. Defendants knew that I was engaged in rice shipping; it was a matter of conversation between us. They had furnished me with information and advice regarding the best mode of shipping rice. I recognise that letter (shown.) These gunny bags were pressed in bales of 500 each. They were covered with double sacking. The final arrangements for payment were as stated in my letter of 11th February. Payments were to be made immediately on delivery, and deliveries were to be made

immediately. We took delivery of the bags without examination within two or three days. To have opened the bales would have destroyed their merchantable character. Defendants pressed me to use the utmost despatch in taking those in Yokohama, I was to pay in sterling 4s. to the dollar for those here, but as the taking delivery occupied several days and exchange slightly improved, I, at the solicitation of Mr. Gay, increased the rate to 4s. 0½d. Of the bags taken delivery of here one bale showed signs of external damage and this we declined to receive, but subsequently it was taken over at a reduced price. Of the Yokohama bags some 300 or 400 were injured through unpacking; these we refused. Subsequently defendants had these repaired and pressed us to take delivery, Mr. Gay using very high words in the matter. We still refused. The bags in Kobe were taken over by Browne & Co. at my request with all possible despatch, though delivery was retarded by bad weather. They were about a fortnight in taking the whole lot, of which none were opened. During this delay Mr. Gay repeatedly complained of Browne & Co.'s slowness, and they as stoutly maintained in their letters to me that no time was lost. Mr. Wilkin's written instructions to Kobe were to despatch the bags by first steamer. Payments were made to defendants after all were delivered, as shown by their receipts. I sent the Yokohama bags to Yedo for use: they were there opened as required. In consequence of reports made to me, I went to Yedo and examined the bags, and found many of the bales short in count, some of them as much as ten, and in the bales some bags were marked with an Asiatic character showing that they had been used before. These were, however, unstained, and in good order and suitable for my purpose. I immediately reported the circumstances to defendants, but told them, as part of the friendly arrangements made with them, I should not mind it unless fresh discoveries were made. This was in personal communication with Mr. Gay, who appeared surprised at the report. Shortly afterwards Browne & Co. reported to me in their letters that the bags, when the bales were opened, were in very bad condition. It had been arranged that the bags were to be used in Kobe and a small portion sent to Nagasaki. About 100,000 were of no use for packing rice. I gave notice to defendants at once (letter produced [30th July, 1876] and read.) This is the answer of defendants (letter 21st July, 1876, produced and read.)

Recess till 1.30 p.m.

When the sitting was resumed in the afternoon, Mr. Watson continued his evidence as follows:—The survey referred to in the letter of the 16th August (shown) was held and the result embodied in this report (produced.) The letter was from R. G. Walsh of Kobe to defendants in Yokohama. (paper shown.) That is the report alluded to in the letter. (Mr. Ness objected to this being put in because it was a survey taken by Brown & Co., plaintiff's agents, without the acquiescence of defendant.) The letter shows that Mr. Walsh was present at the survey. (Letter read and objection overruled.) Defendant's counsel objected to the admissibility of the paper as evidence on the ground that the party who made the survey should be produced as a witness. Mr. Dickens said that it had never been objected to before on the part of defendants. The survey having been made in the presence of one of the defendants, it was perfectly admissible

for what it was worth, and the letter now produced (August, 19th, 1876) was evidence to that effect. Paper withdrawn for the present. Mr. Watson: I do know the result of the survey. (Mr. Ness objected to this, on the ground that the source of information was not stated.) I know by the report of the surveyor in Kobe. (Mr. Ness objected again on the ground that it was hearsay evidence and was derived from his own surveyor.) His Honor said that this report could not be taken in as evidence unless the surveyor were called in person, or his evidence got otherwise. Report withdrawn accordingly.) This is a letter (produced) received from my agents in Kobe, dated 15th August, 1876. In consequence of that information I placed the matter before defendants in the most friendly light, but was compelled to place the matter in the hands of counsel. To the best of my belief I suggested, as the best way out of the difficulty, arbitration. The particulars of demand attached to the petition are substantially correct, but may be modified by closed accounts received from Kobe. Previous to the letter of the 11th February defendants did not inform me that they were agents for any company whatever. Only from a written memorandum to Mr. Wilkin did I know that any one else was interested in the matter. Before these arrangements were made, I did not know that defendants were merely agents. I was certainly led to believe that to defendants alone could I look in case of any after dispute. Other parties had never entered into my consideration. Previous to the letter of the 19th August no intimation of the names of any alleged principals were given to me by defendants. If I had known defendants were merely agents for a principal I should never have entered into the transaction at all; it was altogether a personal consideration. The necessary requisites in bags for shipping rice are, (1) that they should be new, for the following reasons: any bag, however slightly stained, a ship captain would not accept and give a clean bill of lading for, nor would an insurance agent grant insurance with average on the cargo. (2) Should any stain escape the notice of a ship captain on this side and consequently that of the insurance agents, any such stained bags taken out of the ship at the port of delivery would as an absolute custom be condemned as first class ship damaged rice and be subject to a reduction even though the rice should be uninjured. (3) As cargoes of rice shipped from Japan are generally sold to arrive, on one sample drawn from the bulk of the cargo (a little from each bag forming the cargo) a mixture of marks is of course detrimental to the interests of the parties. (4) Had it been known that I had shipped any rice in second-hand bags it would have been prejudicial to my chances of success in the home markets, and would have been in contradiction to a guarantee sent by me to my agent, and published by authority of the London Rice Association. (5) Any other bags but new are unfit for rice cargo. Impregnated bags are unfit for such cargo. A clear bill of lading could not be obtained for stained bags. The greatest care has to be taken in loading rice cargo. There is no export of bagged grain except rice from Japan. This paper was received by me from defendants (shown and read.) This was before the purchase was completed. The bags are mentioned as grain bags. With respect to exchange there was no other difficulty than mentioned. Rice in second-hand bags incurs a discount of about 40 per cent in

the home markets; out here I would never purchase them. Bags which had been used for guano could never be used. I have samples of the rejected bags sent from Kobe. They have been in the custody of Mr. Wilkin.

To Mr. Ness:—The samples of the bags on which the whole purchase was made are now in Court, or rather Mr. Dickins has them. Mr. Robertson of the Oriental Bank never represented me in the matter of purchase of these bags. Before the contract was concluded Mr. Robertson did not give me to understand that defendants were part owners of these goods only. He asked me to stretch a point in defendants' favour. Neither directly nor indirectly part of the goods in question were the defendants'. No declaration of agency was made to me. Mr. Robertson gave me to understand that others were interested in the matter. At Mr. Robertson's request, at the instance of Mr. Walsh, two prices were mentioned. Mr. Robertson did not tell me that that one price alluded to the part belonging to defendants and the other to the part belonging to other persons. Mr. Robertson said that the balance of the bags were on consignment. I agreed at Mr. Robertson's suggestion to give an increased price for the bags which were sole property of defendants, stating that I did so solely in consideration of the kindness done me by defendants in giving advice, &c. As a business man I knew the different kinds of consignments, and certainly thought that defendants had at least some share in the venture. The term on consignment does not usually signify that the consignee is agent of the consignor. It does not indicate to what extent the consignee is interested. I had reason to believe that in the bulk of these goods some others had an interest. All my communications with Mr. Wilkin were verbal. Mr. Robertson had spoken to me about the price which was fixed before the date of this letter (produced, February 5th.)

Mr. Ness here remarked that Mr. Dickins was prompting witness. Mr. Dickins denied this, and said that Mr. Ness should not suspect others of doing as he did. Mr. Ness should wear spectacles.

Cross-examination continued:—My responsibility commenced with the letter of the 11th February. I received this list or a copy of it before the completion of the contract. It does say "account of" W. H. & Co., M. & Co. and L. & Co., but these initials inform me nothing of the principals; it conveyed no impression to my mind. I did observe that it is stated "grain bags in hands of" defendants, but it conveyed no special meaning. All the other information from Mr. Robertson's memorandum threw no light upon the phrase "in hands of," nor did any of the rest of the list do so. I did not take the trouble to look that I only paid 17 cents for the quantity marked W. H. & Co., for I was convinced there was no difference in the quality of the whole. I took care that 17 cents were paid for no more than 74,000. Had I made a careful examination and computation of the numbers opposite to W. H. & Co., I could have ascertained the number claimed to belong to W. H. & Co., and in the same way to L. & Co. and M. & Co. After the discoveries at Kobe I found that L. & Co. represented Levi & Co., and M. & Co. Morrison & Co. for whom defendants were agents. I examined the description of the goods in connection with the samples. I did observe that some were designated "second-hand" some "new" and some without any designa-

tion at all. These I thought must be new because the price opposite represented the cost of brand new bags and because defendants positively assured me of the facts. The prices of Hessian bags are according to the weight and size of the bag. I examined all the samples carefully. A price was not fixed for one particular mark but for all. The price collectively paid for the bags was proof positive to me that the representations of defendants that they were new were true. I did observe that there were six lots of Hessians marked at different prices.

Adjourned till Friday, the 16th instant, at 10 a.m.

Friday, March 16th, 1876.

Mr. Ness continued to cross-examine Mr. Watson, who said:—The prices were to be paid partly in sterling. I did not suppose defendants had to remit to London with respect to these goods. The suggestion was from myself. Mention was made that defendants had to remit to London, and it would consequently be convenient to be paid in drafts at sight. (Samples put in.) There are eleven, but some are in duplicate. I did not particularly know that there were 16 bags. I do not know particularly that only eleven were given by defendants: only eleven are mentioned in their memo. to Mr. Wilkin who received them. (Memorandum produced.) It is dated, I notice, January 19th and mentions 19 samples sent me. The other eight are, to the best of my belief, in the possession of Mr. Wilkin. I have no positive knowledge that these eight are samples of Yokohama bags; I believe they are. It is stated that the bales marked Nos. 40 and 147 are represented by no samples. That is the sample marked 139 (shown.) That is second-hand turned inside out. I examined these samples with what I considered sufficient care. Mr. Wilkin was conducting the transaction and also examined them. To the best of my belief I did examine these samples carefully. (Exhibit 4 shown, list of bags.) The description of this sample is "gunny." I believed these to be new. I judged from the sample. There was nothing to indicate that it was second-hand. I know now that it is second-hand because the marking was concealed previously. It is marked inside. The marks are English and others, which I cannot decipher. I see faults which might have been caused by sewing or in manufacture, bags being often loosely made at the top. This string at the top conveys nothing to my mind; it may have been a tag. That also might be evidence of a tag. There might be half a dozen tags at the top. Had they not been marked inside I would have doubted it. That bag has apparently been mended, but for what reason I don't know. From my knowledge of bags it has also been mended there. We do not object to bags because they have been mended. It is certainly difficult to tell the inside from the outside of a bag owing to differences in manufacture. I have never specially noticed a bag with the seam on the inside. Usually the seam is on the outside. It is in the present case on the inside. Defendants and I had a joint survey on the goods in Kobe now complained of. (Paper produced.) That is one of the surveys. One of the lots of which I complain is represented by this second-hand sample, 139. The discovery that the lot consisted of second hand bags was made before bringing the action. The lot 40—147 mentioned in the list is another of the lots of which I com-

plain, so far as the lot is referred to in the survey. In the memo sending me samples this lot is declined as of the same quality as lot 139, the inference plainly is that they must therefore be second-hand also. About one-half of lot 40-147 was taken delivery of, but I do not know positively that they were really good bags. No. 1-51 is also one of the lots of which I complain as being second-hand. The survey report refers to the whole of the contents, with half a dozen exceptions of lot No. 1-51. (Sample of this lot shown.) That is second-hand. It is marked but it may be a fault of manufacture. It is turned inside out; marked inside and the marks concealed. It is easy to see now that it was turned inside out. In dealing with respectable persons such a minute examination was unnecessary. There is no evidence of its having been sewed or hemmed at the month. I swear these samples are in the condition in which they were received by Mr. Wilkin. The lot 1-51 of which this second-hand bag is a sample is described in the list as "fine sacking" only. At the time of purchasing I believed that they were new. Lot 1-26. I cannot point it out positively but believe this to be it without a tag attached. It is stained through the cover being exposed. I can't say whether it is a sample or not. This lot 1-26 is described in the list as "striped." I now notice that there are other samples without bags. It was not wholly upon the descriptions in the list and the samples furnished that I purchased the bags, but upon the assurances of defendants that they were in fit condition for packing rice. This was the basis of the whole transaction. I am unable to give you the exact date of this assurance. I was told about their quality in most of my meetings with defendants, probably before and after this list was given me. I cannot say positively. I do not recollect any special interview at which this representation was made. I do not remember the words used beyond that they were completely satisfactory to my mind. I stipulated for new bags, perhaps not directly but it was so inferred. A certain number of loose Kobe bags were rejected by my agents, being stained or eaten by rats, I cannot say whether before or after payment was made. This was made in Yokohama, on the 6th March for 210,450 bags, and the balance on completion of delivery, about a week or ten bags later.

Mr. Ness asked for the production of the correspondence in the month of March from plaintiff to Messrs. Browne & Co. Mr. Wilkin said no letters had been written relative to these bags, but he was willing to produce the whole of the correspondence.

Cross-examination continued:—I did reject some of the Yokohama bags before and after payment. The letter from defendants to me dated 28th March requests me to take delivery of a certain number of repaired Kobe and Yokohama bags. Therefore I know a certain number must have been rejected in Kobe before payment. I refused to receive these bags; this was after payment. The last instalment was before the 28th March, I can swear. I cannot swear that the 1,990 bags were rejected before that date. I do not know as a matter of fact that the iron hoops were all off the bags; I should be greatly surprised to know that they were. I positively deny that they were. I did not open one bale and compare the contents with its sample; it would have destroyed

its merchantable character. Had I opened a bale I should have ascertained that the bags were not so new as represented.

Adjourned till Monday, the 19th instant, at 10 o'clock.

Monday, March 19th 1877.

Mr. Ness asked if Mr. Dickens produced the correspondence he had asked for, and received a negative answer; the defendant thinking that the letter referred to had nothing to do with the case. However, if it was needed it could be easily obtained. The document was then sent for.

E. B. Watson's cross examination continued:—I am not able to say whether full payment was made before or after the Kobe bags were rejected. Second-hand bags might be used for shipments to China, but no such shipment would bear the expense. In my opinion they would not be shipped to America. I do not consider I have sufficient knowledge to give a decided opinion as to whether shipments to Europe are ever sent in second-hand bags.

Mr. Dickens objected to the question. He thought it a silly question; and the time of court ought not to be taken up with such questions.

Cross examination continued:—I have never shipped any rice in second-hand bags. I did not use any of the second-hand bags, that were sold me by the defendant; they are still in my possession, as well as those we took delivery of in Kobe. When I purchased the goods in question it was my intention to use the 28,000 bags for shipments to China. I did not tell the defendants when I purchased the bags the different places where I intended to ship rice; though all the information they gave was in reference to the market in Europe. Marks on bags are prejudicial to rice in Europe. I have not said that it was an absolute necessity to always ship rice to Europe in new bags. The reason why I notified my agents that I shipped new bags, was because it was to my interest to do so. I believed that all rice shipped to Europe by all shippers was in new bags, but do not know it for a fact. This was my first shipment of rice. I did not make any shipments before purchasing these bags. I had no knowledge that rice was ever shipped to Europe in second-hand bags before I made the contract. I did not say there was a difference of 30 or 40 per cent between old and new bags in Europe; I said I thought there would be a difference of 40 per cent at home. The bags in Kobe were intended for Europe, with the exception of a small portion, which might have been intended for China. My agents wrote me that a large quantity of second-hand bags might possibly be used. Messrs. Walsh Hall & Co. never made any request or gave any guarantee so as to obviate my examination of the goods; but I received assurances from them, though I cannot refer to any one particular assurance. They were constant from first to last. The purport of these assurances were that the bags were new and fit for the shipment of rice. The defendants never objected to my examining the goods. It is not usual to inspect goods and reject improper goods when dealing with respectable persons; and in this case would have spoilt the merchantable character of the goods. It is usual to postpone the examination of goods until after payment has been made. There were not many loose bags or open bales handed to me. I have good reason to believe the loose bags delivered in Kobe did not amount to more than a few hundred, and

think they were taken from one bale. (Mr. Ness put in a letter from Browne & Co. to Mr. Wilkin, dated 29th February). I observe that that letter states that a few of the bags were damaged before delivery. This was before payment was made (press copy of letter from defendants to plaintiff dated 16th March, 1876, advising delivery of 1185 bags and asking payment, read, but plaintiff had not the original and disputed the copy). I claim \$14,000 for 100,000 bags. To the best of my belief these bags are of the same quality as mentioned in the contract. From the joint survey I am aware there is a difference of 3,000 bags. The real claim is for the number mentioned in the survey. The goods, with the exception of a few bales, are still in my possession. I have broken bulk of the goods in Kobe, having used more than half of the good bags.

To Mr. Dickens:—There were a variety of different lots of bags in the Kobe lot. I refer to particular lots when I say we broke bulk. We ceased breaking bulk when they began to turn out badly. The survey necessitated the breaking up of the particular lots referred to. In that breaking bulk the defendants joined for the purpose of survey. When I had the conversation with Mr. Robertson, he used the words "on consignments," in a general sense. Mr. Robertson stated that Mr. Walsh had stated that part of the goods were wholly and solely their property and the balance of the goods other parties had an interest in. Mr. Robertson suggested an increased price for Messrs. Walsh, Hall & Co.'s goods over what was paid on the balance, in consideration for their kindness in supplying me with information. I have had considerable commercial experience in Yokohama. Messrs. Walsh, Hall & Co. never informed me verbally that they were agents for any person. They did not by letter inform me, previous to August of last year, that they were agents for any named principal. I have no letter other than the one of 19th August in which they informed me they were agents for any named principal. In one memorandum from defendants to Wilkin & Robison they stated they held a portion of the goods on agency. I cannot say the date of that letter; and apart from that no declaration of agency has been made to me. (Survey report shown). The majority of the lots mentioned in the report are marked H & E N L & Co. (Exhibit 11 shown). The mark L A Co. did not indicate to me that they referred to the marks H & E N L & Co. in the Survey report. Messrs. Henry and Edward Levy & Co. mentioned in exhibit 9, are not to my knowledge bag makers or bag merchants. The mark "M & Co." in exhibit 11 did not convey any particular meaning to me. If it was desired to convey to me a knowledge of whom the marks designated, that information would have been made by a specific declaration of the names of the alleged principals. The payments were made to defendants and they granted receipts invariably in their own name; and the bills of exchange were also in their name. When complaints were made as to the quality of the bags the defendants from the beginning did not disclaim responsibility. The first time they disclaimed responsibility was in their letter to Mr. Wilkin, to the best of my belief. Previous to the 19th of August the representations of the quality of the bags to the defendants were few in number. I had personal interviews with the defendants on the subject. They did not disclaim respon-

sibility to the best of my belief, and in some instances made the allowances I required without reference to agency. The defendants never represented to me that any of the bags other than the 28,000 were second-hand. They were always represented as new. I did not conceal from the defendants that I was intending to ship rice to Europe. On the contrary I informed them that I intended to do so. Before the contract was concluded I had chartered a ship for Europe. The samples of the second-hand bags presented some difference from those representing the other bags; they were legibly marked on the outside and there was no concealment about them. There was nothing in the external appearance of the samples, not being second-hand samples, to lead me to suppose they were marked on the inside. The samples were probably better than than they are now. To test the resisting power of the bags, I have observed Mr. Wilkin put his finger through them.

Recess till 1.30 p.m.

On the Court resuming, the plaintiff continued: About seven thousand pounds sterling were paid in drafts on London and the balance in cheques here. I arranged with Walsh Hall & Co. to pay them in drafts. I was not surprised that they should apply direct to the Bank for the drafts thinking they had no desire for me to know their business. The last payment I believe was made on the 17th of March; the amount was \$163.43. There were some bags refused after this date, both of Kobe and Yokohama bags I think, which were not paid for although payment was demanded. When payment was demanded nothing was said about agency. That letter (shown) refers to the bags of which payment was demanded and rejected. (Letter read, the purport being that defendants had completed the mending of the bags and desired to be paid). In April I had a conversation with Mr. Gay. He made further propositions in my office to import other bags on commission, to be of the same quality as before, and showed the same marks. The prime cost as stated was about 40 per cent lower than the first lot were bought for; and the charges actually incurred, less $2\frac{1}{2}$ per cent commission to be paid by defendants. (Memo. referred to put in.) In exhibit 4 I notice Hessian bags, 1,000 of them, and thought in buying them they might be used for packing silk. I did not use them. There were other Hessian bags and I believe they were used. I judged the bags to be new because I knew the samples of second-hand bags were unmistakably second-hand, and in the balance of the samples there were no visible signs that they had been used before. From the prices at which the bags were offered they must have represented new bags: otherwise the invoices must have been fraudulent.

This concluded the cross-examination of the plaintiff.

Alfred John Wilkin, sworn, deposed:—I acted on behalf of the plaintiff as broker for the purchase of some bags in January. Towards the end of 1875 my firm made certain arrangements relating to rice with the plaintiff. In January Mr. Watson wanted to send some rice to San Francisco. I told him Messrs. Walsh Hall & Co. had some bags for sale. I knew they had because I had bought some from them. They answered my purpose very well, and I recommended Mr. Watson to get some for his shipment. He asked me to see defendants about their bags. The first interview was

about a small quantity, as only a few were wanted. Messrs. Walsh Hall & Co. furnished me with a list of their stock and samples. That (Exhibit 4) is the list they furnished me. I examined the list to see which were the best to take. Ultimately I was authorised to treat for the whole of the stock. My negotiations were for an all round price and delivery to be given within three months. That is my letter to defendants. (Letter shown and read.) Two lots are specified in that letter as second-hand, amounting to 20,000 in one lot and 8,500 in another lot. There was no specific description of the other bags in that letter. Prior to my sending the letter, defendants had had negotiations with Mr. Watson. The defendants got an alteration in the delivery, though price and other details were agreed to. Messrs. Walsh, Hall & Co. paid me the brokerage mentioned in the letter. The bags mentioned in this letter, and not designated as second-hand bags, were represented as new bags by the defendants. I was under the impression that the bags not designated as second-hand were new. The defendants never gave me to understand, either at that time or after, that the bags not represented to be second-hand were second-hand bags. There was nothing in the samples which was calculated to lead me to suppose the bags were second-hand. From the commencement of the negotiations up to January, the defendants never gave me to understand they were agents. Between the 25th of January and 11th of February, I have no recollection that the defendants conveyed to me that they were agents. They, the defendants, first gave me to understand that other parties were interested, after the reports arrived from Kobe about the bad state of the bags. (Exhibit 9 shown). I recognise that letter. Previous to the date of that document, August 19th, 1876, I have no recollection that the defendants stated they were acting for Levy & Co. and Morrison & Co. (Letter dated 21st August, written by Wilkin and Robison to defendants, put in). After the arrangement of 25th of January, another arrangement was made between defendants and the plaintiff. Defendants offered to make certain allowances if delivery was taken immediately. I never authorised Mr. Robertson of the Oriental Bank to represent me in any way. I looked on the terms made on the 25th of January, apart from delivery, to be definite and closing the transaction. In the letter of the 25th of January, some of the bags are quoted at 17 cents and others at 14 cents, but I did not understand that was to represent any difference in quality. None of the samples sent to me were impregnated with bone dust. If I had known that the defendants did not consider themselves responsible, I should not have transacted the business in the way I did, and should have taken other precautions. The whole tenor of the circumstances led me to suppose that the bags were new, as nothing was said to the contrary. I have had long experience in Yokohama and have acted as Chairman of the Chamber of Commerce. In the ordinary course of business, it would be presumed that the goods are new unless the contrary is asserted. I have no personal knowledge of the mode of payment, except that defendants came to me and grumbled at the delay in taking delivery. It was only a question of a few weeks. Mr. Gay came to me one day and talked about legal proceedings if we did not at once take some small quantity of bags. I don't recollect anything being said of others being in-

terested except the Banks. I was given to understand that the Banks had a lien on them or that they were held in trust for some Bank or Banks. If I were acting for some one I should declare my principals, as I did in this case. I have had no experience in rice despatched to the London market in second-hand bags. Shippers here would not take delivery of bags stained or impregnated without exception. The effect on delivery at home would be that the goods would be set aside as damaged and would be very severely dealt with. I have read the survey report on the bags in Kobe; and have also seen samples of bags sent from Kobe. For rice packed in such bags I would not get a clean bill of lading nor affect a proper assurance; and the rice packed in some of those bags would be almost unsaleable at home. The difference in value of new and second-hand bags, would be about from half to two thirds; that is if the bags were in good condition. It is seldom that bales of shirtings are opened before payment is made, unless there is some external damage done to the bale. The buyer relies upon the sample and to a certain extent the reputation of the house. In the event of a purchaser of shirtings or yarns finding on opening a bale that the goods were of inferior quality or damaged after taking them away, I should not refuse claim to compensation, unless there was some apparent fraud.

To Mr. Ness:—If the purchaser did not inspect the goods for two months after taking delivery, I should consider he had a claim upon me, unless I thought the damage arose through the goods being placed in a damp godown. The goods were sold as according to description in list 4 and as per samples. That was the description upon which the goods were purchased. The list I gave to Mr. Watson before the purchase was made. I carefully examined the 19 samples that were handed over. I did not observe any to be second-hand except those described. I know that some of the samples are second-hand, though the lots are not described as second-hand in the list. The outside of a bag is not easily discernable from the inside. I cannot say that any of the samples produced are the samples that were handed to me as I sent them to Kobe six months ago. The samples sent from Kobe with the report are not a portion of the original 19 samples. The survey report referred to is not the report put into Court. There are eleven of the samples in Court. The tags came off some of the bags, I could not distinguish the bags without tags. Here are three samples with tags which I believe are part of the original samples. The goods complained of have not, to my knowledge, been compared with the samples. I never compared them, as I had no opportunity. I noticed in list 4 that some of the goods were described as new, others as second-hand and others not described at all. The weight of the bags is not given in that list. The price of the goods was such that no second-hand bags would cost as much. Some of the second-hand bags mentioned in the list are charged more for than is charged for new, but, in this case, the new are Hessian bags. For the new bags I bought before from the defendants I paid twenty cents and sold at home at 4½d. I supposed the bags named in the list except the 28,000 were new. I notice that the prices on that list average under twenty cents. I noticed that the difference in price between new and second-hand gunny bags is put down at one cent on the list. The price, to me,

conveyed the presumption that the bags were new. The Court at this stage adjourned until to-morrow at 10 a.m.

(Owing to the indisposition of General Van Buren, the case was not resumed at the time appointed.)

In H. B. M.'s. Court at Kanagawa.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Tuesday, March 20th, 1877.

YOKOZAWA ZENZUKE vs. TEMPLE WILLCOX.

The plaintiff claimed the sum of \$150. This case was resumed this morning, it having been adjourned on the 6th instant in order to enable the plaintiff the opportunity of producing witnesses. He called.

Tomitaro Yoshimatsu, who said:—On the 3rd of October I made a contract with the defendant for velvets and on the 28th went to take delivery of the same. That is the contract (produced) I entered into for Yokozawa. The goods arrived in port on the 23rd of October, and as the agreement was to take delivery of them at the hatoba within two days from their arrival, I went on the following morning to see about them. I was told that they had not been yet landed, and went to No. 73 and informed the defendant I wished to get them with the least possible delay. On the 28th I learnt they had been landed and went to pay the money. But when one box was opened it struck me the goods were not like the sample. I informed defendant of the difference but he denied it; and as the original sample was in Yedo in possession of the man whom I had contracted to sell the goods to, the defendant allowed me six days in order that I might confer with the party as to whether he would take them or not, as there was a difference. The original contract was for goods according to sample, and defendant knowing as well that I had no authority to take goods other than the sample, he agreed to allow for the difference. I accordingly took one sample of the goods to Yedo to compare it with the original. I consulted with the person in Tokio and he decided to refuse to take delivery. On the 1st of November, the Chinaman who managed the business for defendants, came to my house and enquired the result of the conversation with the purchaser in Yedo. I told the Chinaman that the goods had been refused. As I heard nothing on the following day from the defendant, I went the next and every subsequent day until the 5th to see about the matter, and as nothing could be done with the Chinaman I went to defendant himself. I told defendant that in view of the difference I could not take delivery of the goods. Defendant wanted me to take the goods, but as I refused to do so, we agreed to call in experts. It was settled the experts should meet on the 7th, and I accordingly went on that day with the experts I had selected, but as defendant was busy the inspection was postponed until the 8th or 9th. Mr. Walter's and my arbitrators met on that day and it was clear the goods differed from the sample. That is all I have to say.

To Mr. Willcox:—When the contract was made velvets were \$8.87½ per piece. I sold them for same price I contracted for with the defendant, and I was to get nothing more than the usual commission. I do not recollect the price of velvets on the 28th of October; and don't know how much they

had fallen in value. I am not aware that any fall took place between the 28th of October and 5th of November. It was in consequence of a notice sent by you that I came to Yokohama on the 24th and 28th to see after the goods. I first examined the goods on the 28th at No. 73. I did not examine the goods at the Hatoba. I was anxious to take delivery of the goods, as there would be a commission for myself, and I therefore readily agreed to pay the coolie, hire during the six days postponement which would be incurred in shifting the goods. I did not see the goods which arrived in the *Fleurs Castle*. I don't know that the goods referred to had arrived on the 28th. I did not request that the six days should be allowed in order for me to get the money to pay for the goods. I did not make any suggestion that a portion of the price should be taken off. The experts were called to decide as to the quality of the goods, and I did not make any promise to abide by their decision.

To the Court:—The piece of velvet I took to Tokio was taken out of a box which arrived in the *Martaban*. Two of the boxes out of the five, I saw opened. The goods had already arrived at No. 73 when I made the agreement for the extension of six days. It was mutually agreed that the goods should be taken to No. 73 and examined. I gave this memorandum after the goods had been examined. The Chinaman gave me the sample to take to Yedo. That memorandum is not to be taken as a promise to pay interest. I objected to the velvets because the texture was bad and the colour vastly inferior to the sample. When black velvets are contracted for black velvets are expected. Some of the velvets which arrived were black but others had a whitish tinge. The blackness was not equal to the sample. I did not see the goods at the Hatoba.

Recess till two o'clock.

On the Court resuming the defendant asked the Court to question the witness Yoshimatsu in relation to the delivery of the pieces of velvet.

Witness, to His Honour:—The five cases had been brought to No. 73 before the sample was given to me on the 28th. The defendant did not send to the Hatoba to get the piece of velvet.

Kimura Riyemon, deposed:—I was requested by Yokozawa, to come and examine whether the velvets were good or bad. On the 9th of November I went, and Mr. Walter was present on behalf of No. 73. There were three arbitrators altogether; and out of the 300 pieces of velvets, 150 pieces were examined. We first of all took two pieces from a box marked 1038 and compared them with the pattern. We found there was a difference. The pattern was closely woven. Having decided that the two pieces referred to were inferior to the sample, we took out another piece and compared it, and found it was much the same as the first two. From the second lot of 150 pieces we took three pieces from a box marked 566 and found they differed greatly from the sample. We, the arbitrators, then conferred among ourselves and agreed that the goods differed in colour from the sample.

To Defendant:—I believe there was a slight fall in the price of velvet during the interval between the time the contract was made and the time the goods arrived. I had no magnifying glass when I examined the velvets. Where the difference in the texture is great it can be perceived by the naked eye. There

generally is a difference in the quality of large parcels of velvets, some may be worse and some better than the sample, but there would be a general resemblance between them. It might be customary in some cases to make an allowance where the goods differed from the sample, but there is no fixed rule. I might have taken the goods in question, but it would have depended on circumstances.

Okata Heisaburo, said he corroborated the evidence of the last witness and had nothing to add to it.

This concluded the plaintiff's case. The defendant called

Ah Chow, who was cautioned, and deposed:—I am compradore at No. 73. On the 28th of October, the plaintiff's banto came to the office and said he could not take the goods at that time, but would take one piece. The velvets were at the Custom House so I sent the godown keeper to get one piece, and when it was brought I handed it to the banto, and he took it away first agreeing to pay the six days' interest. He said nothing then about any difference between the goods and the sample. Every day I went about the goods, and on the sixth day the plaintiff said, for the first time, he did not want the goods.

To Defendant:—When the banto saw you on the 28th he said he had no money and asked for six days' extension of time and he would pay interest. You gave him six days to pay the amount in, as he had no money on that day. He did not complain of the goods being bad. On the 3rd November the banto came and asked for an allowance of 25 or 30 cents a piece on the velvets.

To the Court:—150 pieces of velvet came in the *Martaban* and 150 pieces in the *Fleurs Castle*. The contract was for 300 pieces of velvet.

Ah Hee, cautioned, deposed:—On the 28th of October, the compradore asked me to go to the hatoba and open one case and get a sample of velvets. I did so. The Japanese banto was at No. 73 when I fetched the sample. I saw the compradore give the sample to the banto.

Muroga Mashiyoshi, deposed:—I was upstairs at No. 73 on the 25th of October, when the compradore brought the banto up. They had a conversation together respecting these goods. The banto accepted the goods without making any complaint respecting their quality. The banto also said that he was out of funds, and requested a postponement of six days. The defendant agreed to this providing he paid interest on the money. When Yoshimatsu came after the six days had elapsed, he said he could not take delivery of the goods as they were not according to sample. It was finally agreed to call in experts, and if the goods were not according to sample the difference in the price was to be fixed according to the value of the goods at the time the contract was made.

W. B. Walter, sworn, deposed:—I am a merchant's assistant. The defendant asked me to examine some velvets. I went some time in November. Some Japanese were present on behalf of the buyer of the goods. There were two lots of goods which had arrived by different vessels. We took three pieces out of each lot and compared them with the sample. Some of the velvets varied a little in colour, which is not uncommon among such goods; but taking them altogether I think they were fairly up to muster. The Japanese found them inferior to muster. I told defendant I thought the

goods were fairly up to the sample, but as the price had gone down a good deal and it would be difficult for him to recover in a Japanese Court, it would be better for him to try and make an arrangement. He asked me what I thought a fair allowance, and I replied about 25 cents. I believe if the market price had kept up no dispute would have arisen. Japanese are very fond of giving up their contracts when the value of the goods decreases. I made a report. That is it (handed into Court).

The Court rose at 4.30 p.m.

Wednesday, March 21st, 1877.

On the case being resumed this morning, the evidence of Mr. Walter was translated to the plaintiff, at the conclusion of which he, plaintiff, said the evidence was different to the survey report handed into the Saibansho.

Mr. Walter stated that he had only written one report which was that now in Court.

The defendant stated that the report had been forwarded to the Saibansho, with his petition, on the 10th of November, through the Consulate.

The plaintiff explained that Mr. Walter saying the goods differed in colour and yet were up to muster was not consistent, and was different to the statement made in the survey report.

W. B. Walter, to Court:—T at is my report. I made no other report and gave no evidence at the Saibansho. Very often slight differences occur in velvets; but the buyers know this and will take the goods with these slight differences. With more expensive goods the variation in colour is less. There may be variations in colour, still that would make no material alteration in their value. I only saw one muster, and the colour of some of the pieces taken from the second lot was as good as and better than the sample; but others were not so good. The variation was not such as to entitle the purchaser to any reduction on the goods. Goods with such variation are generally accepted as being equal to value of sample. When the market falls the Japanese usually try to get some reduction and frequently endeavour to evade the contract altogether. The custom is this. Suppose the bargain money paid covers the fall in the market, the seller would make no reduction and the purchaser be compelled to take delivery. But if the bargain money be insufficient a compromise may be made in order to avoid litigation. This may be in a case like the present or when there is no variation at all. The variation in velvets is caused though the difficulty of dying goods exactly the same colour. Independent of the colour, I consider the goods in question fully up to muster. It is very unusual that such a heavy fall in velvets takes place as in the present instance. Some Japanese would take delivery of the goods notwithstanding the fall in the market as they would not like to lose their reputation. Others again would endeavour to get out of the contract. Such goods as those at issue would be taken by foreign merchants without demur. Although there was a variation in the colour the goods were fairly marketable according to the sample. I could not say the goods were "fully" up to muster as there was a difference in the colour; otherwise there would have been no difference at all. My reference to the reduction of 25 cents had no reference to the goods being of inferior quality but was simply on account of the fall in the market.

The evidence having been read over to the plaintiff, he said he did not care what Mr. Walter said about the custom of trade. The custom with Japanese was to buy and sell according to sample.

Temple Willcox, deposed.—On the 28th of October, plaintiff's banto came to me and I asked him if he had seen the goods that were then on the hatoba. He replied that he had, and that he was unable to pay for them according to contract: would I allow him six days? I replied that I would. This conversation took place through the compradore. On the 3rd of November the banto came to me, and for the first time stated the goods were inferior, but that he would still take them if I made an allowance, as the market had fallen, of 50 cents per piece. I told him that as the goods were a consignment and as the sale had already been advised to the consignor, I could make no allowance whatever. Through the interpreter however I said that, rather than carry the case into the Saibansho, I would make some slight allowance. He then proposed that arbitrators should be appointed to say what allowance should be made. This I agreed to. I have sold a great many of this class of velvets and no complaint has before been made as to the variation in colour. I subsequently sold the goods, at the then full market rate, at a loss of \$562.50. The contract was not written out in my presence, but it was delivered to me with the \$150 bargain money. I sold to Yoshimatsu the whole of my consignments of velvets.

This concluded the case, and His Honour said he would give judgment to-morrow, at 2 o'clock in the afternoon.

Thursday, March 22nd, 1877.

JUDGMENT.

In this case the plaintiff sues the defendant for the return of the sum of \$150 paid by the plaintiff to the defendant as bargain money, upon a written contract entered into between the plaintiff and the defendant for the purchase by the plaintiff, from the defendant, of 300 pieces of black velvet according to a sample delivered at the time of sale. The velvets had not then arrived, and when they did arrive the plaintiff refused to receive them, alleging as the ground of his refusal that they were not equal to the sample.

On this point of the accordance of the goods with the sample, the most important evidence which has been given is that of the two Japanese experts appointed by the plaintiff and by Mr. Walter, an expert appointed by the defendant. The two Japanese experts agree in saying that the goods were inferior to sample both in texture and in color. They admit, however, that they answered the description of black velvets. Mr. Walter's evidence is that they were "fairly" up to sample, and in explanation of that phrase, he states that they were marketable on that muster, that is to say, that as between foreign merchants the goods in question would pass upon the sample shown without any demur or any abatement in price being allowed. Mr. Walter further states that on account of the variation in color he could not have put in his report that they were fully up to muster, he would not have felt justified in stating that the velvets were up to muster without qualifying that statement with the word "fairly." The conclusion I arrive at upon this evidence is, that the goods were not according to sample so as to satisfy the terms of the contract.

The terms of the contract are, that the goods are to be according to sample. There is no qualification of these words in the contract itself, and if any is to be introduced by any custom of trade that custom must be proved. Now upon such a custom we have some evidence. What Mr. Walter stated, as already mentioned, as to the goods passing between foreign merchants upon the muster without any demur or any abatement being allowed, is evidence of a custom as between foreign merchants. But this is a contract between a foreign merchant and a Japanese merchant, and as to such transactions Mr. Walter's evidence goes to show that there never has been a general acquiescence on the part of Japanese merchants in any custom of allowing in the carrying out of such contracts the qualification expressed by the word "fairly"; that on the contrary they have, when it was their interest to do so, insisted on the letter of the contract. I find therefore that no such custom has been proved and the contract must therefore be construed strictly according to its terms. It may seem harsh that such a construction should be put upon it. But the harshness is not in the law. If people deliberately make hard bargains they ought not to blame the law if it will not relieve them.

In deciding this point I am untrammelled by any decision given on the same point elsewhere. The petition mentions that the same point was litigated between the same parties in the Yokohama Saibansho, when the defendant in the present case sued in that court the plaintiff in the present case for breach of contract in not receiving the same goods. But the judgment in that case has not been put in, nor has it been argued that it could or ought to be put in. As it has been mentioned however, in the course of the case, it may not be out of place for me to refer to it. In that case the Yokohama Saibansho upon this point came to the same conclusion as I have come to, and if this had been the only point to be decided in the case, the judgment of this court must have been as the judgment of that court was in favor of the plaintiff here, the defendant there.

But I do not think that this is the only point to be settled in order to decide the right of the plaintiff to recover. It is well established in English law, and in the absence of any proof to the contrary I am to presume that Japanese law is the same,—that when goods are purchased out of bulk and warranted equal to sample, the purchaser, in the absence of any stipulation to the contrary, can refuse to take delivery of the goods if they are not equal to sample, or having taken delivery of them, can return them within a reasonable time on discovering that they are not equal to sample, and recover whatever he may have paid the vendor for them. But it is equally well established that, when the goods purchased are specific goods and are warranted equal to sample, the purchaser cannot refuse to accept them. He must take the goods, and has his remedy against the vendor for the inferiority in the goods by setting off the difference in an action for the price, or by taking an action against the vendor for breach of warranty. It is possible for the vendor and vendee to make, the goods being equal to the sample, a condition precedent to the completion of the sale. But there is nothing in the present contract to show that such was its meaning. The stipulation as to the goods being equal to sample is, as I construe the agreement, a warranty.

Were the goods then purchased out of bulk, or were they specific goods? The contract is for "300 pieces Black Velvet as per sample; of these 150 pieces shipment of *Martaban*, 150 pieces shipment of *Fleurs Castle*."

I find upon the evidence that these were the whole of the shipments of velvets by those vessels consigned to the defendant. Now it would have been possible for the defendant to have specified the goods more particularly by putting the marks and numbers of the pieces or the cases in the contract, but still even without that I consider that the goods are sufficiently ear-marked so as to prevent the contract applying to any other velvets, and the plaintiff is therefore not entitled to rescind the contract and refuse to accept the goods, because they do not come up to the terms of the warranty.

He ought, as already mentioned, to have taken the goods and to have sued the defendant on the warranty, or when sued for the price, to have given the inferiority in evidence in reduction of the claim. This is clearly laid down in the case of *Heyworth v. Hutchinson* (L.R., 2 Q.B., 447). The plaintiff is therefore not entitled to recover back the money paid on account. I shall now look at the whole case without confining myself to the particular form of the pleadings. By the plaintiff's refusal to take the goods, I find that the defendant has suffered loss to the extent of \$562.50. As to the extent of the inferiority of the goods to the sample, if it were necessary to determine that question with accuracy, I should wish for further evidence. Mr. Walter's opinion is, that the inferiority was not sufficient to entitle the plaintiff to any abatement. But from the view I have taken there is some inferiority, and there must be some abatement. I am satisfied, however, on the evidence given, that the extent of the inferiority does not exceed—if it does not fall considerably short of—the amount which Mr. Walter suggested should be allowed, namely, 25 cents a piece,—that is to say, \$75. Deducting the \$75 from \$562.50 would still leave \$487.50 as the amount due from the plaintiff to the defendant; and the sum which the plaintiff seeks to recover is \$150, or much less than that in which he is indebted to the defendant.

On these grounds, therefore, the plaintiff is not entitled to recover, and judgment must be for the defendant. There are no costs.

Wednesday, 14th March, 1877.

KONDO HIKOYEMON HAKII SEIJIRO vs.
J. E. CARTER.

This case, in which the plaintiff claims \$360, was resumed this morning from the 28th Feb.

The defendant stated that he had been this morning to the Kencho, thence to the Saibausho, and back again to the Kencho, but did not see Kobayashi Hiditaro.

Mr. J. C. Hall mentioned that a Japanese policeman had been sent by the Kencho to Kobayashi's house, but he was not to be found, and that the police had orders to keep a strict look-out for him.

Shimidzu Momiuke, a Japanese lawyer, warned to speak the truth, said: I was asked on the 4th November by Kondo and Hakii to go to Mr. Carter's house to act as interpreter. Kondo there told me to ask Mr. Carter to fulfil his contract, but Mr. Carter said that Kobayashi and another Japanese ought to be present, and unless they were he could not pay any money, as they had a document to return to him.

Cross-examined by defendant:—You asked me to tell the Japanese to bring the document. I never went to your house afterwards.

Defendant suggested that the case be adjourned until Kobayashi be found.

Case adjourned to 10 a.m. on the 27th inst.

In the Judicial Court at Kanagawa.

Before MR. ASAINA KANSUI, Vice President.

Tuesday, March 13th, 1877.

MESSRS. VAN OORDT & CO. vs. TAKAKE
FUSAJIRO.

Judgment in this case was rendered this morning against the plaintiff, His Honour being of the opinion that no binding contract had been entered into other than what was admitted by the defendant, which was, that he had contracted for the purchase of 500 catties of cloves and not twenty piculs, as alleged by the plaintiff. The decision of the Court, therefore, was, that the defendant pay the sum of \$350, the contract price of 500 catties of cloves, and that the expenses, fifty cents, be equally divided between the plaintiff and defendant.

The plaintiff gave notice that he intended to appeal against the Judgment.

Monday, March 12th, 1877.

C. BRAUN vs. KOJIWO SHOKITSU.

This case was adjourned on the 7th inst., at the request of the defendant, in order to allow time and opportunity of producing certain evidence, which he considered would be contrary to the testimony of the plaintiff, regarding the delivery of certain quantities of goods.

The case was set down for ten o'clock this morning, but the hearing did not commence until a quarter past eleven. His Honour apologised to the plaintiff for the detention, which he stated had been caused through a witness for the defendant not appearing, and His Honour had been enquiring from a proxy the reason why.

Mr. Dickens produced further evidence to substantiate what had been given respecting the quantity of goods in the godown. The witness, a Chinaman, stated that when he received goods he informed Mr. Marques who wrote particulars in a book.

Mr. Marques, book-keeper to the plaintiff, also gave testimony and stated that he had written the delivery orders upon details given by the comprador. The Japanese then got the goods mentioned in the delivery orders upon presenting them to the godown keeper; and he thought it was impossible that there should be any mistake as to quantities, numbers or prices. According to the practice of the firm, Japanese merchants might take delivery of the goods after the dates of the delivery orders, but certainly not before.

Mr. Dickens remarked that he had no further evidence to produce, though in the course of a few days he thought he should be able to show that there were in the godown on the 10th of November more than the number of pieces before stated, but it would require a few days to go through the books to ascertain this.

The defendant produced some evidence concerning the delivery of certain goods to a certain merchant; but the witness himself not having taken delivery of the goods and not producing any documentary evidence, his testimony did not amount to much; and what he did give was subjected to a severe cross-examination by the counsel for the plaintiff.

The defendant had another witness, but

Mr. Dickens asked the Court to adjourn, as it was mail day, and if it was inconvenient to the witness it was that person's own fault, as the court had been detained an hour on his account at the commencement.

The case was then adjourned till Thursday, 15th instant, at 10 a.m.

Thursday, March 15th, 1877.

According to promise Mr. Dickens said he had looked through the books from the beginning of 1876, and had found that, prior to the commencement of the arrivals of the 19,000 pieces, (September 28th) plaintiff had in stock 6,200 pieces 9 lbs. Shirtings. The Custom House returns and other documentary evidence were put in. Further proof was given by showing the arrivals from the 1st January in detail. That settled the question, for in spite of the proof defendant brought forward to the effect that plaintiff delivered all the 19,000, this still showed that there was a balance on hand of 6,200, more than sufficient to settle plaintiff's claim. Plaintiff still adhered to his statement, besides, that he had left, out of the 19,200 pieces, 5,700 to give to defendant. Mr. Dickens said the evidence of to-day merely strengthened his assertions; he had never expected to be met with such evidence as defendant had brought forward.

Defendant called a Japanese merchant who produced several books which, in answer to Mr. Dickens, he said had been written under his instructions. He stood over the clerk who made the entries. He took delivery of the goods he mentioned, personally. He could not exactly point out the parcels which he took delivery of himself. He had not brought the book from which he could ascertain these particulars.

Mr. Dickens said this was always the case; he never brought the books wanted.

Witness said it was impossible to mix up different deliveries together in entering. When he took delivery he paid the money for the goods. He never got receipts. He always got a delivery note to give to the godown man. He always went to the Chinaman who gave him delivery and to whom he paid the money. Some time ago he used to get delivery of goods without an order when the people in the office were busy. This was not the regular custom, however. The amounts mentioned in the delivery orders were always taken delivery of though not always on the same day. Sometimes he deposited the dollars at No. 30, and took delivery at their convenience. During September and October witness never took delivery of other shirtings than those contracted for. Witness did not know when defendant first applied to his master for assistance in this case. Witness did not know when defendant first gave access to his books, from which all this information had been obtained. They did not show their books to every one who asked to examine them, but to such as defendant, who was in the same trade, and on friendly terms with them.

Another merchant now enumerated the deliveries he had taken from defendant during September, October and November, the sum total of which agreed with plaintiff's calculation, but the dates differed. Sometimes *satz* were deposited several days before delivery was taken. Witness did not take delivery personally. Defendants first asked him for information about the middle of this month.

Defendant had no more witnesses to call.

Court adjourned till Monday, 26th instant, at 10 a.m.

Monday, 26th March, 1877.

The hearing of this case was adjourned on the 4th instant until to-day; and on the Court assembling this morning, Mr. Dickins remarked that he was very sorry to put His Honour to so much trouble, but the onus rested with the defendant who so persistently demanded proof. At first he, Mr. Dickins, had thought it would have been sufficient for him to show that enough goods had arrived between September and 20th October, 1876, to cover the contract. But the defendant would not admit this and brought a witness to prove that all the pieces of goods the plaintiff had in his godown were delivered before the 20th of October. The differences in the witness' books and the plaintiff's were differences of date of delivery only, which could be easily explained by the fact that often the money was deposited long before the goods were taken delivery of; and while the plaintiff's books always mention the day of actual delivery, the witness' and other books mention the date of payment as the date of delivery, although actual delivery did not take place for some time after, as the evidence of the witnesses would show. Hence Counsel maintained that the books on his side are right and don't really clash with the testimony of the witness produced by the defendant. On the 20th of October the plaintiff had nearly twice as much as was necessary to fulfil the contract. To satisfy the defendant and the Court, the plaintiff had gone to much trouble to prove this. The learned gentleman then particularised the number of pieces that the defendant had in his possession at a certain date, to prove that the plaintiff was in a position to fulfil the contract at the time specified.

Mr. Dickins produced, in support of the above statements, the Custom House returns, Bills of Lading and Invoices for the Shirtings, which arrived between January, 1875, and this date.

The Judge now asked Mr. Dickins to state the circumstances of the second (7 lb. contract.)

Mr. Dickins said that the only defence was that the goods were up to sample. He continued:—The contract was that the Shirtings were to be like those bought in the 7th month. Plaintiff maintains that they were equal in quality and manufacture to the 500 pieces sold in the 7th month. If these 500 pieces were produced by defendant, and if, on comparing with the 5,000 pieces arrived for defendant, they were found to be of a different mark or manufacture, we must lose our case. But as it is impossible for us to prove a negative, defendant ought to produce the whole of the 500 pieces and himself prove by comparison that the 5,000 pieces are not on the average equal to the average of the 5,000 pieces. These shirtings are manufactured in enormous numbers and sometimes one piece will be a little better or a little worse than another: therefore, I do not say that all the 5,000 pieces are equal to the very best of the 500 pieces, but that the average of the 5,000 pieces was fully equal to the average of the 500 pieces and of exactly the same mark and manufacture. The contract simply refers to shirtings that were bought in the seventh month and says that the shirtings now bought are not to be of the same quality but "the same stuff," i.e. the same mark and manufacture, but nothing is said about quality. Nevertheless the quality of the 5,000 is the same as that of the 500. Being made by machinery there can be none but accidental and trifling dif-

ferences. In the answer, the defendant says that the plaintiff requested the defendant to take delivery of the 5,000, offering to reduce the price. This is wholly untrue. The plaintiff simply said, "if there is any difference in the quality we will refer it to an arbitrator and if he decides that I ought to make a reduction, I will make such." The arbitrator suggested by plaintiff was Echizenya, a Japanese merchant; but defendant would not agree to any arbitration. The answer also says that defendant asked plaintiff to take back 5 bales and to pay to defendant the money paid for the 5 bales and interest. This is wholly untrue. The answer then goes on to say that plaintiff brought this action unexpectedly and before negotiations were concluded. This also is wholly untrue. The notice was given to defendant, long before the action was brought, both verbally and by letter, that an action would be brought if the remainder of the goods were not taken delivery of. Mr. Braun can prove that, as can his banto, who wrote the letter. Mr. Braun being unwell did not come to-day; besides, he did not know the case came on to-day. That is all I have to say at present. Let defendant show by comparison between the 500 and 5,000 pieces of shirtings, that the latter are inferior to the former; then we will withdraw the case.

His Honour asked what factory's mark the red deer in circle represented? Mr. Dickins was not certain; but the mark showed that the shirtings which bore it were of a particular weight, size and number of threads. In all probability it was a mark confined to Reiss & Co., but not being himself a merchant Mr. Dickins could not positively say. For a manufacturer to send out different qualities of shirtings under the same marks would be to lose his whole business. No sample is given; they buy by mark, size and weight. In this case the goods were not bought on sample.

Defendant said that, as regard the difference in quality in the two quantities mentioned, he had had the opportunity of comparing them. Plaintiff's banto had written to Mayeda, the purchaser of the goods, offering a reduction in price.

Mr. Dickins asked if plaintiff knew anything about this Mayeda?

Defendant said they were known to each other. Kashiwo made this contract with plaintiff. Defendant had the letter, but not at present with him.

Adjourned till Wednesday, the 28th instant, at 1.30 p.m.

Nippon Notes.

(From the Choya Shinbun, March 8th.)

How can we say that we do our duty to the utmost of our ability, and have gained the confidence of our countrymen, if we do not daily publish in our paper everything which occurs of importance? In such a case as the present when a variety of wonderful reports are circulated in every direction, it is the duty of an editor of a newspaper to publish impartially all that transpires between the contending parties, whether of victory or defeat. Is this not right? Newspapers are now eagerly scanned by a large number of readers, in the anticipation of being made acquainted with what is taking place in connection with the Southern disturbances. And if our publications are not worthy of credit, and are inconsistent, we have no right to complain if our countrymen speak evil of us and denounce us as cheats.

And how is it possible for us not to publish the truth concerning what transpires to either party? Yet we are not permitted to publish what we desire, and why this is so we cannot say.

About twenty days have elapsed since the Imperialists and the rebels first encountered each other at Kuma-moto. All the telegrams since then which have arrived from the southwest, announce that the troops have been victorious. The word "victory" has been read in the papers for the last twenty days. Nothing has ever been mentioned of the insurgents having gained the advantage. If the statements in these telegrams are correct, then the insurgents must have been driven back with great loss, and will not be able to assemble again in sufficient force to obstruct the victorious march of the imperial troops; and the task of subduing the rebels will not be very difficult, and the arrest and execution of the ringleaders will be easily effected. But the indisputable fact that the rebels are still besieging the castle of Kumamoto, and are daily fighting in a number of places, causes the people to distrust the veracity of the telegrams published in the papers, and to consider they are not worth the paper they are printed on. The expression "*Shinbun hora*" (newspaper exaggeration) is heard throughout the country. One day a public story-teller told his audience that nothing in the newspapers could be believed, as they were filled with false reports from beginning to end.

We have no desire to blindfold our readers by intentionally publishing false reports. But out of the hundreds of telegrams which arrive from the field of battle, it is seldom that we can get one; the reports we publish are usually street rumours.

According to intelligence which we have received up till to-day our troops are encamped in a commanding position, and there is a promise of their fighting a great battle shortly and coming off victorious. Were the newspapers in Berlin compelled to publish only information relating to victories during the war between Prussia and France? We believe not.

Notification—No. 26.

To Kucho and Kocho:

At 6 a.m. on the 3rd instant, the Imperial troops advanced on the Yamaka and Takase road and fought against the insurgents. The troops were also victorious in a battle with the insurgents at Kinoha, and set their camp on fire, besides capturing their fort. On the morning of the following day, the victorious army advanced as far as the summit of Tawarazaka; and part of the Imperial forces then proceeded through a by-path as far as Kichiji. Tawara-zaka is a distance of three *ri* from Kuma-moto castle. The army will shortly unite and advance to U-yeki and then establish communication with the castle and other places.

The above is to be notified through every district by order of the Home Minister.

WATANABE NOBORI,

Chiiji of Osaka-fu.

5th March, 1877.

Notification—No. 4.

To Fu and Ken:

Notice is hereby given that 425,000 yen will be allowed for the maintenance of the primary schools for the year commencing with July the 10th year of Meiji (1877) and ending on the 30th June, the 11th year of Meiji (1878.)

TANAKA FUJIMARO,

Vice Public Educational Minister.

8th March, 1877.

THE *Choya Shinbun* writes:—Owing to the South-West disturbances, various rumors are circulated through the Kochi-ken, Shikoku. But all is quiet there, and the various companies of soldiers are in a prosperous condition. The members of the Shiritsu-sha company number about 10,000. An excited discussion once took place among them, which resulted in their separating into two parties, one being known as the Yen-rioku-to and the other Rikutsu-to. But a short time ago they again became united. The Seiken-sha company consists of about 5,000 men, whose opinions were at variance with the views entertained by the Seiritsu-sha, and for some time they were not on friendly terms. Lately, however, they have become reconciled to each other. The Shin-shi-cha at Kita-machi, and Ippo-sha at Yenokuchi have united with the Funiki-sha, Horai-sha, and Koyen-sha. They have also been joined by a large number from the Jojo-sha in Awa. These united companies number about 20,000 men. The most of them are young fellows, aged about twenty years. They are led by Messrs. Baba, Ito, Iwagawa, and Takeda, who have distinguished themselves in the interests of freedom and independence. The Churitsu-sha company, which has been lately formed, numbers about 9,000 men; and this number is daily increasing. Besides these there are also other companies in Toka.

PRINCE FUSHIMI, *Nihon-shino*, was, on the 8th inst., appointed Chinbu-shi (peace maker?) between the government and insurgents, and left for the South-West on the 1st inst.

WASHIO, a noble, has presented a petition to the Acting Minister of the Imperial Household Department to the effect that he may be permitted to ask what Saigo desires from the government in person by visiting him at his camp in the South. But an answer has not yet been given.

THE *Hochi Shinbun* says, that the man-of-war *Kongo-kwan* and two others, which were ordered in England, have already been completed and will shortly arrive in Japan.

NOTWITHSTANDING the South-Western disturbances, the Annual Exhibition at Omiya-gosho in Kioto will be opened on the 15th inst.

THE *Mai-nichi Shinbun* writes:—It has been repeatedly mentioned in the native newspapers that owing to a great famine in Corea, many men and numbers of cattle have starved to death. But the Corean government did nothing to alleviate the distress of the poorer classes. They therefore became much excited as they could not maintain themselves, and have risen in rebellion. Several persons wander about condemning the action of the authorities. The town of Fusan is much disturbed in consequence.

A FEW days ago about 300,000 yen from Gifu-ken and 100,000 yen from Hiogo, were sent to the branch office of the Finance Department, Osaka.

RECENTLY the editor of the *Nichi Nichi Shinbun* was ordered to appear before the Tokio Saibansho and condemned to pay a fine of 5 yen for having violated the press regulations.

ABE, a Kuwazoku has presented 1,000 yen to the government towards defraying the expenses of the Satsuma expedition.

It is rumored, says the *Mainichi Shinbun*, that Mr. Shimadzu died suddenly a few days ago.

CANNON are being manufactured at the arsenal in Osaka.

ABOUT 1,500 men are to be added to the police in Tokio.

ON the 14th inst. at about 5 a.m. a fire broke out in the city of Hakata and was not extinguished till about fourteen houses were destroyed.

MR. KOSAWA, of the *Kofu Nichi-nichi Shinbun*, has been fined 3 yen for having violated the newspaper regulations.

(From the *Osaka Nippo*.)

When Eto-Shinpei was serving the Mikado's government as Minister of Justice he introduced the practice of photographing prisoners in jail in order to facilitate their arrest should they escape from custody; and when he himself evaded his pursuers on the suppression of the Saga rebellion his arrest was brought about by his being identified through a photographed likeness of himself. Now, in regard to Saigo, we observe an analogy between his case and Eto's. They have both, in devising reforms for the Government, worked towards their own destruction. Among those subjects of talent and distinction who introduced and perfected the present military system, the most conspicuous was Saigo. We have heard that he was, more than anyone else, in favor of the suppression of the bad habits and oppressive arrogance of the samurai, and the abolition of the class distinction between the military and agricultural population. And now Saigo finds himself face to face with those very troops which he levied, drilled, and trained himself, and will soon be routed by them. Ah, how hard it is to estimate what will be the result of the designs of mortals!

(From the *Hochi Shinbun*.)

THE DEFENCE OF KUMAMOTO.

"After no matter how desperate a resistance, a fortress entirely beleaguered by an enemy, must surrender when all its provisions are exhausted." This is a verse from a Chinese poem, composed by Riyu before his sovereign, whose General, Chojun, was, at that time, besieged in the castle of Waiyo. All the provisions and missiles of the besieged were exhausted. However, General Chojun remained faithfully at his post, where he was killed, and his gallant conduct is yet a theme for praise. When an English army besieged the French in the castle of Orleans, the latter exhausted their provisions; and nothing remained for the garrison to eat. At this critical moment no reinforcements arrived, and at length the French were obliged to surrender to the king of England. Their gallant defence is yet spoken of with admiration in Europe. Very few, whether in the east or west, of the world can hold their own against hardships and a hundred difficulties.

Troops in a fortress, beleaguered by an enemy, always rely upon the arrival of reinforcements. If it should happen that the relieving forces should be obstructed in their march for many days, and the provisions of the besieged garrison be exhausted, it must be very difficult to protract the defence. Now, the castle of Kuma-moto is entirely surrounded by insurgents. General Tani, the Governor, remains, faithfully guarding the Mikado's flag there: still we have received no information from the castle for many days. The Imperial troops at Takase and Yamaka are said to gain daily victories. But no communication has yet been established between Kuma-moto and the camps of the Imperialists. We fear that, if the troops take much longer to reach the castle, the fate of General Tani will shortly be that of Chojun in Waiyo.

(From the *Mai-nichi Shinbun* of the 17th March.)

"If you want to stop the march of an enemy, you must first take their king prisoner. If you desire to shoot a man on horse-

back you must first shoot his horse." Thus writes an ancient sage. A sovereign has the full control of his troops throughout a country and their advance and retreat is ordered by him. A charger greatly assists his master. Many millions of troops are of no use without their king, and no knight can long fight victoriously without his horse. The king of a country is regarded as the eyes of the entire army, and the charger of a soldier as his hands and feet. One million troops have no eyes without their king, and thousands of brave soldiers have no hands or feet without their chargers. Nothing can be done by those who have no eyes nor hands nor feet. Under such conditions even Moki and U-go could make no use of their ability and talent.

Saigo-Takamori, commander of the insurgents, raised troops in the South-West against the government. He would not be satisfied like a robber or pirate with a small booty. Judging from his conduct, it is apparent that Saigo regards the province of Satsuma as his own, and intends that the battlefield at Kuma-moto shall give him the command of the entire island of Kiushu, by making him master of the castle. If he does not succeed in this, he will immediately retreat to Satsuma, where he will resist the Imperialists in the strong military and mountainous positions of Mitara, and in the forts in the harbour of Kagoshima. According to what we have lately heard the insurgents took violent possession of our arsenals in Kagoshima and carried thence all the military stores to their camps. Their defection is throughout supported in Kagoshima. So the entire province of Satsuma is their stand-by and fortress. As long as that province shall not be placed at our mercy, the insurgents about Kuma-moto will not fall and their communications with elsewhere will not be cut off. So, it is most important to attack them in their own fortress as well as in Kuma-moto. Their Excellencies Messrs. Yanagiwara and Kuroda were sent to Kagoshima to preserve peace. We have already written recommending the armed occupation of Kagoshima. Now a telegram received from Mr. Kuroda announces that large quantities of gunpowder and military stores belonging to the insurgents have been captured. This is indeed good news for us, and may shortly bring about a great change in the aspect of the war. Should that be true and Shimadzu be loyal to the Mikado the insurgents in the province of Higo will have no further source of supply for ammunition and provisions: they will not be able to keep possession of Kuma-moto, or to defend themselves in the forts of Kagoshima and Mitara. The insurgents, numbering about 10,000, will find no way to escape. Our men-of-war are also cruising over the South-Western sea. The Mikado's Envoy and Kuroda have finished their business in Kagoshima with good success, and cut off all help from the insurgents. But when the latter are routed in Higo after a desperate battle, they will return to Satsuma, where they have determined to leave their bones. We do not know whether our troops and police can stand against them or not. So, it is important to station a number of troops there. Is only one battalion of troops and one thousand police in Kagoshima strong enough to stand against the insurgents when the latter are driven to desperation?

(From the *Hochi Shinbun*.)

The following reports, the first from an official of the tenth class serving in the Kagoshima Naval Arsenal at the time of the seizure of arms and ammunition there by the Satsuma

insurgents, and the second from the Director of the Arsenal, are now published:—

MR. SASAKI'S REPORT.

On the 2nd February. I was in my office with Kirino-Toshiaki who was on guard. At about 5.40 p.m. a large number of men forced their way into the office. I was proceeding to enquire the reason for their violence; but was interrupted and asked noisily by them where the military stores were kept. As they had threatened violence two days before, and I had consulted you on the course to be pursued, acting on your instructions, I ordered the men in the service of the arsenal to open all the store houses for them and allow them to take away whatever they wanted. Their numbers rapidly increased; and some rushed wildly about, while others carried away whatever they could lay hands on. One of these invaders asked me who I was? I replied that I was Sasaki Sadashidzu an official of the arsenal. He with his companions immediately arrested me, and reviled me saying that I had perhaps ordered my men to throw water upon the gunpowder. I tried to speak reason to them; but they would not hearken to me and beat me on my head and shoulders. I could not of course resist them to my eternal shame. After having beaten me severely they threw me into the deep water before the office. I swam to land, but they caught me and threw me again into the pond and tormented me there. Fortunately I got a chance at last, and escaped to the workmen's resting room. Here I was met by a boy belonging to the office, who assisted and accompanied me to the hill at the back of the arsenal, where I took refuge in the shrubs, and evaded my enemies. Fortunately I was not severely wounded. The invaders lighted lamps and candles and went through all the buildings, behaving in a very brutal and violent manner. By this time I was quite exhausted and stiff and could not move at all. I was obliged to sit quietly in the thick grass. At about 11 p.m. no more noise was heard in the office, and my wounds were less painful. So I returned to the office, where I found Kirino and others all well. But nothing in the place was left standing, and the machinery had all been broken down. All the military stores were taken away. No one could explain the terrible state of disorder in the arsenal. Mr. Kirino advised me to go to his lodge, where I should be more safe from the invaders than in my own. I did so and left the charge of affairs to him. On the following morning I wished to attend the office, but could not through the pain caused by my wounds. During the same night about thirty men twice attacked my house.

Such is a brief account of the events which took place last night at the arsenal. More minute matters will be told in person, but this is meanwhile reported,

SASAKI SADASHIDZU,

Santo Zoku, (10th Class Official.)

Feb. 3rd, 1877.

To Lieut.-Colonel SUGENO KANPEI,

Director of the Naval Arsenal in Kagoshima.

THE DIRECTOR'S REPORT.

During the night of the 1st February a number of insurgents made their way into the arsenal. On the following morning I had an interview with the Governor of the Kagoshima-ken and asked him for means of protecting the office against them. He replied to me kindly and promised to guard it. Two arsenal officials were left in the office. But the Governor took no heed to its protection. Next evening insurgents in greater numbers

than on the previous night forced their way into the arsenal and beat Sasaki in the office. His report to me is enclosed. Early on the morning of the following day, I was struck with wonder to see the condition of the arsenal, where nothing was left in position, while nearly all the military stores were taken away. So no work was carried on and nothing could be done to replace matters in good order. On the 3rd February the office was closed. The insurgents were hostile to the officials belonging to other ken; therefore all such officials were ordered to withdraw in order to preserve their lives. After a few days the signboard on the gate of the arsenal was altered by the insurgents, who worked there very busily manufacturing and repairing firearms. On the 18th I met the Governor, who told me that he was appointed to the whole command of the arsenal, and that I had better leave in the *Taihei-maru*, which was then anchored in the harbour of Kagoshima. On the 19th, with eleven officials, I left Kagoshima in the *Taihei-maru* and returned to Tokio on the 27th February. I will report further on other matters which I have seen in Kagoshima.

SUGENO-KAKUPEI,

Lieut.-Colonel.

Director of the Arsenal in Kagoshima

March 2nd, 1877.

To MR. KAWAMURA-SUMITOSHI,

Vice Naval Minister.

On the night of the 18th inst. a fire broke out in Kanda, Tokio, and burned about thirteen houses.

THE *Osaka-Nippo* says that most of the former inhabitants of Kuma-moto are in the town of Shimabara in Hizen.

ADMIRAL NAKAMUTA, acting for Mr. Kawamura, Vice Navy Minister, has issued a notice to the effect that two hundred marines are to be enlisted in the Port Admiral's Office in Yokohama.

ABOUT two hundred physicians in Osaka and its neighborhood were lately engaged in the Osaka garrison. One half of them will be sent to Kiushu, where they will serve as surgeons in the field; and the other half will remain in Osaka, whither many soldiers, more or less severely wounded, have been sent from the South-West for medical treatment.

THREE hundred men have been added to the police force in Osaka and two hundred in Hiogo.

ANOTHER man-of-war, to be called the *Iwaki-kuwan*, is to be built at Yokoska.

MR. KOSSEKI, Secretary of the Kuma-moto-ken, who was wounded by the insurgents during Mayebara's insurrection, died recently in the hospital at Kokura, from the effects of his wounds.

On the 16th instant the War Department informed the officers of the Sendai garrison that one battalion would soon be transferred thence to Tokio.

On the 17th instant Lieut.-Colonel Miyagi arrived in Tokio at the head of half a battalion of the Utsuno-miya garrison.

H. E. THE MIKADO has sent two of his physicians, Takenouchi and Yamagawa, to the temporary military hospital at Fukuoka.

A FIRE which broke out recently in the village of Tokiwa, Aichi ken, was not extinguished till about twenty houses were burned.

YESTERDAY Mr. Yamagaki, of the *Akebono Shinbun*, was condemned to be imprisoned for three months and fined thirty yen; and Oyama, of the *Yomi-uri Shinbun* was condemned to a fine of five yen, for having violated the press laws.

ABOUT sixty steam vessels of the Mitsu Bishi Company, are now under the orders of the War Department. The *Heian-maru* is the only one which has not been taken up by the Government.

THE *Hochi Shinbun* says:—The lake Hachiro, which is in Akita-ken, is eight *ri* long and four *ri* broad. During the winter season it freezes all over and then presents a magnificent spectacle, shining like a mass of silver. The ice is so thick that men and even horses can traverse it in comparative safety. This year, however, the ice has not been so thick as usual, as the weather has been uncommonly mild. The fishermen during the winter months have to cut holes in the ice in order to carry on their avocation. On the 18th of February over one hundred men and women were on the ice fishing, when, about one o'clock, a strong wind blew from the north-east and broke up the ice. The portion on which the fishers were engaged became detached and drifted about one *ri* from the shore. The poor people on the floating mass cried aloud for assistance, but none could be rendered. Darkness set in; and as there was no chance of escaping the fishermen had to remain on the ice all night. The following morning, fortunately for them, the wind changed and the block of ice drifted towards the shore, which enabled its living freight to escape.

FROM the *Choya Shinbun* we learn that ex-Daimio Makino has presented the sum of 1,000 yen to the Government, towards defraying the expenses attached to suppressing the insurrection.

THE same paper announces that a letter has been received from the South, dated March 8th, which states that from sixty to seventy Imperialists, on an average, are either killed or wounded daily.

NOTIFICATION.

IWAMURA MITSUTOSHI, late *Shito Hanji*, is appointed the Ken-rei of Kagoshima.

The above has been received by a telegram sent from Kioto by H. M. the Mikado's order.

IWAKURA TOMOMI.

U-Daijin.

21st March, 1877.

THE shizoku in Akita-ken, north, are much excited and are holding meetings.

THE Kencho of Ishikawa, Kaga, will shortly be connected with Tokio by telegraph.

(From the *Nichi-nichi Shinbun* of 17th March.)

As we have previously intimated in our paper, we do not consider there is any danger of a general rising of the shizoku in the various provinces and even if there were they would not be able to do anything very dreadful. We cannot be wrong in saying that the acts of the insurgents are well known throughout the country; and in making the remarks we are about to, we wish it to be understood that we stand upon neutral ground; though perhaps a man in the employ of the Government would side with them when opposition was raised to their authority, especially when the tranquility of the country would be disturbed. If the Government pursues the scheme for the suppression of the insurgents heedlessly, it will

be difficult to say what may be the result of the expedition, and we must therefore be reverential to all.

Now let us consider this trouble with the Kagoshima insurgents. It is well known that the province of Satsuma is their stand-by. We have observed before that it was strange the Government troops did not force their way into Kagoshima, for when the insurgents find themselves exhausted in the province of Higo, where the Imperialists are attacking them along the Kumamoto road, they will retreat into the strongholds of Santaro and there defend themselves; and should the troops be successful in routing them there, they will take up some strategic position in Kagoshima. Such a movement would cause the Imperialists great trouble. The insurgents, who have no systematic method of retreating, have thoughtlessly penetrated into Kumamoto, where they will continue to struggle until their numbers will become greatly reduced. Nevertheless it would be unwise for the commanders of the expedition to presume upon the ignorance of the insurgents, and only attempt to suppress them by sheer fighting. According to information received by us, the scheme of the government for attacking the rebels is as follows: General Kuroda, *Sangi*, has been instructed to fall upon the rear of the enemy. With this object, it is reported, he has left Nagasaki for Yashiro, landing his forces at Kawajiri, the headquarters of Saigo. The loyalty of this General is well-known to all. It is said that when he was in Kioto he advised the despatching of an envoy to Kagoshima, also that he himself escorted the envoy and rendered him all the assistance he possibly could in his difficult mission. His integrity has been disputed by some, but his noble actions have given almost universal satisfaction.

A report is circulated that the city of Kagoshima is at the mercy of the Imperialists; and that Shimadzu and his son have received the Mikado's envoy with hospitality, and assisted him in his scheme to cut off communication between the insurgents at Kagoshima and the insurgents at Kumamoto. Notwithstanding this, we consider that the actions of the Imperialists at Kumamoto will not be of any advantage unless an attack is made on the rear of the enemy. Now General Kuroda has left Nagasaki with this avowed purpose, and he will proceed to attack Saigo's head quarters, Kawajiri. In the course of a few days we shall probably receive some information as to what he is doing.

Respecting Kumamoto castle, the opinion we advanced that it would not be given up by the insurgents turned out to be correct. It is now about twenty days since the castle was first besieged by the insurgents, but neither the commander nor his troops show any signs of discouragement. Of course we do not desire the castle to be surrendered into the hands of the insurgents; but should they take it, it will prove of but little advantage to them, as the campaign is already decided in favour of the Imperialists who occupy strong positions. When the insurgents first penetrated to Kumamoto, the garrison troops were unable to withstand them: they retreated to the castle and there waited to receive them, though it must be said that some of our countrymen disgraced themselves and their commanding officers by their cowardice.

Those whose knowledge of military science entitles them to express an opinion acknowledge

with admiration the excellency of the scheme of the garrison. On the north of the mountainous position of Santaro is a plain, where it would have been difficult for the troops to withstand the impetuosity of the rebels. Although the garrison troops are well trained, if they had been routed on this plain the insurgents would have advanced victoriously before the Imperial troops could have arrived from Tokio and Osaka. The commander of the garrison declining to try conclusions with the insurgents has called forth commendations from learned men.

It is not a good plan for a large body of troops to shut themselves up in a castle, because a small force can besiege the castle and plunder the surrounding country at the same time. The taking of Kamamoto castle was of the greatest importance to the insurgents; and if its capture could have been effected before the arrival of the Imperial troops, it would have influenced the action of the shizoku throughout the country—the effect would be just the same if the castle of Maiyo was taken, as the entire province of Kosui would surrender to the enemy.

We think we are justified in saying that when the insurrection is suppressed the Kumamoto garrison will be the first to be rewarded for their gallant conduct.

The Imperial troops have now advanced within a short distance of Kumamoto castle. We hear that the garrison is short of fire-wood, but that plenty of rice and water is stored within the castle. Fire-wood will be supplied by the destruction of old houses and other things. We would advise that the garrison desert the castle, cut their way through the insurgents, and unite themselves with the main body of Imperialists. Victory is already decided, and there is nothing to fear throughout the Empire. But we do not know yet whether Saigo, the traitor, will leave this world at Kawajiri.

(From the *Nichi-nichi Shinbun*, March 21st.)

Saigo Takamori has behaved treacherously against the authorities, but his younger brother Yoshimichi is a general in the army and is now acting in the capacity of Minister of the War Department, in place of General Yamagata who has accompanied Prince Arisugawa-no-Miya to the South-West. The newspapers have frequently adduced the fate of Minamoto-no-Yoshitomo as an example for others to take warning by. Tomomune says:—"An outburst of passion between families and relations breaks the spirit of and disheartens brave soldiers. Retainers who have been faithful to their sovereign, and men who have been obedient to their parents, are led to behave themselves dishonourably in consequence. What method is there of treating a man who is a traitor to his country?" What beautiful sentiments! The conduct of Saigo has no justification; and the present trouble cannot be termed a civil war, but merely an insurrection. Saigo's crime is very great. Yoshimichi occupies the important position of a general in the army and is one of the strong props of the country. He not only must act in the capacity of Minister of War in Tokio, but if called upon he must also take the field in person and kill Takamori, even as Odo killed the enemy of his sovereign. An ancient sage has remarked that it is quite right for a man to kill his parent, provided that parent has done anything worthy of death; and Yoshimichi will not be able to escape the responsibility resting upon him by resigning his post.

We have heard it said that on Yoshimichi being questioned relative to affairs in the South-West he replied: "Kawamura has succeeded in blockading that important place Umanosaki; and a number of men of war are cruising in the strait between Bungo and Choshu, so that the insurgents are unable to cross from one side to the other. But I hope the rebels will be allowed to advance as far as the Sanyo-do and Tokaido, otherwise I shall be unable to meet my brother in the battle-field." His visitor interrogated him as to what would be done in the event of the Imperial generals now in the South being killed, and he replied thus: "Generals who have gone to the war previous to me had better fall there, so that I and others who are now in Tokio may be able to take the field." From his words it would appear that Yoshimichi was not troubled about his brother, but we cannot tell the feelings of his heart. No information from the South relating that the insurgents had fallen would bring comfort to him, but would probably break his heart. We are sorry for him; but it is right for the public to rejoice on receiving information of the Imperial troops being successful; and the downfall of the insurgents, though it may bring much private sorrow, should be a matter of public thankfulness.

During the war between the Toyotomi and Tokugawa clans the two sons of Sanada, Nobuyuki and Yukimura, in the presence of their father, had a lively discussion respecting the merits and demerits of each party. One brother took one side and the other took the opposite side. Their father advised each to follow their own inclinations, which advice they adopted, and each went his own way and afterwards encountered each other on the battle-field.

(From the *Hochi Shinbun*.)

Notification No. 35.

To In, Sho, Shi, Fu, and Ken.

It is hereby notified that an office for the conduct of the business in connection with the Japanese section of the coming French Exhibition has been opened in the Home Department.

IWAKURA TOMOMI,
U-Daijin.

22nd March, 1877.

On the 22nd inst. Mr. Narabara, Karei of the Shimadzu clan, arrived in Tokio and went immediately to the Daijo-kuwan, where he had an interview with H. E. Mr. Iwakura.

(From the *Nichi-nichi Shinbun*.)

NOTIFICATION.

To every FU and KEN.

In any case when the people unlawfully hold meetings in the provinces, the municipal authorities must first endeavour to persuade them to depart peaceably. If it is found necessary to use force, the authorities may obtain the services of a number of shizoku or heimen, living under their jurisdiction, for the purpose of suppressing the unlawful gatherings. When the people rebel so far as to arm themselves with fire-arms or swords, then the authorities may, according to Article 5 of the Provincial Constitutional Regulations, despatch the garrison troops against them. But, in the event of the rebels rising before the arrival of the troops, a police force may be employed to suppress, and if necessary kill, the rioters.

But government property must not be left unprotected in order that an attack may be made upon the rebels; and, if it is found that they are too strong to be suppressed, all government money and documents must be taken away to a more secure locality. While attending to military affairs the official functionaries must not neglect their duty as civil authorities, and must use their best endeavours to preserve peace and tranquillity in the provinces under their jurisdiction. The above is hereby notified.

OKUBO-TOSHIMITSU,
Home Minister.

On the 23rd inst., at 7.58 a.m., a fire broke out at No. 53, Tori san-cho-me, Motomachi, Kobe, and was not extinguished till after ten o'clock, by which time about eight houses and one godown were burned.

It seems that the excited shizoku in Shonai, Yamagata-ken, have dispersed quietly to their homes. All the fire-arms and ammunition they have in their possession will shortly be taken from them by the local authorities. Mr. Funakoshi, Chief Secretary of the Home Department, has returned to Tokio from the North, where he has been endeavouring to persuade the people to remain quietly at home.

(FROM the *Mai-Nichi Shinbun*.)

A certain foreign consul, resident in Yokohama, (we much regret that we do not know either his name or that of his country) served with the rank of a general during a civil war in his own country, and greatly distinguished himself upon the field of battle. In his present position his warlike ardor still remains with him. * * * As soon as he heard the news of the disturbances in the South-West, the ancient flame was again kindled in his bosom; and he thought it necessary to raise volunteers for the protection (of foreigners). He proposed that volunteers who had lately arrived from Shanghai, fortunately for the residents in Yokohama, shall be engaged for the safeguard of the latter. Several meetings were therefore held at the Grand Hotel, where the Consuls of every country and many other gentlemen assembled. It appears, from a rumor which we have heard, that a difficulty has occurred amongst themselves and the movement has been unsuccessful. That is only what was to be expected. No volunteers will be found here so strangely disposed or so foolish as to serve without wages; and the owners of red hair and beards, being very stingy when money is concerned, are not likely to pay people of no account wages to protect them. Many laugh at the bare idea of such a thing, when the foreigners are so mean that they will not even pay for lighting their settlement, an area, comparatively speaking, not much larger than the palm of one's hand, where, between six o'clock in the evening and six in the morning, all but the blind are in danger of falling.

WORK, which had been for some time suspended in the Takashima coal mine owing to the fire there, was resumed a few days ago, and three hundred tons of coal are got out daily. It is expected that, within a fortnight, an output of six hundred tons a day, the average quantity before the fire, will be attained.

The *Mai-nichi Shinbun* asserts that, two or three days before the insurgents overtly took arms against the government, the agent,

of the Mitsui Bank in Kagoshima was requested to call at the Kencho. He did so, and was politely informed by the authorities of the projected rising and advised to deposit all the money then in his bank with the Kencho, for safe keeping against the insurgents. The agent acted on the suggestion, and immediately sent 500,000 yen in coin to the Kencho authorities who handed it all over to Saigo!

THE following troops are now encamped South of Fukuoka:—Twenty-two battalions of infantry, three brigades of artillery, three of engineers, with sufficient commissariat, and a force of cavalry, the number of which is not stated.

A LARGE number of workmen have been recently hired in the arsenal of Koishikawa, Tokio, where they are very busy from four o'clock in the morning till midnight. There has been no holiday kept in the arsenal since last month. General Saigo visits the works every alternate day.

KONOIKE, a rich merchant in Osaka, and five other residents of the same city, received permission to establish a national bank on the 24th instant. It is to be called the Thirteenth National Bank.

THE sale of newspapers in the streets of Osaka has been prohibited.

Miscellaneous.

It is hard to bring oneself to imagine that there can be any basis of truth for the report that a government, which, whatever its failings, has at least shown an earnest desire to achieve a reputation for great humanity, should have devised so monstrous a scheme as the assassination of Saigo. The propagation of such a report would be a not unnatural nor impolitic move on the part of the insurgent leaders; and the circumstantiality with which it is invested, by the publication of alleged confessions, in detail, of the scheme, and the manner in which it was to be executed, might well be looked for, when once the report itself was well set afloat, at the hands of the astute heads of the Satsuma insurrection. But we would certainly caution our readers against giving it their credence, until they have better authority for its trustworthiness than has so far been made public.

KLENIOFF, the Russian, who last month was sentenced to a fine of \$50 or four days' imprisonment, for having bought a stolen watch from a Japanese woman, was called on the 10th inst. to pay the fine. Being unable or unwilling to do this, he was committed to gaol for the term to which he had been sentenced.

A LETTER received recently by a Japanese gentleman from a relative residing in Chikuzen, announces that the people in that city have been thrown into great consternation though the rising of the samurai; and large numbers have packed up their valuables and departed for a less dangerous neighborhood. The writer states that Prince Arisugawa-no-Miya, Commander-in-Chief of the army, has made his head quarters at the castle of Chikuzen; also that ten thousand troops have been landed there from time to time and been despatched to meet the rebels. On the day the letter was written a battle was raging at U-yeki, but how it has going the writer knew not. Great anxiety prevails among the people.

THE departure of Mr. J. M. Jaquemot by the San Francisco mail has furnished the Editor of the *Echo du Japon* the opportunity

of inditing a well-timed valediction, which we are pleased to translate below. Mr. Jaquemot is much respected among all classes, and his departure will be much regretted, while that of Mr. Ronald Jaquemot will leave one gap, in the personnel of the Amateur Dramatic Club, which it will be hard to fill:—

"One of the oldest residents in Yokohama, Mr. J. M. Jaquemot, who has been for sixteen years in Japan, embarks this evening on board the *Oceanic*. He proceeds to the South of North America, where he is going, nobly and courageously, to endeavor, by working as a colonist, to re-establish a position which was lost in the disasters of the silk season of 1875-76. In spite of his commercial misfortunes, Mr. Jaquemot bears hence the esteem and consideration of all those who have known him, and he has had the opportunity of making many proofs of this during the period preceding his departure. It is not our business to speak of certain things which are within the domain of private life, but we can say that the most flattering testimonies of sympathy and interest have been given to him by those even who have been most affected by his liquidation. It is by the manner in which those who have been smitten by misfortune are treated by public opinion that one can best judge of what they are and what they are worth.

"For us, who see in Mr. Jaquemot only a faithful and assiduous collaborator of the *Echo*, and at the same time an excellent friend, we will not let him depart without expressing to him all the gratitude for the services which he has rendered to our paper, and without saying what a vacancy he will leave in our editorial department. It was not in the *Echo* that Mr. Jaquemot made his first appearance before the public: the English press of Yokohama has long reckoned him among its most appreciated writers; and all the journals here, the late *Commercial News*, the *Japan Mail*, the *Japan Herald*, and the *Japan Gazette*, have owed, as we have, to his elegant and conscientious pen, numerous articles of all kinds, political, economical, and commercial, scrupulously thought out and remarkably well written. But it is the *Echo*, which, for many years, has been the journal of his choice, and it is that paper which will most feel his absence.

"Fortune has been hard on Mr. Jaquemot. She obliges him to recommence his career at an age when a man who has worked hard would have the right to think of repose. But Mr. Jaquemot is of the small number of those who do not allow themselves to be cast down. A distinguished linguist, and an agreeable writer, at the same time a silk cultivator, merchant, and perfect connoisseur of silks, he has, to use a familiar expression, too many strings to his bow not to attain his aim. We hope with all our heart, while wishing him an affectionate farewell, that the new land where he is about to pitch his tent, in company with one of his sons, will be more fortunate to him than the one he is forced to leave; but at the same time we find it necessary to say to him that, whatever may happen, if the course of events should bring him back to us, his return will be hailed as that of a friend."

THE *Niigata-maru*, late *Behar*, got under way at 11 a.m. on the 12th inst. bound for London with a full cargo of rice. This vessel has been, for the nonce, converted from a steamer into a barque. The spars were put in by Mr. H. Cook, and the rigging was done by Mr. H. Pagden, the two contractors for the *Ly-ee-agon* and many other vessels which have come in here in distress. The sails have been made and furnished by Messrs. Hiltz & Co. They

have also converted the *Takasago-maru*, late *Delta*, into a four masted vessel, destined to follow the *Niigata-maru* with rice to London, where new engines and boilers will be put into them, previous to the return of the two vessels to Japan. Meanwhile the temporary alterations which have been made, are pronounced by competent judges to be very complete and to reflect great credit upon the experienced workmen by whom they were undertaken and effected.

THE Agents of Fire Insurance Companies in Yokohama appear to be in a state of unnecessary alarm on the subject of dwelling house risks. About the middle of last month a meeting of the agents was held in private, but we understand the principal resolution then passed was to the effect that all new risks offered after the date of the meeting, and all current risks expiring on and after the 1st January 1878, should be subject to an examination or survey of the chimneys and stove pipes. We also understand that some of the leading offices have ignored the resolution, and decline to avail themselves of the additional security afforded them by peering into chimneys to ascertain if a beam has been purposely placed there by the builders (who by the way are all incendiaries of the deepest dye) with the object of destroying the settlement and thereby ruining the Insurance Offices. Some of the more resolute of the agents have, however, already commenced a crusade on the Bluff and in the Settlement, to the manifest vexation and annoyance of the householders. The foreign residents of Yokohama, who have not the luck to be agents of Fire Offices, are not particularly even-tempered when any of their domestic privileges, real or imaginary, are invaded; consequently the movement, so far as it has already been carried, is calling forth "curses, not loud but deep."

Apart from a jocular view of this matter, we think we are not exceeding our limits in pointing out that the resolution is wholly unreasonable and unnecessary. The assured is bound by the representations he makes on application for insurance, and ignorance on his part of an element of danger so material in its nature as to influence the underwriter in either of two points, namely. 1.—As to whether he will insure. 2.—The rate he will charge; would be fully sufficient to discharge the policy in event of a fire arising from a beam in the chimney. So far Fire Insurance Offices have not suffered in Yokohama: with the exception of the great fire of 1866, the business done has been very lucrative and satisfactory, while the premia charged is exorbitant, and out of all proportion to the nature of the risks incurred. Is it then, wiser for the agents to make new petty restrictions of a description which cannot be carried out in practice, with a view to escape the probable loss which may arise from an overheated stove-pipe, or a chimney shaken out of gear by an earthquake, and so alienate and irritate their chief supporters, than to go on as they have hitherto done, that is, to take the large premiums, pay the few losses, and be content with the fat business they possess.

There is no doubt that any one office openly announcing its intention of disregarding the resolution complained of, will have an immense increase of business.

On the 12th instant, the Government local Marine Board held an examination for the purpose of licensing coast pilots. The examiners were Captains A. R. BROWN and CHRISTOPHER YOUNG, and Messrs. J. J. MAHLMANN and E. T. PERCY were admitted as pilots for the coast

between the Gulf of Yedo and Nagasaki, via the Inland Sea. Captain BROWN has been long and favorably known to the foreign community and Captain YOUNG has a well earned and deserved reputation for his knowledge of the coast and seamanship; it follows therefore, that the pretensions of the successful candidates were submitted to severe practical scrutiny.

The thanks of all persons interested in maritime commerce are due to the Japanese Government for the establishment of these invaluable regulations.

THE only item of interest recorded in the Kobe papers is that the ordinary monthly meeting of the Municipal Council, which should have been held on the 9th instant, was abandoned. The standing Committee have accepted their own resignations, and all the Consuls, with the exception of Mr. NEWITTER, signified their intention of absenting themselves.

A meeting of the Shanghai Rowing Club has been held when it was resolved to send a crew to either Nagasaki or Kobe in response to the invitations of the respective Clubs; but in view of the distance of Yokohama and the unsuitability of the bay for light boat racing, they unwillingly declined the challenge recently given. This is to be regretted, as the annual regattas are sources of much pleasure apart from the encouragement they give to the supporters of a manly amusement.

Tails 600,000 completing the instalment of 1,000,000, due on 31st March, were paid over to Messrs. RUSSELL & CO. on the 28th ult., and the management of the S. S. N. CO.'s steamers, wharves and godowns is transferred to the C. M. S. & CO.

A critical examination of the translation of the confession of NAKAHARA HISAO, Corporal of Police, as published in the *Japan Mail*, and copied into the *Herald* in corroboration of a rumour to which that journal had given publicity on the 28th February last,—namely of a Government plot to assassinate the elder SAIGO,—discloses among others, the following curious facts:—

1.—The orders for SAIGO's assassination were given in the month of November 1874, or before the expedition had returned from Formosa.

2.—They were entrusted entirely to *samurai* of the Kagoshima ken serving (all of them apparently) in the police force of the Government.

3.—The army, the navy, and the telegraph were to aid and abet the assassins.

4.—The Conspirator NAKAHARA HISAO left Yokohama in the *Genkai-maru* on the 28 December 1874. But the passage was very unfavorable and the ship had to anchor at several places, consequently he did not reach Kagoshima till the 11th January 1877, or a little more than two years from the date on which he set out.

5.—He must have been arrested almost immediately after he landed, that is on the 3rd February 1877, and his confession was made forthwith, or within one clear day after his arrest.

Comment on the above is, we feel quite uncalled for.

SERIOUS troubles have commenced in Chikuzen, north-eastern division of Kiusiu, of a character sufficient to cause the government great anxiety as they must cause a diversion of the troops now before the insurgent army.

TAKASAKI, the Chamberlain, has proceeded to Fukuoka at the command of the Emperor, as Imperial Commissioner with special instructions to Arisugawa-no-Miya.

NARABARA, the Chief Kerei of the Shimadz' family, whose detention in Kioto was reported some time ago, accompanied the Imperial Envoys to Kagoshima.

The above two paragraphs tend to show that there may have been some foundation for the rumour, which is gradually gaining ground, that efforts are being made for a compromise, and that an armistice may be resolved upon at any moment.

By the arrival of the *Saikio Maru* we are in possession of some late news from the South. The engagement on the 8th instant is said to have resulted in the defeat of the Imperial troops, and that up to that date the insurgents had been successful in every struggle, except one, since they left Kagoshima. In addition to 15,000 troops well armed and furnished with artillery under the command of the renowned SAIGO, there are upwards of 40,000 *guerillas*, practised sharpshooters, who have committed incalculable havoc among the Imperial officers; and who, having no fixed camping ground, nor head quarters, are able to range the hills in formidable gangs secure from punishment or defeat. Further reports advise that SAIGO has cut off all Imperial communication with Kumamoto; that his system of warfare is somewhat similar to that adopted by Schamyl in his struggles with Russia amid the rugged peaks of the Caucasus; and that he is waiting for the first signs of exhaustion to be shown by his opponents, to fall upon them with his main army of resolute devoted followers.

THE following letter is taken from the *Nichi Nichi Shinbun*. The tone adopted by the writer is remarkable for its determination, spirit, and apparent disregard of the consequences of so free an expression of opinion.

To the Editors of the *Akebono*, *Nippo*, *Choya*, *Hochi* and *Nisshu Shinbuns*.

The newspaper proprietors with a natural anxiety to secure the earliest news of the movements of the Kagoshima insurgents, despatched special reporters to the field of action. The consequence of this has been the publication of any rumours bearing the appearance of truth and calculated to please young men who are too ready to allow their opinions to be swayed by newspapers, to the great profit of the proprietors. It is quite certain that editors of newspapers ought to publish without partiality all that is good and bad, while it is equally their duty to discriminate between truth and falsehood. If this duty be neglected we have no alternative but to stigmatise all newspapers as false and misleading. In the present case you have from time to time deviated from the straight path; you have published false reports under the pretended authority of telegrams announcing this and that; and you have commented thereon with unjust partiality. Now mark me, you newspaper writers who live in an atmosphere of lies:—I, and the men who sympathize with me, will come in force, destroy your offices, and expose your heads upon Nihonbashi! Repentance is too late! Buy soap from foreigners, wash your heads and necks and stretch out the latter for the inevitable stroke of the retributive sword. Think not of defence, for however numerous your supporters may be, we will, sword in hand, wipe them and you off the face of the earth.

If you are men and not cowards publish this merciful warning in your newspapers.

SATSUI IMORO,

Tokio.

11th March, 1877.

As the *Jokoska-maru* had made about half the distance between Yokoska and Yokohama on her return trip on the evening of the 13th, the attention of her master was drawn by some foreigners on board to the fact that the launch of Messrs. Whitfield and Dowson, much closer in shore, was repeatedly blowing her steam whistle, evidently demanding assistance. The *Jokoska-maru* bore down on the launch, which was discovered to have burst a tube, and demanded to be taken in tow. This request was promptly and courteously complied with; and the launch, which had a lady and children on board, to whom a long delay in returning to Yokohama in so small a boat would have been very disagreeable, was towed up to this harbor.

WHAT with restrictions imposed by the authorities on publication on the one hand, and the clamorous demands of the public for news on the other, the editors of the native journals are in anything but an enviable position. And now threatening letters come from all quarters to add to their troubles. We translated one above. We take the following from the *Hochi Shinbun*.

It is addressed to the Editors of the *Hochi*, *Yomiuri*, *Choya*, and *Akebono Shinbun*—

On account of the Kagoshima disturbances, there is no person throughout Japan but is anxiously desirous to know the condition of the rebels. Notwithstanding our desire, you, writers of newspapers, who are regarded as our eyes and ears, mention only false and unfounded rumours in your daily papers, saying as follows:—"The Imperialists gained the victory in the contest.—Their power and influence is gaining ground.—The rebels fled in disorder with great loss.—The impetuous forces under Kirino and Shinohara will shortly be dispersed." This may be all right. But since any engagement first took place, about twenty days have passed, and we have not yet heard that the Imperial troops have driven the insurgents from Kuma-moto. So the former cannot be said to be victorious in each battle they have fought. Kirino, encamped at Yamaka, is a brave leader and a man full of forethought. Therefore the Imperial troops are repeatedly defeated by his men at Yamaka. And, besides, as soon as the notification of the deposition of Saigo and others was issued, the writers in newspapers spoke of Saigo as a traitor, without fear of Mr. Saigo Yoshimitsu, his brother in Tokio. These are important matters to censure you for. You are too inhuman, you, newspaper writers! Cease instantly from your double-faced work, and try to get credit for your newspapers by publishing the truth. I advise you by this writing. Oh, is the anger of Messrs. Fukiosai and Imoro against you not justified?

OSHIMA-SHINSAKU,
in Tokio.

12th March, 1877,

P.S.—Don't discard this letter through fear of——.

THE Tokio correspondent of the *Echo du Japon* writes:—"I am told that the Minister at War received, some days since, a certain number of well closed cases, which, on being opened, were found to be filled with (human?) heads. These are, it is said, sinister presents

sent by the fanatical combatants from Satsuma. A resident in Tokio received, in the same way, the head of his younger brother."

The *Hochi Shinbun* gives the following details on the subject of funeral ceremonies in Corea:—

When a Corean dies the corpse is swathed in bands of a coarse stuff, and laid, with a pillow beneath the head, face upwards, in a long coffin. A mound of earth is thrown up, and on this the coffin is placed, and over the coffin a monument is erected to the memory of the deceased. After the corpse is thus entombed, the family of the dead place fish, rice-cakes, boiled rice, wine, vegetables and dishes of venison and beef before it. In the case of the death of parents, the eldest son kneels down at the head of the near relations before the tomb, and makes offerings of rice sprinkled with wine. This being done he rises to his feet, and cries in a loud voice "Aka-o! Aka-o!" after which he again sits down and burns incense. He repeats his offering, libation, cries, and incense-burning three times, and then takes up a position at the back of the tomb and cries aloud, while his relatives offer rice, sprinkle it with wine, cry and burn incense as he did and the same number of times.

The writer adds that the period of mourning lasts three years. The mourning color in Corea is white; and mourners wear not only white clothes but white hats and shoes. The ninth day of the ninth month is the day on which the Coreans assemble round the tombs of their friends, which they clean and weed. The fifteen of the eighth month, the thirtieth of the twelfth month, and the fifteenth of the first and fifth months, have each their special ceremonies in honor of the dead. The last mentioned day is a great holiday: people dress in their best, visit the sepulchres of their departed friends, and on their return witness wrestling matches. The wrestling in Corea is not very good. Successful wrestlers receive grants from government funds. No woman is allowed to witness the matches. The priests in Corea are vowed to celibacy, and are not allowed to eat fish or meat. Their heads are shaven, and they wear the *kesa*, the ordinary scarf worn by the Buddhist priesthood here and in China.

If the conductors of the native press find it to their interest to load Saigo with abuse and to stigmatise him as a traitor, he, on the other hand, has plenty of friends in the native world of literature to take his part. It is even more than possible that the newspaper editors or their regular contributors write not from their hearts but as meaner organs guide them, and that their own true feelings find vent, under the veil of anonymity and threats addressed to themselves, in such letters as the following.

"To the proprietor and editor of the *Osaka Nippo*:—In your paper of the 7th March, you ventured some remarks upon H. E. Mr. Saigo, president of the new government, whom you compare with Ashikaga-Takanuji. What is your purpose in this? You are so ignorant that you cannot know the reason of his conduct in his expedition to the East. You yourselves are really traitors to Japan. Publish this letter and retract your former expressions! If you do not, your heads will soon be exposed to public view. Let this be a warning to you.

"A BRANCH OFFICE

"OF THE NEW GOVERNMENT.

"8th March."

News from the European Silk markets is much better. Latest telegrams assert a great firmness in the rates in the Lyons and London markets, a satisfactory impulse in business, and marked indications of a rise.—*Echo du Japon*.

THE *Echo du Japon* recently asserted, with almost certainty, that Kuma-moto has been carried by the insurgent forces. It says:—"More detailed information has come to hand corroborating that which we gave yesterday morning. Kuma-moto is said to have been in the hands of the insurgents since the 8th. The soldiers of the garrison, who refused to make a sortie, are reported, in order to take away from their commander every pretext for resistance, to have set on fire the commissariat buildings and the provision store-houses. We are told that these details have been furnished by an eye-witness who arrived recently from Kuma-moto."

APPARENTLY the government intends to bring more force to bear upon the insurrectionary armies, and to try the campaign value, more especially, of its newly organised cavalry. Many horse-boxes are being rapidly manufactured to government order in Tokio; and this would seem to indicate that additions are to be made to the cavalry already in the field.

SOME time ago we drew attention to the advisability, if possible, of improving and widening the approach from the Bluff to the Yato Bashi, which is at present both narrow and, owing to the abruptness of the turn at the foot of the hill, dangerous. Several accidents, which can be directly traced to the very bad arrangement of this portion of a very frequented road, have from time to time occurred. Soon after we first drew attention to the matter we were informed that negotiations had been opened between the French Consul and the Municipal authorities for the cession by the former, on the part of his Government, of a corner of the block, which being enclosed is the principal cause of the inconvenience we indicate while it is not used for any purpose, known as the French camp. Matters remain as they were, however, and there is no sign of any approaching enlargement of the road. We believe that Mr. Kraetzer's successor in the French Consulate will arrive shortly from Europe. Many Bluff residents would be glad to owe, to one of the last official acts of a gentleman who has so worthily discharged the duties of his office, an improvement which would greatly conduce to their convenience and often to their safety.

WITH reference to the above paragraph we are informed by Mr. Kraetzer that the grant of a portion of the ground necessary has in fact been made by him to the municipal authorities, and that, on the arrival of his successor in the consulate, Mr. Pierret, who has taken his passage by the Marseilles mail due in Yokohama on the 1st April, it will be decided on what portion of the now unoccupied camp ground the projected buildings for the new French Consulate will be erected. After that the road will be enlarged and improved at the convenience of those who have the care of such works.

THE side road leading to the Bluff by the old Small-pox Hospital is being repaired and graded, a great improvement and one which was much needed.

THREE somewhat remarkable documents purporting to be confessions made by some of the men recently arrested in Kagoshima, of the

plan to assassinate General Saigo, have been placed in our hands. Their general tenor corroborates the substance of the confession of Nakahara Hisao, recently published in the *Japan Mail*, with a number of additional circumstances throwing further light upon this shameful and murderous scheme. We refrain, for the present from publishing, or rather we hesitate to give to the public, matter involving charges of such gravity against two, if not more, members of the present government. In event, however, of these confessions being hereafter supplemented by the additional evidence absolutely requisite to support the accusations, we shall at once make them public. In the meantime a spirit of fairness compels us to say that the whole of the so-called confessions may be fabrications of certain unscrupulous members of Saigo's faction, and in the interests of justice we consider our duty is best performed by suppressing them until the government has had an opportunity of thoroughly investigating the whole affair, which investigation it is to be hoped, out of regard for its own reputation, will be performed in public.

BETWEEN midnight and one o'clock on the morning of the 17th inst. just after the audience which had assembled at the Gaiety Theatre had dispersed, a fire broke out in an unoccupied house in Gochome, Motomachi, Homura, close to the Fudo temple. A strong north-west wind was blowing, and the flames spread with rapidity, sweeping from the point of inception to within a short distance of the Messageries Maritimes coal yard, and consuming from two to three hundred houses. The engines could be of very little service, and practically the fire only ceased when it arrived at a vacant space where it had nothing more to burn. The sufferers by this disaster are principally poor coolies who live from hand to mouth, and who not only are rendered homeless but have in many cases lost their all. One young woman who was bed-ridden and could not be moved was burned to death. Possibly the amateurs who so generously gave their time and talent in aid of the distant sufferers by the Civil War in Spain, might give a second performance for those closer to their doors whom calamity has rendered destitute.

DURING the half gale which blew on the 18th instant the schooner *Banner* dragged her anchor and went ashore on the beach near the French hatoba. When the wind moderated she was got off and was found to have sustained no damage. A small steamer which came down from Tokio was also aground for a short time off the English hatoba.

THE *Hongkong Daily Press* makes the following remarks upon the trade of Japan :—

There is no reason why the production of copper, camphor tobacco, wax, and other articles, for which a ready market exists in Europe, should not, under favourable circumstances, be largely increased, and millions of acres of waste land be thus made to contribute to the wealth of the country. In Yezo, it is stated, there are vast tracts of land capable of producing excellent wheat crops, and the mineral deposits of the country are still scarcely tapped. Until, however, the Government sets to work in earnest to construct roads by which transport to a part of shipment can be facilitated, comparatively little progress will be made. The authorities are undoubtedly most anxious to forward the prosperity of the people, both by opening up mines and by the creation of new industries; but it has been singularly unfortunate with many of its undertakings, and, owing to inexperience, has often begun at the wrong end. The people have, moreover, been incautious in their adoption of Western inventions and institutions, rashly purchasing articles of luxury they could well have done without for some time to come. It is to be hoped that the Govern-

ment will, if it can manage to quell the Satsuma insurrection without bloodshed, go steadily and soberly to work to find out the best and most economical way in which to develop the productive power of the country. If the present condition of affairs be allowed to go on for many years, a feeling of discontent, ending in reaction and revolution, will follow. For this there is, however, no occasion, provided the Mikado's Government will only act with prudence and care. It could not do better than take the advice of some disinterested foreigner on the subject of the development of the mineral wealth and agricultural capabilities of the empire."

This is in great part true, but the Editor of the *Daily Press* has not touched the heart of the matter. What is wanted for this country is that it shall be opened to foreigners, and its resources developed by foreign capital. To hasten the day when this shall take place would be the advice given by the "disinterested foreigner," provided his ideas were at all level on the needs of Japan.

WITH reference to this question of the opening of the country, we have another alleged instance of the contact of extremes. The Satsuma people who were most opposed to for eigners being allowed even a *pié-à-terre* in Japan, are now said to be those who are most keenly alive to the advantages to be derived from extended intercourse with them. We have heard it said on good authority that one of Saigo's demands is that many of the restrictions placed on foreigners shall be removed, and that they shall even be invited to employ their capital in the development of mining and other industries.

A telegram from Colonel Hayashi at Kobe says that a Chinese man-of-war, the *Kai-an*, arrived there on the 20th. He boarded the vessel and asked the captain his business in Kobe. The reply was that the crew were being trained in seamanship. She will stop there for about one week, after which it is not yet decided whether she will go on to Yokohama or return to Shanghai.

HAKODATE, March 13th :—The Japanese schooner *Efuku* has been lost on the coast of Yezo, near Horoidzumi. The M. B. M. steamer *Serio* has been to Awamori and taken in troops and munitions of war for Sendai. The Kaitakushi steamer *Hakodate* lost a boat and one man on her last trip to Otaru. Range of temperature from 1st instant 20° to 42°. Weather fine and mild; prevailing winds W. to N. N. W. The *Hakodate* brought a hundred "military settlers" from Sapporo to garrison the fort. A guard and look-out is stationed on the mountain (Hakodate Head). Ten men and a corporal patrol the streets day and night; and the *Hakodate-maru* is stationed here as guardship.

THE *Osaka Nippo* states that, on the 12th February, on the expiry of the engagement of Mr. Wm. Pole, F. R. S., Consulting Engineer in London to the Imperial Government Railway Department, a present of 2,000 yen and two rolls of silk was set apart for him in recognition of his valuable services.

AN official notification has been issued by the Prime Minister deposing Oyama, late Governor of Kagoshima, from his office.

THE Police force in Tokio has been reinforced by about eight hundred shizoku from the Ebaragi ken, who arrived in the capital yesterday.

A new Japanese trade dollar has been issued recently, a handsome coin, and of the full value which it represents—a coin admirably adapted to take the place here usurped by the

Mexican as a medium of exchange, or at least to circulate side by side with it.

THE Ministry for Foreign Affairs will remove from the temporary offices it now occupies in the Kobusho to Ohmagoten within one month from this date.

TODA, ex-daimio of Ogaki, Mino, who lately visited Kioto to pay his respects to the Mikado, had been, previous to that, doing good work in his old dominions. He assembled the most prominent men of his former retainers in a monastery, and exhorted them to do their utmost to preserve peace and order in the province. He distributed among them yen 10,000; and gave yen 5,000 to the agriculturists, and yen 3,000 for division among the inhabitants of the town of Ogaki.

THE *Choya Shinbun* publishes the following regulations for the guidance of newspapers during the continuance of the insurrection :—

The proprietors of newspapers are warned that they must not publish any of the following things :—

1. The name of the sender of any telegram received from the South.
2. The appointed date of an attack contemplated by the Imperial troops, or of a march or counter-march of any section of the army.
3. The strength of the Imperialists or insurgents; and the arms, ammunition or accoutrements in the possession of either party.
4. The names of Imperial officers who may be killed or wounded.

Notwithstanding the information may be received by telegram or post, or from the best and most trustworthy sources.

SECOND SECTION, KEISHI-KIOKU.

Tokio, 21st March, 1877.

Concealment of their movements, and weakness as opposed to the insurgents, would seem to be the chief object of the government in thus destroying the utility of the native press, consequently it becomes a duty to warn the public against attaching any credence to the reports from the South which may hereafter appear in the Tokio newspapers.

In consequence of the attendance of but few members, the meeting appointed to be held at the Chamber of Commerce on the 22nd inst. to discuss the important resolution, "that it is desirable there should be in this port a silver currency among foreign merchants which shall circulate in the interior of the country," was adjourned *sine die*. This is much to be regretted: the resolution intended to be discussed is one of considerable interest to a community essentially mercantile, but we are not without hope that, failing the possibility of securing sufficient attendance for the purposes of verbal discussion, the matter may be brought prominently forward in the local press. The mode in which Japanese coin is disposed of, and the blind dependence of merchants upon the banks, seriously prejudice the freedom with which trade ought to be conducted in a market distinguishable for the spirit of keen competition among foreigners and it is eminently desirable that a new coin of account should be adopted.

This year's "Hof Kalendar," or Almanack of Gotha, has for its frontispiece a very good likeness of the Empress of Japan. It contains also a portrait of the Mikado, and one each of Pauline, Duchess of Wirthtemberg, and the Earl of Beaconsfield.

OTAMA TSUNAYASHI, late Governor of Kagoshima, arrived a prisoner from Nagasaki on board the *Nagoya-Maru* on the 22nd inst., and was at once transferred to Tokio, where he is to be put upon his trial on some charge, probably of complicity in the seizure of the gunpowder and arms in the arsenal by the insurgents. In bringing him to Yokohama no regard was shown to his rank, or possible innocence. During the first part, at least, of the passage from Kobe he was put on deck forward among the sheep and cattle.

FOURTEEN or fifteen samurai were also brought up under arrest in the *Nagoya-maru* from Nagasaki and transferred to Tokio the same morning.

BARON ALEXANDER VON Siebold, attached to the Finance Department, leaves shortly for Europe on a special mission in connection with his department. He expects to be absent from Japan about six months.

A PROOF of Saigo's popularity, especially among the southern people, is cited by the *Hochi-Shinbun*. Ikebe, a Kumamoto shizoku, and formerly a great friend of Saigo, after the insurrection broke out, collected a number of young men and harangued them to the effect that they should never join "the traitor." His audience became so angry that they hewed the orator in pieces.

ABOUT THIRTY of the most prominent of the German residents and their friends met on the evening of the 22nd instant to celebrate the Emperor's birthday by a dinner, given in the banquet hall of the Club Germania, which was most tastefully decorated for the occasion. Mr. A. Evers occupied the chair. The toast of the evening, the health of the illustrious monarch whom the guests had assembled to honor, was proposed by Mr. E. Zappe, the German Consul, in warm and patriotic terms, and was responded to with cordiality and respect. As is usual on the Emperor's birthday no other toast was drunk; but the evening was enlivened with songs and other amusements, and the convives did not separate till a late hour.

CAPTAIN J. CARST has returned from Cape Idzu accompanied by the diver, Mr. Sutherland, appointed by the British Consul and the United States Consul General at the request of the French and Netherlands Consuls to survey the wreck of the French Mail Steamer *Nil* and report upon its condition. From what we can gather, it appears that the diver found the ship in the condition in which she was reported to be by Mr. Jan der Boer some time ago, namely with the port side and decks blown to pieces, and no cargo visible.

THE Government are about to lose the services of a very valuable foreign officer. It appears that Mr. J. W. Fenton, professor of music, is about to return to Europe on the expiration of his engagement. The *Akebono Shinbun* states that a banquet was held in his honor at the Seyoken restaurant in the Uyeno Gardens.

WE fear that little can be done in the matter to which a "lady resident" draws attention in a letter which appears below. It appears that she could not swear to her uninvited and unwelcome guest, even if he could be arrested, and charged before his Consul with vagrancy. He and others in the same case, without visible means of subsistence, might be so charged, if they could be arrested; and those whom they frighten and

from whom they really extort alms would appear against them. Conviction before the Consul of whatever nationality the vagrant might belong, to would be followed by deportation, or, failing that, a transfer to Japanese jurisdiction. The "refuge" to which our fair correspondent alludes, has not been much frequented by the class for whom it was intended, even during the severe winter of the past few months. One man only has used it frequently as a shelter and a place where he could obtain a morning and evening meal. Others of the reduced number of foreign loafers, have preferred their old precarious style of existence. While we are sorry for the troubles of a "lady resident," and would gladly see vagrancy done away with here, where there is so little excuse for it, we cannot forget that poverty is an unavoidable evil; and that there is the highest authority for the belief that "the poor shall not perish out of the land."

ACCORDING to the *Akebono Shinbun*, one at least of the conspirators, alleged to have been suborned by the Government to assassinate Saigo, has publicly recanted his "confession," which he now says was wrung from him by torture in Kagoshima. It will be remembered that in his "confession" itself he stated that he had not been tortured. So that it would appear that torture was applied to him not only to make him confess, but to confess that his confession was spontaneous. The *Akebono Shinbun* says:—"The following account of Mr. Nomura's imprisonment by the insurgents in Kagoshima has been related by himself:—'I arrived at Kagoshima in the steamer *Koyo-Maru* three days after the insurgents had forced their way into the arsenals. On landing I was arrested by a policeman and taken to the Kencho, where I was examined by the Chief of Police, Nirei. He first enquired what business I had returned to the ken to transact. I replied that I had been engaged in educational affairs in the late Miyagi-ken; but, on that ken being abolished, I regretted very much that a number of enterprising students should be left without the opportunity of completing their education, so I took them to Tokio and placed them in a good school. Having no business in Tokio, I returned to my birth-place, Kagoshima. But the Chief of Police refused to believe me, and pronounced that I was sent by the Government to execute some secret order; and then, under severe torture, compelled me to confess and seal my confession. At that time the rebels were ready for marching towards Kumamoto. Before departing, they became very excited and wanted to kill me and some others who had been imprisoned by them, but Saigo would not permit them. When the Mikado's envoy arrived in Kagoshima, the Kencho despatched an express messenger to Saigo at Kawajiri, asking for instructions as to what was to be done with the prisoners. An order came back that they were all to be killed. In the meantime the envoy hastened to effect our liberation, which was fortunate for us all, as otherwise we should all have been killed.'"

WE have been requested to give publicity to the following appeal in behalf of "starving multitudes" in the Chinese Provinces of Shantung and Chihli:—

[Circular.]

NETHERLAND LEGATION IN CHINA.

To His Netherland Majesty's Consul and Subjects in China, Japan, the Philippines, Hongkong, Macao, Cochin-China, Siam, Straits Settlements and India.

GENTLEMEN.—It was pretty generally known that during the summer and autumn of last year various

parts of the Provinces of Shantung and Chihli had suffered from a drought, which would result in more or less distress from the scarcity of food that must necessarily follow, and indeed symptoms—in themselves grave—began to be manifest as winter approached, though only trifling as compared with what has occurred.

Towards the middle of November regular communication from reliable sources in the interior of Shantung ceased, and native report was the only source of information as to the condition of the suffering province. It appears that, in the interim, matters were becoming daily more and more aggravated, and that the aid given by the Chinese Government towards the suffering districts, proved not to be sufficient, so that urgent appeal was made to the people of other provinces and the foreign communities in China.

About the 25th of January communications were again opened with the coast, but unfortunately the first letter, coming through Chinese hands, only reached its destination long after subsequent accounts, which confirmed the worst fears and depicted a state of unutterable distress. The word which now reaches us says that thousands are already dead of starvation, and thousands more are starving.

The principal scenes of these sufferings in Shantung are eight *hiens*, viz: Liu-ku I-tu, Chang-lo, Wei-hien, Lo-ngan, Show-kwang, Ling-to and Poling. Of these Liu-ku suffers most and gets 10,000 taels in relief, from the 43,000 taels granted, for all, by the Government; but though the distribution of gruel has doubled, yet the suffering has more than doubled. The people have eaten up the little crop they got in the autumn and now are in the direst plight, and their cry is no longer for rain, but for life.

With reference to the extent and degree of sufferings the following details will give an idea. A moderate *hien* contains about 1,000 villages of 500 families report 300 persons dead of starvation; villages of 300 families, 100 persons, and so on. One village in Liu-ku had 180 inhabitants in it last summer; now there remain 93, 40 are dead and the rest gone away.

The course of the distress to be that as soon as the corn is all eaten, they resort to the husks; then potato-stalks, elm-bark, turnip leaves and grass seeds gathered in the fields. When these are all done, they pull down their houses, sell their timber, eat the rotten sorghum stalks from the roof, and the dried leaves, which they usually burn as fuel. Thousands eat fuel leaves, and thousands more die because they cannot get them. Then they sell their clothes and children. Having no more clothes many take refuge in pits built under ground, to keep themselves warm by the foetid breath of the crowd—a course which is bought dearly. For the east suburb of Ching-chow city, there are four such pits. One third of the number, 240, originally put in them, died within six weeks, and yet no sooner is a corpse carried out than a crowd is struggling for the place. All this has wrought a great change in the spirit of the people. Late in the autumn they were strong and daring, and although life and property were then at their mercy, no popular disturbance of any kind has taken place. Now the fare they have had for many months has broken their spirits, and they are quiet and submissive to their dreadful fate. Starvation by inches faces these unfortunate people, and deputations of old men, who come to beg relief, weep like little children before you, when they find there is none to be had. Not a day passes but one must refuse to many who ask it, perhaps the last bit they would have eaten.

The Chinese Government and the people of the other provinces do what they can, but the calamity is too great to be met by ordinary means. There is a Government distribution of gruel to the value of six or eight *cash* per person per day. Many have lived on nothing else for two months, and are getting so weak that young men of twenty years cannot walk three miles for it. If it is so with youth, how must it be with the infant and the aged? Even though the gentry have in many places doubled the Government aid by their contributions, yet it is estimated soberly that there are districts in Liu-Ku, where half the people will not live to see the wheat crop ripe, if no support comes from outside. To all this there is added the one capital aggravating circumstance—the depreciation of the land to about eighty per cent below its normal value. Next comes the fixing of an upward limit for the price of grain, thus preventing the influx of supplies from neighbouring provinces. There has been no such famine as this in these parts for 90 years, since the 51st year of Kien-lung (A. D. 1786). The number of lives saved and orphans rescued will only be limited by the amount of

money placed at the disposal of the distributors. Thousands may be tiled over the famine at \$4.00 per head. Who would not like to be the deliverer of fifty or a hundred human beings from starvation, where nothing but money is to be given? These are the heartrending accounts which reach us here daily. This is not pleading for charity to the poor, but for the ransom of their lives.

I therefore take the liberty to appeal to the Netherland Consul and my countrymen in this and the adjacent countries to give a helping hand during this exceptional famine and distress in the two above named provinces of China. The Netherland Consul at Shanghai and at Chefoo will receive all gifts collected by His Majesty's Consuls at other ports in China, Japan, the Philippines, Hongkong, Macao, Cochinchina, Siam, the Straits Settlements and India, and hand these collections over to proper persons in the interior for distribution, of which an account will be published in due time, in the local papers of Shanghai, for the information of those who have responded to this appeal on behalf of our starving fellow-creatures in China.

I have the honor, etc.

J. H. FERGUSON.

H. N. M. Minister-Resident
and Consul-General in China

CHEFOO, 1st March, 1877.

WE TRANSLATE and publish below for what it is worth a short but caustic article from the *Mai-nichi Shinbun*. The promoters of a volunteer movement in Yokohama will be a little astonished to learn that their proceedings have been misconstrued into a desire to engage the volunteers in Shanghai to come hither and defend the settlement.

THE M. B. M. S. S. *Seirio Maru*, is said to have had three hundred tons of gunpowder on board. She left on the 25th for the South; but several hours before her departure she lay with her dangerous freight just off the English hatoba. When we consider that the slightest carelessness might have been the cause not only of the vessel being blown up but of the destruction of the entire settlement the question naturally occurs, would it not be right on the part of the authorities to see that vessels similarly laden should lie in a position where they would be less a source of peril to the other shipping and the inhabitants of the town?

THE *Kworio-maru* took two hundred troops and about one hundred tons of ammunition to the South. The *Nagoya-maru* carried about one thousand troops. Many of the men of these contingents are raw boyish levies from Hakodate.

PROCEEDINGS AT THE KAISEI GAKKO (TOKIO.)

Notwithstanding the very unpropitious state of the weather on Saturday evening (24th), the inaugural addresses in the English language were delivered in the new Lecture Hall of the Kaisei Gakko. Of the hall itself nothing more need be said than that it is very much like any other such hall and will doubtless answer very well all the purposes for which it was built. The audience, owing, we suppose, to the cold and rain, was composed almost entirely of the students of the Kaisei and Go Gakkos, not more than nine or ten foreigners being present.

The addresses were four in number, and were commenced by a young student of one of the American Universities. The subject he had chosen was the causes opposing the spread of Christianity among the Japanese. The silliness of the remarks of this young orator was only exceeded by their bad taste.

Doctor Veeder then addressed to the stu-

dents some very apt and highly interesting remarks, the moral of which was that they should endeavor to prosecute their studies with that thoroughness from which alone we may hope for success.

The proceedings were then taken up by another youthful aspirant for oratorical honors who owed his education to England. His theme, as well as we could make out from his broken English, was something connected with filial piety, the superiority of the Japanese race, and the avarice of foreigners, and his remarks thereon, if as inane as those of his predecessor, had at least the virtue of not being in quite such bad taste.

Doctor Murray next addressed the audience upon the educational aspect and influences of the Centennial Exposition. It would be impossible for us to give here even a résumé of what the Doctor said upon this interesting subject; suffice it to say that it was treated in a manner at once masterly and pleasing, and that it was with regret that we heard him conclude. The proceedings were terminated at about 9 o'clock, by which time, happily for the foreigners, most of whom had a long distance to travel, the night had cleared.—*Communicated.*

It is said that the firm of König & Bauer, Germany, has recently received an order for thirty-four printing machines, several of them for two colours, for Japan.

OWING to the continued indisposition of General T. B. Van Buren, the case of E. B. Watson against Messrs. Walsh Hall & Co., has been again postponed. It will be resumed when the U. S. Consul General is well enough to hear it.

MR. MACHADO, British Postmaster, has received a telegram from Hongkong the purport of which he gives in his notification of today's date. It is to the effect that the contemplated reduction in the postal rates by British Mail will not come into effect, here at least, on the 1st April. The reason for this is at present unknown, and will probably remain so until the arrival of the English Mail, due on the 7th proximo.

Correspondence.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

THE INSURRECTION.

To the Editor of the *Japan Gazette*.

DEAR SIR:—Having occasional opportunities of conversation with native officials from whom I get some hints about the present insurrection. I am well satisfied that the charge of an attempt to assassinate Saigo is well founded in truth. It seems that the present quarrel is ready a feud between Satsuma and Choshu, and in its origin is not really a rising against the Imperial Government. To trace it from its beginning, it would be necessary to go away back to the former history of rivalry and jealousy between the clans. Recently the Choshu people have been jealous because the Satsuma people have been allowed to get and hold so large a share of political place and power to the exclusion of others; and other clans have held with Choshu in their opposition to Satsuma in this regard. It was this opposition of Choshu and other clans that held the Government back from giving still more patronage to Satsuma and so caused Shimadzu

and Saigo in anger to retire from office, and the same reason now prevents the samurai of other clans from joining the insurgents and leads some even to offer their services to aid the Government. The Satsuma men who now remain in office and who are now pressing H. I. Majesty to destroy the rebels, have joined the Choshu party. . . . This state of things will tend to localize the insurrection. The lack of success of the Government troops seems to be chiefly owing to the inferiority of the material of Imperial forces, which will doubtless improve with experience on the battlefield: and with the superior resources possessed by the Government, the latter must eventually gain the victory. In the beginning of the great rebellion in America the volunteers lacked discipline and other fighting qualities, but experience soon made good soldiers of them, and at the last they became valiant defenders of their country's flag.

It will be a difficult task for Saigo to get into the Osaka Castle as he no doubt hoped to do after taking the Kuma-moto Castle. He is daily growing weaker, having little opportunity of recruiting, while the Imperialists are daily improving and adding to their power of attack. Even though the insurgents get the Kuma-moto Castle, they will have little opportunity of getting supplies, and will be likely to be shut up there: and without any great assistance from other quarters must ere long yield to superior numbers and resources.

There is no common bond of feeling or interests between the Satsuma samurai and the samurai in other clans; but ancient tradition and recent politics all tend to isolate the insurgents and leave them to fight their battles alone.

Such is the best view I can get of the present situation from native sources.

Very truly yours,

AN OBSERVER.

Yokohama, March 15th 1877.

VOLUNTEERING.

To the Editor of the *Japan Gazette*.

DEAR SIR:—

In connection with the Volunteer movement one cannot but feel a degree of compassion for the *Japan Weekly Mail*, when it positively asserts, as it does in its issue of the 17th inst., that there is no law forbidding British subjects from entering into a military organization such as that proposed: therefore, to set all doubt on the subject at rest, it may be as well to quote a portion of the act bearing on the subject, which runs as follows:—

"Be it therefore enacted. That at all "meetings and assemblies of persons for the "purpose of training or drilling themselves, or "of being trained or drilled to the use of arms, "or for the purpose of practising military "exercise, movements, or evolutions, without "any lawful authority from his majesty or the "lieutenant, or two justices of the peace of any "county or riding, or of any stewardry, by com- "mission or otherwise, for so doing, shall be "and the same are hereby prohibited, as dan- "gerous to the peace and security of his majesty's "liege subjects and of his government: and "every person who shall be present at or attend "any such meeting or assembly for the purpose "of training and drilling any other person or "persons to the use of arms, or the practice of "military exercise, movement, or evolutions, or "who shall aid or assist therein, being legally "convicted thereof, shall be liable to be trans- "ported for any term not exceeding seven years, "or to be punished by imprisonment not ex-

"ceeding two years, at the discretion of the court in which such conviction shall be had; and every person who shall attend or be present at such meeting or assembly as aforesaid, for the purpose of being, or who shall at any such meeting or assembly be trained or drilled to the use of arms, or the practice of military exercise, movements, or evolutions, being legally convicted thereof, shall be liable to be punished by fine and imprisonment not exceeding two years, at the discretion of the court in which such conviction shall be had."

But the right or otherwise of the members of the community to form themselves into a Volunteer Corps does not depend on the question as to whether the country to which any individual may belong has, or has not, a law prohibiting drilling to the use of arms, it being a matter of international law, and no public functionary, government, or sovereign of any country has any right, or power, to authorize, or sanction the arming, or drilling to the use of arms of any persons within the territory of a power with which that country is at peace, without the express consent of the sovereign or government of such power.

Chitty in his work on the Law of Nations says:—

"After having established the position that foreign nations have no right to interfere in the government of an independent state, it is not difficult to prove that the latter has a right to oppose such interference. To govern herself according to her own pleasure, is a necessary part of her independence. A sovereign state cannot be restrained in this respect, except it be from a particular right which she has herself given to other states by her treaties; and, even if she has given them such a right, yet it cannot in an affair of so delicate a nature as that of government, be extended beyond the clear and express terms of the treaties. In every case, a sovereign has a right to treat those as enemies who attempt to interfere in his domestic affairs otherwise than by their good offices." Again from the same author:—"The right of levying soldiers belongs solely to the nation or the sovereign, no person must attempt to enlist soldiers, in a foreign country, without the permission of the sovereign, &c."

It is true that a Volunteer Corps exists in Shanghai, and also that foreign officials have taken part in the same; but this is no argument in favor of a similar organisation here, as the Chinese Government have the right to object to such proceedings. If they do not do so the fault rests with them.

MARS.

Yokohama, March 19th, 1877.

SAIGO A PATRIOT.

To the Editor of the *Japan Gazette*.

SIR:—Your able and impartial article in your issue of 21st inst, deserves attention. Every thinking man must indeed deplore the unfortunate civil war which now deluges this beautiful land with the best blood of Nippon's bravest sons.

Let us pause for a moment to consider what are the causes of the repeated insurrections which break out one after the other amongst a people as courteous, as kind hearted, as generous, and easily led, as are those of Dai Nippon.

There is but one answer which can be given. It is the vacillating and pernicious system of government which immediately succeeded the restoration.

A system inaugurated by a set of "new men" who strive to make one believe they are not natives of Nippon, and who are constantly hunting after the shadow, and losing the substance, of something new or foreign. It is such as these who treat the people whom they are called upon to govern and protect with disdain and contempt, who are deaf to their repeated petitions, and, having suddenly seized the reins of government in the name of His Majesty the Mikado, have set themselves to work to destroy the old nobility, crush the spirit of the people, and rule them as slaves.

The struggle that is now raging is the result of years of oppression until the burden has become unbearable. In vain have the people demanded a Representative Assembly, where their grievances would be heard and redress granted. No, it suits the policy of the Central Government who claim, or attempt to claim, despotic power, to harass the people by useless and childish edicts, to oppress and tax them until they are driven to desperation, to keep up useless and expensive establishments, and to make them as it were in one day change their very natures. Over and over again have the people appealed to those in authority, and petitioned and protested against a system of sudden changes which they cannot understand, and know well can but end in the disgrace and ruin of their country. All protests and petitions are treated as open rebellion by those in authority; and instead of wishing to conciliate and appease the wrath of the people, armed and foreign-drilled hordes are sent forward to pillage, burn and destroy all before them. Happily for the cause of order and good government, a *patriot* has arisen in the person of His Excellency General Saigo, who deeply sympathising, and free from selfish and ambitious motives, has determined to sacrifice himself in order to obtain for his people freedom from the hateful yoke of those who are endeavouring in every way to enslave the bodies and minds of this great people. In the proclamation issued by His Excellency at Kagoshima it is distinctly stated that the "people have not taken up arms against His Majesty the Mikado; but what is demanded is certain reforms in the present administration, and that those who have betrayed the trust reposed in them, may be dismissed from the councils of His Majesty and punished accordingly. All peaceable people will be protected in their person and property. Any violent or disgraceful conduct will be summarily dealt with." Such is a brief outline of the orders issued by the Commander-in-chief of the Southern army to his people on the eve of a great war.

Can any one help sympathising with a people who have shown themselves so generous after repeated victory? On the other hand it is clearly stated by almost every telegram received at Tokio, when the so called *Imperial Troops* get into some town or village, they in every case proceed to pillage, burn, and destroy all before them. All honor then, I say, to His Excellency General Saigo, the Father of his country. Let the editors of the *Choya Shinbun*, *Nichi Nichi Shinbun* and others, for shame hide their heads and hold their foolish tongues. How dare they malign the name of so great a man, the pride and glory of Nippon?

* — * — *

Yokohama, March 23rd 1877.

UNWELCOME VISITORS.

To the Editor of the *Japan Gazette*.

DEAR SIR:—Some time ago—I think it was in the early part of the winter—you wrote informing your readers that a refuge for the un-

employed and houseless had been opened in connection with the Temperance Hall. Incidentally you mentioned that houses on the Bluff were frequently visited by foreign vagrants, who, when the male members of the household were in town at their business, often obtained doles of food and money from the charity or the fears of the ladies who were left at home with no protectors but their servants. Whether the "refuge" has mitigated this evil during the severe months which we have passed through I do not know; but, speaking for myself, I can say that my house has been unvisited by any of the unfortunate class of men you alluded to—until yesterday, when I was favored with a call as unwelcome as it was unexpected.

A tall man, a foreigner, and apparently by his accent neither an Englishman nor an American, appeared suddenly in the compound and walked straight to the cook-house, where he compelled the boy to serve him with some cold meat and bread. Finding these victuals rather dry, he required something to moisten them, and insisted upon being supplied with some kind of *sake*. His wants were attended to in this respect also, I am afraid not out of pure compassion for his necessities. The boy, not knowing how to get rid of the visitor, told the cook in Japanese to hurry down to town and tell the master to come home immediately. Unfortunately for him the guest included a knowledge of the vernacular in his accomplishments; for the words had hardly passed the boy's lips than his ears were soundly boxed. Having accomplished this castigation to his own satisfaction, and finished his meal and his drink, the visitor departed as unceremoniously as he had come. When my husband came home, and I told him of the unpleasant event, for really I had quite a fright, I assure you, he asked me to describe the man, and this I was quite unable to do, further than to say that he was like several men I have seen walking about in Homura, with nothing to do apparently but to look fierce and hungry and dirty, and stare at the shops. As I could give no better description of the horrid man who had frightened me, and eaten the bread and meat and drunk the beer, which I would not, please remember, have grugled him if he was hungry and thirsty—I am not so mean as that—only he ought not to have beaten the boy—he, my husband, was first cross, and then laughed, and said, "why then, take no note of him, but let him go, and presently call the rest of the watch together, and thank God you are rid of a knave." I told him it was all very well to laugh; but if he was a woman, and left alone all day at the mercy of such nasty callers as that, he would cry, as I felt inclined to. And I do think something ought to be done, and a workhouse built for such people, if they must stop here, or the consuls should send them away. Please, dear Sir, take some notice of this, and ask, if nothing else can be done, to let us have some foreign policemen to look after the houses on the Bluff, where so many ladies are left alone all day, liable to be robbed, or murdered perhaps, for all their husbands would know, or sometimes care, before night. You will oblige at any rate one

LADY RESIDENT.

Bluff, March 24th, 1877.

To the Editor of the *Japan Gazette*.

DEAR SIR:—Can you assist me in the solution of one of the current jokes (for so I understand it) of the day in Yokohama? I have

not been here very long, and the customs of the place rather stagger me. For instance, I am not unfrequently asked in a stern tone of voice, "How are your chimneys?" and, "What is the lowest survey fee on record?"—a question answered in the same breath by "Fifteen cents a chimney with ten cents extra for beams:" also, "Has your flue been inspected? if it has not, apply to the Committee at once—only 15 cents."

I believe these questions have some connection with insurance.

Yours truly,

AN IDIOT.

Yokohama, March, 27th, 1877.

To the Editor of the *Japan Gazette*.

DEAR SIR:—It is pleasing to observe that the *Japan Mail* does at last admit the existence of an Act of Parliament prohibiting all meetings and assemblies of persons for the purpose of training or drilling to the use of arms. The *Mail*, it now appears, wishes it to be believed that this statute has been rendered a dead letter by the Volunteer Acts. Volunteers, enrolled under the Volunteer Acts, have legal authority for their drilling;—they have moreover taken the oath of allegiance to the Queen. These acts leave the penalty for illegal training precisely as it was before they were passed. The so called "Bill of Rights" is entirely inapplicable to the case. The law recognizes the right of an individual to use every means at his disposal for the protection of his life or limb:—this has nothing whatever to do with drilling to the use of arms, the illegal training to which is distinctly forbidden by the statute above referred to. The last part of the *Mail's* paragraph comparing the position of foreigners here to that of those residing and carrying on trade in the East Indies under the régime of the old Company, from whom at the time referred to they had to obtain a license to enable them to settle at a factory is too absurd to call for any comment. Foreigners reside and carry on trade in Japan by virtue of treaties.

Yours truly,

MARS..

Yokohama, March 27th, 1877.

THE SATSUMA INSURRECTION.

(Continued from Page 8)
March 17th.

There is less news than ever to publish from the scene of the civil war. The Government preserve an ominous silence on the subject of the fate of Kuma-moto. Some definite intelligence has, however, been apparently received. Some high officials were yesterday a less gloomy aspect than for several days past. More troops are being sent Southward in the *Saikio-Maru*, which is so crowded that passages have been refused to foreigners. Possibly the Government, having experienced the impossibility of saving Kuma-moto, have sacrificed its garrison, and contemplate surrounding the insurgents in Higo, shutting them off from supplies, and starving, if they cannot beat, them into submission. We continue to cull what reports we deem of sufficient interest from the native journals.

The *Choya Shinbun* says that a telegram from Osaka, despatched at 2 p.m. on the 15th, reports as follows of the castle of Kuma-moto:—It is very strongly fortified. Cannon are mounted on the top of the high stone wall, where the tower of five stories

stood. No insurgents can approach the castle in face of the fire from this point. Detachments of the garrison are stationed at Kio-machi and Fujisaka (in Kuma-moto.) The insurgents have removed their head quarters to Kasuga, and they bombard the castle from the hills of Hanaoka. But it is almost too far for the range of their cannon. A telegram, despatched at 2.35 p.m. also on the 15th inst., says that the mountains of Otsuki and Futaye are occupied each by bands of about two hundred insurgents, who are protected by earthworks which they have constructed there. In the village of Hanaoka and its neighborhood, on the confines of Higo and Bungo, insurgent parties, each consisting of about twenty or thirty men, have built five forts. A force of police, despatched against them, have advanced as far as Uchinomaki distant about one *ri* from the insurgents. In a few days a battle will be engaged. A telegram from Osaka, sent at 6.50 a.m. on the 15th, says that the Imperialists at Kinoha were suddenly attacked by a force of the insurgents. Five policemen were killed and ten wounded. Another telegram states that Shinowara, one of the three ringleaders, whose deposition from rank and office was notified, has been killed.

The *Hochi Shinbun* says that Beppu, an insurgent leader, was killed on the 26th Feb.

The *Akebono Shinbun* states:—According to a telegram from Nagasaki, received by the Naval Department yesterday, all the forts in Kagoshima have been dismantled, and many cannon condemned and broken up as useless. The insurgents, having been informed that all the ammunition in Kagoshima was captured by the Imperialists, are much discouraged and some of them are said to have deserted. The *Osaka Nippo* says:—On the 10th instant a naval brigade landed at the mouth of the river Kawajiri and marched directly towards the headquarters of Saigo on that river. A terrible battle was fought there, the result of which is not yet known. 20,000 uniforms for the troops have been ordered in Osaka.

March 19th.

The *Choya Shinbun* says that a telegram, received from the south at 11.15 a.m. on the 16th instant, runs as follows:—

At about 5 a.m. on the 15th an insurgent party attacked a fort occupied by Imperialists on the hill of Yokoshira, and commanding the Imperial camp at its base. The garrison were driven out in confusion, leaving the enemy masters of the fort, which was not re-taken till the evening of the same day. About sixty policemen, divided into two parties, were sent to recover it, by order of the War Minister. At about 5 p.m. they penetrated into the fort armed with lances and swords. After a short struggle they succeeded in driving out the insurgents. Only eight policemen were wounded and no life was lost. A telegram from Nagasaki, sent at 11.15 a.m. on the 16th, says that General Kuroda, *Saigi*, will soon leave at the head of 4,000 troops for Yashiro, where he will land, purposing to attack Saigo's head quarters at Kawajiri. The news of the death of Shinowara, the rebel leader, is confirmed: his funeral was celebrated in Kagoshima. H. E. Mr. Yanagiwara, the Mikado's envoy, arrived with his suite at Kobe on the 16th instant. On the same day a detachment of the troops stationed at Yamaka fell into an ambush of the insurgents at Nagano. A severe engagement followed, in which the rebels fought desperately. A telegram from Osaka, despatched at 11.55 p.m. on the 17th,

announces that, at about 6.30 p.m. on the 16th, about three hundred insurgents penetrated into the fort at Tawara-zaka, which had been taken by the Imperialists the day before. But they were immediately expelled with loss. A prisoner says that they were headed by Kishima, whose fidelity to the government the native papers have repeatedly insisted upon.

The *Akebono Shinbun* says that a telegram sent from the South at 5.50 on the 16th instant announces that five of the Imperialists were killed in the battle on the 15th, and twenty-seven wounded. A telegram from the Governor of the Owake-ken, received at 7.50 p.m. yesterday, says that agrarian riots have again occurred in the county of Aso, Higo, but the mob was soon dispersed by a force of police. Saigo Kohei, the younger brother of Saigo (the third of the three brothers) has been mortally wounded.

The *Hochi Shinbun* says:—The insurgent prisoners, who were taken in the battle at Tawara-zaka on the 16th inst., confess that they belonged to the force commanded by Kishima, who at first refused to take the part of Saigo, and remained quietly in Kagoshima. But, having determined at length to take the field, he collected about six hundred men, with whom he arrived at U-yeki in the night of the 14th March. During the following night he attacked the fort at Tawara-zaka with one hundred and fifty men. The insurgent forces, which have already penetrated into Kuma-moto-ken, consist of seven bands, each of them numbering about sixteen hundred men. Numbers of them were killed in U-yeki, where several engagements have taken place. One more battalion lately arrived from Kagoshima. Besides these, large bodies of men remain in Kagoshima. Their departure to unite with Saigo has been delayed by order of the Governor. Saigo is himself at the head of about eight hundred well disciplined soldiers, who have not yet taken the field. Shinowara was killed in the battle at Yoshigigoye.

March 20th.

The *Hochi Shinbun* writes:—A telegram from the scene of the struggle in the South-West, sent at 7 a.m. on the 18th, announces that the disposition of the forces for attacking the rear of the insurgents is now complete. At about 5.30 a.m. on that day, one battalion and a half of troops and 700 policemen left Nagasaki for Yashiro, where they expect to land on the 20th instant and attack the insurgent head-quarters. Colonel Takashima commands them. Another battalion and 500 policemen will soon follow them and land at U-to. A great battle was fought at Tawara-zaka on the 17th instant. The Imperialists advanced as far as within only twenty feet of the fort, but they were driven back by the insurgents. The men-of-war *Kasuga* and *Hosho-kuran* left Nagasaki on the 18th to cruise off the coast of Higo. Since the 18th instant, we have learnt the following items:—A detachment of police on the Bungo road on the 11th instant was much troubled by heavy snow. About 200 shizoku in the castle of Kagoshima left by the same road to assist the insurgents. A force of police, who captured two forts at Tawara-zaka on the 14th instant found there about one hundred and seventy of the rebels dead. One battalion of infantry, stationed at the Osaka branch barracks at Himeji, was sent to Nagasaki on the 13th instant. In the Kuma-moto-ken provisions are scarce, owing to the large number of soldiers there; and the price of everything has become

very high. One orange costs 8 sen, a meal for one coolie 37 sen, one pair of straw sandals 12½ sen, one *sho* of *sake* 30 sen. Colonel Kaji-i was mortally wounded in the battle at Tawara-zaka on the 12th inst. Fifty cannon have been or are being founded at the arsenal in Osaka. Of these, six were sent to the South on the 13th. Mayebara Ik-kaku, third brother of Mayebara Issei, who formerly escaped arrest, is at the head of a detachment of Saigo's forces. He distinguishes himself by wearing clothes on which his name is conspicuously inscribed. About forty-three of the Kumamoto insurgents were imprisoned in a jail of the Owake-ken, Bungo. During the night of the 19th February, they removed their irons, set the jail on fire, and escaped. About six hundred policemen, who had just arrived at Nakatsu from Tokio, pursued them. Only eleven have as yet been recaptured.

The *Choya Shinbun* says:—A telegraph station has recently been established at Kinoha, which is thus in direct communication with the capital. Lieut. General Soga, who left in the *Saikio Maru*, will march by the Bungo road against the insurgents.

The *Nichi Nichi Shinbun* writes:—A telegram from the south, despatched at 6.55 a.m. on the 19th instant, says that a battle was fought on the same day, in which one man was killed and four men were wounded. A telegram from the Governor of the Oyama-ken says that about seventeen policemen at the station of Ishino-maki were walking in the village of Kurokawa on the 16th inst. when they were encountered by a force of insurgents, who surrounded them; but they succeeded in escaping by breaking through the ranks of their assailants. Colonel Wirei left Nagasaki in the *Seiko-kawan* on the 17th instant and the *Nisshin-kawan* followed him with a large number of troops. To-day he is expected to land at U-to, Higo, which is situated about two *ri* distant from Saigo's head-quarters at Kawajiri. A telegram sent from Nagasaki, at 4 p.m. on the 17th instant, states that the ammunition and machinery, which were taken possession of at Kagoshima by the Mikado's envoy, were brought to Nagasaki in two steamers and that large quantities were destroyed or thrown into the river or the sea. Mr. Oyama, governor of the Kagoshima-ken, arrived at Kobe on the 17th instant in company with the Mikado's envoy, and was preparing to proceed to Kyoto. But he was ordered to remain where he was, and was deposed from his rank and office. In a few days, he will be sent to the Tokio-Saibansho, where he will be tried. The Police Bureau purchased five hundred swords on the 18th instant and three hundred yesterday, which will shortly be sent to the south. The Finance Department had expended 4,113,000 yen up to the 12th instant for the suppression of the Kagoshima insurrection. The Imperialists' head-quarters have been again removed to Kinoha from Takase.

March 21st.

The *Osaka Nippo* writes:—On the 16th instant, about two hundred wounded soldiers were brought to the military hospital in Osaka from the South. Forty-three shizoku of U-wajima were recently arrested in Osu in the same province. They were discovered in an attempt to send ammunition to the insurgents.

The *Hochi Shinbun* says:—Lieut. General Kawaji, *Dai Keishi*, left Osaka for Nagasaki on the 20th instant. A telegram, sent by Kuroda, and received at 10 a.m. on the 20th,

announces that Lieut. Colonel Kurogi landed at Hinaku at the head of half a battalion of infantry and one hundred policemen. The insurgents were much surprised by their appearance. Colonel Takashima left for Yajiro. A telegram from Mr. Yamagata, War Minister, states that the fort on the summit of Tamara-zaka is strictly kept by the insurgents. Another telegram, sent by Admiral Ito from Nagasaki at 4 p.m. on the 19th instant, states that a detachment of troops embarked at Nagasaki on board the *Genbumaru* and *Fuso-maru* and a force of police on board the *Kanagawa-maru*. They left for the harbour of Hinaku, Higo, at 5 a.m. on the 17th instant. The *Thabor* left for Amakusa, Hizen, on the same day, and the *Seiki* and *Nisshin-kawan* left for the island of Koshima at 6 p.m. on the 16th instant. The *Rinjo-kawan*, which had sustained a trifling damage to the boilers, will leave for Kagoshima after repairs are completed. On her arrival in Kagoshima, the *Chikuba-kawan*, now anchored in that harbour, will return to Nagasaki. To-day a battle is expected to be fought at Nijutoge.

March 22nd.

The *Hochi Shinbun* publishes the following intelligence respecting the insurrection in the South:—According to a telegram received from Osaka on the 20th instant, General Kawaji, *Daikeishi*, has been appointed Commander of the Reserve Corps of the Army.—An engagement between the imperial forces and insurgents commenced at dawn on the 20th at Uyeiki. The Imperialists were completely victorious, setting fire to the town and capturing a number of guns and a quantity of ammunition, besides many prisoners; their victory, however, does not obtained without great loss to themselves.—A telegram from Kyoto, despatched at 10.50 a.m. on the 20th, announces that a detachment of Imperial troops advanced on Nijutoge by three different routes, viz: Niju, Kando, and Kurokawa, each of which was strongly guarded by the insurgents, who had constructed a range of fortifications. The Imperialists came into collision with the insurgents about dawn on the 18th, and after till noon had lost twenty men.—From Nagasaki a telegram has been received, stating that Kokubu and Hakuda left there at the head of a detachment of police about eleven o'clock on the 20th for Hinaku, Higo; also that the forces under the command of Yoguchi and Miura encountered the insurgents soon after landing at Hinaku.—A telegram from Kyoto, received at 3.5 a.m. on the 21st, announces that a number of soldiers and a detachment of police landed at the village of Suguchi, which is south of Hinaku, at 11 a.m. on the 19th. The place was occupied by about 500 insurgents, who immediately retired without resistance. The Imperial forces camped at Yajiro. Information was brought to the camp that to the south of Kumamoto castle there was a small number of insurgents, but the main body are at Takase. On the 20th a detachment of troops and police were despatched towards Miyabara, a strong position occupied by the insurgents.—A telegram from Kinoha, received on the 20th, states that at dawn of that day a battle commenced at Tawara-zaka, one of the most important military positions in Higo, and resulted in a decisive victory for the Imperialists. The insurgents fled towards Uyeiki and were pursued by the victorious troops. Uyeiki was captured and set on fire; and four cannon, 200 rifles, and large quantities of ammunition fell into the

hands of the victors.—We have received the following intelligence from our reporter in the South.

On the 25th February Prince Arisugawa-no-Miya, Commander-in-chief, arrived at Fukuoka, and stopped at the temple of Seiruiji, Roya-Machi. His head-quarters are established in Fukushima, Chikuzen. The insurgents have divided themselves into a number of small detachments: and in fighting the attack the Imperialists with swords and lances, and succeed in wounding most of the troops.

The *Choya Shinbun* says that Saigo, the rebel commander, has removed his head-quarters from Kawajiri to Kitaoka, which is situated about four *ri* from Kawajiri. Prince Fushimino-Miya Colonel, who is in the South, has been promoted to the rank of Lieut.-General. It is rumored that the government has recently given instructions to Mrs. Katsu, late Naval Minister, in connection with the insurrection, who refused to carry them out.

The *Nichi-nichi Shinbun* states that the head-quarters of the Imperialists have been removed from Kinoha to Uyeiki.

March 24th.

The *Osaka Nippo* says:—Shimadzu, late *Sadaijin*, hospitably received the Imperial Envoy in Kagoshima and aided him in his measures for the suppression of the insurrection. About 5,000 shizoku, forming his body-guard, are said to be eager to act against the rebels and not to allow them again to enter their country. A letter from Miyazaki, Hiuga, dated, the 10th instant, contains the following items:—Some of the Kumamoto garrison are said to be in secret communication with the rebels.—The latter have still plenty of ammunition.—Kishima Utao of Kagoshima was reported to have been killed by the Gakko-to. This turns out to be false as he has taken their part. Some days ago, he arrived at Miyazaki with rifles and ammunition, and collected about 7,500 men in the course of only two days. On the 10th he left for Yamaka at their head to join Kirino.—In a few days, about two battalions will be sent to Kagoshima to guard it against the insurgents.—Majors Mori and Kato were killed in the battle at Tawarayama on the 6th instant.—Hanayama, late Vice Minister of Justice, and Fuchibe, late *Sanji* of the Hojo-ken, are among the rebel leaders. They left their camp before Kumamoto for Kagoshima to rise new levees, and had quitted the latter place at the head of about nine hundred men a few days before the Imperial Envoy arrived there.

The *Hochi Shinbun* writes:—A telegram from Takase, despatched at 10.30 a.m. on the 22nd inst., announces that the insurgents, encamped at Yamaka, have separated into two parties and retreated by two roads, one party as far as Kuma-fu and the other to Uyeiki.—A telegram, received at Tokio at 11 a.m. on the same day, says that the Imperialists had captured Yamaka and pursued the insurgents, who fled in disorder toward Kuma-fu. In a few days troops will also be sent from Tokio to Osaka.—About ten men are always stationed on the summit of Tawarazaka, whence they can watch the movements of the Imperialists though a telescope. One of them is said to be Saigo, who travels from camp to camp.—About ten photographers in Nagasaki were recently ordered to visit the camp of the Imperialists in order to take views of the battle-field showing the bodies of the slain.—18,000,000 rifle balls had been sent from the Arsenal in Osaka to the South up

to the 17th instant.—The insurgents have issued paper money.—Most of the coolies and jinrikisha men have left their camps and refused to serve them, as their hire is not paid regularly. So the insurgents, who find much inconvenience in the transport of ammunition and stores, have seized women and boys and obliged them to work.—A telegram from Minami-no-seki, received at 8.30 a.m. on the 23rd, announces that the insurgents, who left their camp at Hinagu in disorder on the Imperialists landing there, have reassembled at Sakamoto and Kawamata.—About five hundred rebels are encamped at Ogawa.—The Imperialists have established camps at Yajiro.—During the night of the 22nd inst. a detachment was sent to Miyahara, where a skirmish took place. Three soldiers were wounded, and the town was set on fire. The Imperialists were victorious here and about twenty insurgents were killed. On the same day a battle was fought at Kagami-machi, where the Imperial troops were severely beaten.—A telegram, received during the night of the 12th inst., states that the man-of-war *Moshun-kwan* was cruising off the coast of Kuma-moto on the 10th, and at about 7 a.m. commenced to bombard the village of Shioya, west of Kuma-moto. The forces were unable to land, owing to the staunch resistance of the enemy. On the following day another attempt was made, but with equal want of success. Early on the following morning, the men-of-war *Nisshin* and *Moshun-kwan* bombarded the same place till 11.10 a.m. At about 10 p.m. the Imperialists with great difficulty at length effected a landing.

The *Choya-shinbun* says:—According to a telegram from Kurume, the head quarters of Prince Arisugawa-no-Miya have been removed from Kurume to Minami-no-seki.—In the castle of Kumamoto there are plenty of provisions with the exception of soy. A telegram, received yesterday morning, announces that General Kuroda had landed at Miyahara at the head of two battalions and a half of infantry and 1,200 policemen, and had formed a camp after having driven out the insurgents. The Imperialists who landed at Yajiro have also been victorious.—On the 21st instant the Imperial troops at Uyeki attempted to effect a communication with the garrison of the castle, and marched, taking *sake* and fish as a present to the besieged from the Mikado. But they were stopped by the insurgents. Those of the latter who were at Kawajiri have removed to the hill of Kitaoka, a strong military position about 27 or 28 cho South-west from the castle.—Yesterday many telegrams were received by the government from the South-west, the contents of which are quite unknown to us.

The *Nichi-nichi-shinbun* writes:—A telegram from the South, received at 11.40 p.m. on the 21st, announces that the victorious Imperialists, having driven back the insurgents from the forts at Uyeki, continued their march to Mukaye-zaka, which was also taken by them. But, on the evening of that day, a force of insurgents came from Yamaka and attacked the Imperialists, who were obliged to retreat to Uyeki.—Notwithstanding heavy rain on the 22nd instant, the Imperialists left their camps in pursuit of the insurgents.—The troops, who were under orders to be sent to the South, will postpone their departure till further notice.—Saigo Kohei, brother of Saigo, Yamaouchi, brother of Kirino, ex-Colonel Beppu, and Kono, all of whom were well known among us, have been killed in battle. On the 22nd the insurgents in great force attacked the

Imperialists at Uyeki, where a desperate battle took place. On the same day, two steamers the *Kogoshima-maru* and *Neisei-maru*, belonging to Kagoshima, arrived at Kobe, where they were ordered to remain till further notice.

The following is a translation of a letter addressed by H. M. the Mikado addressed to Shimadzu, to whom it was handed by the Imperial envoy:—"The insurgents under the jurisdiction of Kagoshima-ken have treacherously penetrated into the Kuma-moto-ken. They defy the government laws and resist the troops. So we have ordered an expedition against them, and appointed Arisugawa-Takahito, *Nihon-Shino*, to be Commander-in-chief. You, Hisamitsu, are a faithful servant of the country. We, of course, believe in you, and have sent Yanagiwara Sakimitsu, *Gikuan*, to you, in order to inform you of our intentions. But, be loyal!"

March 26th.

An extra of the *Hochi Shinbun* of yesterday has the following:—A telegram from the War Minister, sent at 3.30 p.m. on the 24th instant, announces that the insurgents defend themselves with desperation in the strong positions of Mukaizaka and Kidome, and that the troops, who were under orders to be sent to the South-West, and whose despatch was postponed through a recent telegram from the seat of war are now to be forwarded.—One from Nagasaki on the same day says the Generals Yamada and Kawaji had left there that morning for Kawajiri.—A telegram from U-yeki, despatched at 3.20 p.m. on the 24th states that no great battle had been fought at Yamaka for the past two or three days, but only skirmishes, and no decisive action had taken place at U-yeki or Yoshijigoye. The insurgent forces, who were recently driven back from Tawarazaka and Yamaka, have entrenched themselves at Torinosu, Takaye, Iiro-o, and O-otsu. A post office was re-opened in the village of Yamaka on the 24th instant.—A telegram from U-yeki, sent at 4 p.m. on the same day, says that on the 23rd, a severe battle was fought there lasting from dawn to sunset, without decisive result.—On the 22nd instant, Prince Arisugawa-no-Miya arrived at Minami-no-seki and proceeded as far as Takase on the following day. A telegram from Nagasaki, sent at 10.40 p.m. on the 23rd instant, announces that during the pursuit of the insurgents at U-yeki, sixteen Imperialists were killed and many wounded.—It is said that 10,000,000 cannon balls and rifle balls have been sent to the South-West. A large number of the licensed physicians in Osaka, Hiogo, Nagasaki, and Yamaguchi have been ordered to assemble in Osaka and Nagasaki. A letter from our reporter in the South informs us as follows:—The Imperial envoy and his followers arrived in the harbour of Kagoshima on the 8th instant and anchored off the coast of Isonohama, where Shimadzu's dwelling stands. There the four men-of-war, which escorted the envoy and his suite, prepared to bombard the castle of Kagoshima if necessary. The envoy stopped on board ship for one day. On the following morning, he landed with his suite, and the troops and police, under the command of General Kuroda, landed. He proceeded direct to the residence of Shimadzu who received him with welcome.—Nearly all the inhabitants of Kagoshima seem to regard Saigo as their father, and none of them made any comments on his conduct. No man who had expressed any distrust of Saigo could

keep company with any of his fellows. Some months ago, a shizoku in the Island of Sakurajima, who had been long absent from his own province, was distrusted by Saigo who, however, became afterwards convinced of his loyalty. But the poor shizoku having been repeatedly reproached by others, became ashamed to live any longer, and went to Saigo's residence, where he committed suicide. The woman and children adore the name of Saigo. Among the followers of the envoy, there were many Kagoshima gentlemen who had friends or relatives among the families of the place. But none of them was admitted to an interview with the women, who seemed delighted to have sent out their husbands and sons to serve with Saigo.

The *Osaka Nipho* says:—About forty soldiers of the Kuma-moto garrison are said to have been killed. About 1,000 of the Kuma-moto shizoku have joined Saigo's men. On the 21st instant, some 300 wounded soldiers from the South-West were brought to Osaka.

The *Hochi Shinbun* of to-day writes:—Yesterday the two men-of-war *Chikuba* and *Kasuga-kwan* arrived in Nagasaki from Kagoshima, where the *Rinjo-kwan* is anchored. A telegram, despatched at 3 a.m. on the 25th instant, announces that out of seven forts in U-yeki, four were taken by the Imperialists on the 23rd. One was captured by a police force commanded by U-yeda with a loss of eight policemen and twenty wounded. To-day one battalion and a half of infantry, a brigade of artillery, with Lieut.-Colonels Saito, Kudznoka, and Sakamoto, and other officers will leave in the steamers *Seirio-maru* and *Tsusa-maru* for Kobe. A temporary Saibansho will shortly be established in Osaka. On the 23rd instant, Goto Zojiro returned to Tokio. Oyama, late Governor of Kagoshima-ken, is now imprisoned in the same room of the jail in Ichigaya, Tokio, where newspaper writers are imprisoned for having violated the press regulations. Mr. Sakakibara, whose name is famous throughout the country for his skill in the art of fencing, has been allowed to visit the seat of war in the South, and he will leave with about one hundred and fifty of his best pupils.

March 27th.

The *Hochi Shinbun* publishes the following extracts from two letters received from the South-West, one dated the 20th and the other the 21st instant:—

The money in the possession of the Gakko-to of the Kagoshima-ken is estimated to amount to 400,000 yen. Besides this sum they are said to have established a claim for a share of their ex-lord Shimadzu's pension of 100,000 *koku* of rice. So, he was obliged to give up all his last year's income to them, amounting at least to about 130,000 or 140,000 yen. Thus the entire fund at the command of the insurgents is estimated at about 500,000 yen. But, in order that they should not spend that money heedlessly, each of them on leaving Kagoshima was ordered to take money in his pocket for his own expenses.—Every one, who desired to follow Saigo collected what money he could, more or less, by selling his house, land, or other property. This was done that they should not be any charge upon the amount of 500,000 yen in the general possession of the Gakko-to. Those, who were refused permission by Saigo to follow him, became much excited and formed themselves into parties, each consisting of from seventy to one hundred men. Thus large numbers left Kagoshima daily, intending to join Saigo in

Kuma-moto, until the Imperial Envoy arrived in Kagoshima. These parties were ordered to report themselves, previous to their departure, to Oyama, the then governor, who gave them a written license, without which Saigo the traitor refused to allow them to join his forces. On the arrival of the Imperial envoy in Kagoshima, no orders were issued to the governor by him. He ordered his own subordinates to take charge of various matters. The governor asked him whether he was to remain in his post or not and seemed prepared for any event. No answer was given him till two days before the envoy left Kagoshima on the termination of his business there. Then the governor to his surprise was suddenly ordered to accompany him to the capital. But he obeyed the order without cavil and embarked on board the ship, where he was as calm as usual. On his arrival in Kobe, he was immediately deprived of his rank and office. He was then still on board and seemed then to be somewhat astonished. When the envoy first arrived in the harbor of Kagoshima, the governor made him a present of some oranges. His coming there was expected previous to his arrival.—Most of the rifles of the insurgents are sniders.—A man of Kagoshima, who had been a long time in Europe, had returned to his birthplace in January this year. He was much distrusted by Saigo's men. But fortunately he escaped arrest by them. He returned to Nagasaki in the same cabin with the late governor, Oyama. He writes as follows:—

The ammunition in the rebels' possession is sufficient to last them for about half a year. But some persons say that they have sufficient to enable them to keep the field for two years.—It was a false rumor which asserted that Saigo collected his men by impressing them. Most of his followers are volunteers. Numbers of coolies and people employed in transporting provisions and stores also volunteered to serve Saigo and his officers, who had intended at first not to employ others than their own followers. Young men in Saigo's head-quarters have nothing to do, and they amuse themselves fishing or reading. More than 10,000 bags of rice are said to have been seized by the rebels in Kuma-moto who, most of them, are dressed in short hakama.—The ammunition which was seized by the envoy in Kagoshima, had been left behind by the insurgents, who took however large quantities away with them. According to a rumor in Kagoshima, gunpowder is being manufactured at Kawajiri.—When Saigo first left Kagoshima he was unwilling to proceed with so large a number of followers as wished to accompany him; so he ordered many to remain at home. But all refused to do so.

The *Hochi Shinbun* of to-day says:—A telegram from the South-West, which was received in Tokio at 9.10 p.m. on the 25th instant, announces that, at dawn on the 14th, the insurgents in the forts of Miya-no-hara, Toneyama, and Ono, south of the castle of Kuma-moto, were driven out in disorder, and the victorious Imperialists marched in pursuit of the enemy as far as the village of Kitagawa, where they stopped at sunset. Many on both sides were killed and wounded.—A telegram received at 9.30 a.m. on the 26th says that the insurgents encamped at Wai-fu, who fell back there from Yamaka in confusion, had, again left their camp sometime before the Imperialists arrived.—A special session will shortly be held in the Tokio Saisansho for the trial of Oyama, ex-governor of Kagoshima.—A telegram, des-

patched during the night of the 25th, announces that one insurgent fort was captured on the 24th. On the following day the rebels assailed it again during foggy weather, but were driven back with loss.

The *Osaka Nippo* says:—Oyama, ex-governor of Kagoshima, promulgated the confessions of Nakahara and others throughout of province of Satsuma and hung copies up in every public place, exciting people very much against the government. Even the women and children in Kagoshima wished to follow the insurgents to the field. They did not sorrow at all at the departure of their husbands or fathers or brothers, but accompanied them for some distance from Kagoshima.

The *Choya Shinbun* says:—The temporary office of the Kuma-moto-ken is removed from Minamino-seki to Takase. Mr. Ishi-i, Chief Secretary of the Home Department, is acting for Mr. Morioka, governor of Kuma-moto. The dead body of Saigo-Kohei was sent to Kagoshima where the funeral ceremonies were performed with great pomp. About 300 officers and soldiers have been so far killed in the South-West and about 2,000 wounded more or less severely.

The *Mai-nichi Shinbun* states that all the men of the Imperial guards, who deserted lately from Tokio, have been arrested in Osaka.—It is rumored that about 5,000 Shizoku in Kagoshima, who are known as the body guard of Shimadzu, left their homes a few days ago for Kuma-moto. But their intentions are not known.

Nippon Notes.

(From the *Nichi Nichi Shinbun* of the 27th Feb.)

We have seen, through the conduct of Saigo, how the advance in goodness and the fall of mankind is produced by the decrees of heaven. When Saigo had first retired to Kagoshima, he was thought of as were Hanrei and Shibo (famous in Chinese history) by most of our countrymen, who respected and loved him for his virtue and considered that as long as Saigo remained in Kagoshima, no troubles could break out. Besides, they maintained that, if he had desired to revolt, he would have risen simultaneously with the disturbances either in Saga or Kumamoto, or Hagi. When a messenger from the insurgents desired to see him and called upon him at his residence in Kagoshima, he repelled his advances and did his best to preserve peace among the Kagoshima men. Though the terrible wave of revolt was long prevented, principally by H. M. the Mikado's influence from rolling over the extreme southern province, it is but right to say that Saigo was mostly instrumental in preserving peace there. At that time the brightness of his glory was said to exceed that of the sun and moon. Now, he has become a ringleader of rebels and caused the Mikado and his people great distress by taking up arms against him. Surely he must be mad or stupid. We have penetrated the depths of the real motives which impelled his former conduct, and find that he did not retire to Kagoshima, hoping to emulate the example given by the worthy Hanrei and Shibo, but to complete his scheme for venting his discontent against the government. He established private schools, where he supported a large number of shizoku, whom he carefully drilled himself under the pretence of going hunting with them. It is now clearly evident that it was not out of good will to the Mikado that he did not assist the Saga, Kumamoto, and Hagi insurgents. He had a dishonorable

dread that, if he rose after them, the victory which he hoped to gain would be attributed to those who took up arms before him. Or if it is not so, he must have meanly desired to gain for himself all the good results accruing from the attempts of others whom he had incited to rise before he had done so himself. Such must be his true feelings. If we had known this before, we should not have been content until we had eaten his flesh. Alas, that a flattering and perverse man should have deceived us thus!

Some time since, when we commented upon the Kagoshima insurrection, it came to our ears that Saigo had assumed their leadership. But we did not hasten to report such a dreadful matter to our countrymen. On the contrary, we have remarked that he could not become a traitor. If Saigo, the beloved of his countrymen, had remained the real Saigo, we should not then have been mistaken. Saigo had disguised himself thoroughly and was hidden in the obscurity of a dense fog, through which nobody could see him distinctly. Now the fog having cleared up, he appeared plainly in his true character of a traitor. It is not wrong to say that we have no Saigo in Japan. In a few days his head will be lying before the camp of the Imperial forces, as did those of Eto of Saga and Mayebara of Hagi. The latter two traitors were also beloved, more or less, before they rose against the government; but a short time after the Imperial troops appeared against them their heads were severed from their bodies. Imagine those whose names were once held in honor meeting with such fate. Our brothers! Consider their end! H. M. the Mikado had once looked upon Saigo as the father of his country. Even after he retired to Kagoshima, he was still retained in the post of Commander-in-chief! Saigo is indeed a treacherous man. He can not deceive us any more as long as we live. According to our opinion he must have lost his reason. How else account for his conduct? He is not the Saigo of former times. The Creator has taken our Saigo from Japan; and the treachery now apparent is some freak of nature. We write this article in consequence of having seen a notice of the deposition of Saigo, Kirino, and Shinohara.

The launch of the man-of-war *Amagikawan*, took place at Yokoska on the 13th instant in presence of numerous spectators.

The *Hochi Shinbun* says that, owing to the Southern disturbances, business is very dull in Tokio. Robbers force their way at least into fifty or sixty houses, and fires break out five or six times, in one night, while, in spite of the strict guard kept by the police, highwaymen wander about the streets.

MANY hundred men will shortly be added to the Police in Tokio.

THE barracks at Marugame in Sanuki have been connected with Shimonoseki by a telegraph wire in the West and with Kobe in the East.

THE sale or purchase of swords has been prohibited in Kobe and Osaka.

THE *Choya Shinbun* writes:—On the 25th ultimo, large quantities of ammunition were sent under guard of a body of police from Washigamori at Miyagi to the Yamagata-ken, where the shizoku are much excited. On the 1st instant, Major Hara left for Yamagata at the head of a detachment of the Sendai garrison, whence more troops were despatched on the following day.

On the 5th instant, a Chinese resident in Tsukiji, Tokio, was condemned to three years' hard labour at the Tokio Saibansho for having sold opium, and two other Chinese were sentenced to one year's hard labour for having purchased it from him.

(From the *Nichi-nichi-shinbun*.)

Saigo-Kichinosuke, who desires, treacherously, to overturn the Mikado's Government and disturb the tranquility of the empire, is said to have hung up a large sign on the gate of his head quarters at Kawajiri, which bears the following motto:—"Shinsei-Daiso-toku Seito-Daiyen-sui, Saigo-Kichinosuke." That information makes us tremble with anger and very sad. Ah, his wickedness has reached its highest degree. We have often endeavoured to write of his conduct, but we have been obliged to pause in our task because none of the subjects of the Mikado can endure to talk of him. What idea has been conveyed to our countrymen by these words of *Shinsei-Daiso-toku Seito-Daiyen-sui*? What does *Shinsei-Daiso-toku* mean! The words are the equivalent of "the director of the new administration of government" or "president of the new government." And what is the meaning of the words *Seito-Daiyen-sui*? Do they not mean, "*Seito*," to attack the national enemy by the Imperial troops despatched by the order of *Tenshi*, and "*Daiyen-sui*," the sole Commander of the Imperial detachments against traitors. Such a title is only borne by the *Tenshi* in person, and by no one in the condition of a subject, according to the present military system. There was formerly such an official title borne by the Commander-in-Chief as immediate subordinate of his sovereign. But now, we repeat, nobody except the *Tenshi* in person, can hold that office. By this we see that Saigo does already not regard the present Mikado as his sovereign. He has established a government, in which he has made himself master and sole commander in military affairs, just as did Davis, who made himself president of the Confederate Government of the United States of America. Arriving at this conclusion from Saigo's conduct, we are in an ague of terror.

(From the *Hochi Shinbun*.)

NOTIFICATION No. 27.

It is hereby ordered that the following regulations must be observed with reference to the engagement of foreigners.

IWAKURA TOMOMI,
U-Daijin.

March 6th, 1877.

1.—The native home, name, occupation, salary, address, and term of engagement of every foreigner employed by government must be reported to the Foreign Office, as must the expiry and renewal of all engagements.

2.—A private person desiring to employ foreigners, must also report the matter to the Foreign Office, through the local office under whose jurisdiction he lives.

3.—Should foreigners in private employ desire to abide out of the limit of the concessions, for the better discharge of their duties, their employers must first apply for permission to that effect to the Foreign Office. Their applications must be endorsed by the local authorities of the district in which the applicants reside.

The *Choya-shinbun* says that Mr. Enomoto, Minister for Japan in Russia, will shortly return to Japan.

THE Kosaku Kioto, the late Kogaku-riō, is hereafter to be called the Public Works University.

On the 7th inst. fire broke out in four places in Tokio, but was extinguished before much damage was done.

On the 10th instant, about sixty army officers and fifteen hundred troops will leave for Kobe in the *Tokio-maru*, which is also said to be taking a large sum of money for the use of the troops.

On the 7th inst. at about 2 o'clock p.m. eight newly manufactured cannon were proved in the presence of General Ida at the Sorenba, an extensive piece of ground situated before the offices of the War Department in Tokio.

Work on public buildings and roads at government expense is said to be temporarily suspended.

A parade of troops was held in the island of Yecchu-jima, close to Ts'kidji, Tokio, before General Saigo on the 7th inst. 128 officers, 351 non-commissioned officers, 3,234 soldiers and 168 buglers, besides Imperial guards, were present.

(From the *Akebono Shinbun*.)

The following account has been given, by a gentleman recently returned from Kagoshima to Tokio. He says:—

Saigo Takamori was not the first to desire to declare war against the Government. Three days after the Gakko-to seized the arms and ammunition in the arsenal at Kagoshima, he went to the school-house and exhorted those who had assembled there to disperse. But Kirino, who was at the head of those restless fellows, showed him a document from Nakahara, who, under torture, had confessed that he had been sent by the Government to assassinate Saigo and others. He then endeavoured to persuade Saigo to assist their cause. "Have you forgotten," Kirino angrily continued, "the words which have passed between us. If you do not take up our cause, we would desire to have your head before we start on our enterprise, for you will not be able to escape from our association." When Saigo retired to his birth place he took an oath in the presence of Kirino and others, which has compelled him to assume the command of their forces. Yet he had no desire to give battle to the Imperial troops; and when he left Kagoshima at the head of his men, he issued an order strictly forbidding any one to fire a shot without first obtaining an order from him, under penalty of death. His purpose was to proceed as far as the boundary of Higo, where he would be likely to meet with his friends sent by the Government to obstruct him. He would then leave his men at Kuma-moto and proceed to Tokio in company with his friends and make some proposals to the Government. But, unfortunately for Saigo, a battle took place at Kuma-moto and his deposition was ordered by the Government.

WASHIO, a kuwazoku, has presented two hundred yen to the Kunaisho, in aid of the expenses incurred by the expedition against the insurgents.

The office of the Mitsui Bank in Nagasaki was temporarily closed on the 28th February.

(From the *Choya Shinbun*.)

Of late various rumours concerning the disturbances in Kagoshima have been in circulation throughout the country; and a notice authorising the destruction of the insurgents

will shortly be issued by the Government. We cannot say for certain who are the principal ringleaders among the rebels. But, according to rumour, and we believe the rumour in this respect to be true, the insurgents are members of the Gakko-to; and we are much afflicted to be compelled to distrust the actions of Saigo and Shimadzu.

We hear that the Gakko-to endeavoured to persuade Mr. Saigo to take command of them before they broke out into open rebellion. But he refused and endeavoured to pacify them by reminding them of the fate of Ito and Mayebara. But perceiving that they would not be dissuaded from their purpose, he became frightened lest they should do him some injury, and left his home secretly, and has gone no one knows where. Mr. Shimadzu has also followed his example.

We consider that the rebellion in Kagoshima will have a very injurious effect upon the country. The Kagoshima shizoku have frequently been in battle; and they are well furnished with firearms and military stores. This rebellion must not be considered as trivial as the Saga and Hagi rebellions. Mr. Shimadzu occupies the high rank of Junii, and was once an official of Sa Daijin. Mr. Saigo occupies the office of Rikugun Taisho, (Commander in Chief of the Army.) In such a troublesome time as the present, in which H. M. the Mikado is much distressed, both Messrs. Shimadzu and Saigo, who cannot put down the insurgents by themselves, ought to come up to his palace in person, and discuss with others the best plan of action. But instead of doing this they have both left their homes, and selfishly permitted the insurgents to carry out their outrageous designs. Have such men a right to be called patriotic? But perhaps some of our countrymen will say that, though they are said to oppose the insurgents, they may be secretly in connection with them.

But they are very learned and wise men and nothing could shake their loyalty, and they are not desirous of seeking their own fortunes. They must have some particular motives for staying in Kagoshima, or must be obliged to remain there, for there is no way leading from the province but is strictly guarded by the insurgents. We believe that both Saigo and Shimadzu will shortly turn up and serve the Mikado as before.

On the morning of the 25th ult., at about 6 o'clock, a fire broke out on lot No. 3, Kobe, in a foreigner's house, which was burned down.

At about 6 p.m., on the 23rd ult, a fire broke out at Terashima, close to Tokio, which was extinguished before much damage was done to property. But one man was burned to death and three persons were injured.

GEN. SAIGO (the younger) has been appointed to fill the place of Mr. Yamagata, War Minister, during the latter's absence from Tokio.

THE *Akebono-shinbun* states that on the 27th a banquet was to be given at the Ohama-goten to a French gentleman employed in the Arsenal in Yokoska. H. E. Mr. Iwakura, U-Daijin, was expected to attend.

MR. KINASHI of the Home Department will shortly leave for Loo Choo on government business.

THE *Nichi-nichi Shinbun* says that Colonel Fukuhara, who was wounded, returned to Kobe on the 18th instant, where he died on the 23rd.

H. M. the Mikado seems to be likely to remain for an indefinite time in Kioto, as the families, now in Tokio, of his attendants are shortly to remove to the former place.

Shipping.

ARRIVALS.

Mar. 13, Brit. barq. *Forget-me-not*, Dobson, 198, from Takao, Sugar, to Hudson & Co.

Yokohama Market Report and Prices Current.

STAPLE IMPORTS.

Since the date of our last report there has been some activity in Cotton Yarn, which ceased on the 27th instant, and business may be characterized as dull in the extreme. The sudden and severe fall in exchange interferes with sales so far as foreigners are concerned, while the troubles of Japan prevent any operations by natives except at very much reduced quotations. All prices, except for Yarn, are nominal.

The steamer *Duna*, from London *via* Hongkong, with general cargo; the barque *Caspar*, with coal, from Cardiff; and the barque *American Lloyds*, with kerosene, from San Francisco, have arrived. Transhipped cargo ex *Indus* and *Poonah* from London, *Nestor* and *Agamemnon* from Liverpool, *Peiho* from Marseilles is also to hand.

ARTICLES.	PRICES.			REMARKS.
COTTON PIECE GOODS.				
G. E. Grey Shirtings—				
7 lbs., 38½ yds. 39 in. per piece.	\$1.30	to	1.60	} Very difficult of sale.

do. Amoy Brown "	3.60	to	3.80	

Yokohama Market Report and Prices Current.

STAPLE EXPORTS.

SILK.—During the past eighteen days there have been several changes in the silk market with more business, resulting from the encouraging telegraphic news from London. As usual prices sprung up from \$60 to \$75 per picul, with eager demand for parcels of good and desirable quality; while the larger portion was under inspection, less favorable telegrams checked operations and many parcels were rejected. A slight advance all round is, however, apparent in all classes except Oshius, which remain as formerly quoted, notwithstanding the good selection of this class offering. The market closes quiet at the following quotations.

Settlements since the 10th instant amount to 480 shipping bales; and the stock on hand is 3,050 native bales.

TEA.—Operations in this staple since last mail issue have been almost nominal: in fact, the current Tea season may be considered as fairly closed. Settlements since 10th inst. only amount to Piculs 600 and arrivals are almost *nil*.

Prices are so irregular that we withhold quotations for the present as the few small sales being now made, afford no criterion of our market.

Of the New Crop we can so far report nothing. The weather, however, has been fairly favorable and first samples should be offering about the close of April.

The *Coulmakyle* will probably have despatch from Kobe about the 30th instant.

DESCRIPTION.								PRICES PER PICUL.	REMARKS.
SILK:—

EXCHANGE.

Since the date of our last considerable fluctuations have taken place; 6 months' Bank paper during last week was quoted as low as 3/11. Towards the end of week a firmness became apparent and rates gradually rose till yesterday, when 4/0 $\frac{1}{2}$ was done; to-day however a drop has again taken place. Business has been on a moderate scale only as is usual at this time of year.

The Japan Gazette

MAIL SUMMARY, SHIPPING AND MARKET REPORT.

PUBLISHED TWICE A MONTH.

Per O. & O. Str. "Belgic."

YOKOHAMA, THURSDAY, APRIL 12TH, 1877.

Single Copy, 25 cents.

THE "Japan Gazette" MAIL SUMMARY.

FROM 30TH MARCH TO 11TH APRIL, 1877.

BIRTH.

At Niigata, on the 29th March, the wife of JAMES TROUP, Esq., H. B. M.'s Vice Consul, of a son.

MARRIAGE.

At Christ Church, Yokohama, Japan, April 2nd, 1877, by the Rt. Rev. C. M. Williams, D.D., Bishop of Yedo; assisted by the Rev. Wm B. Cooper, B.D., and the Rev. W. F. H. Garratt, M.A., the Rev. CLEMENT I. BLANCHET, B.D., of the American Episcopal Mission, Tokio, Japan, late of the Diocese of Illinois, and Miss ANNIE VAN NESS, eldest daughter of ELLSWORTH P. MALTBY, Esq., of Albany, New York.

DIED.

At the Temperance Hall, No. 86, Yokohama, on the 9th inst., JAMES TURNBULL, a native of Scotland, aged 58 years.

OUR last mail Summary was despatched per P. M. Steamer *Alaska* which left this port at noon on the 30th ultimo. Since that date we are in receipt of the following mails:—

	DUE.	ARRIVED.
French Mail	April 1.	Mar. 31.
American "	Mar. 31.	Mar. 31.
English "	April 7.	April 3.

Latest dates are:

London	Letters	Feb. 16.
"	Telegrams	Apr. 4.
New York	Letters	Feb. 23.
"	Telegrams	Apr. 4.
San Francisco	Letters	Mar. 3.

Summary.

THERE is yet no appearance of the early suppression of the Satsuma insurrection, which has exceeded in its extent, and the bloodshed it has caused, almost all anticipations. Such an account as we are able to

furnish, collated from day to day from the imperfect intelligence given in paragraphs, letters, and telegrams in the best native papers, and from occasional direct and more reliable information, will be found in this Summary. Our readers abroad can hardly imagine how difficult it is to obtain anything like definite and trustworthy information. A rigid censorship has been established and is enforced upon the native press. Proof sheets of all newspapers have to be furnished before publication to the censors, who ruthlessly expunge whole articles, if the comments they contain are in any degree or from any cause, personal or public, unpalatable to them, and telegrams or items giving news distasteful, because probably true, to the authorities. Hence we hear next to nothing of any Government reverses, yet the hospitals and ambulances, near and at the scene of strife, are undoubtedly crowded with inmates covered with ghastly wounds, inflicted by the swords of Saigo's men, who commit dreadful havoc among the Government levies when they can encounter them at close quarters. Many important leaders on both sides have been slain; and of the rank and file probably not less than ten thousand have already fallen. A careful estimate of the troops and police sent against the insurgents gives a total of not less than thirty thousand men, and Saigo's forces probably amount to at least half that number. Saigo himself is suffering from dropsy, and has to be carried about in a chair. The rebel troops are completely surrounded, it is true, and it even appears that Kumamoto may still be in the possession of its imperialist garrison, but the samurai occupy important strategic positions: they fight with desperation, and have a sublime contempt for death. All people who wish the country well, must desire that such a strife should cease. A grievous responsibility rests with both the heads of parties to it; but the fact of so many insurrections following each other must be held to prove that the grievances which provoke them are far from groundless.

MR. JOHN ROBERTSON, agent since 1866 of the Yokohama branch of the Oriental Banking Corporation, left by last trans-Pacific Mail en route for Europe.

THE ARGUMENTS of Counsel on both sides in the case of the Tokio City authorities

against Mrs. Bloch, a British subject, for the recovery of arrears of rent, have been heard in H. B. M. Consular Court, at Tokio. Judgment.

In the U. S. Court Mr. E. B. Watson, a merchant, has sued Messrs. Walsh, Hall & Co. for \$16,000, damages accruing from alleged delivery of a quantity of bags inferior in quality to those contracted for. Evidence has been adduced on both sides, and decision is reserved.

GEORGE HARVEY, a young landsman employed on board the U. S. S. *Alert*, has been killed by falling from the main yard of that vessel.

MR. R. J. BEADON, Barrister-at-law, attached to the (Japanese) Public Works Department, has been admitted a practitioner of H. B. M.'s Supreme Court for China and Japan.

THE season for destructive fires has hardly closed. Another disastrous conflagration has destroyed a number of houses in Tokio; and minor ones are reported from the provinces.

A SHOCK of earthquake was felt on the night of the 5th instant.

THE land-renters of the Swamp Concession have petitioned the Diplomatic Corps to urge upon the Japanese Government that it is the duty of the latter to light the streets of that part of the settlement by night.

THE annual report of the Postmaster General, Hongkong, has been published. It records a great falling off in the number of letters sent by the English mails, in consequence of the greater cheapness and rapidity of the United States route.

CONSEQUENT on the change in the moonsoon the annual spring alteration, from Tuesday to Wednesday, in the days of the departure of the English and French mails has been made.

COMMANDER J. D. MARVIN, U.S.N., in command of the American Sloop-of-war *Alert*, committed suicide on board by shooting himself through the head on the 10th instant.

CURRENCY.

THE practical uselessness of the CHAMBER OF COMMERCE to the mercantile community was proved the other day, if further proof than those negative ones already given by the CHAMBER itself in a long period of inactivity, were needed, by the non-attendance of sufficient members to form a quorum for the discussion of so important a matter as the proposition that "it is desirable that there should be in this port a silver currency among foreign merchants which shall circulate in the interior of the country." A meeting was convened by public advertisement. We do not know of how many members the CHAMBER is composed, and having just referred to the last annual report fail to find the information there. That, however, is not the sole defect in the report in question, which is guilty of other and greater faults of omission. But, if only seventeen members including the secretary could assemble to receive the annual report of the committee, and to elect their officers for the year, it is hardly matter for astonishment that a number sufficient to constitute a legal meeting did not come together for the consideration of one subject. If the want of interest thus evidenced is not to be wondered at, it is certainly to be deplored, when the much felt want of a silver currency which should circulate equally in the treaty ports and the interior, as a legal and accepted tender, is taken into account, and the fact admitted that some action on the part of the CHAMBER OF COMMERCE, if it was not decisive, might have—nay probably would have—paved the way towards the solution of a question of so much interest and importance.

The arguments, however, which would probably have been adduced in favor of the proposition which should have been discussed had the meeting been held, are embodied in a letter signed "W," and addressed to the *Japan Weekly Mail*, whence we will briefly summarise them, and place them within the reach of our readers, who never see the journal in which they appeared.

Premising, then, that eighteen years ago the trade of this country circulated only within her own shores, but that now, having received the proceeds of her exported silk, tea, and general produce, she buys therewith in Yokohama the shirtings and yarns which come thither, he holds that it would seem to be a first consideration that there should be a standard measure of value recognised between buyers and sellers, "that the whole system of circulation should beat in unison with the centre, if a healthy vitality is to be maintained." Instead of this being the case, however, accounts are kept and transactions arranged in the Mexican dollar, "which is not recognised half a mile from our door." The exchange system is a barrier between the buyer and the up-country producer, which is held, correctly, to benefit only "the whole race of shroffs and money-brokers," while it "impedes trade, introduces an unfair element of uncertainty into all transactions, and muets the producer of no small share of his lawful returns."

In support of this assertion, "W" quotes the results of the last six months of the silk season of last year, when seventeen million dollars' worth of produce was bought and paid for, principally, in Mexican dollars. After deducting the commissions and charges of native dealers, and the sums which would naturally be returned to the foreign merchants in payment for imports, the remaining

and of course larger portion should have been returned to the producing districts, there to circulate until in the ordinary course of healthy trade it would return to Yokohama there to be expended in payment for imports. Under the present system, however, it could not circulate in the country. It was arrested in its flow in Yokohama, and, as a consequence, native paper money, which would circulate, rose in value as high as $7\frac{1}{2}$ per cent., which means that for every hundred dollars paid for silk the silkmán really received only 92½ yen. Other fluctuations followed and aggravated the disorder, until, in last month, things had so completely altered that 105 yen were required to buy 100 dollars.

The monstrosity of a system which allows, in coins of equal intrinsic value, fluctuations in the course of a few months of thirteen per cent., is surely evident enough to warrant "W" in the conclusion he draws, that it is, besides being absurd, baneful to legitimate trade, and that "only the class which thrives on the losses of others, or those whose natural element is gambling, can desire its perpetuation."

The evil by no means stops here; for the accumulation of dollars in Yokohama, useless to the country producer as a circulating medium, and only discountable at a ruinous loss, induces purchases of foreign imports in great excess of the demand to the detriment alike of buyer and seller, as was shown last autumn by a sudden rise in price of certain fancy articles, and the equally pronounced and sudden collapse which followed it. "W" holds, and with every appearance of reason, that the issue might have been very different had the large amount paid for silk last season been paid in a currency which could have circulated through the country. He says:—"Possibly to this day we might have been enjoying a steady demand for our goods, the outcome of the gradually developed wants of those to whom the silk crop had brought prosperity, in place of short lived inflation to be followed by collapse and stagnation."

Surely there are here reasons enough and to spare for the adoption of a circulating medium to suit the purposes of native and foreign traders. It remains to be seen whether and how the yen could be made to answer that purpose. If that coin could be adopted the difficulties cease. "W" holds, that it could be so adopted under guarantees: 1.—for the maintenance of the standard; 2.—for the issue of a sufficient supply; 3.—for the regulation of the currency. On the first two points he maintains that there need be no difficulty, while on the third difficulties exist, but not insuperable ones.—"I surmise that the elements of this adjustment must be, a moderate supply of Silver yen, and a lesser quantity in Gold yen:—a fair proportion of convertible paper, and Branch Banks in some of the most important districts to further facilitate circulation. I venture to think that, with such an adjustment, the existing inconvertible paper might be extinguished without risk to the Government of any financial crisis. There are grounds for fearing that we are at this present time threatened with further issues of this inconvertible paper, on the fallacious plea that there is not enough money in the interior for the purposes of trade: the true state of the case being rather that we have already too much currency, but that it cannot move about."

On the last point touched by "W," the desirability that the silver currency in use

here should be such as circulates in China, we will go even further than the writer. Under guarantees, such as proposed, the yen would circulate certainly in Hongkong; and eventually, in China, where the weight and purity of a silver coin is for everything, it would become a favorite. Meanwhile there is no necessity to have the yen supersede the Mexican. As "W" now says, and as we ourselves wrote last week, the two coins should circulate side by side.

It remains now to be seen how the advantages of a currency which shall circulate equally in the interior and in the ports are to be arrived at. "Let us affirm the principle, and then patiently work on until we attain the results we desire." This is very good advice; but how and by whom is the work to be done? If by the foreign merchants in concert with the Japanese Government, well. But steps should be taken at once to avoid in the next silk season the bad effects noticed as the fruit of the last. It appears as evident as it is deplorable that the CHAMBER OF COMMERCE has not the weight collectively, or unanimity among its members, necessary to deal with the subject. We have no great faith in public meetings—in Yokohama at least—but for once some good might result if a meeting of merchants were held to consider so important a question as the one before us, though the CHAMBER OF COMMERCE ignored it, and a Committee appointed to take measures to carry into effect some such scheme as "W" has so carefully outlined.

THE KAI SEI GAKKO.

SATURDAY, the 24th March, was the day set apart for the opening of the Kai Sei Gakko lectures, and although the weather was most unfavorable there was a large attendance of the officers of the College, foreign instructors and residents, and a fair number of students. Sir HARRY PARKES was one of the invited guests. The occasion would have called for a mere passing notice, such as was furnished us by a Tokio correspondent and published in our issue of the 26th ult., had it not been rendered more worthy of remark by the speeches of two Japanese, a "professor" and "a law student." The former, Professor YATABE, whose name, if not handed down to posterity, should at least receive the momentary consideration of foreigners, and be temporarily rescued from the certain oblivion which awaits it, touched upon "the claims of Christianity and Buddhism to the respect of the people; and explained particularly some difficulties which seemed likely to always operate against the acceptance of Christianity by the Japanese. These objections, the speaker said, were, first, the dogmas of Christianity, such as the Trinity and the personal attributes of the Deity, which did not address themselves to the cultivated and intellectual Japanese, whose minds were eminently philosophic and free from superstition; second, the manners of foreigners in Japan, especially their brutality to coolies and their licentiousness, which were not such as to recommend their religion." The next native speaker was a law student by name FUJITA, whose vast experience and knowledge of men and things enabled him to compare the "moral and mental qualities of Japanese and foreigners." Mr. FUJITA's observations led him to consider the English inferior in filial piety, politeness, and—save in the

faculty of continued observation—in mental calibre, to the Japanese. They were also exceedingly avaricious. He regretted that, owing to the introduction of false notions of independence by foreigners, the Japanese were losing in a measure the politeness that formerly distinguished them."

For the report from which we have quoted, we are indebted to the *Tokio Times*; and we only regret that that enterprising journal did not give us the excellent speeches of these talented natives more at length, to enable us to compare the mental qualities of the speakers with the lowest standard of foreign intelligence. This privilege having been denied to us, we will pass over the flippant remarks of "Professor" YATABE on Christianity and the grave subjects connected with it, in dealing with which the most profound scholars hesitate and are eventually silent; and content ourselves by correcting an impression which, originating with a foreigner, has been sedulously instilled into the native mind, and has at last been publicly asserted as a truth by a native speaker in one of the chief seats of education in this empire: we allude to the brutality and licentiousness of foreigners in Japan. During the past eighteen years foreigners have resided in the open ports, and have often travelled into the interior of this country, but, so far as our memory serves us, no charge of licentiousness or brutality has ever been thoroughly substantiated, while very few, and those brought forward under circumstances calculated to throw the gravest doubt upon their validity, have been made. "Professor" YATABE, however, confines his observation on brutality to that which is shown to "coolies." Is there a foreign householder in this place who is not daily plundered right and left; whose compound does not contain a colony of native blood-suckers with their attendant burdens of wives and children, to prey upon his substance? Are we not cheated in almost every one of the minor transactions of domestic life? Do not our servants come to us poor and thin, and leave us rich and fat? Are they not as a body dishonest and untruthful, untrustworthy and faithless? There can be only one answer to these questions, and that is an affirmative. And yet these are the only "coolies" towards whom foreigners can display their innate brutality; and they do so by paying the highest wages; by providing houses and food; by submission to robbery and ingratitude, and by attendance upon and assistance to the sick and distressed. So much for foreigners' brutality. Their licentiousness can only be estimated in its degree by comparison with some known standard. Were we to take for this purpose the morality of Japanese domestic life, we should have to adopt an argument almost inadmissible, and ask in whose favor the balance lies!

We can scarcely conclude this brief refutation without an allusion to the superiority—"in mental calibre"—of the Japanese over the Englishman. It will be time for Mr. Fujita (a law student) to eulogise the intellect of his countrymen when Japan can point to the peers of the Stauleys and Russells, the Cunnings and the Bruces, to a Brougham and a Lansdowne, to Napier and Campbells, Nightingales and Burdets, who have headed their competitors in every branch of statesmanship, diplomacy, government, civil and military, and benevolence; of the dead heroes of action and thought to whom England owes her liberties and her grandeur; of Wellington, Nelson and Marlborough, of Russell, Blake, Hampden and Cromwell, of Bacon and Raleigh, and of the

barons who extorted Magna Charta. We ask Messrs. YATABE and FUJITA to consider the rule that they who would command must first learn to obey; and to beware how in the future they merit the contemptuous silence with which the highbred mastiff treats the diminutive and snarling cur; for Englishmen, at least, can well afford to let slander pass idly by, secure that the still small voice of truth will be heard at last.

PROTECTION'S LATEST ADVOCATE.

THE race of Sophists is not yet extinct, and the definition given of them by Aristotle is as applicable to modern members of the class as it was to those who came immediately under the well merited lash of his censure. They are "but imposturous 'pretenders to knowledge, employing' what they know or ought to know to be 'fallacies 'for purposes of deceit,' with ulterior objects. It matters little whether they teach what they know to be false, or inculcate fallacious doctrines in which they themselves believe: the result is equally pernicious. The advocates of Protection, having no arguments left them, save such as have been refuted over and over again, have recourse to sophisms, the weakness of which, when impertinences suit their purpose, they attempt to bolster with impertinences. A fair average example of the sophistical-impertinent proposition is the following, which we cull from one of just half-a-dozen paragraphs in the last issue of the *Tokio Times*, written at the *Japan Gazette*, *currente calamo*, without any thought, but with a good deal of the hackneyed flippancy which writers of the school of the editor vainly trust that their readers will think smart. Thus:—"Drawing upon the resources of excellent "Mr. Wells, *The Japan Gazette* reprints his "opinion that Free Trade is 'the essential "condition of abundance, of a larger and "higher life, of peace, good will and amity "between the nations.' In fact, the connection between Free Trade and universal "peace is not difficult to establish, but Mr. "Wells's method of stating it reverses the "proper relative positions of the cart and the "horse. Free Trade is not necessarily the "essential condition of peace, etc., but peace "is the vital and indispensable condition of "Free Trade. So long as wars shall remain "possible, perfect freedom of trade can exist "only as a visionary theory. A conflict of "nations may uproot it in an instant. A "principle that the breath of a monarch or "the impulse of a people may send to sudden "destruction lacks, according to the true "views of social science, a few trifling "elements of stability. Perhaps *The Gazette* "understands this, and is prepared to meet "it."

Certainly the *Gazette* understands this and is prepared to meet it. The distinction drawn is merely specious; and Mr. WELLS has not "reversed the relative positions of the cart "and the horse." But, admitting for the moment that he had done so, his argument and ours would not be one jot affected by the transposition. Whether Free Trade is the condition of peace, or peace is the condition of Free Trade, matters little so long as the two great blessings go hand in hand. The deduction drawn from the argument of the *Tokio Times* that because Free Trade cannot exist without peace therefore Free Trade is an evil, is an evident *non sequitur*. As well say that because good crops cannot be obtained without the aid of such weather, with its suitable

variations of moisture and heat, as is requisite for their growth and maturity, therefore good crops are most undesirable. Yet this is the kind of teaching volunteered to Japanese students of political economy by a self-sent apostle of Protection, who promises, graciously, "to listen with respect, though, "it may be, with fatigue, to our (*Gazette's*) "advocacy of Free Trade." Commend us to this sublime self-conceit on the part of a writer who apparently forgets that it is he who has forced upon us the unpleasant duty, in the interest of the already sufficiently harassed and impoverished country whom his teachings, if followed, would utterly and perhaps irretrievably ruin, of refuting once more those fallacies which have been repeatedly refuted. We pause to ask the question:—Might not Protection, as well as Free Trade, be "sent to sudden destruction by the "breath of a monarch or the impulse of a "people"?

We will pass without comment, having neither space at our disposal for, nor the will to enter into, such a bandying of compliments as would be to the taste of the *Tokio Times*, whose editor is welcome to employ to his heart's content the already overdone Columbus and other personages to adorn his trite figures,—we will, we say, leave unnoticed the personal paragraphs intervening between the one we have quoted from, which is the first of the series, and the last two. In these latter doubts are expressed, first, whether Mr. HENRY C. CAREY felicitated the United States upon the death of RICHARD CORDEN, and, secondly, whether he was the author of a "vehement paragraph" which we quoted in an article on "Protection" on the 22nd ultimo. Although we are in no respect bound to answer the not too courteous interrogatories of the *Tokio Times*, which displays in great extent the quality which has made the name of Didymus a by-word, we will make no objection to state frankly that we have not the privilege, any more than has, admittedly, the Editor of the *Tokio Times*, of having the works of Mr. CAREY within our reach; and that we are indebted for our information solely to "excellent" Mr. WELLS. We have no reason for suspecting that gentleman of wilfully lying in the presence of more than one hundred and twenty gentlemen at the Cobden Club dinner of 1874; and it was from his speech on that occasion, which is sufficiently good authority, for ourselves at least, that we took the expressions attributed to Mr. CAREY. We now reproduce that portion of the speech which contains those expressions, italicising some lines, and leaving to the editor of the *Tokio Times* the task of finding out at his leisure whether they are the enunciations of "him "who is recognised in every country but one "(!) as the profoundest living master (!) of "the great principles of social science," and in the meantime assuming the very easy and to him more natural course of simply stating that Mr. CAREY never said nor wrote, nor could have said or written any such thing.

In short, the whole aim and object of "this school of economists has been to en- "graft upon the country a sort of Chinese "policy of prohibition and exclusion; and "their great leader and teacher, Henry C. "Carey, of Philadelphia, has not hesitated "to publicly express his opinion that the very "best thing which could happen to the United "States would be to have the ocean that rolls "between the two continents converted into a "sea of fire so impassable, that if Dives was in "Europe and Lazarus in Pennsylvania they "could not under any circumstances enter into "commercial correspondence. And within a

"comparatively recent period also this same individual, who, it will be remembered, 'aspires to the reputation of a great teacher, has over and over again expressed the opinion that the death of Richard Cobden was 'one of the crowning mercies for which the United States had cause for gratitude; for the reason that, if Mr. Cobden had lived, it was his purpose to have again visited America, and that such was the universal respect of the people for his name and his services, that they would in crowds have flocked to his speaking, a contingency especially to be dreaded, lest in hearing with their ears, and understanding with their hearts, they should have become converted to his principles.'"

The laying bare of one more fallacy, occurring in the same issue of the *Tokio Times* as that to which we have already at some length referred, is a duty the discharge of which is disagreeable, but not to be shirked. It is really important that the Japanese, for whom our contemporary's lessons are doubtless intended, should know that they are being misled. They are told:—

"England pretends to believe in and to act upon the principles of free trade. Japan does not pretend to believe in them and does not wish to act upon them. This being the case, let us compare the percentage of customs duties upon imports into each country. In England, the duties amount to about 5.4 per cent of the whole value of imports. In Japan, to about 4.48 per cent. That is to say, the ratio is higher in free trade England than in Japan which is averse to free trade. Under these circumstances, we are forced to one of two conclusions:—either England is false to her economic theories, or Japan has been compelled by pressure of what the *Economist* calls 'peddling and irritating manœuvres,' to accept, for the benefit of foreign commerce, a tariff revenue lower than that of the nation which most vehemently advocates free trade. Whichever you please, gentlemen."

We need hardly notice the stupid sneer at the commencement of the paragraph. England does believe in Free Trade; for she knows that her commercial prosperity and greatness, her solid wealth and influence, are in great part due to the following out of its principles. As for the proclivities in another direction indulged in by Japan, we are content to take the writer's word for the fact, in the absence of better authority, and to deplore it. But we cannot, without warning, allow the false deduction, which his comparison would suggest, to be made. Admitting that the duties in England "amount to 5.4 per cent. of the whole value of imports," or that the British Customs contribute the enormous sum of upwards of twenty million pounds sterling to the revenue, we find that since 1846 Free Trade legislation has cleared away a mass of taxation which impeded commerce: that now all the necessities of life, to say nothing of manufactures and art products, are imported as free as air into Great Britain; and that the huge sum derived from the Customs comes from duties on spirits, wine, tobacco, tea, coffee, and dried fruits, articles the taxation of which is not opposed to the principles of Free Trade. These are principles of which the *Tokio Times* is ignorant, or which it wilfully misrepresents. To enlighten the editor in the former case, and to prevent the mischief his doctrines might do to his readers in the latter, we will state what is to be understood by Free Trade, and why it is not incompatible with a revenue derived from duties on the imports of such things

as we have mentioned. There is free trade when there is no interference with the natural course of buying and selling, if such interference be intended to improve or otherwise to influence trade. It is necessary to keep this distinction in view, because there are many laws not contrary to the spirit of Free Trade which interfere with buying and selling: for instance, it is unlawful to deal in slaves, because we do not acknowledge the right of one human being to be the owner of another; it is unlawful to sell intoxicating spirits without having obtained a license, because the tax for the license brings revenue to the Exchequer, and intoxicating liquors are a commodity which it is advisable to tax, in preference to the common necessities of life, or even harmless luxuries. Some of these last cannot be sold into Great Britain without paying Customs duty, but this is for the purpose of revenue merely, not as a restraint on trade. Free Trade, in fact, has been established as the result of a double experience, the one being the failure of all deviations from it, of which the United States furnish the most flagrant because the greatest examples, the second the unequivocal success of the practice of its principles in Great Britain, to say nothing of those of her immense dependencies where it has been tried.

LETTERS BY SANJO AND IWA-KURA TO THE CLUB OF NOBLES.

(Translated from the *Nichi-Nichi Shinbun*.)

Since the order for the expedition of the Kagoshima rebellion was issued by H. M. the Mikado, many soldiers have been wounded during a long succession of days in the fields of battle, where they fight regardless of the cannon and rifle balls falling around them. H. M. the Mikado feels much pity for them and has sent his own attendants and physicians to the field in order to aid them, making to them presents and showing them great attention, as well as ordering that the wounded soldiers shall be well tended in the hospitals provided for them. H. M. the Empress has also shown her sympathy, and made presents to the soldiers. Such conduct has not only caused gratification to the wounded men in hospital, but has given fresh ardor to those still engaged in the campaign, causing them to fight bravely, regardless of danger and death. We, Saneyoshi and Tomomi, have heard that, during years gone by, when a war broke out between Turkey and Russia, the English and French assisted the former by sending out large armies. Numbers of officers and soldiers were killed and wounded. At that time, H. M. the Empress of Russia personally visited in hospital the soldiers of the country, and enquired after their health, presenting them with various things. And an English lady went to Turkey at the head of other ladies of noble birth, taking various comforts to the soldiers in the battle-field, where she and the other ladies tended the wounded in hospital. And those invalids who were sent home to England were visited by the Queen in person, who inquired after the health of each one in the wards of the hospitals. And still later, when war was declared between France and Prussia, Their Majesties the Empresses of both countries repeatedly visited the wounded. Both officers and soldiers of the contending parties were much elated by their visits and were filled with martial spirit. The Europeans cite these ex-

amples with admiration. Now the conduct of our Empress and Empress Dowager towards our soldiers is just the same as that of these European ladies. Who of us will not take fire at such devotion and draw therefrom ardor for our work? The *kuwazoku* are higher in rank than men of other classes, and are much favoured by H. M. the Mikado. At the present trying time, they must not amuse themselves, but behave more worthily than others. To our great joy Mr. ——— has made a present of money to the government towards war expenses. We will talk of him some other day. It is right that the families of the nobles should also work to the utmost for the country. It would be well for them to devote their time to the manufacture of lint for the wounded soldiers, according to Their Majesties' the Empresses' desire. Lately a young woman in Osaka sold her hairpins, ornamented with gold and jewels, in order to raise money which she gave her country in aid of the expenses incurred. And an old woman in Takasaki, Joshu, petitioned the local government to enrol her only two sons in the troops. Similar accounts of individual sacrifice repeatedly occur in the newspapers. We advise our own class to follow such examples.

SAANJO SNEYOSHI.

IWAKURA TOMOMI

March 29th, 1877.

(Translation furnished to *Japan Gazette*.)

When the undersigned had on a previous occasion addressed the members of the Club of Nobles, it was understood that one question was left to be reconsidered. This was that of the voluntary contribution of sanitary material for the wounded by every noble family in proportion to its means. But it has occurred to us that this arrangement might offer several inconveniences; for, in a voluntary supply of material of this sort, it might easily happen that some article would be supplied beyond all proportion to its possible consumption, and other things altogether useless might be sent. To prevent waste of this kind it would be preferable if, instead of goods, every noble family would send in a round sum of money, to be deposited with the military and naval hospitals, to be spent at the discretion of the officers in objects most needful and beneficial to the wounded. But when we consider how great is the inequality between the several fortunes of our noble families, it can not be insisted upon that this rule of supplying money should be applied in each instance, but we prefer to hold out to them the example of some of the European nobility, which as we are informed are organized into regular and permanent associations under rules and statutes, in which the individual obligations and services of its members are clearly defined both in time of peace and of war.

We have been desirous of submitting to the opinion of the members of the Club of Nobles a translation of these statutes and regulations, but as this work would require time we have instructed certain persons to put themselves in communication with the Austrian Baron Siebold, who is attached to our Ministry of Finance, in order to enquire into this subject, and in co-operation with him to furnish an account of the association of Austrian nobles for the assistance of wounded and sick in war times (Marianner Corps of the Teutonic Order of Chivalry). A short account of this report is hereby annexed, which we submit to the consideration of

the members of the Club of Nobles. As it is however the result of a very hurried enquiry, some omissions may have happened and perhaps also misunderstandings; but as the informant is himself a member of the Austrian nobility, and as such actually a member of the said order, his statements are based on personal knowledge and observation, and we can therefore not hesitate to recommend them to the serious attention and earnest contemplation of the members of the Club of Nobles.

SANJO SANEYOSHI.
IWAKURA TOMOMI.

March, 1877.

SHORT DESCRIPTION OF THE AUSTRIAN ASSOCIATION FOR THE ASSISTANCE OF THE SICK AND WOUNDED IN TIME OF WAR (MARIANNER CORPS OF THE TEUTONIC ORDER OF CHIVALRY) BY BARON VON SIEBOLD.

In Europe the establishment of associations of nobles (called orders) date from the earliest times, and their original purpose was the promotion of a spirit of chivalry, the defence of religion, and the care of the sick in their hospitals.

As for the purpose under consideration the constitution of these ancient orders is not specially required, I may limit myself to saying that they partook of the nature of strict fraternities, under a superior, with fixed statutes, to which every member had to swear obedience and fidelity on entering the association. The most celebrated among these orders were the order of the Teutonic knights (Deutscher Ritter Order) and the "Johanniter," orders which were composed of the feudal nobles of those times. Each of these orders had a distinct organization akin to that of political bodies; and they were very powerful, until in course of time, with the downfall of the feudal system, their influence and importance diminished, and when, after the Napoleonic campaigns, the German Empire was finally dissolved in 1806, their possessions were mostly incorporated into the territories of the sovereign states which arose after the fall of the German Empire. Although some of these orders succeeded in preserving some remnants of their feudal character and a few of their possessions, even to the extent of being called by titles denoting independence and sovereignty, * they were in fact completely subjected to the government of the territories in which their remaining estates were situated (Austria and Italy.)

Although under these circumstances the continuity of some of these orders was safe and assured, it must be not overlooked that great changes came over their tendencies and character; but, true to the spirit of their foundation, they still continued to devote their efforts to the relief of suffering humanity, particularly taking care of the wounded officers and soldiers in time of war. The principal orders of this kind now existing in Europe are:

In Italy.—The order of the Maltese knights (Chevaliers de Malta.)

In Austria.—Order of the Teutonic knights (Deutscher Ritter Order.)

In Prussia.—The order of St. John (Johanniter Order.)

In order to be brief, I shall limit myself here to giving a short sketch of the constitution and organization of the Marianner Corps

of the Teutonic order, because, as a member of the same, the details of its organization are more familiar to me than that of the others.

By the statutes of the Teutonic order, only Austrian nobles could, on application, be accepted as members of the Marianner Corps for the assistance of the sick and wounded, but of late members of the foreign nobility have also been admitted. The superior authority is vested in the Grand Master of the order H. I. R. H. Arch Duke Wilhelm of Austria. Those desirous of taking part in the association can apply to the Grand Master who, provided they are otherwise qualified, appoints them by a diploma under his signature. They on their part enter into an engagement to be faithful and obedient to the articles of the constitutional statutes, which are, essentially, that every member promise to pay an annual contribution of 25 florins (12 yen) to the sanitary fund (in time of emergency further voluntary contributions are collected): further they engage to render personal service either on the battlefield or in hospitals. By this is understood that every member, whose circumstances will admit, is to take the field in one of the Order's sanitary columns on the mobilization of the army, in order to render effective service at the seat of war to the wounded and sick (lady members render service in the hospitals); and it must be said that this service has been very effectually rendered by volunteer noblemen whenever it has been required.

The Austro Hungarian army which when on a war footing numbers about one million men†, is divided into 40 divisions; and to each of these is attached one column of the Teutonic order composed of

- 1 Commandant (volunteer nobleman).
- 2 Surgeons (engaged by contract).
- 2 Assistant Surgeons (engaged by contract).
- 10 Stretcher Bearers to collect the wounded (volunteer noblemen).
- 2 Bandage carriers (engaged by contract).
- 1 Cook (engaged by contract).

The material of each sanitary column is composed of

- 2 Ambulance Wagons.
- 1 Fourgon.
- 1 Cooking Wagon.
- 1 Surgical Instrumentarium, and a number of Stretchers (about 20).

Although the order is established quite independently, and without any subsidy from the government, it has made arrangements with the Minister of War that, in case of a mobilization, all the horses required for the transport of material, as well as the necessary number of men required for their management, shall be supplied by the military authorities. Thus the Minister of War has engaged to furnish about 800 men, with their arms, to be detached for this service; and moreover all men and material are transported free of charge by all public means of communications.

THE SATSUMA INSURRECTION.

(From the Japan Gazette March 28th.)

The Choya Shinbun writes:—The Gakko-to seized the ammunition and other military stores in the arsenal. But they could not

get a pretext to rise against the government. During December, last year, Mr. Nakahara and twenty-one others in the government service returned to Kagoshima. On the night of the 4th February the rebels assailed their houses and took them to the police station, where they were strictly examined by the police officers and the rebels. The latter obliged them by torture to confess. The poor men having fainted under the question a cordial was given them and they were brought to. They were thus repeatedly tortured until they sealed their confession, which the rebels had composed themselves. They could not move at all, and their tormentors had to guide their hands. Afterwards, they were imprisoned, and a strict watch was constantly kept upon them. There was no hope left to these poor prisoners, who thought that they would be slain by the rebels. On the 10th March they were taken out of prison, which they left expecting to die. But to their great wonder, they were in the care of the Imperialists, at which their joy was indescribable. Thirty six of them were released in Osaka, and the rest, twenty-one in number, were taken to Tokio with Oyama, late governor of Kagoshima.

The Hocki Shinbun writes:—A telegram from Nagasaki, despatched at 12 o'clock on the 26th instant, announces that, on that day, the Imperialists in Yajiro captured a strong military position on the river Ogawa. More than one hundred soldiers were killed or wounded there; and about seventy three soldiers, severely wounded, were sent back to Karate.—The road between the castle of Kuma-moto and the river is level, and it would be very difficult for the rebels to obstruct the advance of the Imperialists there.—Mr. Kawamura, Vice Naval Minister, left the seat of war for Nagasaki on the 27th.—A telegram from Minami-no-seki, which was sent at 2.5 p.m. on the 26th, says that no battle was fought at Uyeki on the 25th.—The rebels are encamped between Otsu and Waifu. The Imperialists advanced against them as far as Midzushima and Shinmachi. No engagement has yet taken place between them. On the 26th the insurgents attacked the Imperialists at Mukaizaka, but they were soon driven back.—The captain and sailors of the Kagoshima-maru at Kobe were ordered to leave the ship, which was placed in charge of the Hiogo-ken.—Major Nagata of the Osaka garrison was killed in the battle at Tawara-zaka.—Machida-Keijiro, the third son of the ex-lord Sadowara of Hinga (a branch of the Shimadzu house) is twenty-two years of age. He was in America for seven years, returned to Japan in March of the 9th year of Meiji (1876), and visited the tombs of his ex-retainers in the northern provinces, where they fell in battle on the side of the Mikado against the Tokugawa Shogun. Having travelled through every famous place in the north, he returned to Tokio, where he became one of the members of the Kuwazoku Kaikan (Noble Club.) He found there that his opinion differed from that of Mr. Uyesugi, a prominent member, on some matter connected with education. So he left the club and returned to his birth-place. But he was soon obliged to return to Tokio through the ill health of one of his family there. Previous to his arrival, his invalid relative died, and he was then obliged himself to stop in Tokio by an attack of sickness. He was treated in the hospital of Juntendo, Hongo, Tokio, and recovered in October, 1876, when he again returned to his native country, where he built a large school for the children of his

* Thus the order of St. John is styled to this day in Austria the "Sovereign Johanniter order," and accredits an Envoy Extraordinary to the Austrian Court.

† The Austro-Hungarian army on a war footing actually numbers 29,596 officers and 1,013,755 men, 171,048 horses, with 209 batteries of artillery.

ex-retainers. The building was completed in January and was opened on the 5th February of this year. At that time, the young prince heard of Saigo's rising. He immediately collected about two hundred men, and armed them with rifles, and on the 18th of the same month proceeded, at their head, to Kagoshima, where he expressed his desire to follow Saigo. The chief, however, refused his assistance, saying that he was content to take the field with the Gakko-to. But this did not turn the prince from his intention, and he proceeded to Yajiro with his two hundred men, where he fought against the Imperialists.—In Nagasaki, the price of an orange is 8 sen, and six shō of rice cost one yen.

THE *Choya Shinbun* says:—A telegram from Osaka, despatched at 3.30 a.m. on the 27th, announces that a bloody battle was fought at Yajiro on the 26th inst., in which the Imperialists gained the victory. It is expected that they will shortly effect a communication with the garrison of the castle.—A despatch from the field, North-West from Kumamoto, sent at 11.30 a.m. on the 27th, states that at noon of the 26th, a battle was engaged at Kidome, where about fourteen earthworks were captured by the troops with a loss of only four or five lives, while many of the rebels were killed.—Some of the latter were dressed in the uniform of the Imperial troops.

(March 29th.)

The *Hochi-shinbun* of the 28th, March has the following narrative communicated by Kagawa, a Buddhist priest, who was imprisoned by the Kagoshima insurgents. It throws some light upon the value of the confession of which so much capital was attempted to be made by the *Japan Mail* and the *Herald*:—

On the 28th November of the 9th year of Meiji (1876) eight Buddhist priests, namely; Osu, Yamazaki, Kagawa, Koike, Takizawa, Kishun, Somon, and Takikawa, belonging to the monastery of Honganji, arrived in Kagoshima, as missionaries. They sojourned at Sakawa's house in Torodori. Their first difficulty was to get a lot of land whereon to build a temple, in which to preach the Buddhist doctrine. After some discussion with the ex-governor Oyama, 2,000 Tsubo of land were purchased by the priests; and the construction of the temple was commenced. In Kagoshima, all the Kucho and Kocho were appointed by the Gakkoto, and their influence was higher than that of the Kencho authorities of the rank of eight or ninth class. Since the outbreak of the Kuma-moto and Hagi insurrections, the people became much excited, and the Kucho and Kocho issued an order to the effect that the Buddhist priests of the Monto sect were enemies of the Shimadzu clan, so that no man under their jurisdiction should practise that doctrine and that those who professed it should be killed. So, all the shizoku and heimin, belonging to the sect, were much surprised, and discontinued attending the preaching of the priests, who were suspected by the Gakko of having been sent by Mr. Kido, *Naikaku-komon*, as spies, and to have about 5,000,000 yen for building the temple. The rebels forced their way into the arsenal for the first time on the night of the 31st January. On the following morning, Mr. Sakawa ordered the eight priests to leave his house. They did so, but could get no lodging anywhere, while the rebels were anxious to arrest them. They passed the night in a hut, where timber for the use of the temple was stored. Fearing an attack from the rebels there, Osu, chief priest, left the hut and

took refuge somewhere else. On the night of the 4th February, four insurgents came into the hut with swords in their hand and asked for Mr. Osu. When they were quietly told of his absence by the priests, the insurgents became very angry and took away blankets and other things. On the 7th of the same month, Osu was holding a meeting with other priests in the hut. A number of insurgents entered it and took them all into custody. They were imprisoned, and repeatedly questioned by the local officials, on suspicion of having entered Kagoshima as spies by Mr. Kido's order. They were in the same prison where Mr. Nakahara and others were imprisoned on a similar suspicion. During the night of the 9th February, Yetsumi, one of the rebel leaders, came to the prison at the head of a large number of shizoku, wishing to kill the prisoners, fifty-seven in all, and ordered a gate-keeper to give him the key of the prison door. This Saigo kept in his own possession, and he is said to have repeatedly ordered his men not to kill any prisoners. So the detestable leader was obliged to return, without fulfilling his desire. On their way homeward, he and his men in giving vent to their wrath killed a large number of oxen. A few days before the rebels' departure for Kumamoto, the ex-governor published the confessions of Nakahara and others, and exhibited copies in every public place. On the 17th a prison was specially built for them, and the fifty-seven prisoners were guarded to their new jail. The road was crowded by men and women, who cried loudly that "the spies, who desired to assassinate Saigo, were coming along. They were their enemies, and they desired to see them. Tanaka, one of the prisoners, was recently employed in the *Hiron Shinbun*. He greatly aided the Buddhist priests in their purpose of building a temple. So, he was much more severely tortured than the others by the Gakko-to. He and others were examined separately and obliged to seal a confession, which was quite different from what they had really testified. Nakahara refused to seal such a confession at first, but was obliged at last to do so by torture. They were again removed to another prison which stands on a hill, and kept there till the 10th March, when the Mikado's envoy arrived. He took them back to Kobe on the 18th. On the following day, the eight priests, all in good health, were handed over to the police in Osaka, by whom they were set at liberty.

The *Choya Shinbun* writes:—A telegram from Takase, despatched at 10 p.m. on the 27th, announces that about thirty earthworks at Kidome and its neighborhood were destroyed by the Imperialists on the 26th instant.—A despatch from Uyeki, sent at 10 p.m. on the same day, says that in the morning the town of Kidome was set on fire by the Imperial troops.—A bloody battle was fought at Uyeki on the 26th. The Imperialists kept their ground before the insurgents.—A detachment of infantry and artillery has been sent out against the insurgents encamped at Ogawa, but no information has yet been received from them.—Mr. Kawamura, Vice Naval Minister, has left Nagasaki for Yajiro, where he will join General Kuroda.—A telegram from Fukuoka, despatched yesterday, announces that a tremendous cannonading was heard in a direction North from Fukuoka, Chikuzen, and much smoke was seen. Details will follow.—The ex-Governor Oyama is said to have sent a letter to Prince Arisugawa-no-Miya, through the

Governor of the Nagasaki-ken, to the following effect:—"Saigo Takamori, Commander-in-chief of the army, left his home with the intention of asking some questions of the Government. A number of police officers have come to the Kagoshima-ken, saying that they were ordered by high Government officials to assassinate him. This was a most unreasonable order to issue. So he left, with the desire of enquiring into it. He felt himself compelled, under the circumstances, to protect himself from assault on his way to Tokio with a guard armed with fire-arms. So, I, Tsunayoshi, granted him permission to do so. But he was unfortunately obstructed in his way by the garrison troops in Kuma-moto, and, further, an expedition was fitted out against him. All the local authorities were also distrusted by the Government. But Saigo and others have entertained no treacherous desire from the first and they only wished to ask a question. Now, I, Tsunayoshi, request that His Highness the Prince will order the withdrawal of the Imperialists, and accord permission to Saigo to go up to Tokio."

The *Hochi-shinbun* says:—A telegram from Kioto on the 27th instant announces that Prince Arisugawa-no-Miya visited the camps at Uyeki and other places on the 26th instant.—It is said that the shizoku of Fukuoka are much excited, and that telegraph communication south-west from Fukuoka had been again interrupted. According to the *Nichi-Nichi-shinbun*, the telegraph wire in the village of Katagase, situated about one *ri* south of Fukuoka, was found to have been cut. It was immediately repaired and communication was restored yesterday afternoon. The damage must have been done by the shizoku of Fukuoka. About 150 of them have met there. Twenty of them were arrested, and the rest have dispersed.

The *Akebono-shinbun* says:—A telegram from Kinoha on the 27th announces that a great fire was observed this morning in the direction of Kumamoto. It is rumored that some of the garrison of the castle had opened secret communication with the insurgents, who thus found some means to take the castle and to make prisoners of the Governor and garrison.

(April 3rd.)

It becomes more and more evident from day to-day that the Imperialists have not gained one important step towards the suppression of this revolt, and that having failed, and continuing to fail, in their efforts to reduce the rebels by force, the Government will have to try, with the best grace they may, such diplomacy as they may have at command, to induce Saigo to disband his forces. That the insurgent chief will only do so on condition of his demands being complied with, is evident. Rumor has been busy during the past few days. There seems no reason now to doubt, but on the contrary every ground to believe, that Kumamoto has been captured. If it is so, Saigo is, no doubt, furnishing it with provisions in order to prepare it for another siege, this time by the Government forces, should they be able to advance so far. But it is to be hoped that matters will be settled before that siege is laid; and indeed Saigo is evidently in such a position that he is very far from being reduced to the extremity of shutting himself and his troops up in a fortress. He holds most of the fastnesses of the province, and the constant reinforcements of troops which are sent thither prove that his resistance is a desperate one. The capture of Kumamoto is said to be due to the garrison,

who, starved and demoralised, refused to prolong their resistance, and marched out bodily, leaving their Governor and officers to be made prisoners. Among other reports circulated, true or false, in the capital, was one of the assassination of Kido. A more reliable one is to the effect that Shimadzu has been invited to Kioto, which, if well founded, means the offer of concessions to the Satsuma insurgents. The prompt termination of this disastrous civil strife which impedes commerce, and arrests the progress of the country, is to be ardently wished for. We translate below the more important news from the seat of war given by the principal native journals:—

The *Hochi Shinbun* of the 30th March publishes the following items:—A great battle was fought at Kidome and Uyeki on the 28th ultimo, which was ended without decisive result, though many on both sides were killed.—Mr. Tsugawa, *Daikeibu*, left Tokio for Kiushu, at the head of eight hundred police who were recently recruited in the North.—The Imperial Mint in Osaka had supplied about 3,600,000 yen for the expenses of the expedition up to the 25th ultimo.—A telegram from the South, which was received at 2 p.m. on the 29th, announces that at dawn on the 28th the insurgents, encamped at Kidome, were attacked by the Imperialists and that the latter were obliged to retreat with great loss at about 1 p.m.

The *Nichi-nichi Shinbun* of the 30th has the following:—The Imperialists at Takase and Yajiro are in constant communication by the Higo sea. On the 25th ult. a skirmish was fought at Yajiro, where colonel Yamagawa landed with a detachment on the following day.—On the 26th, the Imperialists advanced by the two roads of Miyahara and Kagamimura. The insurgents deserted their forts at Ogawa and Sunagawa leaving the Imperialists in possession of them. Kodama, one of the rebel leaders, who had held Government rank as Lieut-Colonel, was killed in that battle. On the 29th, Lieut-General Soga left Kobe for the South.—Telegraphic communication between the town of Yamaka and Kioto has been restored.—To-morrow telegraphic apparatus and wires are to be sent to the South-West in the *Hiroshima-maru*.

The *Choya Shinbun* writes:—Since the 27th ultimo, the Kuma-moto garrison troops have repeatedly fought with the besiegers, who beat them. But the latter were totally routed on the afternoon of the 28th.—Many messengers were sent out by the Kumamoto garrison. One of them only arrived at the Imperial lines, and nothing is known of the others. H. M. the Mikado sent for the messenger and he accordingly went to Kobe, where the Mikado personally questioned him as to the condition of the garrison.—A number of troops will shortly be despatched for the South-west.—On the 30th, a desperate battle took place at Waifu and Torinosu. Neither the Imperialists nor the insurgents got any advantage. After the engagement at Yajiro on the 29th, the insurgents fled in disorder, leaving cannon and rifles behind them, and twenty of them were found dead on the field.—According to a man who has recently arrived from the South-west, the Imperialists have always been victorious, but they have suffered much more loss than the insurgents.—A telegram received at 2 p.m. on the 30th says that the rebels about Kumamoto had retired as far as two ri from the castle and threatened to proceed on the road to Saga.—H. M. the Mikado came to Osaka by the 8

a.m. train on the 31st ultimo. He was present at the parade of the Osaka garrison, and visited in hospital the wounded who were recently brought back from the South-west.—A telegram from Kioto despatched on the 31st says that, on the 30th, a detachment of police and soldiers was sent out against the rebels at Sawara, who fled after setting the village on fire. The victorious troops pursued them as far as Ikuba.—About fifty officials of the Home and Finance Department have been appointed to offices in Kagoshima-ken. They will soon leave for their posts together with the new governor. To-morrow, the 4th, about 500 police will leave for the island of Kiushu.

The *Akebono Shinbun* writes:—A telegram from Kioto, despatched at 10.10 a.m. on the 31st, states that, on the 30th, the Imperialists attacked the fortress on the summit of Mitake. But they were soon obliged to retreat and no attack was made at Kidome. Another detachment of the Imperialists sent in pursuit of the insurgents at Waifu were victorious. About fifty dead rebels were found on the road between Kagomura and Torinosu.—All the insurgent camps are lighted during the night by torches, a practice not adopted in the Imperial camps, where lights are thought likely to aid the rebels in making attacks.—The insurgents at Waifu and Futamata have deserted their forts and joined the besiegers of the castle.—Seven battalions of infantry and 2,000 police have already landed at Yajiro.—It seems true that Kirino, one of the rebel leaders, was killed.—A telegram on the 29th ultimo announces that about 500 or 600 shizoku of Fukuoka threatened an attack upon the castle of Fukuoka early on the morning of the 28th. They were soon dispersed by the troops and marched for the province of Higo.

(April 4th.)

The authorities, not satisfied with the prohibition they had issued to the native journals to abstain from publishing idle rumors, and disgusted, probably, at some grains of truth finding their way into the accounts given of the successes of the insurgents, have established a rigid censorship. The *Choya-shinbun* states that from the 2nd instant no papers would be published without previous approval of a sample copy by the *Keishi-kioku* (Police Department). So that the sources of news so far but partially available, bid fair to be all but dried up. This morning's *Mai-Nichi Shinbun* displays several gaps, one of which is the space intended to be occupied by a long leader—we wonder what it was about—which shows where the relentless pen of the censor has expunged offensive (probably because truthful) matter. We reproduce some items below, which must be taken for what they are worth, having reference to the insurrection. Ex-governor Oyama's letter is interesting and appears straightforward. Saigo's first intention was probably to proceed to the capital to insist upon reform; but he was too far-sighted not to foresee probable resistance to his march, and to take his measures accordingly. The Government have not enough men yet at the seat of war to cope with the insurgents. One thousand more troops and police are forwarded this afternoon by the *Hiroshima-maru* for the south—more sheep for the slaughter, more live flesh to be carved by the trenchant blades of Saigo's samurai.

An extra of the *Hochi Shinbun* of the 1st instant publishes the following letter from Oyama-Tsunayoshi, ex-governor of the Kago-

shima-ken, addressed to Prince Arisugawa-no-Miya:—

“The alleged reasons of the departure for Tokio of Saigo-Takamori, Commander-in-chief of the Imperial army, and the two others (Kirino and Shinohara) have already been reported to the government. They left their homes on the 15th February; and the garrison troops in every ken were beforehand informed of their movements. Notwithstanding that, the Kuma-moto garrison troops set the town on fire previous to their arrival as a measure of protection against them, and when they had advanced as far as Kawajiri, the troops fired upon and attacked their procession. I was much surprised at receiving this news, and still more astonished to hear that the Kagoshima expedition had been ordered by His Majesty the Mikado on the 19th ultimo. Saigo, Commander-in-chief, lived respectably and peaceably in this ken since he resigned his post; and many thousands of shizoku established private schools at their own expense, where they were instructed not to misconduct themselves but to work for the benefit of their sovereign and country. So when the Saga, Kuma-moto, and Yamaguchi insurgents treacherously rose, the entire Kagoshima-ken remained in tranquility. But ———, having some suspicion of Saigo and his friends, ordered their private assassination, in violation of the laws, and wishing to gratify his personal enmity against them. I think that this is a great fault on the part of the government, and calculated to bring us into contempt with foreigners, and that it would have been only right that one holding the office of Commander-in-chief of the army, marching with followers, as his escort, armed with rifles and swords, should have been allowed to arrive in Tokio, without interruption. I therefore granted Saigo and others permission to depart. Is the government really determined on the subject of the Kagoshima memorial? The inhabitants under the jurisdiction of this ken are the subjects of the Japanese government, whose orders will not be disobeyed by them. But as all of them are much excited and moved, I beg that Imperial instructions may be issued to them, and further that the desires of Saigo may be acceded to by the government.

“OYAMA-TSUNAYOSHI,

“Governor of Kagoshima

“2nd March, 1877.”

The *Hochi Shinbun* of the 29th ultimo gives the following list of names of killed and wounded Imperialists, since the 6th March, from a letter from the south-west:—Majors Gato, Iseki, and Nagata, and 2nd-Majors Kitagawa, Nagata, and Nagahisa of the 2nd battalion of the Osaka garrisons, killed. Majors Takata, Tonai, and 2nd-Majors Isono, Ito, and Captains Nohara, Nishino, Ikeno, Oto, Yoshihiko and Fugita of the same division, wounded. Majors Oseki, Takehira, and Sasaki, 2nd-Majors Tsusaki, Tosaki and Ono, and Captains Okasaki, Hayashi, Hira-ishi, Nagami, Katayama, of the 1st battalion of the Imperial body guards, killed. Majors Awaya, Chishiki, Fujino, and Takayama, and 2nd-Major Dewa, and Captains Matsushima, Munakoshi, Akamatsu, Kaseda, Kuramitsu, Ishizu, Itokata, Takasugi, and Kurahashi, of the same corps, wounded. Besides these, one Major, three 2nd-Majors, and four Captains were killed; and two 2nd-Majors and three Captains wounded. Captains Wa-

shidzu, and Yoshimatsu of the Osaka garrison were wounded in the battle at Takase on the 27th February. 2nd-Major Miyazaki was wounded at Yoshiji, on the 3rd March. On the following day three Majors were wounded at the same place. Major Mori was killed at the same place on the 6th. Three Majors were wounded at Futamata on the 8th. Six Majors and Captains of the Kumamoto garrison were wounded, and one Captain was killed, in the battles at Kinoha, Kawazaki, and Tawara. Seven Majors and Captains of the Hiroshima garrison were wounded, and one Major was killed. Three Captains of the Nagoya garrison and two 2nd-Majors were killed. Besides these three Majors and fourteen officers of various divisions have been killed.

Later intelligence is as follows:—The *Mai-Nichi Shinbun* reports that a telegram sent from Nagasaki at 12.40 on the night of the 2nd, announces that the insurgents, encamped at Matsubashi, were driven out on the 30th ultimo and that the Imperialists attacked U-to on the following day.—One from the south, despatched at 9 p. m. on the 1st instant, says that a fortress at Sannotani has been taken by the Imperialists.—According to information from Osaka the wife of Saigo Takamori has collected in Kagoshima a band of about 1,000 women, whose husbands and fathers had followed Saigo to Kumamoto. These Amazons are dressed in a uniform of white cloth, and are armed with halberds and swords. They have left their home for Kumamoto.—The trial of Oyama ex-governor of Kagoshima, has commenced at the Tokio Saibansho. It is said that he makes no reply to any question by the judges; saying simply that he will accept any decision, as he had no desire to arrive alive in Tokio.—On the 29th ultimo about sixty shizoku of Fukuoka were arrested for having taken up arms against the authorities.

The *Hochi Shinbun* writes:—A telegram from Kinoha, despatched at 10.40 p.m. on the 1st instant, says that the Imperialists are masters of Kidome and Yoshiji.—The Kumamoto Kencho and Saibansho have been temporarily opened at Minami-no-seki.—Oyama, ex-governor, is to be tried before H. E. Mr. Oki, Minister of Justice.—Tahata, chief secretary of the Kagoshima-ken, and many subordinate officials will shortly be brought to Tokio.—When the town of Takase was set on fire, about 20,000 koku of rice, belonging to the government, was burned. It was set on fire by the Imperialists on the 24th February, and when the insurgents arrived there on the 18th March, the rice was yet burning.—A telegram from the South, received at 10 p.m. on the 2nd, announces that the Imperial troops at Yajiro were victorious at Matsubashi on the 31st March; and removed their head-quarters from Yajiro to Kagamimura. On the following day they attacked the insurgents at Uto, where the latter were again routed with great loss.—The insurgents in hospitals at Kawajiri have been removed to Ni-oi-zaka on the road to Hiuga.—Mr. Iwamura, the new governor of Kagoshima, will leave for his post in a few days. About five hundred policemen will escort him.—Mr. Hosokawa, ex-lord of Kumamoto, has distributed rice to the value of about 7,000 yen among the poor in his former dominions. He is now stopping at Takase.

(April 5th.)

It is stated by the *Hochi-shinbun* that the insurgents' tactics have undergone a change. Up to the 25th ultimo they rarely attacked; but awaited the assaults of the Imperialists. Since that date, however, they have made

furious onslaughts upon the troops. The reason for this change is asserted to be shortness of provisions in the rebel camps. Many wounded soldiers are brought to Osaka. All according to an eye witness of their arrival are hideously hacked, lopped arms and legs, and gaping wounds testifying to the sharpness of the swords of the samurai, and the force with which they are wielded. The native papers report some successes on the part of the imperialists, and say that an army is within three *ri* of Kawajiri, Saigo's head-quarters.

This Morning's *Daily Advertiser* has the following paragraph. If the intelligence it contains, is correct, as indeed it probably is, the diversion effected by the insurgents, and their unqualified success, must have a great influence upon the ultimate results of the campaign:—"News from an undoubted source has been received of an attack on Fukuoka on the night of the 28th ulto., or rather at daylight on the 29th, which seems to have been a serious affair, and likely to create a strong diversion in favour of the insurgents. From the few particulars that we have been able to learn, it seems that this important town, which, at the commencement of the outbreak, was made the head-quarters of the Imperialists, was left by them protected by about four hundred policemen only, though it is a large place and a castle town. On the nights of the 27th and 28th ulto. a large band of samurai, the number of which cannot positively be stated, consisting principally of Saga and Akizuki men—though members of many other clans had joined—managed secretly to enter the town. At the same time a steamer succeeded in running in under cover of the darkness, and in landing a number of men. At daylight an attack was made, and after some hard fighting the castle was taken by the samurai. It is reported that the killed and wounded on both sides amounted to over four hundred. Attention had been called to the unprotected state of the place, but it was stated that no danger was apprehended, as Fukuoka was so far removed from the actual seat of war."

(April 6th.)

The *Nichi-nichi Shinbun* writes:—The first and second divisions of troops at the seat of war, under the command of Lieut.-Generals Nodzu, Oyama, and Miyoshi, are encamped between Kidome and Uyeki, the third under Lieut.-General Mi-ura at Yamaka, and the fourth or *corps de reserve* between I-igura and Takase. Three more divisions under the command of Lieut.-Generals Takashima, Kawaji, and Yamada are encamped between Hinaku and Yajiro, South of Kuma-moto. Three inspectors, viz., Generals Yamagata, Kuroda, and Admiral Kawamura, are constantly passing from one camp to another. The troops now at the seat of war number about 30,000. General Soga has advanced as far as Umano-seki to reinforce them.—Men-of-war are cruising in the sea of Higo.

The *Hochi-Shinbun* writes:—A telegram from Kioto sent at 6.30 p.m. on the 2nd inst. announces that the insurgents in the Fukuoka-ken were totally routed at Matsuzaki on the 1st inst.—Another telegram on the 3rd says, that during the night of the 2nd, they were dispersed in disorder, and that on that morning many of them gave themselves up at the Kencho.—A telegram from Kioto, despatched at 7 p.m. on the 4th, gives the following as taken from a letter from Lieut.-General Tani, Commander of the Kuma-moto garrison, dated the 20th March.—"The garrison troops are still victorious. No great

engagement has yet taken place here. Only about 800 insurgents are besieging the castle, and they keep at a distance. Every entrance to the castle is strictly guarded and no rebel forces have endeavored to effect an entrance. They seem to be waiting the exhaustion of our provisions, which are sufficient to support us for many months. But we are anxious to effect communication with the other Imperialists as quickly as possible. If the insurgents at Tawara-zaki are routed, the besiegers will probably retreat. A detachment should be sent to Takahashi, South of the castle, by sea, this district not being thoroughly occupied by the insurgents, and men-of-war should be sent to Akune to cut off communication with Kagoshima."—Another telegram from Fukuoka, received at 8 p.m. on the 4th inst., announces that the insurgent forces in that ken having been routed at the village of Otoku, Chikugo, on the 1st, they retreated as far as Akidzaki, Chikuzen, where they were nearly suppressed by the police force on the following day. Seven rebels were killed, twelve taken prisoners; and many others surrendered. The city of Fukuoka is now free from disturbance.—On the 5th, the *Seiki-kuwan* and *Takao-maru* left Nagasaki for U-to. Admiral Kawamura has embarked on board the former.—Yesterday evening two battalions of the Sakura garrison arrived in Tokio. They will be sent to the South in a few days.

The *Choya Shinbun* writes:—4,000 insurgents at least have been killed. The number of men under Saigo is said to be about 25,000, and not only 15,000, as has been repeatedly stated in the papers.

(April 9th.)

The intelligence taken from the native papers, which we give below, will at least be found interesting, though it does not contain much definite news as to the condition of the opposing forces. Whether Kumamoto has fallen or not is still a matter of doubt. The native papers are strictly scrutinised by the censors, who, of course, prevent the publication of reports, well or ill founded, of reverses to the government cause. The columns of the *Mai-nichi*, and *Akebono Shinbun* have many spaces filled up with ominous black, and the *Nichi-Nichi*, *Choya*, and *Hochi Shinbun* show at intervals rows of circles, where reading matter should be. It seems now that not merely the expression of opinion and the statement of unpleasant facts by the press is forbidden. Even speech is interdicted, so long as it is unpalatable to the Government. We read in the *Mainichi Shinbun* that the inhabitants of the city of Kurume, Hizen, are forbidden even to mention a victory gained, or a defeat sustained, by the imperial forces; and anyone infringing this prohibition is liable to be taken into custody by the police. The question which winds up the paragraph stating this must surely have escaped the eagle eye of the censor. It asks, "Is it on account of fear that the secret truth as to the real state of the war should leak out, that this order has been promulgated?"

A foreign gentleman, recently arrived from the South, and who had many opportunities of conversing with natives who have been employed in turn by the insurgents and the imperialists, asserts that beyond question the former are entirely surrounded. He says that the number of wounded soldiers is very great; and estimates that some three thousand of Saigo's men have been killed, or, being disabled, have despatched themselves. He was told that the samurai, if slightly wounded, bound up their hurts and continued to fight; but if

they found or thought themselves dangerously injured either ripped themselves up, or begged of their comrades to kill them, a last service which was promptly rendered. Saigo is reported to be unwell, suffering from a dropsy which prevents his moving about. So he is carried from place to place in a chair.

The government, it is evident, do not yet feel that their forces in the field are strong enough to bring the rebels to submission or to exterminate them. Two more battalions, infantry and cavalry, were sent towards the seat of war yesterday in the *Tokio-maru*. We witnessed the embarkation of some of these troops, which are composed of the most boyish of levies. It is deplorable that the horrible and unnatural slaughter should continue. What the country will suffer by the withdrawal from the pursuits of peace, and the destruction of such vast numbers of those who should be cultivating the soil or trading, the future only can show. Meanwhile grave fears are felt that the insurrection, which has already taxed to the utmost the powers of the authorities more to make head to it, will spread to other provinces. In the Owake-ken, north of and adjacent to the seat of strife, the natives are holding largely attended meetings in various places. Although the object of the meetings is not known and can only be suspected, yet, especially in the present condition of affairs, such assemblies themselves are ominous of more trouble. We can but reiterate our heartfelt hope that a peaceful settlement may soon be come to. Difficult as it is for foreigners to pronounce correctly upon Japanese affairs, the deduction, that there must be serious defects in a Government under which such insurrections, as those of which the present is but one, are possible, is the only logical one to make.

The *Choya-Shinbun* says:—About five police inspectors were in Kuma-moto castle disguised as farmers of the province of Higo. On or about the 15th of March, they left the castle in order to effect communication with the Imperialists. One of them passed undiscovered through the besiegers' lines. He was stopped three times by the insurgents, but, fortunately, succeeded at last in arriving at the Imperial quarters at Uyeki. Nothing has yet been heard of the four others, who may have been taken prisoners. The one who passed through the lines of the besiegers reports having seen five or six imperialist prisoners, each of them tied up to a post, with the nails of his fingers and toes broken to pieces through the infliction of torture. —About 200 volunteers of the ex-daimio Matsushiro, having been allowed to join the imperialists at the seat of war, were attached in Tokio to half a battalion of reserve under the command of Major Hayashi. They left for the South in the *Tokai-Maru* on the 8th instant. Half a battalion from the garrison in Awomori will shortly follow them to the South-West.—About 3,000 shizoku of various ken in the Northern provinces have been appointed to the police.—Two battalions of shizoku in the Ehime and Fukuoka ken have been collected, and arrived at the Hiroshima barracks on the 28th March. All of them served in the field during the revolutionary war.—The youthful son of General Tani, commander of Kuma-moto castle, was sent out of the fortress by his father, who "ordered him to survive." He was once arrested by the insurgents who took compassion on the boy, and after entertaining him hospitably sent him on to the Imperial camp.—Mr. Tamano, judge of the

second class, has refused to preside at the trial of Oyama, ex-governor of Kagoshima.

The *Hochi Shinbun* says:—A telegram from Osaka, despatched at 4.30 p.m. on the 5th instant, announces that the insurgents in Tajima and its neighborhood were dispersed with great loss on that day; and that the fort at Torinosu was captured.—Another telegram from the South, received at 1.55 p.m. on the 4th, says that, during the night of the 3rd, the insurgents attacked the imperialists, encamped at Kidome, but were soon obliged to retreat. On that same day, the imperialists made an assault upon the fort in the village of Taremidzu, which they set on fire.—The Daijo-kuwan has instructed the governor of Yamaguchi-ken to the effect that those under his jurisdiction who have once served in the army are to be enrolled. A similar order is said to have been issued to the other ken, by which means it is expected to form a force of about 10,000.—A telegram from Kioto, despatched at 1 a.m. on the 7th instant, announces that on that day, a great battle was fought at Kidome. At first the Imperial troops were victorious and captured six or seven entrenchments of the insurgents. Meanwhile, an insurgent force attacked the victorious army in the rear. A desperate battle followed, and at length both armies retired from the field. Another telegram from Kioto, sent at 12 o'clock on the 6th, says that, according to news received from Minami-no-seki, the Imperialists had in the morning early commenced an attack upon the insurgents at Midori and had once advanced in pursuit as far as Torinosu. But they were driven back again and at last made a stand at Harano-Daiba. No skirmish nor battle had taken place at Uyeki or Kidome on the 6th. In the direction of Waifu tremendous firing was heard that morning. Details were to follow.—H. M. the Mikado has sent, by Kataoka, one of his attendants, to Takase, to inquire after the health of the wounded in the hospitals.—Mr. Yanagiwara, member of the Genro-in, and recent envoy to Kagoshima, returned to Tokio on the 5th instant, and had an interview with H. E. Iwakura, on the same day.—A telegram from Minami-no-seki at 9 p.m. on the 6th, announces that before dawn the Imperialists had attacked the fort at Torinosu, but were obliged to retreat.—One from Kioto, sent at 10.35 p.m. on the 7th, says that the Imperialists on the Yajiro road, south of Kuma-moto castle, had captured Uto, where they established their head-quarters. No battle had taken place in that neighborhood for a long time. But a large number of insurgents, newly raised in Kagoshima, had advanced on the Hitoyoshi road and arrived at Naodani, which lies within two ri south of Yajiro. On the evening of the 5th instant, a battle was commenced there and lasted without result until night.—The third battalion of infantry from the Sendai garrison is expected to arrive in Tokio to-morrow.—The following is a translation of communications issued by the Mikado to Prince Arisugawa-no-Miya and to the government officials and generals at the seat of war:—To the Prince:—"You, being in command of the naval and land forces, are reminded to discharge your duty faithfully as the chief of the expedition. I am much pleased to comfort you in your trouble and present you some wine. Issue proper orders to your generals, and report, promptly, your success to me, when the rebellion is suppressed." To Yamagata, Kawamura, and Kuroda, who are watching the campaign:—"Some treacherous fellows in the Kagoshima-

ken are growing more and more strong and hostile to the government troops. But you fight bravely against the insurgents, commanding your several divisions of troops, and aid the Prince to the utmost of your ability. H. M. the Mikado feels much sympathy for you, and presents you wine and fish to comfort you. He has ordered that you will promptly report your deeds to H. M. the Mikado on the suppression of the rebels." A similar letter was addressed to Lieut.-Generals Oyama, Nodzu, Miyoshi, Miura, Yamada, and Kawaji, through Sanjo-Saneyoshi, Daijo-Daijin.

100 yen have been sent to the Prince, 50 yen to each of the three next mentioned officials, who are called "war spectators," and 25 yen to each of the Lieut.-Generals, by the Mikado as money for the purchase of wine and fish.

The following letter has been addressed to the Prince by the Minister of the Kunai-sho:—

"Since the Kagoshima insurgents treacherously took up arms, many of the Imperialists have been killed and wounded in several bloody battles. Their Majesties the Empress and Empress Dowager have made the following presents to the wounded:—lint, 105 rolls; English lint, 20 rolls; white cotton cloth, 500 rolls; wine, 500 bottles; and tobacco, 800 pounds.

"Specially to the wounded Imperialists in Yajiro:—lint 50 rolls; white cotton cloth, 250 rolls; tobacco, 400 pounds, and wine, 1,000 bottles.

"This lint has been manufactured by their Majesties the Empress and Empress Dowager in person, assisted by their female attendants."

On the 2nd instant, Matsudaira-Yoshinaga, Date-Masashiro, Ikeda-Yoshitoku, Mori-moto-toku, Ikeda-Shigemasa, and Yamanouchi-Toyonori, all nobles, who accompanied H. M. the Mikado to Kioto, visited the wounded Imperialists in the hospitals in Osaka, and made various presents.

Large numbers of men, wounded more or less severely, arrived at Osaka on the 2nd and 4th instant, 126 out of—(number not stated) were mortally wounded. Some of them have lost their arms and others their legs.

EXTRACTS FROM THE P. M. GENERAL'S (HONGKONG) REPORT.

The Postmaster General's report has been published at length in the Hongkong papers, and is, as all Mr. Lister's reports are, highly interesting. We take from it the following excerpts:—

A mail sent by British steamer *t^o Bangkok* was delayed two months, in consequence of the Master's omission to land it. This vexatious circumstance led to an enquiry into the state of the law as to the delivery and reception of Mails at Consular Ports, which was found to be complicated and unsatisfactory. The whole question has been referred to the Home Government.

It is matter of regret that circumstances have again prevented an inspection of the subordinate Post Offices and Agencies, which however, it is hoped to undertake early in the present year.

It has been ascertained that the Australian Post Offices deliver free all private ship correspondence arriving in mails. The antiquated and vexatious charge of 4d. a letter, formerly levied here even on prepaid cor-

respondence received by private ship from Australia, has therefore been abandoned. This Office now delivers free in China and Japan all ship mails from all parts of the world, with one trifling exception. (Manila, now a Union country.) Loose letters are of course charged as formerly.

A misunderstanding, for which this office was not responsible, having been removed, the Torres Straits route is now open for New Zealand as for other parts of Australasia. The packets on this line have made more regular passages during the year, and all correspondence for Queensland, New South Wales, Victoria, New Zealand, or Tasmania is sent by them, unless it be specially directed for the route via Galle.

The English mail twice arrived unsorted during the year, each time from a cause which could not have been foreseen. The Messageries Maritimes Company have most kindly given permission for the sorters to be sent to Singapore in the Company's packets when there are no other means of conveying them in time. Sincere thanks must also be tendered to the agents of other steam lines, who give passages to the sorters on nominal terms every winter.

The registration of letters at sea, mentioned in the Report for 1875, has been a complete success. Registered correspondence is now delivered almost as soon as landed.

A letter was received here which was being sent round the world westward with a view to its subsequent exhibition at the Centennial Festival at Philadelphia. A payment of 5d. in America and of 2s. 1d. in Hongkong—under the Postal Union only one payment would be necessary—would carry such a letter by the most advantageous route entirely round the globe in about 80 days. It would bear the dates of four Post Offices only, the office of origin in America, San Francisco, Hongkong, and London; and the Postage Stamps of two, America, and Hongkong. Were it registered the whole way the total cost would be increased to five shillings. But by availing of a private steamer from Hongkong, a letter could be sent entirely round the world, probably in less than 100 days, for 1s. 1d., which would be thus divided:—

American Office.....	5d.
Hongkong Office.....	3½d.
London Office.....	4½d.

It is worth recollecting that for such trivial sums (which will be still smaller under the Postal Union) a letter is carried by steam across three great Oceans, and through such works as the Suez Canal or the Mont Cenis Tunnel.

It is to be hoped, however, that sending letters round the world may not become a popular pastime, or it will constitute as serious a nuisance as the incessant demands of Postage-stamp collectors. The senders seem to forget that greenbacks, or the Postage-stamps of their own country, are not available everywhere, and that the trouble they give leads to no practical result of any kind.

The increase of colonial expenditure is mainly in payments to shipmasters, and to the American and Japanese post-offices for the conveyance of mails.

The net falling off in colonial revenue is \$11,725.03, of which half at least has arisen from loss on exchange in remitting to England. The remainder must be ascribed to the competition of the American and Japanese post-offices at Shanghai, Hangkow, Ningpo, Nagasaki, Hiogo, Yokohama, and

to some extent at Foochow; to the development of the Shanghai local post-office at most of the above ports; to the great reductions in the profit this office was making on correspondence to the continent of Europe (see report for 1875, par. 14); and to the lowering of the local rates of postage; whilst unfortunately the new post-office ordinance, which is to lessen some of the outgoings of the department, has not even yet received approval at home.

If even, however, it could be shown that the whole decrease, instead of a small part of it, were due to the lowering of the local rates, the responsibility for the change would be accepted by this department. The rates were too high, and the Hongkong Office was being left behind the times. Our revenue might be made an excuse for any exorbitant charge whatever.

It must be remembered, however, that throughout the whole year, two rival offices in Japan and the North of China have been offering communication with America and Europe at rates less than half of ours (5d. on letters for instance as against 1s. 2d.) and that, for Shanghai and Ports North of Shanghai the route via San Francisco is at least as speedy as that via Suez. At Yokohama alone nearly 10,000 letters and 6,000 papers less were posted for the Suez route in 1876 than in 1875. It has been learnt that the mail despatched from that port via San Francisco has been as much as fifty bags by one packet. Much of the contents would no doubt be papers, &c., which but for the low rates would not have been posted at all; but a few years since all the rest would have passed through this office.

It is to be hoped that the next annual report will be more encouraging, if not with regard to revenue (for revenue is in all probability a thing of the past) at any rate in something to show for the revenue which may have ceased to exist. The chief characteristic of 1876 has been waiting for better times. It must not be expected, however, that the Postal Union machinery will work smoothly all at once. Much experience and a vast deal of correspondence will be required to settle things into their new groove. Perplexing questions are almost sure to present themselves. It is hoped that public forbearance will be extended to delays which, vexatious as they are, are inevitable where correspondence with distant offices is involved.

Miscellaneous.

MR. JOHN ROBERTSON, Agent of the Oriental Banking Corporation's Branch in Yokohama, left for San Francisco *en route* to Europe by the *Alaska*. Mr. Robertson has represented the O. B. C. here since 1866 with great benefit to the Bank as the directors can testify. A shrewd man of business, he has advanced the interests which were confided to him, and brought to a uniformly successful issue the large transactions of which he has had the conduct. By his juniors, whose respect he has gained, he will be much missed, while his absence will be felt by a large circle of friends and acquaintances socially, and by numbers of business men who could always rely upon the accuracy of his judgment for good practical counsel in commercial matters. On the turf, too, he will leave a void which it will be hard to fill. The community of Yokohama will keep his memory green, and think of him with a feeling of gratitude for his staunch resistance on their behalf to those who endeavored to deprive them

of their rights, but whose efforts were baulked by the manly front shown by Mr. John Robertson. We have no wish to open up old grievances; but it would be hard to bid farewell to him who is going without giving him one thought and one word of recognition for his excellent management of the Race Course question. For ourselves, and on behalf of the public of Yokohama, we wish him and his family a cordial good-bye, and express the hope that his return may not be long postponed.

Soon after one o'clock on the morning of the 28th March, a disastrous fire broke out in Nakamura's eating house on the north side of Ichhome, Otamachi, situated only a few doors beyond the photographic establishment at the corner. A strong breeze was blowing from the South-West, and caused the flames to spread rapidly to Benten-dori and Minami-Naka-dori. At this spot an effort was made to arrest their further progress by pulling down the houses in their path, but without success, as they gained ground quickly on the workers and carried the destruction into Honcho-dori, where they burned down the houses adjoining the Town Hall, which at one time was in imminent danger, but fortunately escaped without injury. About one hundred and fifty houses, among them the large and well known store of Tachibanaya, in Ichhome, Benten-dori, were burnt to the ground. The loss of property must have been very considerable, as the hearth of the conflagration was the centre of a large trade with foreigners, and although all the godowns withstood the flames, a large quantity of the goods on sale in the shops was left there through the night. All the foreign fire brigades hurried to the spot as soon as the alarm was sounded, and men were landed from the men-of-war in harbor, and all worked with a will to impede the spread of the destruction.

A circular headed "Christ Church, Yokohama," was somewhat freely and indiscriminately distributed over the Settlement, in the latter part of March. The subject is one upon which we would not willingly touch without great provocation, but we think we shall not exceed our province by pointing out, that the issue of papers of this sort is a grievous mistake, and in extremely bad taste. The thoughtful and sensitive man is shocked at the seemingly light manner in which the most sacred names and texts are bandied about, as though they formed part of an auction advertisement, or a sensational trade circular; while the irreverent and profane take advantage of the opportunity to scoff at, and abuse, the very principles which the author of the document in question intended should receive additional reverence and respect. While upon the subject we would ask why the English speaking exponents of Christianity should cling with such tenacity to the sentimental, or impracticable, side of religion? Would it not be infinitely better to point out to the rising generation some of the tenets of the "muscular" school; to advise them to be men; to be loyal, honest, and truthful; brave and fearless in the battle of life; to do their duty to their employers; to cherish the traditions of their early lives; to give what they can to assist the poverty-stricken and distressed; to exert themselves to become useful working members in the world in which they live; and to pay, in reverence and respect, their humble tribute of gratitude for the blessings they are endowed with.

We cannot avoid the thought that if ministers of religion would adopt a method of

teaching tending towards the end we have suggested, the result would be matter for sincere congratulation. The outward semblance of religion being repulsive to the earnest and mature mind, it cannot be matter of surprise that it is received with dislike, if not with derision, by the younger members of society; it is therefore in the interest of true piety that we discountenance the publication of such papers as that which has given rise to this paragraph, but in doing so we have neither wish nor inclination to reflect upon the sincerity or good intentions of the author.

THE selection of the evening for the concert in aid of the funds of the Temperance Hall was rather an unfortunate one. In the first place it was the evening preceding the day of the departure of the American mail, (29th ult.) always a very busy time with a large portion of our community; and, in the second, it was Maundy Thursday, a day which strict Church of England people think should be devoted to other ends than secular entertainments. In spite of these drawbacks, however, the Hall was tolerably well filled by half-past eight o'clock, and the financial results of the performance should have been gratifying to the committee. The object of the concert is one which must commend itself to all friends of good works; as the institution, although it has not so far perhaps altogether realised the hopes and designs of its promoters in attracting sailors to make it their sojourning place while on shore, has yet been of very great benefit to the town, in finding a home for those who without the Temperance Hall would often be homeless; and, more especially, in providing for respectable young men of quiet tastes and limited means a comfortable and well regulated hotel. That the sphere of usefulness of the Temperance Society might be largely extended is only too well-known by its patrons; but that desirable extension can only be effected by increased means. Such entertainments as that provided on Thursday evening are well calculated to attract an audience, who, while paying a moderate sum for their own amusement, are adding to the funds of an institution which more than perhaps any local scheme of benevolence commends itself to the consideration of those who have means wherewith to do good. We should recommend to the management of the Temperance Hall a series of concerts, given at monthly intervals; and we are sure that the assistance of many amateurs would be willingly given and tend to the production of a still better class of entertainment. The programme of Thursday, however, was well arranged; and the pieces it contained were thoroughly appreciated. We offer our tribute of well merited praise to the exquisite duets sung by Mrs. Correll and Miss Brown, and Mr. Townley's song, the latter given with that finish of execution and true feeling which distinguishes that gentleman's rendering. Mr. Douglas sang "The Election," which closed the programme, produced great amusement.

A fatal accident occurred on board the U.S.S. *Alert* on Thursday evening, 29th ult. A young man named George Harvey was aloft, about sunset, and fell from the main yard head foremost, to the deck. He was immediately picked up, but was perfectly unconscious, and died a few minutes afterwards from comminuted fracture of the skull. The deceased was a landsman on board the *Alert*, was nineteen years of age, and the only son of a widowed mother. His shipmates, anxious to testify their esteem for the deceased, collected about \$200 for the purpose of erect-

ing a suitable tombstone to his memory; but we hear that this sum will most probably be sent to the bereaved mother, instead of being expended as originally intended, it having been represented to the men that the living was more in need of it than the dead.

WE hear that at least one of the Mitsui Bishi steamers is likely to be put on as a regular trader between Japan and the Australian Colonies.

THE toll board at the Fujisawa bridge, in its list of tolls for passengers, animals, and vehicles, has, as a fee for a jinrikisha carrying one person one cent, and for one with two persons $\frac{7}{8}$ cent, an anomaly involving so vast a financial result that we deem it worth while bringing it before the notice of the Kanagawa Kencho, with a view to its adjustment.

ON Monday the 2nd inst, Mr. and Mrs. Vertelli gave an entertainment in leger-de-main on the deck of the U.S.S. *Alert*, in presence of some of the officers and the crew. The audience were so pleased with the performance that they presented the sum of \$50 to Mr. Vertelli.

IN our notice of the concert at the Temperance Hall in aid of the funds of that institution, we should have mentioned that the management of the entertainment was conducted by Mr. Crane, who enlisted the aid of the amateurs, ladies and gentlemen, gave his own services, and arranged the programme, being the prime and directing cause of the success which we had the pleasure of recording.

A correspondent of the *London & China Express* writes as under:—

SIR,—The cause of the disastrous fire in Yedo, which was lately reported in your paper, should be very carefully scrutinized. While houses and property in Japan in the occupation of foreigners are a fair risk for our home Insurance Offices, I am of opinion that property assured by natives is a very bad risk, and should not be taken except under some exceptional circumstances. It is a risky business for our Insurance Offices to give authority to their agents in Japan to accept them. The ordinary daily routine of Japanese life is such that fire is the normal condition, and to be indemnified, or possibly make "a good thing" of it, is a strong temptation.

Yours truly,

FIRE.

Liverpool, February 11th, 1877.

The writer of this letter is under an evident misapprehension of facts. So far as home or foreign Insurance Offices are concerned no investigation into the origin of the late great fire in Yedo is necessary, as no loss on native property was sustained by them. No agents of Insurance Companies accept risks on native property, unless under very exceptional circumstances, one of the chief conditions of which is the isolation of the premises insured from the immediate or close vicinity of hazardous surroundings. The letter is therefore based upon supposititious premises, and its force is destroyed with their correction.

A very useful hand-book to racing and other sporting men, has just issued from the press of Messrs. Kelly and Walsh of Shanghai. Its title is "The China and Japan Sporting Register for 1877," and it purports to be a record of the principal sports at Hongkong and the open

ports of China and Japan. The proprietors who hope "to make the register an indispensable book of record and reference," thus introduce it to the public:—"The want of such a work has long been felt in China and Japan and attempts have been made in years past to meet it, but, from various causes, have been hitherto unsuccessful. The plan of the Register is to include all the open ports in the two countries and not to restrict itself to any one of them, though the proprietors believe that the central position of Shanghai and its frequent communication with the other ports give it a decided advantage from a recording point of view. While they have to thank the Secretaries of several Clubs and other obliging friends for great and valuable assistance, still much difficulty has been experienced in collecting the material for this issue and in several cases reports have failed altogether which would have added to its completeness; the proprietors trust, however, that their endeavors may be seconded by the Secretaries and Officers of the various Clubs, whose reports are essential to insure the desired correctness and reliability. These reports will be gratefully acknowledged and carefully arranged, and the Register will be published as soon after the completion of each year as possible."

The work contains accounts of the races and matches held under the auspices of the various Racing, Cricket, Base Ball, Yachting, Rowing, Athletic, and Rifle Clubs in Hongkong, China and the Far East, with the rules of the Societies, and appears to be very complete and to meet all the wants of the classes for whom it is intended.

Mr. A. Conil, Agent in Yokohama of the Messageries Maritimes Company, has been made by the King of the Belgians a Knight of the order of Leopold.

IN H. B. M.'s Court at Kanagawa on the 4th inst., before H. S. Wilkinson, Esq., Acting Law Secretary, on the motion of Mr. G. Ness, Barrister-at-law, Mr. R. J. Beadon, of the Inner Temple, Barrister-at-law, was, upon the order of the Chief Judge, admitted to practice in H. B. M.'s Supreme Court for China and Japan. Mr. Beadon is attached to the Kobusho (Public Works Department) as legal adviser to the Government.

THE *Hochi Shinbun* publishes the following letter from a Japanese correspondent residing in Corea, which is dated February 28th. He says:—"The climate of Corea is quite as salubrious as that of Japan; though this year the weather has been very changeable, and in cloudy and foggy weather everything becomes very damp. The thermometer from the 18th to the 27th of February registered as follows:—32, 34, 30, 60, 61, 53, 59, 49, 37, and 38; each register being taken at noon.

Last autumn when the Japanese Envoy, Mr. Miyamoto, arrived in Corea, the weather was very dry, and not a green cornstalk or vegetable was to be seen. A great famine succeeded this drought. We were very sorry to see everywhere a famine-stricken people, and out of charity we gave them rice or wheat gruel daily. Every day large numbers of starving mortals assembled in our settlement to receive what we had to give them. As is always the case in any country at such a time, robberies become very frequent. A few days ago two or three robbers, armed with swords, forced their way into the premises of the Okura Company, and took away a large quantity of rice. During the night of the 15th of March, six daring robbers broke open the door

of Mr. Takeda's residence, and stole a number of articles besides wounding the proprietor. Some of these robbers have been arrested by the Corean authorities.

Last January the King's palace was destroyed by fire. Numbers of Coreans are continually emigrating to Kiushiu. This year the Japanese Government has sent back one hundred and eighteen men; and some who landed in Satsuma are to be brought back in the *Naniwa-maru*, a vessel trading between Osaka and Corea. These people seem anxious to become naturalised subjects of Japan. Many of the inhabitants of the country north of Kankio, have left their homes and emigrated to Russian dominions, where they hope to save themselves from starvation. Notwithstanding the great distress of the people, the Corean Government have done nothing to alleviate it, but on the contrary have compelled the poor people to raise sufficient money to rebuild the King's palace. The price of one koku of rice is about seven yen. Our merchants and storekeepers barter rice for gold-dust, skins, and dried fish. Tiger skins are valuable when cured. They are badly tanned, however, and cannot be kept for any length of time without being retanned. Some of our people have sent to Japan for their wives and families, and whenever these go out they are nearly surrounded by inquisitive natives. The houses in our settlement were built many years ago by the ex-lord of Tsushima, and are in a very dilapidated condition. A large building situated on a hill has recently been repaired and converted into a hospital, the ceremony of opening which took place on the 11th of February.

A SEVERE earthquake of several shocks, and lasting in all for about forty seconds, was felt on the night of the 5th inst, at 11.15. Another earthquake much less violent occurred later in the night.

A LETTER of which the following is a translation has been addressed in French to the Doyen of the Diplomatic Corps, on the subject of lighting the Swamp Concession. It bears the signatures of forty of the most considerable of the land-renters of that locality, and was accompanied by a petition:—

To the Doyen of the Diplomatic Corps, Yokohama.

Monsieur le Ministre:—

Trusting in the sentiments of justice and good will of the representatives of our countries towards their nationals, we beg you to be good enough to submit to the Diplomatic Corps the accompanying petition.

This petition, signed by almost the whole of the proprietors of lots and buildings in the Swamp, Yokohama, has for its aim to obtain from the Japanese Government, under the auspices of our ministers, the lighting of our streets with gas. It consists of two connected documents:—1st, a summary of the articles of the different treaties and conventions, concluded between the foreign representatives and the Japanese Government, and which, we think, will sustain us in claiming as a right the lighting of our streets:—2nd, an explanatory memorandum analysing these articles, one by one, and intended to make clear to the Japanese authorities that we are really entitled to demand from their high equity the gratuitous grant of gas.

We trust, Monsieur le Ministre, that the Diplomatic Corps will deign to take our petition into consideration, and will be kind

enough to press it upon the Japanese Government.

A RUMOR is current and has been reproduced by at least one of the native papers that the Mikado will shortly return to Tokio.

TOKIO has been the scene of another disastrous fire, which has not only destroyed a vast amount of property, but was the cause of several lives being lost and a number of persons being more or less injured. From the accounts in the native journals it appears that the fire broke out at about 2.20 on the morning of the 6th inst, in a house on lot No. 5, Taikokoro-machi, Kanda. A very strong wind was, unfortunately, blowing at the time, which carried the flames with great rapidity from house to house, until about 1000 families were rendered homeless. In a large godown situated in Ichome, Yumushima, a large quantity of powder was stored. Whether it was thought that the building was fire-proof, or the people had no time to take away the contents, does not appear to be known. However, the fire reached the godown, the powder ignited and a terrible explosion took place, fairly shaking down some of the houses in the neighbourhood. This explosion was most probably the cause of the loss of life. It is to be hoped that, for the sake of the poor people in Tokio, this fire will be the last of the season. The number of houses and the quantity of property destroyed in the capital since the commencement of the winter must be enormous.

A FIRE which resulted in the destruction of nearly three hundred houses is reported to have occurred in Shirakawa, Fukushima ken. It originated in a house standing outside the front gate of the castle.

THE *Hochi Shinbun* has a paragraph to the effect that Mr. P. Gambet-Gros, legal adviser to the Keishi-cho (Police Bureau), has petitioned to be allowed to contribute forty yen per month towards the relief of members of the police force wounded in the civil war. His request has been referred to the Daijokuwan.

THERE is some analogy between the case of young Tani, son of the Governor of Kumamoto, turned out of the beleaguered citadel by his father, and that of young John Talbot, as related in the first part of King Henry VI. If the *Choya Shinbun* is to be believed, however, the young Japanese has escaped the tragic fate of his English prototype.

THE following story, which has been going the round of the native press, is told by the *Mai-nichi Shinbun*, probably not so much for the sake of the story itself as for its application, which evidently is meant to convey a meaning not exactly apparent to the eye:—

"Last year, while Japan was engaged in a controversy with China bets were made between Englishmen and Frenchmen to the amount of three million yen, the former maintaining that Japan would get the worst of the diplomatic game then being played. Anxious to retrieve the loss they sustained on that occasion, the Englishmen have now made a bet of equal amount that the insurgents will conquer the imperialists in the present struggle. It may be asked, 'why should the English thus favor the rebels?' The answer is that, when their countrymen fought with the Satsuma men in Kagoshima, they were obliged to retreat without capturing even one fort, and they greatly respect the prowess of the Southerners. In fact, they say in their news-

papers that all the military power in Japan is vested in the Satsuma clan. We have been told the above by a Chinaman. If it is true the eyes of Englishmen must be as serviceable as a knot-hole in a piece of wood, when they are looking at the affairs of our country."

Nippon Notes.

NOTIFICATION No. 7.

To Government Offices.—It is hereby notified that the temporary Naval Office established at Kobo has been removed to Nagasaki.

SANJO SANEYOSHI,
Daijo-Daijin.

26th March, 1877.

ANOTHER battalion of the Sendai garrison has been ordered to leave for Tokio, which is now nearly unprotected. Lieut. Colonel Onuma arrived in Tokio to-day.

MESSRS. TAMANO, second class judge, and Iwatani, sixth class judge, have been appointed to conduct the trial of Oyama, ex-governor of Kagoshima.

On the 27th inst., a fire broke out at the temple Zenshoji at San-chome, Honcho, Kobe, whence it spread to another temple where a large and famous bell is hung. Both the buildings were burned to the ground.

A NEWSPAPER, named the *Chikushi Shinbun*, will shortly be issued in Fukuoka.

THE *Nichi-nichi Shinbun* extracts the following items from a letter from Hakodate, Hokkaido:—All is quiet and prosperous in the island. It is now the season of the herring fishery, and many fishermen and labourers have crossed the strait from Awamori to Hakodate. The two steamers *Shinmi-Maru* and *Komei-Maru*, belonging to the Kaitakushi, ply to and fro daily. One day recently they brought seven hundred men to the island, where they will engage in the fisheries. A fort in the harbor of Hakodate is well guarded: a number of soldiers are stationed there and in other places. Esashi, Sapporo, and Fukuyama, are also occupied by troops. Seventy-four junks and three sailing vessels of foreign construction were wrecked on the coast of Hokkaido between February and December 1876. Thirteen lives, a large quantity of rice, and 968 articles of various kinds of merchandise were lost.

MR. IWAMURA, Governor of the Kagoshima-ken, arrived in Osaka on the 24th March. He intended to remain there for a short time, before leaving for his post.

On March 28th, ammunition was brought to Sendagaya, Tokio, in 2,185 wagons from the magazines in Idzumi, Shenden.

A FIRE broke out shortly after eleven o'clock on the night of the 27th ult, in Kawaramachi, Sendai. It continued burning until four o'clock; and in that short space of time 260 houses were consumed. The same night a fire destroyed fourteen houses at Mishima, a town on the Tokaido.

ACCORDING to the *Nichi-nichi Shinbun* soldiers are soon to be despatched to the Bonin Islands.

THE *Sendai Shinbun* states that farmers in the counties of Iwaki and Shirabe under the jurisdiction of Fukushima-ken (North) have shown much displeasure at the alteration of the land-tax. About 2,000 of them are holding meetings. A force of police has been sent to disperse them.

On the 23rd ultimo, Prince Kuroda, ex-lord of Bizen, was summoned to appear before H. M. the Mikado at his palace in Kioto. The Emperor made him a present of a pair of flower-stands. Notwithstanding his great age, he had accompanied the Imperial envoy to Kagoshima.

Four or five kuwazoku have formed a company and are going to establish a National Bank, with a capital of 18,000,000 yen.

A ROBBER, so far unknown, broke into the police station at Toyohashi, Aichiken, and abstracted thence 1,012 yen.

THE *Nichi-nichi Shinbun* gives the following account of the Mikado's visit to the Osaka barracks and hospitals on the 31st March:—

The Mikado left his palace in Kioto in a carriage at 7.30 a.m. and rested at the Shichijo Railway Station. Their Excellencies Messrs. Sanjo, Kido, Tokudaiji, Sugi, and many high officials accompanied His Majesty, and about thirty cavalry escorted him. At 9.20 a.m. the party arrived at the Umeda Station in Osaka, where the local officials and about 300 police were waiting to receive His Majesty. Mr. Watanabe, governor, headed the procession to the barracks in the old castle of Osaka. Having taken a short rest, the Mikado was present at a parade of some troops, who were to leave for the South-West on the evening of that same day. He then went to the military hospital, where he was received by General Shijo, commander of the Osaka garrison, and Ishiguro, Hotta, and other physicians. He first visited each of the wounded officers, whose rank and name were told him by Ishiguro. The Mikado asked through Mr. Kido whether any, and if so who, of the wounded had died in the hospital. Then he paid a visit to the soldiers in the temporary hospital, and evinced a lively personal interest in each invalid whom he saw. He next returned to the barracks, where he called out three physicians, Ishiguro, Hotta, and Yokoi, and asked them, through Mr. Kido, what provisions had been made for the wounded. They replied and gave him a list of names of wounded and killed. The Mikado, having given strict instructions that the patients should be well cared for, returned to Kioto at 2.40 p.m. on the same day.

When H. M. the Mikado visited the wounded in hospital in Osaka on the 31st ultimo, he gave twenty eggs and one bottle of wine to each patient.

H. E. Mr. Watanabe, Governor of the Osaka-fu, issued a notification on the 31st March, in relation to a disturbance in the Fukuoka-ken, as under:—

On the 28th March, about 400 or 500 shizoku under the jurisdiction of the Fukuoka-ken, assembled in the village of Nanakuma in the country of Mayara, and took up arms against the local authorities. The Imperial troops, stationed at Shimonoseki, were immediately sent out and dispersed the revolvers. They reassembled in the villages of Afurayama and Kakozaki in the same county. But notice has been received from the Fukuoka Kencho that they will be dispersed shortly, and the matter is therefore not of serious importance.

THE *Akebono Shinbun* says that ex-retainers of the ex-daimio Matsushiro have repeatedly requested to be employed with the Imperial troops in the south. The War Department is said to have notified them to the effect that those who had seen service during the last revolution, would soon be allowed to come to Tokio, for military employment. About 200 are reported to have left for the capital.

(From the *Choya Shinbun*.)

The difference in numbers of the Imperialists and insurgents is so great, that General Shinno-so has completely surrounded the rebels in Taishin. Which regard to fire-arms, also, the Imperialists have a decided advantage over the insurgents; and it should be very easy for the former to destroy the latter in Kagoshima by cutting off communication with other parts of the country. In such a case it would be impossible for the rebels to hold out for any lengthy period. But the facts, so far, are that about fifty days have elapsed since the expedition was sent South; and from the various telegrams which have arrived it would appear that the Imperialists have been continually victorious. But, notwithstanding the repeated assertions of victory, the fact remains that the troops are still north of Kuma-moto, and that the leaders of the insurrection have not been arrested; neither has communication with Kagoshima castle been established; and there is no doubt that the garrison of the castle will soon be in need of provisions. Why is it that the Imperialists are advancing so slowly when they greatly exceed the rebels in number and are provided with everything? Some intelligent men say that, though the Imperialists do exceed the rebels numerically, most of them consist of feeble farmers and traders, who are unable to withstand the furious onslaughts of the insurgents, who fight most desperately till the last. The telegrams published in the newspapers are not reliable. Who would believe them?

It is therefore not to be wondered at that the Imperial troops have been unable to reach Kuma-moto castle. According to accounts from the south the rebels defend their position with desperation. After many bloody battles, however, the Imperialists have succeeded in capturing a number of forts at Tawara and Yamaka, which are important military positions. Saigo Takamori, the rebel leader, was commander in chief of the Imperial army until he took up arms against the government, when he was deposed from his high position. But the talent and ability he has exhibited since the rebellion show that the confidence placed in him as a great general was not without foundation. We had hoped that he would have protected the country from harm, but, on the contrary, he is destroying its peace and tranquillity. We feel confident, however, that peace will shortly be restored.

Mr. Tanaka, editor of the *Shishusha*, was summoned before the Tokio Saibansho on the 5th instant, and sentenced to three months' imprisonment, for having transgressed the press regulations.

On the same day three criminals were condemned to be decapitated for serious crimes, two of them having been convicted of arson.

An office for the direction of the affairs of the Kagoshima-ken has been opened in the Home Department.

The staff of the Foreign office, which has temporarily occupied a portion of the Kobu-sho, was removed to Ohama-goten.

H. M. the Mikado recently made the following presents to those officials who accompanied him to Kioto, namely: 200 yen to those of the rank of Chokunin, 100 those of the rank of Sonin, 50 to those of the rank of Hannin and 25 to each one of lower rank.

Some citizens of Tokio have asked to be allowed to send about 400 or 500 nurses, for the care of the wounded, to the South-west.

A son of H. M. Mr. Kusumoto, Governor of Tokio-fu, died on the 29th ultimo. During the period of mourning, Mr. Chida, Chief Secretary, will act as Governor.

MR. IKEDA, a kuwazoku, has sent large quantities of lint and 2,000 yen, for the relief of the wounded, to the Kuwazoku-Kaikan.

ON THE 29th ulto. Nomura, one of those who were tortured and imprisoned by the rebels, was summoned before the Tokio-Saibansho, where he gave evidence as to the torture inflicted upon him.

THE *Nichi-Nichi-shinbun*, referring to the shizoku of Shonai, Yamagata-ken says:— Various rumors are heard in Tokio. In the city of Tsurugaoka, late Sakai, there is a party consisting of stubborn shizoku. They are intimate friends with the Satsuma men, and respect Saigo as their father or lord, just as the Christians revere the cross and the Buddhists adore Amida. When the news of the Kagoshima expedition first came to them on or about the 23rd February, they became much excited and held meetings where they debated whether they should assist their friends or not. But their chiefs ordered them to disperse and re-assemble only at such time as they should be sure that Saigo had taken the lead of the insurgents. They accordingly dispersed, and a force of troops from Sendai arrived in the Yamagata-ken, which was besides well guarded by police. But as soon as the news of the deposition of Saigo and the two others was received by them on the 4th March, they again became excited and busied themselves collecting fire-arms, ammunition, and swords. It was then too late for the shizoku to take up arms against the authorities, and the Kencho purchased all the fire-arms and ammunition in their possession.

THE Tokio Library, formerly under the care of the Mombusho, has been transferred to the charge of the Tokio-fu.

THE 3rd inst, being the death day of Jimmu Tenno, was observed as a general native holiday. No native papers were issued.

THEIR Majesties the Empress and Empress Dowager have manufactured lint in person, and have despatched two physicians with the lint, wine, tobacco, and white cloth to the South for the use of the wounded.

THE *Choya-shinbun* gives currency to a rumor that Saigo is laid up with dropsy in the legs and is unable to move.

KONISHI-SHINYEMON, a wealthy resident of Itami, Hiogo-Ken, has presented about 20,000 yen to the Hiogo Kencho in past years. He has now made a present of 60,000 yen to the government towards the expenses of the war with the southern insurgents.

(From the *Akebono-Shinbun*, March 4th.)

How is it that the insurgents in the South are growing more and more vigorous? What a number of days have passed since the expedition to Kagoshima was despatched by H. M. the Mikado. Prince Arisugawa-nomiya was despatched to the seat of war as Commander-in-chief of the Imperial forces, the larger proportion of whom were collected in the island of Kiushiu. Their efforts to arrest the rebel leaders proved futile, and as yet they have not been able to sing the song of victory before His Majesty the Mikado. Neither have they been able to pass through the rebel lines and establish communication with the Kuma-moto garrison. Alas, how strong are the insurgents! Or is it that the Imperial forces are weak and their tactics not

equal to those of the insurgents? It is surprising that it should take so long to suppress the rebellion, and at the present time we have not the slightest knowledge as to when peace is likely to be restored. Even journalists become anxious, because of late but few telegrams have arrived from the South, and from the strict supervision of the government over the newspapers before publication; and all our countrymen ought to be anxious through the suppression of information.

We feel confident, nevertheless, that the insurgents will gradually lose power, and will be prevented from crossing Shimonoseki Straits, and finally be overthrown; so it is of little use distressing ourselves about them. If Kuma-moto Castle had unfortunately fallen into the hands of the rebels when they first rose, they would soon have made themselves masters of the whole island of Kiushiu; and Generals Nodzu and Miyoshi would never have been able to establish a camp at Minami-no-seki with only two brigades; and before very strong forces could have arrived in Kiushiu, many discontented shizoku in the provinces of Hizen and Chikugo would have joined the insurgents. In such a case the Imperialists would have experienced much trouble, but fortunately things turned out not so badly. Now Imperial troops are all over the island and can attack the rebels in their front and rear at the same time. And as the insurgents have exhausted their supply of ammunition and provisions, they are reduced to great extremity and can neither advance nor retreat. But, they being determined to fight to the last, it is no easy matter to destroy them; but it is pretty certain they will not perform any more deeds likely to surprise us.

According to what we have heard, the rebel commanders Kirino, Shinohara, Kishima, Murata, Beppu and Kodama, have either been killed or wounded. These men were to Saigo like his members; and he must be much discouraged and disappointed by their loss. The insurgents having lost so many of their leaders will not be able to stand much longer against the Imperialists.

REFERRING to the insurgents the *Nichi-nichi Shinbun* writes as follows:—

There are a number of Saigo's intimate friends among the shizoku in the Fukuoka-ken, who are his firm adherents. At times these persons have manifested symptoms of hostility towards the Imperialists. When Prince Arisugawa-no-Miya first arrived in Fukuoka, they became very excited and proposed to attack and kill him. On perceiving there was danger the Prince removed into the castle, which was strictly guarded. Being thus foiled the rebels had to give up their treacherous intentions for the time being; and the city subsided into perfect tranquility. But the enterprising followers of Saigo did not entirely abandon their project, though they became much discouraged on account of the castle being occupied by such a large number of Imperialists. Although their design to kill Prince Arisugawa-no-miya was frustrated, a favourable opportunity for a general rising soon occurred by the Prince departing with the main body of his forces for the south, leaving only a small body of soldiers and police to guard against any accident. Soon after the departure of the Prince, Ochi, Tatebe and Kuze three of the most popular men amongst the shizoku, issued a circular to their men, who numbered about 600. This circular set

forth that, if they took advantage of the fighting in Higo and rose against the authorities, their example would be followed by the shizoku of Saga, Kurume and Yanagawa. The result was that, during the night of the 27th of March, about 500 shizoku assembled in three different places. The majority were armed with swords and lances; while a few had guns. About two o'clock in the afternoon these men made a sudden assault upon the castle from three different directions, their idea being to get the large quantity of ammunition they knew to be stored in the castle. Notwithstanding the suddenness of their attack, the troops, who only numbered a quarter of a battalion, were not taken by surprise, and repelled the attack so vigorously that many of the assailants were killed and the remainder retreated as far as the villages of Onishi and Yoshimura. They set houses on fire as they went, in order to deter the troops from following them. On the 28th the insurgents re-assembled at Oyasumi, close to the castle; but before the Imperial forces arrived at that place they retreated in disorder. The same night some of the rebels forced their way into the city hall, which was not guarded, and took away about 10,000 yen. The following day, as the insurgents were reported to have assembled at Noge, which is about two ri from the castle, Lieut.-Colonel Shinagawa and Major Shirasa were despatched against them at the head of half a battalion of soldiers, who had arrived the night previous from Osaka. Noge and its neighbourhood formerly belonged to the chiefs of the insurgents, and the people residing there favoured the project of the rebels by deceiving the Imperial forces, so that when the latter arrived at Noge the insurgents attacked them on each flank. A desperate battle was fought, which resulted in the Imperialists being defeated, and they fled in disorder. At this critical moment, however, reinforcements arrived and the battle was renewed, and this time the insurgents were completely routed. On the 30th they were again defeated at Magaribuchi. About 50 rebels have been arrested, and numbers have fled to Saga. The Imperialists pursued the flying foe as far as Mitsusegoshi. In Saga the Shizoku are reported as being very quiet.

THE *Akebono Shinbun* says:—Admiral Enomoto Buyo, Envoy Extraordinary, and Minister Plenipotentiary for Japan in St. Petersburg, is said to have sent a telegram to the Government to the effect that he desires that Saigo, should he be arrested, should be kept in prison until Enomoto's return to Japan. The same paper further says that when His Excellency, last year, heard that Japan was about to declare war with Corea, he made a rapid journey to Paris in order to obtain a good map, engraved by Hollanders, of Corea. He had it copied, with the descriptive words in Japanese characters, and sent it to his Government.

THE *Nichi-Nichi Shinbun* gives currency to a rumor that Saigo has committed suicide in his camp.

THE *Choya Shinbun* says that Mr. Shimadzu Hisamitsu, with four or five attendants only, has arrived in Nagasaki, and will shortly visit the Mikado at Kioto.

ABOUT 3,000 soldiers are to be levied in the Wakayama-ken.

SOME nobles in Tokio have made a present of 1,000 yen for the use of the wounded imperialists.

ONYAMA, ex-governor of Kagoshima, was not bound up to the commencement of his trial.

But since H. E. Mr. Oki, Minister of the Shiho-sho, has presided, he has always been brought to the bar in bonds.

AGRARIAN riots have taken place in the Ebaragi-ken (North). About 1,000 farmers from five or six villages have held meetings presided over by kucho and kocho. On the 4th inst., about 100 of them advanced as far as the town of Minato, where they were dispersed by the police.

Correspondence.

We do not hold ourselves responsible for the opinions expressed by Correspondents.

JAPANESE FISHING.

To the Editor of the *Japan Gazette*.

DEAR SIR:—A recent article in the *Field* upon "Japanese Fishing" seems to have been written by some one who never saw a Japanese fishing boat.

He says they are "clinker built," that they have "a sharp keel, the stem straight above water, which rakes very much below the water line, a stern-post which rakes very much up to the water line," "rudder irons," "stone ballast," are "iron fastened, &c."

Now, sir, I have spent more than twice ten years in the country and have travelled from Hakodate to Nagasaki, visiting many sea ports and fishing villages, and yet I have never yet seen even one native boat or junk, that was "clinker built," or had any sort of keel whatever. They are all flat bottomed, the stem rakes very much above the water and reaches but a short way below that line. Neither have I ever seen a stern-post in a native craft, and as for rudder irons, who does not know that the rudder is always fitted in to a notch into a huge log of wood that lies horizontally across where the rudder post ought to be?

Being flat built, a native boat rarely if ever carries ballast.

Neither are they all iron fastened, but most of them are copper fastened.

Neither have I seen the distinction, of which the writer speaks, between the harbors where fishermen and traders congregate. True, trading junks do not enter every little creek and inlet where fishing boats are found. But I have known many a native boatman, who with his strong flat bottomed and sharp bowed boat is always ready to engage in fishing, or in the transportation of freight, as one or the other might be for the time the more lucrative employment.

This heedless writer also says that sharks are not abundant on the coast of Japan. If he were here, I should ask him to take a walk some fine morning to the fish market, where he might at all seasons find a good stock of sharks on sale, or to the godowns of some of our Chinese merchants, where he might see hundreds of tons of sharks' fins ready for shipment to China.

The fact is, that these coasts literally swarm with sharks of various kinds.

He also speaks of the fisherman's home-made potato whisky. I have made diligent inquiry among the natives and I can find none who ever heard of such a thing. He also speaks of the women and children picking up oysters on the beach, and that there are no oyster dredges in use! I have seen cockles and clams picked up on the beach; but the oysters are fished up from deeper water by a dredge at the end of a long bamboo pole, used by a man in a boat.

But of all the statements of this Munchausen writer, commend me to that about the whole family watching over the side by the light of a charcoal fire, which attracts shoals of fish, at which a shower of bamboo harpoons is hurled with such unerring aim even by the youngest baby who leans over the gunwale!

He says that the village in which they (he and his party) were loitering did not own many boats.

I think he could have seen but few boats or fishermen either, to write such wonderful tales about his "loiterings." My earnest conviction is that he has never set foot on Japanese soil, but has looked at some illustrated newspaper, and from some fancy sketch or distorted picture of some Japanese coast view, has worked up in his own imagination a story of his loiterings, and feasting upon rice and fish, and sweet potato whisky that gives them a pleasant relish to his mouth!

Fiction reads very well when it has the semblance of truth, but in order to attain this necessary characteristic, the writer must first make himself familiar with the true facts of any subject upon which he proposes to exercise his imagination. Otherwise his perorations will be as wide of the mark as would be the attempt to write the biography of

Your humble servant,

THE MAN IN THE MOON.

Moon-day.

THE KAI SEI GAKKO.

To the Editor of the Japan Gazette.

SIR:—The popular lectures originated by some missionaries in Tokio the autumn before last, are likely to be not without some influence on the people of that city. Similar meetings have been begun elsewhere, and a few weeks ago the Imperial University of Japan inaugurated a series of lectures on general subjects. The English course, as your readers are aware, was opened on Saturday week and the proceeding, have excited some comment. I am not aware how far the "vilification" of foreigners and their religion complained of, exceeded the just bounds of adverse criticism, and, therefore, I shall confine myself at present to a brief consideration of certain "facts" adduced by the lecturer as hostile to Christianity. In another letter I hope, if no abler pen deals with the subject, to say a little as to that "philosophy" on the basis of which the "philosophic and "incredulous" people of this country seem to be justified by the lecturer in rejecting Christianity. Professor Yatabe, the opening lecturer, a graduate I believe of an American university, and therefore probably reputed the ablest available opponent of Christianity in Japan, proposed to give some explanation of the "recent sudden check" which the progress of that religion had met with here. Now, Sir, I have taken some interest in the reported statistics of mission work in Japan, and believe on good evidence that no "recent sudden check" has been experienced,—no check indeed at all. The progress of Christianity, which is so opposed to the natural worldly heart of man, has indeed, here as elsewhere, been painfully slow, but on the whole it has been steady. I believe that a slightly increasing ratio is observable and is still to be expected in its progress. *Hinc illæ lacrymæ!*

The students of the Imperial university were ordered some time ago to abstain from frequenting the English service in which numbers of them used to join on Sundays; and, to a man,

shall I say? they quietly consented to this outrageous interference with private liberty and freedom of conscience. Perhaps this may be the "sudden check" to which the professor refers; but so far as I am aware it has had no appreciable effect on the general movement now manifesting itself.

Professor Yatabe further stated that the greatest difficulty had been found in inducing the educated classes to accept the new religion. Now here is a dilemma. Were I to prove that the converts were chiefly learned persons, then our Divine Master generally taught his disciples that the rich and learned would tend to reject a religion of self-denial and moral purity. I shall therefore be content with stating what I believe to be the truth on this point; namely, that the reasonably well educated members of the Churches (Protestant) are apparently in a considerably higher proportion than would be found in the general population. I say apparently; for it must indeed be admitted that any such statement must be based on a mere subjective impression, than which nothing may be more deceptive: but then, mark, the worthy Professor's statement cannot possibly have any other basis, and as the Japanese are admitted to be "deficient in observation," he is most probably mistaken. If he refers to educated men in the higher sense of that term, then he must be gently reminded that there are as yet comparatively few men in Japan, who could properly be ranked as such. Of these few, however, quite a considerable number have professed Christianity: of these latter a few—a very few—remain steadfast through much petty and disagreeable opposition: a larger number, with that foolish and fatal facility, which so painfully characterizes their countrymen, have abandoned as suddenly as they embraced it; and other some, gentlemen of Japan they may call themselves, have taken the name of Christian from totally bad and unworthy motives. Probably the professor may happen to know some of those to whom I refer.

Again, it was objected to Christianity that foreigners are cruel, vicious, &c.; and, to make his argument worse, Professor Yatabe drew his illustrations from a Christian sermon he had heard in Tokio condemning these vices in foreigners as opposed to Christianity. If a comparison must be made let it be a just one, however; and leaving for the moment Christianity out of the question I do not think the foreigner contrasts unfavourably with the inhabitant of the East. Legal torture can hardly be said yet to have ceased in Japan. His Excellency Iwakura appeals to the ladies of Japan to imitate those of the West in caring for the wounded in war. The average Japanese, I am sorry to say, does not strike me as being quite so truthful as the average "foreigner;" while filial piety, which is claimed as the special virtue of Japan, would seem even to be a rare thing; for now and again one reads in the *Yomi-uri* that Government has given a reward of money to some girl for nursing a sick father, &c. This seems absurd to foreigners; for an event like that in Western countries is so common as to pass quite unrecorded; and Government would never think of giving a reward for that which is a common duty. It is said, again, that foreigners use coolies very badly. I am sorry to hear this; but others, besides foreigners do so; and on the whole the coolies for some reason or other seem very anxious to be hired by the cruel foreigner.

A foreign doctor once had in Tokio a jūrikisha coolie who had been very badly treated by his *kiyaku* (hire); and in consequence had taken

so seriously ill that he afterwards died. This doctor, who believes himself to be a friend of the Japanese, thought that the *kiyaku* had been a foreigner, and resolved at whatever cost and trouble to himself that he would get something out of him for the poor man's family at least; but he found on enquiry that the "cruelty" had been that of one of the poor coolie's own countrymen. But what of all this? I fear both sides may be guilty of that unphilosophic spirit, which is under the influence of what Herbert Spencer calls the patriotic and antipatriotic biases; and, therefore, in trying to pick faults in each other both may fail to reach the Truth, which is the only thing philosophers should be in quest of. What if all that the Professor urges against foreigners were true, does that at all affect the totally different question of the validity of the Christian religion? The Professor is fond of formulæ. I therefore ask him if Japanese logic admits this one?—"Some A is B: therefore all C is D; or some "foreigners are wicked: therefore all Christianity is false." If so, then the Japanese philosophy on which such logic is based has results yet undreamt of in the West; and if developed soon must attract that studious attention which it so richly merits.

Again, Mr. Yatabe levels his deadly logic at the conduct of the foreign missionaries, which, he says, produces disbelief in Christianity.

It is to be regretted that on this last point the Professor, perhaps conscious of the intrinsic weakness of his argument, should have stooped to the most glaringly outrageous misrepresentations of the worst abused and most trusted men in the East. The specific charges, as reported in the *Tokio Times*, were, that they lived apart from the Japanese, and neglected the poor and the sick. The first is met by a simple reference to the treaties which render any other course legally impossible. The second by a reference to schools and orphanages for the poor, by the work for the poor blind originated by missionaries in Tokio and Yokohama, likely yet to produce some fruit in their hands; while it might fairly be assumed that in the region of private benevolence, which no one has a right to criticize, they are not behind either Japanese or lay foreigners, especially when the amount of their salaries is considered. I may state that the native rumour of missionaries having contributed a fabulous sum for the relief of sufferers from the late great fire in Tokio, was not due to the missionaries, but might fairly be taken to show that the people appreciated the spirit which was then shown.

The third point can be still more satisfactorily disposed of by a reference to that high authority on medical subjects, the British and Foreign Medico-Chirurgical Review, the number for October 1875 of which, on "Medical Missions," contains a sufficient refutation of the learned Professor's reckless allegation that Christian missionaries do not attend to the sick. In that article mission hospitals and dispensaries are highly commended from a merely scientific point of view, both as to the actual work done in them, which has been of a highly scientific character, and as to the healthy stimulus they give to the laggard practitioners around them. Besides noting direct work it adds:—"The medical missionary societies are well aware of the fact that if a country is to be properly supplied with doctors, it can only be by training natives." " * * * Dr. Davidson in Madagascar is literally introducing to a whole kingdom and nation the blessings of European medical knowledge, in the place of the grossest and most superstitious practices; and his training college bids fair to be not merely a medical

"school, but also the first step towards a "national university."

Many other such institutions are specially named and commended, and the article thus closes:—"If these paths do not lead to worldly advantages, they are yet replete with scientific interest, and are particularly fitted to inspire the ardour of high-minded and generous men." It thus appears that not only are the sick attended to, but that they are on principle, and very specially, cared for by Christian missionaries, using all available scientific means. It is perhaps credible that a graduate of a Western university might be entirely ignorant of this general aspect of mission work, but if so, unless more than usually "deficient in observation," he might surely have made himself acquainted, before speaking publicly on the subject, with the fact that there are at present eight foreign (Protestant) medical missionaries, doing something to aid the sick poor of Japan, one of whom at least is not quite unknown to Japanese students of English. I find from authentic sources that, even with the very limited opportunities afforded to them in Japan, they have sixteen stations where treatment is given, and that annually about 14,000 new cases are attended to, many of them indoors, at considerable expense. I am persuaded further that, but for certain absurd prejudices, fostered by interested parties, a good deal more might have been done, and is likely to be done in the future.

However, even if all, and more than this professor, with all the prestige of the Imperial University, so slanderously alleges, were true about the conduct of Christian missionaries, does that contribute anything to the settlement of the question whether Christianity be true, or not? To reject the new religion on that ground would be like denying the validity of a demonstration in Euclid, because the paper on which it was printed happened to be somewhat soiled. Meanwhile, such false statements, so artfully framed to be injurious, can only have one effect; and that is to excite the sympathy of all serious right-minded Japanese who wish to live soberly, righteously, and godly amidst the light of Truth.

On the other hand, the missionaries may well say in the wise words of a late Scottish Professor as "philosophic and incredulous" as any in Japan.—"As we listen to proud, "furious and relentless words" like these, "we shall endeavour to regard those whom we consider to be wandering in ways of error "as objects of sympathy rather than of hatred—to be reasoned with rather than denounced—whose good qualities we are anxious to acknowledge, whose judgment we are honestly ready to adopt if they can make us see "it to be right, and whom we desire to approach aggressively no further than to place "before them, not the less confidently that "we do it modestly, a statement of the faith "that has given ourselves peace, direction, "and hope."

Your obedient servant,

F.

Tokio, April 6th, 1877.

A CORRECTION.

To the Editor of the Japan Gazette.

Dear Sir.—I have seen in the *Japan Herald* a statement about the recent erasure of an article in the native papers, which I think needs a little correction. First, there is a mistake in the translation of the wording of that article. It should be "the expedition is toiling hard," not "the army is fatigued." And then when I examine the native papers I

find that the case stands thus, viz:—On the 31st ult., the Kenrei being absent from Yokohama, the chief of police allowed the article with the above heading to pass for publication, and it was published on that day. Some of the Tokio papers having published articles disputing the position taken by the Editor of the Yokohama paper, the Editor of that sheet wrote another article for publication on the 4th instant, setting forth his views in still stronger terms, in opposition to the Tokio papers. And now, the Kenrei having returned, the second article of the Yokohama Editor was laid before him for inspection. He at once disapproved of this article, and, calling the Chief of Police, scolded him for allowing the first article to appear, and gave orders for the suppression of the second. It was no matter of war news that was thus suppressed, but a controversy between the Yokohama and the Tokio papers.

The Yokohama Editor argued that the expedition was toiling hard, and that the soldiers had experienced some defeats, as well as gained some successes, and that some of the Tokio papers were making too light of their hardships and difficulties.

The Kenrei liked the *coulour de rose* style of the Tokio papers, and, having before had a controversy with the Yokohama Editor, it is possible that some personal feeling may have made him all the more ready to order the suppression of the said article, containing sentiments of which he did not approve. He ordered the Editor to fill up the blank with something else, which he refused to do, and it is said about town that the publication of the paper with the blank space and the explanation appended by the editor, nettled the Kenrei even more than did the contents of the article which was intended to fill that space.

At all events the whole matter was evidently a mere personal squabble between the Kenrei and the Editor, growing out of a newspaper controversy, and can in no way be alleged as a proof of any new stringency of Press Regulations, nor yet of any doubtfulness of the security of the government expeditions against the rebels in the South-West.

Hoping this explanation may be of benefit to the public,

I am, Sir, Very truly yours,

TADASHI.

Yokohama, April 7th, 1877.

TOKIO.

(From a Correspondent.)

To-day the city of Tokio presented quite a lively and warlike appearance as company after company of soldiers marched towards the Shinbashi Station, where they camped temporarily until the trains could carry them to Yokohama. Hundreds stood in rank on the platform as each train arrived and hundreds of others remained on the other side of the station, with their arms and baggage piled in the roadway, waiting their turn to be hurried on to Yokohama, thence on board the steamers waiting to transport them to their ultimate destination, the South, where they go to assist their brethren in arms against the rebels. Although a very large proportion of these men were only raw recruits, still they carried themselves with the air of experienced veterans.

The castle grounds also seemed to be alive with soldiers, as the not very musical and monotonous note of bugles indicated, while the short, sharp crack of rifles, and the regular firing of one or more Gatlin guns, continued with little intermission all the

afternoon, and was evidence enough that sharp practice was being carried on. With the exception of the occasional bustle of despatching troops to the field of battle, there are but slight indications in Tokio that a terrible strife is occurring in another part of the empire; and the feeling of anxiety which pervaded the population on the breaking out of the rebellion has dwindled into one of mere curiosity. Even itinerant newspaper vendors are not such objects of attraction as they were a few weeks since; indeed the city of Tokio is in a perfect state of order; and the people have, to all outward appearances, implicit confidence in the strength and wisdom of the government.

On my suggesting to an intelligent Japanese that the government sending so many soldiers South looked as if they found it difficult to hold their own with the rebels, he replied "Not so. The real reason is to completely surround the rebels, cut off all their supplies, and compel them to surrender. The government is loth to slaughter the rebels wholesale, knowing full well that a very large proportion have been forced into following Saigo. The reports which are circulated that the women and children adore Saigo are altogether fabrications, as they would only be too glad to bring the ruin and desolation which is spreading throughout that part of the country to a termination at any sacrifice."

One theory—and a very unlikely one I think—of the ultimate intention of the government is this. It appears the total annual incomes of the Satsuma shizoku amount to 10,000,000 yen. Already 4,000,000 yen have been expended in the expedition against the insurgents, and the government estimate that it will cost 3,000,000 yen more to put on end to the rebellion. This 7,000,000 yen is to be deducted from the salaries of the shizoku and the remaining 3,000,000 confiscated. Such a course of procedure on the part of the government, even if it were at all justifiable, would not be calculated to restore peace and prosperity to the country, but, on the contrary, would unquestionably lay the foundation of more trouble. And, as very large numbers of shizoku have maintained a neutral position in the strife which is raging, it would be exceedingly unjust to deprive them of their livelihood. That the pensions or salaries of the ringleaders will be confiscated is more than probable.

One opinion in Tokio is that the insurrection will be suppressed within a month, and that without any compromise whatever but by an unconditional surrender of the rebels.

The case of Tokio *Fu vs* Blockley is a subject much commented upon at the present time, and thereupon a great diversity of opinion is expressed by foreigners. Those, of course, who have speculated in by-gone days in allotments in Tsukiji, argue that the defendants are decidedly in the right and if they don't succeed in getting judgment against the government they ought to. Others, again, who live without the settlement, contend that the Japanese government have a decided right to allow foreigners to reside outside the concession if they think proper. I understand that the case has been postponed again from some cause or other. It is rumoured here that there is a very great probability of the case against Captain Bachelder being heard again in the American Court, though how the rumour got circulated in the first instance, and on what grounds it is based, is not very clear.

March 26th.

Law Reports.

In H. B. M.'s Court at Yedo.

Before H. S. WILKINSON, Esq., Acting Law
Secretary.

Thursday, March 29th, 1877.

TOKIO FU vs. BLOCKLEY & BLOCKLEY.

KUSUMOTO MASATAKA,
CHIJI, OF TOKIO FU, } Plaintiff

And

BRIDGET BLOCKLEY, Defendant.

And

KUSUMOTO MASATAKA,
CHIJI, OF TOKIO FU, } Plaintiff

BRIDGET BLOCKLEY, Defendant.

The Tokio Fu claim from the defendants three years' ground rent for Lot No. 17, situated in the foreign settlement of Ts'kidji, Tokio, amounting to \$340, with a penalty of two per cent per month added. The defendant's plea is, that, while she admits the arrear of rent, the Government has broken its contract by not confining foreigners, resident in Tokio, within the limits of the foreign settlement. She, therefore, claims from the Government the sum of \$5,000 damages for breach of contract.

The above cases came on for hearing before H. S. Wilkinson, Esq., Acting Law Secretary, on Thursday last. Mr. Lowder appeared for the Plaintiff, Mr. Ness for the Defendant.

Mr. Lowder opened the case for the Plaintiff. No evidence was called on either side, the necessary admissions being made by Counsel, Mr. Lowder then proceeded to argue the case for the Plaintiff, and spoke as follows:

May it please your Honour:—On the 26th August, 1858, a Treaty was concluded between Japan and Great Britain, Article III of which provides, among other things, as follows:—"From the 1st day of January, 1862, British subjects shall be allowed to reside in the city of Yedo, and from the 1st day of January, 1863, in the city of Osaka, for the purposes of trade only." In each of these two cities a suitable place, within which they may hire houses, and the distance they may go, shall be arranged by the British Diplomatic Agent and the Government of Japan."

On the 6th June, 1862, a Protocol was signed in London by the Japanese Envoys to Great Britain and Her Britannic Majesty's Principal Secretary of State for Foreign Affairs, by virtue of which the fulfilment of the foregoing stipulations was deferred for a period of five years, to commence from the 1st January, 1863.

On the 26th November, 1867, an Arrangement for the settlement of foreigners at Yedo was entered into between the Japanese Government and Her Majesty's Representative in pursuance of the foregoing provision of the Treaty. The following is an extract from that Arrangement.

ARTICLE I.—Within the limits colored red in the annexed plan, foreigners of nations having treaties with Japan may hire houses and reside for purposes of trade. But no Japanese shall be compelled to rent any buildings to foreigners within the said limits against his will. Moreover, as the Japanese Government are willing that foreigners of those nations having treaties with Japan should enjoy at Yedo the same facilities for leasing ground and building houses that are secured to them by treaty at the ports, the Japanese Government are prepared to lease to foreigners for building purposes that portion of land on the same plan which is colored blue.

ARTICLE II.—Whenever the above named building ground shall have been occupied by foreigners, and more space is required for their use, the Japanese Government will prepare the adjoining space marked A A on the same plan, which, in that case, will be provided with a surrounding road of not less than forty feet in width. Should more land be subsequently required, the above named building ground will be further extended, as may from time to time be desirable, within the limits colored red.

ARTICLE III.—Before the opening of the city to foreign trade, the Japanese Government will clear the ground colored blue in the same plan, and will surround it with a road, which shall be properly drained, of not less than forty feet in width. The ground within this site not required for roads will be leased to foreigners in the manner provided in Articles 6, 7, 8, and 9 of the Arrangements for the Formation of Foreign Settlements at Hiogo and Osaka.

Articles 6, 7, 8, and 9 of the Arrangements for the Formation of Foreign Settlements at Hiogo and Osaka, referred to in Article III above extracted, are as follows:

ARTICLE VI.—The Japanese Government will be re-imbursed the cost of preparing the said site for the use of the foreigners above-named by the sale of the leases of the ground. The land will be divided into lots, and prices placed upon the different lots, which will vary with the eligibility of the situation, but will amount in the aggregate to the total outlay incurred by the Japanese Government. This outlay will form the basis for calculating the upset prices at which the lots will be offered to foreigners at auction. The foreigners of all nations having Treaties with Japan may bid at these auctions, and each bidder may obtain as much land as he requires. The money realized above the upset prices will be retained by the Japanese Government as compensation for deprivation of interest on capital, and for the risk that may be incurred of not recovering the outlay.

ARTICLE VII.—All the ground leased to foreigners at Osaka and Hiogo will be subject to the payment of an annual rent calculated at a rate that will be considered sufficient to meet the expenses of keeping in repair the roads and drains, the cleansing and lighting of and maintaining order in the settlements, and the ordinary land-tax payable at the present date to the Japanese Government.

ARTICLE VIII.—The Japanese Government will not grant or dispose of any of the ground set aside by the preceding article for the establishment of foreign settlements at Hiogo and Osaka to any foreign government, company, or individual for building or other purposes, except at public auction, in the manner laid down in the preceding articles. The Foreign Consuls will not be provided with separate grants of land by the Japanese Government either within or without the foreign settlements.

ARTICLE IX.—In determining the upset price of all the land to be thus leased to foreigners at Hiogo and Osaka, the amount of annual rent, the number and size of the streets, lots and drains, the quantity of ground to be put up to auction at one time, the conditions and date of sale and the formation of the cemeteries hereinafter mentioned, the Japanese Government will consult the foreign Representatives.

On the 4th May, 1870, a Further Arrangement was concluded between the Japanese Government and H. B. M.'s Representative, the first five articles of which are as follows:

ARTICLE I.—The limits within which foreigners may hire houses are shown by the red line on the annexed plan. It is now agreed that, within these limits, Japanese may let their houses to foreigners for any period not exceeding five years, with the option of renewal on terms to be negotiated between the parties. Foreigners renting houses from Japanese within the said quarter will pay the same charges as are paid by Japanese for keeping in order roads, drains or canals.

ARTICLE II.—With reference to articles I and II of the arrangements for the settlement of foreigners at Yedo, dated November 1867, it is now agreed that the land within the blue line shown in the annexed plan shall be leased by the Japanese Government to foreigners. This site shall be separated on the North side from the adjoining Japanese quarter by a road of one hundred feet in width, and the front block marked A shall be cleared of Japanese houses as soon as the two adjoining blocks marked B B, and the three rear blocks marked C C C shall have been leased to foreigners.

When all the ground within the blue line shall have been occupied by foreigners, the Settlement shall be extended to the canal marked D D D on the annexed plan.

ARTICLE III.—The leases of all lots contained in the two front blocks marked B B and the three rear blocks marked C C C on the annexed plan shall be put up to public auction on the 2nd day of June next. The upset price of all the lots in the five blocks above mentioned shall be six Bus per tsubo, and the annual rent one Bu and a half per tsubo.

The upset price of lots within the block marked A, and within the quarter bounded by the canal marked D D D, shall be eight Bus per tsubo, and the annual rent one Bu and a half per tsubo.

ARTICLE IV.—The sale of the leases shall be conducted on the conditions annexed to this arrangement; a month's notice will be given by the Japanese Government of all subsequent sales of leases of land within the said limits, which sales may be held by them either on the information of the foreign Consuls that more land is required by foreigners, or whenever the Japanese Government themselves may deem desirable.

ARTICLE V.—In consideration of the payment by foreigners of the rent aforesaid, the Japanese Government agree to construct in a solid manner, and to keep in good order and repair, the sea or canal walls, and all the streets or thoroughfares of the said settlement, and also to drain and light the said streets.

To the last mentioned arrangement were attached the "Conditions of the Public Sale of the Leases of Land in the Foreign Settlement at Yedo," and a "Form of Title Deed for Foreign Settlement, Yedo," both of which documents will be found set out in the Record.

An examination of the foregoing extracts will show that (Art. I, Arrangement, November 26th, 1867) there were two modes provided by which foreigners might acquire business premises in the city of Yedo. Within certain defined limits they were to be at liberty to hire houses from the Japanese owners of those houses, and within certain other limits they might purchase from the Japanese Government leases of land for building purposes. When (Art. II) more space is required for building purposes, the Japanese Government undertakes to extend within certain limits the area already set apart; and, in the event of more land being subsequently required, to extend it still further, so as to embrace the ground where, up till that time, houses alone might be hired by foreigners. Provision is next made for the manner in which the leases are to be disposed of, i. e. in accordance with Articles 6, 7, 8, and 9 of the Hiogo and Osaka Arrangement. These articles have an important bearing on this case, for in them is set forth the basis on which the ground-rent has been calculated, and the consideration for which it is to be paid. That consideration is clearly expressed in Articles VI and VII. The upset price at which the land is first put up is to go towards re-imbursing the Japanese Government for its outlay in preparing the sites; the amounts realized by the sales of leases, over and above the upset price, are to be retained by the Japanese Government as compensation for deprivation of interest and capital, and for the risk of not recovering their outlay; and (Art. VII) the annual ground-rent is expressly appropriated to meet the expenses of keeping the roads and drains in repair, the cleansing and lighting of, and maintaining order in the Settlement, and the ordinary land-tax payable to the Government. The consideration for which the ground-rent is payable being thus clearly laid down, it is maintained on behalf of the Plaintiff that it is the failure of that consideration, and that consideration alone, that could possibly excuse the non-payment of ground-rent.

It was not until the year 1870 that foreigners began to avail themselves of the privilege of residing in the city of Yedo; and the Further Arrangement concluded in that year by the Japanese Government and H. B. M.'s Representative, though it did not supersede, it nevertheless somewhat amplified the provisions of the previous arrangement of 1867. Article IV refers to the conditions of sale, and provides that the Japanese Government may dispose of leases within the limits already laid down "whenever they themselves may deem desirable"; and Article V amplifies the consideration upon which the ground-rent becomes payable. The "Conditions of Sale" (Art. V) provide for the form of Title Deed, and from the form of Title Deed itself is to be gathered the mode in which it is to be executed, that is to say, it is to bear the signature and seal of the Local Japanese authority. The Title Deed of Lot No. 17, Tsukiji, set out in the Record, does bear the signature and seal of the Local Japanese authority and is therefore properly executed, and binding upon the Defendant.

Before proceeding to the consideration of the provisions of the Title Deed, attention may be called to Art. VII of the Conditions of Sale, which provides that "In addition to the purchase money, the Lessee of any Lot or Lots, or his heirs or assigns, shall pay an annual rent of one bu and a half per tsubo * * *."

Passing now to the Title Deed itself, as containing the contract upon which Plaintiff sues the Defendant, the first condition therein contained provides that the Defendant shall pay "in advance" on the 1st of July, in each year, the sum of 586²⁵/₁₀₀ bus (for the purposes of these proceedings, Yen 113³³³/₁₀₀₀) as rent for Lot No. 17, Tsukiji. The breach of contract alleged by the Plaintiff is that the said rent has not been paid for three years, commencing from the 1st July, 1873, and it is admitted so to be in arrear. The third condition of the Title Deed provides that "in case of non-payment of rent, the Japanese authorities shall be entitled to a judgment for the amount found due, and also to a penalty of two per cent per month on the said amount, and to the costs of suit, and that the said judgment shall bear the same rate of interest, by way of penalty until paid." This is the contract upon which the plaintiff bases his claim for, first, payment of arrears of ground rent, and, secondly, a penalty computed at the rate of 2 per cent per month on the rent in arrear, calculated from the date on which the said ground rent became due until the date of judgment. The Defendant admits that the ground rent now claimed is in arrear since July, 1873, and that she is the assignee in possession of Lot No. 17, Tsukiji, in respect of which the rent is claimed. Also that the leasehold of Lot No. 17 is her separate estate, and that the rent in arrear became due before her marriage with Arthur Blockley and after the passing of the Married Woman's Property Act of 1870. The Plaintiff therefore maintains that the rent in arrear is properly payable by the Defendant to the Plaintiff (Married Woman's Property Act of 1870, 3.12) and craves judgment accordingly. With regard to the penalty on arrears of rent, a question may possibly be raised by the defence as to the date from which it begins to accrue. It is submitted on behalf of the Plaintiff, that though the date is not actually mentioned in the Title Deed, it is to be gathered from the context that the penalty is to be computed from the date on which there was default in payment

of rent. Any other construction would make nonsense of the provisoes last above quoted from the Title Deed. Under ordinary circumstances I should have been prepared with skilled evidence of the meaning of that instrument; but, no witnesses having been examined, I am content that the Court should follow the usual rule, and construe the Title Deed as if it were not a foreign contract. (*Lloyd v. Guibert*, 1 L. R., Q. B., 129.)

Having thus epitomized the history of the formation and its incidents, of the Foreign settlement in Yedo, and the manner in which the privilege of hiring houses and leasing land in that Settlement is to be acquired by foreigners, and having, as I trust, shown that the claim of the Plaintiff to the payment of ground rent in arrear, together with the penalty aforesaid, is a just claim, I pass to a consideration of the issues raised by the Defendant in her Answer and in her Petition and Counterclaim.

What is in effect the defence set up to this action? The Defendant in effect says, "the Plaintiff is acting on behalf of the Japanese Government; the Japanese Government has entered into a second contract with the Foreign Representatives on my behalf, whereby it was agreed that foreigners should be confined, as to their residence in the city of Yedo, within certain limits. My property is situated within those limits. The Japanese Government has broken the last named contract by not confining foreigners resident in the city of Yedo within those limits, to my loss, and I therefore claim from the Japanese Government payment of \$5,000 by way of damages for breach of contract." The question arising out of this Answer and counterclaim appears to me to be this:—

Assuming that foreigners have not been confined, in their residence in the city of Yedo, within the limits referred to in the Answer and Counterclaim, does that fact constitute a breach by the Plaintiff acting on behalf of the Japanese Government of any, and if so, of what contract between the Japanese Government and the Defendant? And if yes, is that breach of contract of such a nature that this Court can deal with it?

Now it is apparent from the Answer and from the Counterclaim that the breach of contract complained of by the defence, is in respect of the Arrangements entered into between the Japanese Government and the Foreign Representatives bearing date respectively, the 26th November, 1867, and the 4th of May, 1870. It is nowhere alleged that those Arrangements were concluded directly between the Plaintiff and Defendant, or between the Japanese Government and the Defendant. It can only be surmised, therefore, that the contention of the Defendant is that as the Arrangements were concluded by the Foreign Representatives in the presumed interest of the Defendant, there is an implied privity of contract between the Defendant and the Japanese Government. In other words her contention is that she, the Defendant, is a party to the public authoritative acts of the British Government and its Representative. It is true that in *Conway v. Gray*, 10 East, 536, the Court said: "In all questions arising between the subjects of different States, each is a party to the public authoritative acts of his own Government; and, on that account, a foreign subject is as much incapacitated from making the consequences of an act of his own state the foundation of a claim to indemnity upon a British subject in a

British Court of Justice, as he would be if such act had been done immediately and individually by such foreign subject himself." But the authority of this case was shaken by *Flindt v. Scott*, in Error, 5 Taunt. 674, as explained by Thomson, C.B. in *Bazett v. Meyer*, *Ibid*, 829; and it was overruled by *Aubert v. Gray* (in Error) 32 L. J. (Q. B.) 50. This was a case of Marine Insurance. The Plaintiffs were Spaniards, and sued in an English Court on a policy on goods, by which they were insured, *inter alia*, against the restraints of Foreign Princes. The ship was restrained at Corunna by order of the Spanish Government which had a temporary need for transports, and laid an embargo for that object on all vessels in some of its ports at that time, and so the loss was occasioned. The Defendant alleged that the ship was restrained by the act of the Plaintiffs themselves, and he founded that allegation on the fiction that every subject of every state consents to, and adopts as his own, every act of the Government of his state, according to the decision in *Conway v. Gray*; and he contended that a restraint by the Spanish Government is a restraint by every Spaniard, and so by the Plaintiffs. The judgment in Error proceeds as follows:—"The Court below gave judgment for the truth against the fiction; and in our opinion, the Court below was right. Each party relied on the several authorities which they cited; but it is not expedient now to go through them; they are in such apparent inconsistency that a Court of Error has the duty of endeavoring to see the governing principle, and deciding in accordance therewith. The governing principle for the construction of contracts is, to give effect to the intention of the parties expressed in the words of their contract; and, as before stated, according to that principle, the Plaintiffs were entitled to succeed. The assertion, that the act of the Government is the act of each subject of that Government is never really true." And the judgment of the Court below was affirmed. It is maintained on behalf of the Plaintiff in the present proceedings that the principle decided in the case of *Aubert v. Gray* entirely disposes of the question of privity of contract between the Japanese Government and the Defendant as apparently set up by the Counterclaim.

The next case to which I ask the attention of the Court is that of *Rustonjee v. the Queen*, reported in *The Mail* of 6th November, 1876, and of the 22nd December, of the same year. This was an appeal from a judgment in the Queen's Bench Division, dismissing a petition of right by a native merchant, a British subject, who had suffered great losses by reason of the war with China, to recover from the Government a sum of money alleged to have been paid by the Emperor of China in 1842, as an indemnity for such losses. I quote from the *Mail* as follows:—

"The petition set forth the facts, in substance, thus:—He had carried on business as a merchant at Hongkong, where the Chinese Government had licensed certain Chinese merchants to trade with British merchants within its dominions, and foreign merchants were permitted to trade with such licensed merchants only. These licensed merchants formed a corporate body, called a 'Co-hong,' and one of its incidents was that all its members were jointly liable for the debts of any of its members to any foreign merchant, and on his failure

"to pay, the liability was enforced by the issuing of an edict directing the Co-hong to investigate the claim of the creditor, and to settle it if found correct. When the investigation had been made, and the amount had been settled, an entry of it was made in the books of the Co-hong, and then payment was enforced. The petitioner had business transactions with a Chinese merchant, a member of the Co-hong, who, in September, 1838, was indebted to him in the sum of 34,000 dollars, and on his bankruptcy the debt became due from the Co-hong, and the usual edict was issued to inquire into the claim. During the inquiry, however, and before the claim could be entered in the book, troubles broke out between the two Governments, and war was soon afterwards declared, and the British merchants at Canton, including the petitioner, were arrested and imprisoned, and afterwards expelled from China. He sent the particulars of his claim to Captain Elliott, the Superintendent of Trade of British Merchants in China, at Canton, who promised that the claim should be registered in the books of the Superintendent of Trade, and that the British Government would compel the Chinese Government to pay the debt when terms were arranged between the two Governments. At the close of the war certain articles of a treaty were negotiated, and one of the articles was the payment by the Emperor to the Queen of a sum sufficient to cover the debts due from the Co-hong to British merchants. During the negotiations, in 1841, Sir Henry Pottinger, who had succeeded Captain Elliott, arrived at Macao, and promised the petitioner and others that their claims should be insisted on against the Chinese Government, and that the amount should be paid to them when received from the Chinese Government. On the 26th of August, 1842, a treaty of peace was signed, whereby the Emperor agreed to pay to the Queen the sum of 3,000,000 dollars as and for the amount of debts due to British subjects by 'Hong' merchants. That sum, he alleged, was computed on the basis of the accounts of claims sent in to Captain Elliott, of which the petitioner's claim was one, and the money was paid to the Plenipotentiary for the purpose of paying those claims, as he had agreed and contracted with the British merchants, of whom the petitioner was one, to do. The petitioner, therefore, prayed that the Queen would be pleased to direct payment of the sum due to him, with interest. To this the Attorney-General of the day (Sir R. Bagallay), on the part of the Crown, demurred—that is, admitting the facts stated to be true, denied that they were sufficient to constitute a claim against the Crown. The Court of Queen's Bench, constituted of the Lord Chief Justice, Mr. Justice Blackburn, and Mr. Justice Lush, gave judgment in favour of the Crown, and the petitioner appealed from that judgment. The case was argued early in the present Sittings, before Lord Coleridge, Justices of Appeal Mellish, Brett, and Amphlett, by Mr. Benjamin, for the petitioner, and the Attorney-General for the Crown. The Court had taken time to consider their judgment, and their judgment was now delivered.

"Lord Coleridge delivered a written judgment in favour of the Crown. He said,—
"This is a claim which, if it ever had any foundation, was not brought forward until after the lapse of 36 years, and it is of a kind never brought forward before. Some-

"thing like it was attempted in the case of Baron de Bode, which however, received no countenance from the Courts, and was determined on a ground not applicable to the present. For the purpose of this judgment, it may be assumed that the Chinese merchants did owe a considerable sum to the petitioner. While the correctness of it was under investigation, however, and before, according to the course of practice, any conclusive result was arrived at or the amount ascertained, the war broke out, and the petitioner was expelled. He alleges that Mr. Elliott, Superintendent of Trade, and Sir H. Pottinger, who succeeded him, and, as Plenipotentiary, negotiated the peace, recognized the justice of his claims, and that they promised him that the Chinese Government should be compelled to pay the money, and that it should be paid to him; that afterwards, in the treaty, one of the articles stipulated that a sum of 3,000,000 dollars should be paid by the Emperor; and that this sum was computed upon the basis of the claims made, and for the purpose of paying the merchants, and, among others, the petitioner, the sums they claimed. To that claim the Attorney-General demurred, on the part of the Crown, and on that demurrer the Court of Queen's Bench gave judgment for the Crown. We think that judgment was right, upon two grounds. First, the treaty itself was referred to, and the article in question stipulated that the Emperor should pay to the British Government 3,000,000 dollars, on account of debts due to British subjects by 'Hong' merchants, insolvent, who owed large sums to them. The money, therefore, was paid, not for the British subjects, but 'on account' of debts due to them, no specific sums being ever agreed upon, either between the two Governments or between the merchants and the British Government. It is not, therefore, correct to say that the money was paid for the purpose of paying this claim. It was never received for any such purpose, and therefore, on the true construction of the Treaty itself, without reference to higher and wider considerations, the case of the claimant must fail. But, secondly, on those higher and wider considerations as to which we ought not to abstain from giving an opinion, the claim of the petitioner also fails. I assent to the reasoning of the Judges in the Court below. The making of peace and war are the highest acts of the prerogative of the Crown, and the terms on which a peace is to be made are in the absolute discretion of the Sovereign. If, therefore, Mr. Elliott or Sir Henry Pottinger did promise that these claims should be paid, he promised that to which he had no authority to pledge the Crown. The Queen might or might not have made the peace upon these terms; she might or might not have insisted upon any money being paid; she acted throughout in her sovereign character and out of her own inherent authority, and as in making the treaty, so in performing it, she is beyond the scope of municipal law, and her acts are not to be examined in her own courts. It was a treaty between the Emperor and the Queen, and though they might complain of an infraction of it their subjects cannot. We do not say that in no circumstances can the Crown be a trustee or agent; but it seems to us that, in all that relates to the making or performing of a treaty with another Sovereign the Crown cannot be in the position of a trustee or agent for subjects. We do not doubt that on the payment of the money a duty was imposed

"upon the Sovereign to administer it properly; but it was a duty to act as Sovereign according to the advice of Her Ministers, and not the duty of an agent to the principal or of a trustee to a *cestuique trust*. If there was a failure to perform the duty it was one which Parliament could only correct, and not one with which the Courts of Law could deal. It is not any part of our duty to enquire whether there has been such a failure of performance. In this country 25 years would surely not have elapsed without attention being called to the unjust withholding of money by the Crown from a British subject. But it is to Parliament only that the subject in such a case can resort, and for these reasons we consider the judgment of the Court below was right, and must be affirmed, with costs."

That judgment appears to me to be conclusive against the right set up by the Defendant to bring into question in this Court an alleged departure by the Plaintiff, acting on behalf of the Japanese Government, from the terms of an Arrangement concluded between the Representatives of Japan and Great Britain in pursuance of the Treaty entered into between those two nations in 1858. That Treaty was concluded between the Mikado of Japan and the Queen of England; and, in the words of Lord Coleridge, C. J. "though they might complain of an infraction of it, their subjects cannot." If in this case there has been a failure to perform a duty arising from the Treaty, it is one which can only be corrected by the high contracting parties, and not one with which the Courts of Law can deal; and I submit moreover, that it is no part of the duty of this Court to enquire whether there has been such a failure of performance.

The object of the foregoing argument has been to show, first, that the Defendant is not in any sense a party to the Treaties concluded between Japan and Great Britain; nor to the Arrangements made by the Representatives of the high contracting parties for giving effect to that treaty;—that the complaint of the Defendants being that there has been a breach by the Japanese Government of an agreement contained in the Arrangements so concluded between the Representatives of those powers, no privity of contract between the Defendant and the Plaintiff or between Defendant and the Japanese Government can be presumed to have arisen or in fact has arisen, out of those Arrangements: and that consequently the Defendant has no *locus standi* in this Court as Plaintiffs in respect of the alleged breach of a contract said to be contained in those Arrangements. And, secondly, that the alleged breach of contract by the Plaintiff or the Japanese Government is, if breach there be, a breach of Treaty, and that the Court will in no case entertain a complaint of such a nature nor occupy itself with an enquiry as to whether it is well founded or otherwise, but will relegate the party aggrieved to the proper and recognized channel of communication between State and State. These propositions appear to me to be fully established by the principles on which the judgments in *Aubert v. Gray* and *Rustomjee v. The Queen* are arrived at. I would also refer to the instructive judgment of Wood, V. C. in the case of *Gladstone v. The Ottoman Bank*, 32 L. J., Ch., 230. It is true that that was the case of an original bill, and not, as in this case, of a cross-bill; but it is submitted that that fact can make no difference in principle. In that case the Sultan of Turkey had made a concession, and had subsequently made a second

concession, inconsistent with, and damaging to interests of the grantee of the first concession. Two inconsistent grants were made by the same Sovereign Power; with respect to which the Vice Chancellor says "it seems to me that it is quite impossible, where a Sovereign chooses to act in derogation of rights granted by his first sovereign act, that I can interfere to prevent the derogation of those rights." It is also clearly laid down in the judgment that "persons who depend upon the grant of a foreign Sovereign cannot obtain the aid of this Court against the act of that foreign Sovereign because a grant is made by him that is inconsistent with the first grant; for the act of a foreign Sovereign over-rides everything." And again, "Take the case of a country like Turkey, or any other Sovereign power which might choose to give to English merchants in general the sole right of trading to any port in their dominions; could the Attorney General of this country proceed against some Italian or Frenchman residing in this country, over whom the Court would have jurisdiction, to prevent his sending a ship to that country? It seems to me it is impossible to hold that this Court has jurisdiction to interfere with any step the Ottoman Government might take, according to its own sole will and discretion." Vide also *Duke of Brunswick v. King of Hanover*, 6 Beavan, 1, and the remarks of Lord Romilly, M.R., on that case and on the case of *Gladstone v. Ottoman Bank* in his judgment in the case of *Smith v. Weguelin*, 8 L. N. Equity, 214.

But assuming that the Court is not with me on these points, it becomes necessary to examine into the merits of the grievance of the Defendant. Her complaint is that foreigners have been permitted to reside outside the limits bounding what is known as the Foreign Settlement at Yedo. And she says that the Japanese Government has agreed that foreigners resident in Yedo shall be compelled to live inside those limits. Where is that agreement to be found? In the Arrangements of 1867 and 1870, she replies. I have in a previous portion of this argument set out the clause of the Treaty of 1858 bearing upon this subject, and the various phases through which that clause has since passed; but it will be convenient here to re-quote the paragraphs of the Arrangements of 1867 and 1870 upon which Defendant relies. The first is as follows:—

ARTICLE I.—Within the limits colored red in the annexed plan, foreigners of nations having treaties with Japan may hire houses and reside for purposes of trade. But no Japanese shall be compelled to rent any buildings to foreigners within the said limits against his will. Moreover, as the Japanese Government are willing that foreigners of those nations having treaties with Japan should enjoy at Yedo the same facilities for leasing ground and building houses that are secured to them by treaty at the ports, the Japanese Government are prepared to lease to foreigners for building purposes that portion of land on the same plan which is colored blue.

and the second is in these words:—

ARTICLE I.—The limits within which foreigners may hire houses are shewn by the red line on the annexed plan. It is now agreed that, within these limits, Japanese may let their houses to foreigners for any period not exceeding five years, with the option of renewal on terms to be negotiated between the parties. Foreigners renting houses from Japanese within the said quarter will pay the same charges as are paid by Japanese for keeping in order roads, drains or canals.

Now I utterly fail to comprehend how those two paragraphs, whether taken together or separately, can be construed to signify that the Japanese Government thereby agreed that foreigners shall be confined, in their

residence in Yedo, within the limits stated.

The clauses are permissive to subjects and citizens of the Treaty Powers as a body; and though that permission may undoubtedly be construed to imply a prohibition, its true meaning clearly is that the Japanese Government reserve to themselves the right to prevent foreigners from residing in Yedo outside the limits of the Settlement. The contention of the defence, however, as I understand it, is that the Japanese Government has contracted with Bridget Blockley that they will exercise that preventive power in her interests, or, in other words, that the Japanese Government has entered into a contract with every individual foreign land-renter in Yedo that all other foreigners, whether land-renters or not, shall for all time be compelled to reside within the limits of the Settlement, thus creating a monopoly or privilege in favor of every individual Tsukiji land-renter against all other foreigners. It is submitted on behalf of the Plaintiff that the only monopoly or privilege that was created was in favor of foreigners as a body against the intrusion of Japanese into the foreign Settlement; that no monopoly or privilege as between foreigner and foreigner was ever intended to be created or was in fact created; that no such contract has ever been entered into between the Plaintiff or the Japanese Government and the Defendant; and that if the real intention had been such as is apparently contended by the Defendant, it would not have been left to be implied from a far-fetched and wholly unwarrantable construction of Articles I of the Arrangements of 1867 and 1870, but, on the contrary, would have been expressly mentioned in the Title Deed, or in the Arrangements. In order to make them bear the construction contended for it would be necessary to reverse the maxim *Omne majus continet in se minus*, and to say that the less includes the greater. All that the Japanese Government undertake is that a portion of ground shall be prepared in Yedo where foreigners who are the subjects of Treaty Powers may, to the exclusion of every one else, hire houses and lease land for the purposes of residence and trade. This clause is expressly permissive in its wording and in its nature. The Defendants claim that because it is permissive in one respect, in all other respects it must be prohibitory,—an argument which is quite untenable; for followed to its logical conclusion it would come to this, that by the act of permitting foreigners to reside in a small portion of the Capital of this Empire, the Japanese Government has thereby abandoned its right to extend the limits of foreign residence without having previously obtained the permission of every individual foreigner who happens to have taken advantage of the privilege of acquiring property in the present Settlement. In other words, the possession by Bridget Blockley of the leasehold of less than half an acre of ground in a corner of Yedo, gives her the right to dictate to the Japanese Government on matters of State policy, and to prevent for all time the further opening up of the Empire to the access of foreigners. It is an endeavor to make out that *Privilegium valet contra rempublicam*. If that argument can be upheld, it would follow (to borrow an illustration from the Treaty) that because foreigners are permitted to circulate freely within certain defined limits of the city of Yedo, therefore the Japanese Government has precluded itself from the right to permit them to go outside those limits; and any foreigner, if he happened to be a land-renter, who might choose to consider himself ag-

grieved because others had obtained permission to visit and enjoy the magnificent scenery of Nikko, or to proceed to the mineral springs of Mianoshi'ta for the benefit of their health might refuse to pay his ground rent, and so acquire a right of action against the Japanese Government, or its Agent, in respect of such breach of contract. Similarly, the land-renters of the Yokohama Settlement would have a right of action against the Japanese Government for permitting foreigners to lease land on the hills to the East of the Settlement, and for having extended the original limits of the Settlement itself. The construction of the Railway between Yokohama and the Capital would also from the subject of an action against the Government, for it has undoubtedly interfered with the custom of the proprietors of hotels, and with the interest of others both in Yedo and Yokohama. These illustrations might be multiplied *ad infinitum*; but the question for the Court to decide is whether, looking to the Record, the Japanese Government has or has not vacated its Sovereign rights, and contracted with Bridget Blockley that all foreigners resident in Yedo shall be penned up within a certain contracted portion of that city pending her pleasure. The intention of the parties to a written contract is to be gathered from the contract itself. The contract upon which the counter-claim of the Defendant is rested is before the Court, and it is for the Court to put a construction upon it. A fundamental misconception of the Defendant, as it appears to me, is her impression that the land in the foreign Settlement at Yedo was originally given out for purposes of speculation and that a monopoly was thereby created in her favour. Her complaint, as contained in her answer to the petition, is that the "investments of the land-renters have been ruined by the policy of the Government." Now was this land given out for purposes of speculation? It is true that there is no prohibition against speculation in land, and that the Defendant, had she chosen, might have bought up the whole settlement; but the Arrangements of 1867 and 1870 provide against that and similar contingencies by making it imperative upon the Japanese Government to give out other land from time to time as often as it is required for occupation by foreigners; there is no limit to this possible extension of the area of foreign residence; and unless the Defendant is prepared to buy up the whole country, or, at all events, the whole area of ground prepared and to be prepared for foreign occupation, the Japanese Government may "ruin her investments" by further grants of land, at its own discretion. That the land in the Settlement was not given out for speculative purposes is further evidenced by every clause bearing upon the subject contained in every document in the Record, beginning with the Treaty of 1858 down to the arrangement of the 4th of May, 1870. It was given out for purposes of residence, and the intention is clear, on the face of the Record, that no monopoly whatever was ever intended to be created. And this brings me to a consideration of the last question that I deem it necessary to notice.

In the Petition and Counterclaim of the Defendant she claims from the Plaintiff, acting on behalf of the Japanese Government, a sum of \$5,000 by way of damages for breach of contract. My first objection to this claim, should it for a moment be entertained by the Court, is of a

technical nature. If it is addressed to the Court as a Court of Law, it cannot be entertained in the form of a Counterclaim, but should form the subject of a separate action; and, the plaintiff being an alien, the Court would not have jurisdiction. But on the assumption that it is addressed to the Equity side of the Court, I contend that in that case also the claim must be dismissed, because there can be no relief in a Court of Equity "where a bill is filed for damages, and 'damages only.'" (Per Wood, V. C., in *Middleton v. Greenwood*, 2 De G. J. and Sm. 145.) And, moreover, "where a cross-bill 'seeks * * relief, care should be taken 'that the relief prayed by the cross-bill be equitable relief; for to this extent 'it may be considered as not purely a 'cross-bill, but in the nature of an original 'bill, seeking further aid from the Court; 'and then the relief ought to be such as in 'point of jurisdiction it is competent for the 'Court to give.'" *Sto. Eq. Pl.* 453. See also the judgment of Turner L. J. in the case of *Durrell v. Pritchard*, L.R., 1 Ch. Ap. Cases, 250.

But apart from these objections, there are others of equal weight. Enough has been said in a former portion of this argument to show that the Defendant cannot have suffered legal damage by the neglect of the Plaintiff to confine foreigners, in their residence in the city of Yedo, within the limits referred to in the answer and in the Counterclaim because it has been seen to be in the power of, and lawful for, the Japanese Government to enlarge those limits at their own discretion, even under the treaty itself, and apart from their independent and sovereign right to do so. Moreover, it is submitted that the damages, if any, sustained by the Defendant are too remote to be recoverable. The question is whether they are of such a nature as may reasonably be supposed to have been in the contemplation of both the parties to the alleged contract at the time it is said to have been entered into, and whether they are a natural consequence of any and what breach of any and what contract between the parties. (*Hadley v. Baxendale*, 23, L. J. Ex., 179; and the notes to *Vicars v. Wilcocks*, 2 S. L. C., 6th Ed. 487.)

It is therefore claimed on behalf of the Plaintiff that the Defendant be decreed to pay to him the ground-rent in arrear on Lot No. 17, Tsukiji, for the years 1873-4, 1874-5, 1875-6, amounting in all to yen 339³⁰⁰/₁₀₀₀, together with a penalty for non payment thereof at the rate of 2 per cent. per month, computed as to yen 113³³³/₁₀₀₀ from the 1st of July 1873 to the date of judgment; and as to yen 113³³³/₁₀₀₀ from the 1st of July 1874 to the date of judgment; and as to yen 113³³³/₁₀₀₀ from the 1st of July 1875 to the date of judgment. And that the petition and counter-claim of the Defendant be dismissed. As to costs, I am instructed, in this case, to disclaim them.

I would add that the Defendant's motion for leave to file a Counterclaim is based upon the Judicature Act, upon the Record, and upon Rule 55 of the Order in Council of March, 1865, by which Order this Court is constituted; and at a former stage of the proceedings, in view of that motion, I based an argument upon certain of the provisions of the Judicature Acts. But on that occasion it was intimated by the Court that the sections I referred to had no bearing upon the present case, their sole object evidently being to clothe the superior Courts at Westminster with jurisdiction in Equity, and that they could not be construed to alter the constitution or practice

of this Court as laid down in the Order in Council of 1865. As it is possible, however, that I may have mistaken the opinion of the Court upon this point, or that the learned Counsel for the defence may found an argument upon the Judicature Acts, upon which the motion to file a counterclaim was partly grounded, and, it is presumed, leave was in a measure granted, I will here briefly mention that my objections to the entertainment of the Counterclaim under the Judicature Acts are, first, (*vide* Section 24, Sub-section (3) of the Act of 1873) that the relief prayed by the counterclaim is not such as this Court might have granted in a suit instituted for that purpose by Bridget Blockley as plaintiff against the Chiji of Tokio Fu, who is an alien and consequently not within the original jurisdiction of this Court,—as defendant. And, secondly, (*vide* Order XXVIII, Rule 1) that the facts alleged by the defence do not show any claim to which effect can be given by this Court as against the Chiji of Tokio Fu.

Mr. Ness, on behalf of the defendants, replied that the arguments of the plaintiff's counsel disclosed that the Japanese Government, in seeking redress in this Court, had not come hither with a view to obtaining justice administered in view of all facts bearing upon the case, but to obtain a decision in respect of a portion only, in which they anticipated a favourable result, and to exclude by the institution of technical objections the consideration of all those questions which told for the defendant, by which means the defendant would suffer a serious injustice. Mrs. Blockley was the occupier of a piece of ground in the Foreign Concession at Yedo, for which the plaintiff claimed certain ground rent, in virtue of a document, called a "title-deed," but which was simply a declaration, that the Government thereby leased in perpetuity a lot of land under certain conditions, one of which was the payment of ground rent by the lessee. The defendant alleged that by that document she never came under any obligation to pay rent that her liability, if any, existed under a contract between her and the Government, which did not consist of the so-called "title-deed" only, but of the "title-deed" and certain Regulations and Conventions relative to the settlement of foreigners in Japan, in virtue of which latter the former was issued, and that she possessed certain rights under that contract, which had been violated by the plaintiff. Instead of meeting the issues, which were thus raised by admitting, denying, or excusing a breach of the Conventions and Regulations so far as the breach affected the defendant, the plaintiffs leaned their backs upon technicalities, and said, whether or not the terms of the conventions, &c., formed part of the contract between the parties,—whether or not they had been violated,—and whether or not such violation affected the defendant's interest,—the Conventions, &c., were acts of state of the Japanese Government; and this Court could not occupy itself with any such inquiry as their breach, but "must relegate the party aggrieved by a violation of them to the proper and recognised channel of communication between State and State." They thus endeavoured to obtain a verdict, not upon the whole facts of the case, but upon those facts only which were unfavourable to the defendant,—a course in itself unworthy, considering the position of the plaintiff, and also as tending to avoid the settlement on its merits of a question having an important

bearing on the relations between the Japanese Government and all foreigners in Japan. If it were true, as was alleged by the plaintiff, that the only contract by which he was bound, and by virtue of which the defendant was liable for the ground rent, was contained within the four corners of the "title-deed" put in, then the plaintiff at once put himself out of Court, for although a simple deed of grant (without livery or seisin) was sufficient to convey the freehold, by the Statute of the Frauds (sec. 4) it was enacted, that in order to bring an action upon any contract, or sale of lands, tenements, or hereditaments, or any interest in or concerning them, the agreement upon which the action was brought must be signed by the party to be charged, or his agent. The alleged contract in this case was signed on behalf of the plaintiff only, and thus gave the defendant a right of action against him; but it did not bear the signature of the defendant, or her agent, or of any previous occupier of the land, upon which signature alone the present action could be maintained, unless, indeed, their existed some local law dispensing with such signature,—a law that did not exist except in the Convention and Regulations which referred to this form and title, and in which case these documents would themselves become part of the contract. But he contended that the "title deed" in question was only a fraction of the agreement between the parties. In itself, it was manifestly incomplete,—it was a simple declaration on behalf of the Japanese Government that they leased to certain individuals a piece of ground in Yedo; there was no acceptance of the lease by the defendant, or any previous occupier of the land, it did not contain a single obligation on the part of the person who was designated the lessee, it referred in its body to different articles of certain conventions, the effect of which articles it did not express, and, indeed, as against the lessee the document had no existence at all, for its custody was with the occupier of the land, who might destroy it at pleasure and thus terminate the contract between them. It was equally incomplete on the lessor's side, for it contained no covenant on the part of the Government to maintain the occupier in possession, upon the conditions of the tenure being complied with. From these facts it was clear that one must go outside the so called "title deed" in order to ascertain what the real contract was, and this he alleged was to be found in the conventions and other documents put in, of which the "title deed" in question formed one. The "title" upon which the plaintiff's claim was based, in more than one place alluded in express terms to articles of conventions without stating their effect, showing that the conventions must be referred to in order to complete the grant or title itself. The conventions so referred to were thus adopted as part of the grant, and must form part of it whether they were acts of state or not. But, supposing that the conventions and the regulations therein mentioned were not so adopted as part of the contract, they would have governed the terms of the agreement between the parties so far as that agreement did not in express words exclude their operation, for from the moment they were concluded they were to be viewed as part of the laws both of Great Britain and of Japan, (see *Wheaton's International Law* p. 459, where it was laid down that public treaties, which concern the subject and their individual relations, had the same authority as the laws of the countries between which the treaty

was made, if they had been regularly contracted and published). Whichever view was taken, either that the contract contained in the "title deed" was to be supplemented by a reference to other documents, referred to in it, or if it was to be taken as complete in itself, to be construed in accordance with the laws of both countries as contained in the treaties, the result was the same, namely that the conventions, &c., and the title deed must be read together, and a violation of the rights accruing to one party under any of these documents was a breach of the contract existing between them.

He then proceeded to the question, what were the rights of the defendant under this contract, which, it was alleged, had been violated by the plaintiff. He admitted that the right the violation of which the defendant complained of, was not conveyed in *express* terms in any of these documents, but it was nevertheless extended by implication the existence of which admitted of no doubt. Previously to 1867 no foreigner was at liberty to reside in any part of Yedo; by the arrangement of the 26th November of that year leave was extended to the subjects of nations having treaties with Japan to reside for the purposes of trade in Yedo within defined limits, upon payment of a certain consideration. The question for decision here was, did the restriction that foreigners were to reside within certain limits raise an implication that the Government would not permit them to reside outside those limits, so long as the arrangement in question remained unmodified. The fact that the limits were expressed at all favored the construction for which he contended, and he was upheld by the legal maxim *expressio unius est exclusio alterius*; and the expression of such a limit taken in conjunction with the historical fact that until this limited permission was given no foreigner could reside in any part of Yedo, and with the further fact that at the present day (except in Yedo) no foreigner was permitted or did live outside the concessions in the other ports in Japan open to foreigners, confirmed his construction to such an extent as to render it the only reasonable one, of which the Government's action in imposing the restriction in question, was susceptible. His construction was further borne out by the express terms of the Arrangement of 4th May 1870, article II., and by the general tenour of the other documents referred to by the Plaintiff's Counsel, which plainly indicated, that the then concession was not to be extended until all the ground assigned in Ts'kidji for the use of foreigners was occupied by them. He submitted that upon a *strict* interpretation of the documents in question, his construction was the only one of which they were susceptible, but he contended that in a case like the present the defendant was entitled to have a *liberal* construction put upon them, more especially in the face of the fact that her occupation of the ground was a matter of bargain and sale—a consideration was paid for the use of the land, and as was shown by the Arrangement, a price more than enough to reimburse the Government for its outlay in connection with the land, was levied (for a premium in addition to the estimated amount of their outlay for draining &c. was to be paid so as to ensure the Government against loss by non-payment of rent.)

There were one or two further technicalities, which had been taken by the Plaintiff with a view to obstructing a decision of this
